VOL. XCVIII—NO. 2531 THURSDAY, JANUARY 1, 1914 Reg. U. S. Pat. Office. PRICE TEN CENTS

MATERIALS FOR THE STUDY OF ELEMENTARY ECONOMICS

Edited by LEON CARROLL MARSHALL, CHESTER WHITNEY WRIGHT, and JAMES ALFRED FIELD, of the Department of Political Economy in the University of Chicago.

This volume of nearly a thousand pages is intended to supply to students of elementary economics a collection of readings illustrating the working of economic principles in actual life. The material is drawn from the most various sources—books, magazines, newspapers, commission reports, court decisions, corporation charters, government circulars, etc. In not a few cases, original articles and diagrams have been prepared especially for this book. The selections have been carefully edited, so as to eliminate unsuitable material and present the documents in the most usable form. It is not intended that the book shall take the place of the systematic text on economics. On the contrary, it is designed as a companion to any standard text. Of the various materials collected in the volume a few extracts, primarily theoretical, have been chosen to present important aspects of contemporary or historic economic thought. A number of passages, descriptive of existing economic conditions, are intended to afford a background of information which the systematic treatises on economics can hardly give and which the teacher is certainly not warranted in expecting his students to possess. Most frequently the selections offer documentary or case material in which economic laws are embodied in concrete facts.

The material is thus very diverse in character, but it is all bound together by the single purpose of helping the student to come, by his own thinking, to an understanding of economic principles. To this end expository writing, news reports, official statements of government or private organizations, statistical tables, schematic analyses, maps, charts, and diagrams are all intended to contribute.

946 pages, 8vo, cloth. Postpaid, $3.00.

Library Edition, on heavy paper, bound in library buckram with special stamping, and strongly sewn on tape, postpaid, $4.80

DEUTSCHE LIEDER

By PETER SCHERER, Supervisor of German, Indianapolis Public Schools, and LOUIS H. DIRKS, Teacher of German, Shortridge High School, Indianapolis.

25 cents

A collection of popular German songs, including some of the best lyrics of the great poets. Melody and accompaniment are given for each song. The singing of these songs will stimulate the interest in classes studying German, and will give them a familiarity with German words and idioms, and greater insight into German life.

THE SORROW STONES
AN UNFINISHED STORY

By MAUD E. WILLIAMS. Crown 8vo. Pp. vi+86. $1.35 *net* (Postage 10 cents).

"The author calls this an unfinished story but it is more finished than a good many that make no such claim. A story that has more in it than mere amusement."
—*The Reader.*

"The reader of many novels will lay down this volume with a sense that here is a book of unusual sincerity and effectiveness. The story is unpretentious . . . but handled with a restraint that puts significance into bare outlines. . . . In giving us the flavor of the dialect, the writer evinces her faithfulness by the inclusion of many modern expressions—a step grateful to a public constantly presented with a rehash of identical speech that Scott gave his characters a century ago. . . . A range of characters sufficiently wide to give variety to the action, from the youth's grandparents to his sweetheart, is brought into the three hundred pages of the book."
—*New York Evening Post.*

The Nation

NEW YORK, THURSDAY, JANUARY 1, 1914.

The Week

When the historian who leaves nothing out comes to write the full account of the passage of the currency bill, he will not omit reference to the influence of the Christmas spirit. Congress was as eager as a small boy to get off for the holidays; and there stood the cruel resolution of the Democratic majority not to adjourn unless the bill was passed. This undoubtedly had the effect of hastening final action. The drawing near of the gracious Christmastide seemed to calm the savage breast of the filibuster, and to still the passions of the makers of long speeches. It was rumored that Senator La Follette would insist upon speaking for two or three days; and one can imagine the apprehensive looks that were cast in his direction. But he let his music die within him. Even he could hardly have faced the universal rage that would have fallen upon him if he had ruined the Congressional vacation over the holidays. The whole thing was a wonderful demonstration of what Christmas can do in the sphere of legislation. It was the old miracle over again:

> No voice or hideous hum
> Runs through the archèd roof.

Senatorial eloquence dried up, obstruction laid down its weapons, and Congress and the country seized their Milton and echoed:

> —at last our bliss
> Full and perfect is.

It has been understood from the beginning of the Wilson Administration that nothing would be done about the question of Panama tolls until after the tariff and currency bills were out of the way. That was in line with the "single-track" idea. It may, therefore, be more than a coincidence that on the very day the currency bill became law, Representative Adamson, Chairman of the Committee on Interstate and Foreign Commerce, introduced a joint resolution proposing a way out of the difficulty. The plan is to suspend for two years the provision of the Panama act making the Canal free to American coastwise vessels. This is the clause which England maintained, and which it is hard to deny, was in violation of our treaty with her. There is also the question whether the Canal can be made anywhere near self-supporting if tolls are not paid by all ships using it. Now, Mr. Adamson argues with much plausibility that his proposal will accomplish two things at once: it will give time for a test of the revenues of the Canal in relation to expenses; and it will also give time for the necessary diplomatic arrangements if we are finally to adopt the policy of free tolls for our coastwise vessels.

There are reports of a change in the Administration's attitude concerning the retention in the diplomatic service of Ministers whose training and experience make the continuance of their employment an obvious requirement of sound public policy. Failure to recognize this principle hitherto has been one of the chief sources of criticism of the Administration on the part of fair-minded observers. The report that a better course is now to be pursued derives confirmation not only from the apparent certainty of the retention of Henry P. Fletcher as our Minister to Chili, and the indicated probability of the continuance of John W. Garrett in Argentina and Edwin V. Morgan in Brazil, but also from the unquestionable fact that President Wilson's own convictions and proclivities must lie entirely in that direction. While he cannot disclaim responsibility for what has thus far happened, it can fairly be pleaded for him, if not by him, that the overshadowing importance of the two great legislative projects which he has just brought to consummation must naturally have absorbed his attention to the exclusion of many matters which, in an ordinary time, would have enlisted his keen interest. It is to be hoped that from now on nothing will be done to encourage the spoils conception of the diplomatic service.

Georgia's response to the proposed reduction of Southern delegates in Republican Conventions is as gracious as it is prompt. If we may trust the National Committeeman from that State, the Central Committee will be called together soon after the holidays, and will approve the recommendation cutting Georgia's delegation from twenty-eight to eighteen. Mr. Jackson does say, for home consumption, presumably, that the action of the National Committee is not entirely fair to the Republican party in the South. But he makes another remark that is much closer to the point. "However," he says, "I believe the plan will operate to strengthen Republicanism in the South. It will have a tendency to encourage voters to turn out at elections." He has in mind, of course, the provision that Congressional districts in which the party polls 7,500 votes or more shall be entitled to an additional delegate.

Progressive irreconcilables should keep a sharp eye upon Kansas. A year ago the Progressives were in control of the Republican party machinery, and accordingly there was no "Progressive" State ticket. The "Republican" nominee for Governor, Arthur Capper, lacked only thirty votes of being elected. Now he is hesitating between announcing himself as a candidate for the Progressive nomination for Governor and entering the race for the Republican nomination. And he is getting encouragement in this dubious position by no less an authority than William Allen White! A Progressive who writes to the Emporia *Gazette* to ask why Capper does not decide one way or the other is gently told that "often people who lack imagination cannot put themselves in the place of others. . . . Mr. Capper is in the position of a child of divorced parents who loves them both and is loved by both." Then comes this shocking explanation:

> He is not hesitating because he is afraid of himself. Whatever hesitancy he manifests is due to the fact that he is in a position where a man may not say it is all black and white on one side or the other, and where a sudden decision, a hasty or impulsive act, might do incalculable harm to the best interests of Kansas.

Or of Capper? But why cannot he say that it is all black on the Republican side and all white on the Progressive side? It is, isn't it? While the *Gazette* would like to see Mr. Capper declare

himself a Progressive, it "also realizes the immense pull of the mere party name on entirely honest people," and so it asks patience for Mr. Capper while he makes up his mind. But what would the Colonel say of a man who could even think of accepting a Republican nomination after July 19, 1912, and before January 1, 1916?

"Probably the greatest factor in retarding the development of scientific research among our industries has been high tariff." This is not the guess of a politician, but the verdict of a trade paper, the *Journal of Industrial and Engineering Chemistry*. "This high tariff," it continues, "has caused many of our industries to prosper and pay enormous profits in spite of their short-sighted management. Political research, with a view to exploiting the consumer, is well understood by such managers, and it is a regrettable fact that many of them have spent thousands of dollars on the lobby and not one cent for placing their business on a sound scientific footing." This is not a new contention. It is part of what President Wilson means by "freeing" the American manufacturer and dealer. In this view, lower prices are not the only end of tariff reduction. The main thing is the elimination of the artificial conditions that, under exorbitant rates, have surrounded our industrial processes, which, in consequence, may receive a kind of attention hitherto denied them. Not new "talking points," but better quality, becomes the aim of the man seeking a market. Incidentally, in the opinion of the *Journal*, "the loss of this tariff protection will, in the end, exert a great stabilizing influence on our industrial development."

"Efficient" is the word most commonly used to describe the kind of administration that New York expects from its new Mayor. Because he himself made his reputation as Commissioner of Accounts, and because one of the men he seems certain to put into office is another notable exponent of the new science of statistics as applied to municipal government, one is apt to gather that the city's high expectations for the next four years are based primarily on the efficiency of systematization, correlation, bookkeeping, card catalogues, and the like. Yet there is one factor in governmental efficiency which seems to have been overlooked in the passionate discussion of administrative methodology, and that is the antique virtue of simple honesty. If the average citizen looks forward to four years of efficient government by Messrs. Mitchel, Prendergast, McAneny, and their borough associates, it is primarily because the average citizen is convinced that these men are honest. There is no need to disparage training and method in the conduct of municipal affairs, but the motive behind the method is of paramount importance. German municipal government has reached its high state of efficiency because Germans employ experts to rule their cities. But Great Britain, which is not in the habit of going in for scientific experimentation and prefers to move forward along old lines, has also developed efficient municipal government, for the simple reason that it has developed honest municipal government.

Whether the situation at Calumet is such as to call for an investigation by Congress or not, it is certainly one that is of most serious interest to the nation. The Governor of Michigan owes it not only to his office and to the people of his State, but to the people of the whole country, to get at the full and exact truth, and to get at it promptly. The terrible Christmas tragedy, the accusations that arose out of it, and the attack on Moyer, coming on top of a situation already intensely embittered, make a combination full of sinister possibilities. The story of Lawrence offers a clear enough demonstration of the seriousness of such a trouble as this, and the way in which it contributes to aggravate labor troubles in other parts of the country; and this Calumet case has in it elements of far greater potential mischief than did the Lawrence case. Justice and expediency alike demand that it be taken hold of at once with the utmost vigor.

Secretary Lane's proposal to "conserve" deposits of radium is an illustration of the unexpected ramifications which a new policy is likely to develop. A very few years ago, conservation meant trees, water, coal, and the like. In a day it has come to mean radium. The principle once accepted, we are not greatly surprised at the finding of new objects to which it may be applied. One element in Secretary Lane's proposal is novel. He asks for authority, not only for the President to reserve to the Government all rights in radium-bearing ores on public lands, but also for the Secretary of the Interior to proceed with the mining and treating of these ores in such a way as to obtain a supply of radium for the use of the Government and for hospitals throughout the country. To this kind of Government operation of industry no objection will be raised.

Arkansas's new application of the local option principle, now upheld by the State Supreme Court, virtually disfranchises the negro upon the liquor question. Instead of providing for wiping out saloons by a majority of the voters in any locality, it forbids any municipality or township to license a drinking-place except upon petition signed by a majority of the adult *white* residents. The bill was passed by the efforts of the anti-saloon forces, and had the usual avowed Southern motive of keeping liquor from the black population. Approval of the ends sought can hardly extend to the means employed, especially in a State which increasingly recognizes the colored vote, and which has hitherto resisted a "grandfather clause." There seems no warrant for vesting control over saloons in an artificially restricted portion of the population. The liquor interests, however, declare that they will not carry the matter to the United States Supreme Court, as this would involve too many delays. This implies that other means will be sought to bring the whole plan to a final test of legality.

The high moral purpose behind the exhibition of the "white-slave" films, which has now been brought to an end in this city, is revealed in the remark made by the impresario of one of these enterprises to the effect that he was busy taking in the money while the going was good. It is easy to declaim against police censorship in this matter of white-slave exploitation in the theatre or on the canvas screen. But what, after all, is police censorship as it has been employed? There is no question

here of allowing the policeman to decide whether a certain exhibition is to be tolerated or not. There has been no attempt on the part of Mr. Waldo or his subordinates to impose their arbitrary will on the managers of these enterprises. The matter has been tried out in the courts and the decision against the films is not a police decision, but a judicial decision. In a broad sense, there is, of course, a censorship by the police, and it is exercised upon the citizen in every walk of life. There is a police censorship on crime and on public nuisances. In a still broader sense, the "police" power of the State is invoked by Legislatures and courts when it comes to any form of regulation in the interests of the public welfare. The citizen who complains to the police of a nauseating "moral" exhibition is like the citizen who would complain to the police of a soap factory next door. The police are the primary agents whom the community calls in to bring a public nuisance before the attention of the courts. With public opinion against them, the police cannot destroy the liberties of the citizen; and what other tribunal can the moral crusaders ask for?

Can't somebody do something, at this happy season, to cheer up Col. Harvey? He is having a terribly doleful time in the *North American Review* over the sins and shortcomings of President Wilson. Trouble, trouble, and nothing but trouble does he see—the Constitution "subverted," foreign relations in a parlous state, business depression already upon the country, and political defeat for the Democratic party impending. We can't be sure what is the matter with Col. Harvey, but we have an idea that he has lost his old strong grip on his theology. When one recalls the triumphant way in which, only a few short years ago, he was making it out that Wilson was foreordained, before the foundation of the world, to be President of the United States, it does seem as if it might do the Colonel good, in this hour when his countenance has fallen and his spirit is cast down within him, if he would only reach out and take a stiff dose of his favorite old family medicine, predestination.

We read that Dean C. Worcester, ex-Secretary of the Interior in the Philippine Government, is a great admirer of the Moros; and not, as one would suppose, because the Moro with his kree and his faculty for running amuck constitutes one of the favorite arguments against granting self-government to the Filipinos. The head-hunter and the Moro have never failed to be trotted out as proof that the removal of American rule would mean the handing over of the peaceful population of the islands to rapine and murder. But now we read that Mr. Worcester

> believes that, if properly governed through men who know them and sympathize with them, some day they may be made law-abiding and self-respecting citizens of the Philippines.

Does this mean that the Mindanao datto on the rampage can expect more sympathy from the present white masters of the islands than he would receive from the Filipinos themselves? Or does the sympathetic treatment the Moro needs take the form of being civilized with a Krag? In either case, a native Government at Manila ought to be equal to the task. Mr. Shuster, in his admirable article in the *Century*, points out the shallowness of the Moro argument. A Filipino gunboat, equipped with a few rapid-firers, would be enough to protect the people of Luzon against murderous invasion.

The British Cabinet's decision against official participation by England in the Panama fair is condemned by the Liberal press and defended, so far as it is defended at all, by Conservative newspapers. This has been the usual fate of Mr. Asquith's foreign policies. The bitterest criticism against Sir Edward Grey's policy in the Near and Middle East has come from supporters of the Ministry, and the Tory London *Times* was for a time regarded as the spokesman for Sir Edward. In the matter of the fair the severest indictment against the Government has been formulated by the Radical *Chronicle*, which points out with undeniable force the absurdity of the plea that the British treasury cannot afford the sum of half a million dollars towards an act of international courtesy whose effect on Anglo-American relations could hardly fail to be beneficial. Conceding the point that England has a justifiable grievance against us over the question of Panama tolls, it needs no special acumen to see that an attitude of sulky resentment is not likely to bring this country to terms.

Mr. Andrew Furuseth's resignation in a huff from the London Conference on Ocean Safety so confirms his stamp of radicalism that it will inevitably damage his position upon the Seamen's bill. The House will be more inclined than ever to hear arguments *pro* and *con* upon a measure which could thus lead him to a sharp split with an international and impartial body. President Wilson has already expressed a wish that action in Congress may await the recommendations of the Conference on matters pertinent to the bill. That this be done is highly desirable, for repeated protests from foreign and native shipowners have left no doubt that the bill requires amendment. Its provisions for the protection of crews are now generally acquiesced in, but certain clauses relating to the safety of passengers are held exaggerated and unreasonably drastic. The report of the Conference is not likely to err on the side of laxity; it will be expert in every sense of the word; and a rational willingness to be guided by it will not merely support the general movement for international uniformity in regulations upon transoceanic traffic, but relieve the bill of the charge that it now violates certain treaty obligations.

On his recent visit to London, Anatole France was taken just once to the theatre. And what does the reader suppose was the play by which the cultivated Frenchman was to get his idea of the present state of the English drama? Why, it was "Joseph and His Brethren"! Why not? It was given at Sir Herbert Tree's theatre, it has run for nobody can recall how many months, so why not invite the supreme ironist of France to soothe his spirit at this tedious spectacle, and from it carry back an impression of the present ideals and achievements of the stage in England? Doubtless, M. France is too shrewd a man to be deceived by this stroke of English hospitality. He probably knows that his experience was very like what it would be to ask Edmund Gosse in Paris to pass by the Comédie and the Châtelet and go over the river to the Théâtre Cluny to judge of what the French are doing in the dramatic art.

THE BLOOD-AND-IRON FALLACY.

A valued correspondent, with good knowledge of conditions in Mexico, writes to ask why the *Nation* does not urge the Government at Washington to stop the "atrocities" in Mexico. What he refers to is the slaughter of Mexicans by Mexicans. His estimate is—and we fear that it is not exaggerated—that 30,000 Mexicans have been killed since last February: some of them soldiers slain in battle; more of them shot in cold blood after capture or surrender; with a great many non-combatants. The thought of it all is, indeed, shocking; but two reflections come with it. The first is that no one can suggest a way in which Americans could bring to an end these atrocities without causing more horrible ones. In case of armed intervention by us, the tale of deaths would run far beyond 30,000. And the second reflection is that it is folly to think of terrifying into submission, by means of fire and sword, a people accustomed to such ruthless methods as are now practiced in Mexico. It is an awful habit they have, but it is inveterate, of shooting unarmed prisoners in times of civil war. This they inherited with their Spanish blood. Carranza as coolly proposes to "execute" the adherents of Huerta as Huerta proclaims his intention of exterminating all who take up arms against him. And it is a nation habituated to such ferocities that it is said the United States should bring to terms by being more ferocious than itself!

We have been told, till everybody is sick of it, that Mexico's great need is for a "strong man." Usually, this has meant a ruthless man. With much wise head-wagging, stories are repeated of the swift brutality which Porfirio Diaz used to practice. That is the true prescription for Mexico to-day, we are assured. Send out a detachment of troops with orders to shoot every sixth person in a district where trouble is reported. Kill first and find out the truth afterwards. Diaz did it, and see how he kept the country in order. That's the only way in which these Mexicans can be made to behave. But this is to forget that the Diaz system of ferocity broke down. As Professor Hart writes in *World's Work*, Diaz, "like most despots, discovered that, no matter how many heads were cut off, men with tongues will still arise. The strong man in the end was weaker than his people."

Right here let it be remarked that the demand for a "strong man" in Mexico is made chiefly by foreigners. The Mexican correspondent of the London *Times* notes that this demand "comes glibly from the lips of nearly all British and American residents in the country." And their reasons for wanting a strong ruler are obvious and, to an extent, legitimate. They have great investments in Mexico, which they would have protected. Their lives and the lives of those dependent upon them, they would have safeguarded. This is natural and lawful enough; the trouble arises only when they translate strong man into a ruthless despot. Now, it is the deliberate opinion of the well-informed correspondent referred to that Mexico has passed the stage where a ruthless dictator, dealing out death and destruction, can possibly succeed. Diaz proved this to be true. "No one can govern the country again as he did." Huerta is proving it to be true. How can you frighten men into yielding who face the firing-squad without flinching and die with their last defiant word, "Viva Mexico"? This writer in the London *Times* declares that the idea that the Mexicans need an iron-handed despot is a complete mistake. An able ruler, yes, but never again simply a military ruler knowing no argument but that of pike and gun. "The notion that the Mexicans need merely a despot betrays failure to understand either them or human nature. They are not fully grown up yet. But they are no longer children."

Evidence is, in fact, accumulating on every hand that the flame lit by Francisco Madero cannot be extinguished by blood. Only last week, one Mexican in the very capital had the courage to stand up and tell Gen. Huerta to his face—after others had flattered him—that mere force was no remedy for Mexico's ills, and that the Dictator must seriously consider doing something to meet the demands of the growingly intelligent middle classes. What Señor Urrutia had the boldness to say is unquestionably the thought of many hearts in Mexico, as is borne out by the testimony of sympathetic observers. It is a terrible welter through which Mexico is now passing, and the end of it no man can foresee. But some antecedent and harmful fallacies are at least disposed of. The greatest of them is the assumption that a people which has withstood the worst that native ferocity could do would meekly submit if foreigners began to shoot and burn and ravage. And twin with this folly is that of supposing that if the United States had only sharpened the edge of Huerta's sword, he would by this time have made Mexico a land of smiling content.

THAT "ALLIANCE" AGAINST US.

Several Washington correspondents have made the simultaneous discovery that "Germany and Great Britain have entered into an offensive and defensive commercial alliance against the United States." At last news, Germany and England were about to go to war with each other. But, it seems, they have dropped all that in order to think about trade; and their first move, as traders, is to put their heads together in a plot to harm their best customer. We thus put the essential absurdity of the story in a condensed form, not in the hope of destroying belief in it. Such yarns have more lives than a cat. They turn up from time to time, and always find audience among the credulous. Why this revival should have taken place just now it is hard to say. One reason may be the dearth of topics for Washington correspondents during the holiday recess! Another is seen in the admitted fact that the National City Bank of New York has been contemplating the establishment of a branch in Buenos Ayres, but has given it up for the time being. This is gravely cited as clear proof of a conspiracy, on the part of British and German interests, to check American enterprise abroad wherever it threatens competition with them.

It might be thought that the plain tale of the president of the National City Bank would put down these retailers of big stories about Englishmen and Germans in buckram. Mr. Vanderlip explains that his institution had, indeed, made inquiries preliminary to considering a plan of opening a branch in Argentina, as it is authorized to do under the new banking and currency law. But the project had not been pushed, because it appeared that the time was not ripe for it, either in South America or in this country. It was added by Mr.

Vanderlip that there would be great difficulty in finding Americans able and willing to go and manage such an important enterprise at Buenos Ayres. We have very few men capable of doing the work, and they would not wish to expatriate themselves indefinitely. This, points out the president of the City National, is "a weakness in our system." England and Germany have an abundance of men trained for foreign service. We have scarcely any. But does not that merely show that the "alliance" has been getting in its deadly work in advance? So must think the Washington detectives, for they declare that, "despite the denial made by President Vanderlip," we should have had a flourishing bank at the River Plate by this time, had not our efforts been thwarted by the sinister influence of British and German interests.

This sort of thing crops up whenever there is talk, as there is now, of making new efforts to extend American commerce and financial facilities and prestige abroad. We do not make as rapid progress as we think we ought to make, and then, asserting that the fault cannot be in ourselves, we look about for the machinations of some foreign rival. We have been doing this for many years, and shall doubtless continue to do so until we learn that the thing to search for in foreign competitors is, not mysterious plots, but the plodding methods of success. On this very point of branch banks in other countries, the address of the president of the United States Steel Corporation at Chicago, at the annual meeting of the Illinois Manufacturers' Association, had a pertinent passage. Mr. Farrell had no doubt that American banking institutions would gradually find their way into foreign countries, but they would first have to master the new business. Asserted President Farrell:

> The early history of German banks in Latin America and the Far East was one of continued failure, and it was only after they had solved the problem of doing a banking business in the country in which they were established, rather than merely acting as mediators of German trade, and began to finance industrial enterprises, railway construction, etc., in the land of their adoption, that they commenced to do a large business.

There is no occasion for taking a gloomy view of our foreign trade. It has enormously expanded. Though the greater part of the increase has been in raw materials or semi-manufactured products, it does not follow that we shall not find still greater markets abroad for our finished goods. But our merchants and bankers will have to go about the business like men of sense. If they do, they will promptly dismiss all these inventions of hostile trade "alliances," just as they will also abandon the notion that there is any short and easy way to build up foreign commerce. The whole thing is simply a human and business problem which has to be solved, as other nations have solved it, by human qualities and business principles. First of all, we need to make good the lack pointed out by Mr. Vanderlip—our deficiency, that is, in trained men. The high tariff policy has tended to prevent us from looking to foreign markets. But home-keeping youths have ever homely wits; and Americans must acquire the habit of seeking out a full understanding of the political conditions and the social life and the language of the people with whom they wish to do business, so sharpening their wits and making them cosmopolitan, before they can hope to trade on equal terms with the nations that have long studied and occupied the field.

THE STATE CONSTABULARY.

A State police has long been urged by the *Nation*, not only for Northern States, but for Southern as well; and in the achievements of the model force maintained by the State of Pennsylvania is the clearest demonstration of the usefulness and desirability of such a law-enforcing body. New York, for instance, needs a State police because of the complete breakdown of the sheriff system for enforcing law; because of the necessity of preventing rural crime and apprehending offenders; because of the changed traffic conditions upon its highways; because there is needed a power independent of local politics to uphold State laws; because its heterogeneous population has considerably increased rural lawlessness in several counties. There is the further reason that such a Constabulary would be of invaluable service in preventing and checking riots, and would relieve the National Guard of the disagreeable necessity of dealing with strikes.

This latter, so far as this State is concerned, does not appear to us the most convincing reason. Unlike Pennsylvania, New York has had comparatively few cases of labor trouble involving the calling out of the militia. There can be no question, however, of the greater efficacy of a trained body of mounted police in handling mobs than a similar force of troops. In the street-car strike in Philadelphia in 1910 a company of militia was disarmed and made ridiculous by a mob of women, which was promptly handled and made to behave by a small body of police. In the Pressed Steel Car strike at McKee's Rocks, near Pittsburgh, the strikers cheered the Constabulary, even after they had been sharply handled by the police. They recognized that the Constabulary were doing their duty, and doing it well, admired their courage, and respected them for showing as much consideration as possible. None the less, it is a regrettable fact that organized labor is opposed to the Pennsylvania force, and has thus far blocked a necessary increase. In New York, opposition may develop in this quarter; but we hope that the union element which believes in the necessity of force to win strikes will be held in check by wiser leaders, who will see the great advantage to the whole State if such a body were created to serve the entire commonwealth.

It is the prevention of crime and the apprehending of rural offenders which seem to us the chief reasons for a Constabulary. It is a striking fact that the number of arrests by the Pennsylvania Constabulary has decreased from 5,028 in 1908 to 1,144 in 1912. This does not indicate any police laxity; on the contrary, the decrease has been steady, and is traceable directly to the preventive work of Major Groome's men, who patrol annually between 400,000 and 500,000 miles, although there are but 228 of them, and they are likely to be drawn off at any moment for strike or emergency duty. Thus, they furnish from their number trustworthy State detectives. In the matter of the Coatesville lynching, for instance, the Constabulary placed detectives in that town and obtained the evidence upon which the indictments of the lynchers were based. It is safe to say that if a single member of the force had been in town on the day of the lynching, the town and State would not have been disgraced. Yet the

service of the Constabulary costs the State only $331,000 a year.

This may seem to some a large figure to add to the budget of New York just when it is in great need of economy. But crime is the most costly thing with which a State has to deal. It always spells outgo and no return. It is perfectly plain that by its preventive work the Pennsylvania police have saved the State much more than they have cost, to say nothing of the comfort and security given to districts hitherto terrorized by the lawless, or in danger from wandering criminals. Westchester County would particularly appreciate such a sense of security; that it now lacks altogether. The large influx of Italians into the county has resulted in some terrible crimes, many of which have gone unpunished. In other cases, the Aqueduct police have come to the rescue. But the fact remains that Italians are used to seeing rural districts patrolled by their admirable carabinieri. They come over here and see no symbol of authority whatever; that a sheriff resides ten or twenty miles away impresses them not at all. It was the Aqueduct police, and not the Sheriff, who captured the six Italians executed by the State last year for a horrible crime at Yorktown Heights; and despite the Sheriff, the three Italian murderers who killed a worthy citizen at Mount Kisco last summer readily made their escape, although identified, and not one has been arrested. A single Pennsylvania constable would easily have bagged the trio.

Had New York possessed a Constabulary, it would not have been necessary to call out United States troops from Plattsburgh Barracks last summer to fight the Adirondack fires which did so much damage. The Pennsylvania police have done yeoman service as forest rangers and game- and fire-wardens, in addition to all their own duties; in 1906, prior to the establishment of the police, seven civilian game-wardens were shot at and four killed. Since the police appeared all such attacks have ceased. Every Continental country has its *gendarmerie;* that the United States is for most of its territory without such a force is, to our mind, one reason why our record of crime disgraces the nation.

MAKING LIFE INSURANCE DO THE MOST GOOD.

Several of the leading life insurance companies have recently devoted considerable effort to the promotion among their policyholders of a mode of using their insurance so as to obtain the greatest certainty of substantial good for those whom the insurance is designed to benefit. They have drawn the attention of actual and prospective insurers to the advantage of the plan of putting the benefits in the shape of annuities for the beneficiary instead of a lump sum paid at the death of the insured. Mr. Sylvester C. Dunham, president of the Travelers' Insurance Company, at the recent meeting of life insurance presidents in this city, referred to the frequency with which widows lost in a few months all the money that was the result of self-denial for years, often by both husband and wife. He dwelt upon the wide extent of the business carried on by the promoters of get-rich-quick schemes, who systematically seek their prey among the very people that can least afford the loss in such ventures. Important and regrettable as these losses are, however, they doubtless are less in the aggregate than those caused by the sinking of hard-earned money in investments which, while not tainted with fraud or marked by clear folly, do not present the solid safety that attaches to the careful investments of a properly managed fiduciary corporation. It is therefore to be hoped that the annuity plan will find steadily increasing favor.

But there is a consideration making in somewhat the same direction which seems never to be pressed either by insurance companies or by others. We refer to the fact that in a large proportion of cases the sole motive of the insurer is to provide for the benefit of one person or of a small group of persons, and that if these do not survive him the acquisition of the amount of his policy by his heirs-at-law is of no interest to him. For simplicity, let us speak of the case of a man whose only purpose in insuring is to provide for his wife in case she survives him. Evidently, the way in which he could best serve this purpose would be to take out a policy providing for a payment to the widow either of a lump sum or of a fixed annuity, the company to pay nothing in the event that she did not survive him. By means of this last feature, he could evidently obtain for the widow, with a given expenditure, a much larger provision than otherwise.

Survivorship policies of this nature —simple survivorship policies and survivorship annuities—have been obtainable from English companies since the very infancy of life insurance, and also from American companies; but the advantage of them has not been made sufficiently known. There are, indeed, two evident obstacles to their widespread adoption. One is that people have a dislike to paying premiums of life insurance from which it may easily happen that no returns will come; how unreasoning this attitude is appears at once when we consider that in the case of fire insurance, and even accident insurance, we never think of regarding the probability that our house will not burn down or that we shall not break a leg or an arm as any objection at all. The other obstacle comes from the fact that the majority of persons nowadays, when they insure, have in view a provision for their own old age as well as for a surviving beneficiary or beneficiaries. To some extent both these difficulties, however, are overcome in that combination form of policy which was introduced a number of years ago by Emory McClintock, one of the foremost actuaries in the world, under the name of the continuous endowment policy, and which, we believe, is essentially identical with some of the plans now being pushed by the companies that are recommending the annuity plan.

We are convinced, nevertheless, that it would be possible to bring about such recognition of the manifest advantages of the survivorship plan in insurance as would result in its adoption by thousands of persons who now either do not insure at all, or insure very inadequately, for the protection of those dear to them. Every man would prefer, of course, to make sure of his own independence if he lives to old age, as well as of the welfare of his wife, or children, or mother, if he dies an untimely death. But it costs a lot of money to do that; and if a man who cannot afford a big annual sum for insurance were distinctly and simply informed that for a very moderate sum applied *to the sole purpose* of providing for some one per-

son dependent on him he could place that person beyond all danger of want, he would in a considerable proportion of cases avail himself of the opportunity. This surely applies in great numbers of cases of husband and wife; but there are others. Unmarried men having a parent dependent on them are not to be counted by the million; but there are many thousands, perhaps many hundreds of thousands of them. A man of thirty could, by the payment of a veritable trifle, absolutely insure that his mother of sixty should not suffer in material comfort through his death; and the peace of mind that this would bring about would of itself in many cases be a great blessing. It is doubtless true that there is no great inducement to insurance companies in general, from their customary standpoint of large-scale business, to exert themselves greatly in this direction; but some one company, making a specialty of it, might do much with it, and in doing so would be entitled to the credit of having done a real social service. Nor do we see any reason why some of our great millionaires should not start a company which would undertake this work on well-planned lines—surely as good an embodiment of the idea of "philanthropy and 4 per cent." as can well be imagined.

AN ALASKA PROGRAMME.

In my judgment, the way to deal with the problem of Alaska resources is to establish a board of directors to have this work in charge. Into the hands of this board or commission I would give all the national assets in that territory, to be used primarily for her improvement—her lands, fisheries, Indians, Eskimos, seals, forests, mines, waterways, railroads—all that the nation owns, cares for, controls, or regulates. Congress should determine in broad outline the policies which this board in a liberal discretion should elaborate and administer, much as is done as to the Philippines. This board would, of course, have nothing whatsoever to do with the internal affairs of the organized Territory of Alaska, for it would exercise no powers save such as Congress granted over the property of the United States in Alaska.

This is the solution that the Secretary of the Interior recommends for the problem of Alaskan development. It strikes us as an admirable proposal. The question has now been conspicuously before the country, from time to time, for something like eight years. Mr. Roosevelt treated it with vigor in some of his messages. The Guggenheim scheme, followed by the Ballinger unpleasantness, made it for a considerable period the focus of an intense controversy. President Taft gave to the question a great deal of serious attention, and Secretary Fisher, soon after his appointment as successor to Ballinger, made a visit of investigation to Alaska which resulted in a comprehensive report and important recommendations, especially that of the construction by the Government of a main line of railway in the Territory. This recommendation was adopted by the President. Mr. Taft also urged, as had Mr. Roosevelt before him, the introduction of a comprehensive system of leasing for the exploitation of the coal lands; and in more than one message he recommended the establishment of a commission form of government for Alaska.

While, therefore, Secretary Lane's proposal is novel and original, it seems, to use the medical phrase, clearly "indicated" by the history of the case. He, like President Taft and President Roosevelt, wishes to institute an effective leasing system; like Secretary Fisher and President Taft, he thinks Government construction of a main line of railway an essential prerequisite for the opening up of the country; and he recognizes that the chief obstacle to attaining large results has been the lack of any adequate handling of the problem as a whole. What he adds to the recommendations of his predecessors is a plan for the removal of this obstacle. Instead of an Alaskan question being either nobody's business or the incidental and sporadic business of half a dozen different departments of the Government, he wishes to have a commission created whose sole business it will be to look after the concerns of the nation in Alaska. Properly safeguarded as to the exercise of its powers, such a commission appears to offer the best prospect at once of protection for the nation's possessions against spoliation, and of encouragement to legitimate private enterprise.

In lively and interesting style, Secretary Lane sketches, in the introductory part of his report, the history of the conflict between these opposing aspects of our general land policy in the past. Alaska simply happened to come into active consideration at the time when this policy had, under severe but not too severe criticism, been brought to a halt. It had been wasteful, and thoughtless, and undiscriminating. It had resulted in the reduction of our magnificent possessions in the States and the older Territories to a small fraction of what they had been, without anything like adequate advantage to the people and with a vast amount of undeserved gain to land-grabbers. It was natural that when this process was, by vigorous resistance, brought to an end, something like paralysis should have set in for a time. That is the price which must almost inevitably be paid for the effecting of a cure for so long-standing a disease. Attempts have all along been made by eager friends of Western development to discredit the champions of conservation as men who wished to lock up the resources of the country indefinitely, and in their zeal for the interests of future generations would ignore the needs of the generation now on the scene. The accusation is thoroughly unjust, but the policy which includes a leasing and royalty system for coal and other mineral lands, and discrimination of treatment between timber lands and agricultural lands, has been taking some time to get into shape. Secretary Lane urges legislation by Congress to this end; and it is quite as important that this recommendation concerning the public domain nearer home should be attended to as that Alaskan affairs should be put upon a better footing.

With Mr. Lane's picturesque presentation of Alaska's possibilities it would be hypercritical to find fault. Still it may not be idle to point out that allowance must there be made for the ardor of the advocate. That the potentialities of the Territory are very great is now generally recognized; but as a region which, within anything like a near future, can be made to contain a large population, its claims are doubtful. It is true that the present sparseness of Alaskan population "cannot be explained on the ground of the inhospitality of the Alaskan climate"; and it is also true that "our people are not stayed in their quest for homes or wealth by the rigors of a long winter." Still, they do not prefer those rigors, nor do they like, other things being equal, to go to places so remote in point of location and so peculiar in other re-

spects as is Alaska. The process of settlement will in all probability be a slow one at best. The example of New Zealand is instructive in this regard; in spite of its temperate climate, its good land, its mineral resources, and the long-established and much-advertised attractions of its system of government, it receives a net accession of only four or five thousand inhabitants annually by immigration. The point is not vital as to the essence of the general policy proposed by Mr. Lane, but it indicates the danger of over-sanguineness in the execution of that policy.

LITERATURE AND LIFE IN FRANCE.

The dispatches telling of the death of Jules Claretie, journalist, playwright, dramatist, and man of affairs, all properly emphasized his membership in the French Academy. The term "immortal" has become naturalized the world over. But in this country at the present moment there is a certain danger in using the word. The press has hardly finished poking fun at our own "immortals" as embraced in the American Institute of Arts and Letters, which recently had its meeting in Chicago. There is also danger of doing injustice to the great Academy which Richelieu founded, by popularizing the idea that it is on the whole a society of pedants and book-worms and dryasdusts, who are not qualified to legislate for a living literature because they themselves stand apart from life. This popular conception of the French Academy is reinforced by the well-known tradition of the forty-first chair, the chair to which Molière, Flaubert, Emile Zola, and other "rebels" failed to be elected.

As a matter of fact, the French Academy is far from being an assemblage of secluded scholars and poets of the ivory tower. Certain rebels have failed to obtain admission, but many more rebels have been inscribed on its rolls, though not perhaps until time and experience have given them national prestige and a broadly national outlook. The career of Jules Claretie is an instance in point. He began his literary career as a disciple of Henry Murger, author of "La Vie de Bohême," surely not a pedant or a conservative. Like so many distinguished Frenchmen of to-day, he was an ardent republican during the last years of the Third Empire. He went through the war with Prussia, that cataclysmic event which has left its mark, generally in the form of a sobering influence, on French people of all classes. As head of the Théâtre Français for nearly thirty years, he must have displayed administrative ability, business acumen, and the gift of diplomacy. His weekly *causeries* in *Le Temps* showed a man vividly alive to things of the present day. Here, surely, was no dreamy scholar or fussy grammarian. Nor was Claretie an exception in the Academy, which now contains rebels like Maurice Donnay, who began his career by chanting naughty verses at the Black Cat, dressed in a burlesque Academic uniform; or Jean Richepin, the poet of the vagabond life; or sturdy fighters like Brieux and Maurice Barrès.

Such full, active lives blending the work of the spirit with the hard experience of the world are completely in line with the great historic tradition of the French people, a people which in less than three-quarters of a century has had at the head of its Government philosophers and historians like Guizot and Thiers and a poet of romantic idealism like Lamartine; leaders of the parliamentary opposition like Victor Hugo and the college professor, Jean Jaurès; a people which at the present day names its battleships and cruisers Voltaire, Diderot, Jules Michelet, and Ernest Renan. If France has been the reservoir of political ideas and ideals for the world, it is not merely because the French are a highly volatile race given to experimentation, but because of the large share which men of imagination—philosophers, scientists, men of letters—have played in her political life. The ardent intellectual curiosity of the French nature spares no field of life. But something more than curiosity enters into the account. There is also the habit of laborious application. Tourists have made a commonplace of the thrift and industry of the French working and trading classes. What they have not touched upon is the industry of the French intellectual classes. Only now are we beginning to realize the magnitude of the labors of a Pasteur or a Poincaré, or the lesser-known pioneers who made possible many inventions that enter intimately into our modern industrial life.

Nothing can be further from the truth than the popular conception of the Parisian man of letters as a jolly boulevardier who does his literary work in intervals of social intrigue and the pulling of wires. The extraordinary copiousness of a Claretie is no exception; it is true of most French writers, from sober craftsmen like Sainte-Beuve and Emile Faguet to rebels like the late Catulle Mendès. This, too, goes back to old French tradition, to the numberless volumes of Voltaire and the gigantic labors of a Diderot. Such extraordinary productivity will be explained only to a minor degree by the fact that the task of learning how to write is spared to every Frenchman, who is born with the gift of supple and accurate expression. Nor will the press of necessity explain everything. The pecuniary rewards of authorship in France are not great as a rule, and a writer to make a living must write continuously. But the explanation is that here is a nation which knows how to combine application with artistic ease; a nation which has solved the important problem of how to be gay and how to work.

NEWS FOR BIBLIOPHILES.

Brunswick County, in Virginia, was formed in the year 1720 from the counties of Surry and Isle of Wight, in view of the fact that "the frontiers towards the high mountains are exposed to danger from the Indians, and the late settlements of the French to the westward of the said mountains." The chief Indian Trading Path from James River to the south traversed what became territory of Brunswick County, and at a point on this road, in 1714, Gov. Spotswood had set up a fort and a school, both for the good manners of the aboriginals. Brunswick County lay very near the West for many years of the eighteenth century, and conditions in the region were not greatly dissimilar to those obtaining about Jamestown when George Sandys was making his version of the "Metamorphoses of Ovid," printed in folio at London in 1626.

'Twas always spring; warm Zephyrus sweetly blew
On smiling flowers, which without setting grew—

Sandys may have written the lines during the excellent crop season of 1622, a year of maize so high that the Indians found good cover in approaching the settlements for their dreadful slaughter.

Brunswick County had been but two years established, under the new house of Hanover, when there was born at Anglesea in Wales, Goronwy Ddhu o Fon, that is, Black Goronwy of Anglesea, called Goronwy Owen, who was to die in the County of Brunswick some fifty years later, the last of the great poets of Wales. Goronwy Owen came to Virginia about 1757, was for two years master of the Grammar School at William and Mary College, and thereafter minister of the Parish of St. Andrew's in Brunswick County. His grave there has recently been

identified. Tho author of the "Cywydd y Farn" was an Oxford man, one of the numerous alumni of the English and Scottish Universities to whom fell the task, before the Revolution, of instructing many of the youth of Virginia in the Latin and the Greek, with something of the mathematics. Goronwy Ddbu, immortal composer of the "Last Judgment," was fond of drink, and it is not certain that he was a useful man in America, or that he added to his poetical works among the woods of Brunswick County.

Mecklenburg County, set off in 1764, had been a part of Old Brunswick. For many years before the formation of Mecklenburg the Munfords of that county played a part as active men of the frontier. Robert Munford, perhaps grandson of the emigrant, married into the legal family of Beverley. Robert Munford's son, William Munford (born in the County of Mecklenburg in 1775), was the grandson of William Beverley, an historian of Virginia (editions 1705 and 1722), who was the first cousin of Sir John Randolph, uncle of William Stith, an historian of Virginia (first ed., 1747). William Munford had affiliations with an earlier man of letters. The obituary notice of Sir John Randolph, Knt. (*Virginia Gazette*, March 11, 1736-7), runs: "He was a gentleman of one of the best families in this country, although what Livy says of the Romans, soon after the Foundation of their City, be very applicable to us here—*in novo populo ubi omnis repentina nobilitas fit*, yet his family was of no mean figure in England before it was transplanted hither. Sir Thomas Randolph was of a Collateral Branch, which had the Honour, in several important Embassies, to serve Q. Elizabeth. Mr. Thomas Randolph, the poet, was great Uncle to Sir John. An immature Death put a Stop to his rising Genius and Fame; but he had gained such a Reputation among the Wits of his age that he was exceedingly lamented; and Ben Jonson always expressed his Love and Esteem for him, calling him by no other Title, but that of Son."

William Munford was at college at William and Mary, where he seems to have been introduced to the classical literatures by the celebrated George Wythe, under whom also he studied law. Munford practiced law with success in his native county of Mecklenburg for about ten years, finding time for literary diversions. He published at Richmond in 1798 (12mo, 189 pp.) "Poems and Compositions in Prose on Several Occasions. By William Munford, of the County of Mecklenburg and State of Virginia"—largely a Tragedy, Almoran and Hamet, founded on an Eastern Tale of that name; versions of the Odes of Horace; and metrical versions of Ossian. Removing to Richmond about 1805, Munford held office as a member of the Council of State until 1811, when he became Clerk of the House of Delegates, so continuing until his death in 1825, in the month of June. His Preface to his translation of the Iliad of Homer is dated, "Richmond, May, 1825."

Munford's Homer must, no doubt, be accounted a creditable work. It was published by his wife in 1846, two volumes, 8vo (Boston: Little & Brown). Of his task the author remarks: "How far I have succeeded in this difficult enterprise, the public will judge, if not prevented from reading this work by the prejudice unfortunately existing against American poetry. I hope, however, that some at least of the *lovers* of *Homer* will not be unwilling to behold their favorite author arrayed in such various suits of apparel, as may be furnished by artists of different tastes. Pope has equipped him in the fashionable style of a modern fine gentleman; Cowper displays him, like his own Ulysses, in 'rags unseemly,' or in the uncouth garb of a savage. Surely, then, there is room for an effort to introduce him to the acquaintance of my countrymen in the simple yet graceful and venerable costume of his own heroic times." For example:

> Oh scandal and disgrace!
> Truly ye talk like feeble, beardless boys,
> Who know not warlike deeds. Ah! whither now
> Are fled our solemn promises and oaths?
> Evanish'd with the smoke of sacrifice!
> The councils and designs, by heroes fram'd,
> The treaties, with unmix'd libations crown'd,
> And right hands join'd, to which we trusted once,
> Are fruitless all! For without benefit
> We wrangle and dispute, and staying here
> However long, we find no remedy.
>
> [Book II, ll. 441-451.]

Correspondence

GERMAN DEGREES.

TO THE EDITOR OF THE NATION:

SIR: Last summer, when the report of the attendance at the German universities for the preceding semester came into my hands, I tried to make an estimate of the number of doctor-theses laid before the faculties of those institutions in which the German language is used as a medium of instruction. According to my calculation, it amounted to about 5,000 annually. These figures were so large that I thought I must be mistaken. However, the *Deutsche Literaturzeitung* contains a report of a paper read before the Association of German University Professors, held in Strasburg on the 13th of October last, by Professor von Amira, of Munich, in which he affirms that more than 5,500 such dissertations were issued in 1910 from the universities of the German Empire alone. My figures were, therefore, a good deal too low. Yet the sum-total does not seem unreasonable when we reflect that during the past few years more than 60,000 students have attended the German universities, without counting those in Austria and Switzerland.

It is within bounds to say that of this enormous output not one thesis in ten is worth printing, and not one in a hundred has any permanent value. Professor von Amira declared that in foreign countries German doctors have come to be regarded as a fit subject for merriment, and that even at home they are not taken very seriously. He finds a good deal of difference in the requirements of the different universities and even in the faculties of the same university. He recommends a number of reforms, the adoption of which he proposes for Germany, Switzerland, and Austria, in order to bring about uniformity in the matter of conferring degrees. One is that an accepted thesis should really enlarge the boundaries of knowledge and should not be a mere statistical collection of data. Another is that the candidate should be required to testify under oath that his work was done without assistance and that if it should be subsequently discovered that he had not acted in good faith his degree should be revoked. Evidently the sense of honor in German university circles is not as keen as it is usually supposed to be.

Now, no one believes it is possible for several thousand persons to prepare as many documents that by any stretch of language could be said to contain anything original. Search is not research. While there are doubtless yet many things to discover in the vast domain of nature, that of the historical sciences is rapidly becoming smaller. Would the result not be far more satisfactory if assimilation rather than discovery were set as the goal to be striven for? There would be no danger of exhausting the material. A thesis might still be required, but more attention should be paid to the soundness of the ideas it contained. A great deal of stress should be laid upon the oral part of the examination. This would serve to bring out to what extent the candidate had really made the matter under study a part of his mental equipment, at least if the theme chosen lay in the field of literature. It might not be wise to set a high standard of literary excellence for persons who intend to devote themselves to purely practical activities. But such a requirement would not be out of place for those who expect to devote themselves to teaching. That this goal is not impossible of attainment is proved by the fact that French books as well as articles in French periodicals almost without exception display finer taste in composition than those appearing on the other side of the Channel or of the Rhine.

Many German professors have expressed the opinion that at least 40 per cent. of their students ought not to be in a university at all. The same judgment might with justice be applied to this country. Too many young people are looking towards gaining a livelihood with their wits who should be using their hands for this purpose. Our vicious practice of "drumming up" students is largely responsible. A slight reaction against purely practical studies has set in on this side of the Atlantic. Such seems also to be the case in France, if Professor Laurand is not mistaken. He affirms, in the announcement of his forthcoming "Manuel des Etudes grecques et latines" that "Les études classiques reviennent en honneur. De plus en plus on se rend compte qu'on ne peut les négliger sans détriment." On the other hand, the tendency in Germany is more and more strongly towards the purely practical in education, if the proposed establishment of two or three new universities from the curricula of which the culture studies are to be omitted, can be taken as a sign of the times. CHARLES W. SUPER.

Athens, O., December 24.

THE BULGARO-SERVIAN TREATY.

TO THE EDITOR OF THE NATION:

SIR: In the issue of the *Nation* for December 11 there is a reference to the enterprise displayed by the Paris *Matin* in publishing the secret Bulgaro-Servian

treaty of March, 1912. The gist of your comment is that Russia, Germany, and Austria were aware of the alliance, and that their action in trying to prevent war with Turkey was largely formal.

May I point out that this is no startling revelation? In the *Revue de Paris* for December 15, 1912, there appeared an article on "La Ligue balkanique," by Auguste Gauvain, who was obviously inspired from trustworthy sources. It was there stated that Berlin and Vienna were privy to the alliance, and the fact has not been denied, so far as I am aware. On January 9, 1913, the Sofia *Mir*, the Governmental organ, acknowledged that the idea of the alliance was due at the outset to foreign inspiration. Finally, from the articles published by the *Times* (weekly edition, June 20), on the history of the alliance, it is clear that the Bulgaro-Servian agreement was due to "Russian inspiration," represented by M. Hartwig, the energetic Russian Minister at Belgrade. These articles were written by Mr. J. D. Bourchier, the *Times's* correspondent in the Balkan peninsula, whose accuracy is beyond question, at least on matters of fact.

BERNADOTTE E. SCHMITT.

Cleveland, O., December 23.

A DEAN OF WOMEN.

TO THE EDITOR OF THE NATION:

SIR: I have read with much interest in the *Nation* of November 13 your correspondent's query regarding deans. I cannot attempt to answer so large a question since I have been trying to discover the *raison d'être* of but one species of dean. The writer says "dean of women of course." I suppose it has come to be "of course," but why? What is the real function of a dean of women? I have studied the occupants of the position in various colleges, but they are so different there seems to be no acknowledged type. In one case the dean is a handsome woman, dresses well, is possessed of some scholarship, but without sympathy or social tact. In another, she is a kind of superior matron whose work is almost exclusively supervision of boarding arrangements for women. She is not at all sure to dress suitably and is far from impressive. Another dean is learned, kindly, but has no ability to know or remember her girls. Still another has interest in girls, but violates ordinary rules of good manners. Some have the scholarship to rank with the best faculty members, others are not even college graduates.

The question naturally arises, what is a dean of women? She seems to be, in some sense, the successor of the old-time preceptress changed to fit higher education. If the office is a good thing it should be made a success. I have wondered if part of the difficulty in this matter comes from the fact that while a dean of women must be a woman's woman, under present conditions the position is determined by men as presidents of colleges and as boards of control. Must a dean be a learned woman who represents the best in higher education and ranks high in her chosen field? Should she be a society woman in the best sense of the term, who will be a model for the students that in our democratic colleges need to be trained for a new social life? A woman with human sympathy, who will win her girls? A physical director to protect and improve health? An administrator? A dragon? A policewoman? Or by chance must a dean be a combination of all these? I understand courses are to be offered in some universities to train deans of women. Are deans like poets or can they be made?

I once knew a member of a board of trustees who desired "a woman of the type of Mary Lyon, Emma Willard, and Alice Freeman Palmer." Maybe the dean of women is something as impossible as a woman combining all the good points of these three unique women.

MARY B. PUTNAM.

Literature

A NEW VOLUME OF THE CAMBRIDGE MEDIÆVAL HISTORY.

The Cambridge Mediæval History. Planned by J. B. Bury, M.A., Regius Professor of Modern History. Edited by H. M. Gwatkin, M. A., and J. P. Whitney, B.D. Volume II: The Rise of the Saracens and the Foundation of the Western Empire. New York: The Macmillan Co. $5 net.

This great coöperative undertaking which continues backwards, so to speak, the "Cambridge Modern History" that was completed a year ago, resembles that huge work, both in its general plan and in the lines along which that plan is carried out. Instead of one unbroken and continuous narrative, we have a succession of chapters by different authors, who endeavor among them to cover the whole field by breaking it up into subdivisions; each subdivision being allotted to a writer who is a specialist in that particular division. This method, successfully used by Rambaud and Lavisse in their French "Histoire Universelle," has certain evident advantages, but it almost of necessity involves some overlapping, some risk of omissions, and also a possibility of divergence between the views of two or more writers who are dealing with cognate topics. To the experienced scholar this will seem no great evil: it may even be deemed by him a gain that the various aspects of the same event, or character, or institution, should be presented within the covers of the same book. But the "general reader" may be occasionally perplexed by finding that a theory which he has accepted with satisfaction from the writer of one chapter is ignored or set aside by the writer of another, perhaps without reasons assigned.

The present volume has twenty-two chapters and 891 pages, without counting the maps. It is the work of twenty-one writers, of whom nine belong to the European Continent, one (Professor Burr, of Cornell University) to the United States, and the rest to Great Britain. The period covered is a tolerably well defined period, viz., that from the accession of Justinian to the death of Charlemagne. Besides the more directly narrative chapters, there are several which are, very properly, devoted to the description of institutions. These include The Governmental and Monastic System in Gaul under the Merovingians; Imperial Administration in Italy and Africa; Foundations of Society, *i. e.*, the Origins of Feudalism (by Prof. Paul Vinogradoff); Legislation and Administration of Charles the Great, by Dr. Gerhard Seeliger, and Roman Law, by Mr. H. J. Roby; the last a chapter written with thorough knowledge, which, perhaps in deference to the example of Gibbon, has been made to contain not only an account of Justinian's compilations, but virtually a miniature treatise on the law of Rome, with special reference to the alterations made by Justinian or his legal advisers. The ecclesiastical side of history is dealt with in a chapter upon Keltic Heathenism in Gaul and in the British Isles; and on Germanic Heathenism, with a long chapter immediately following on the Conversion of the Kelts in Roman Britain, in Scotland, and in Ireland, and also on the Conversion of the Teutons in England and in Germany. We find also a chapter on Pope Gregory the Great, but no account of the development of doctrine or ritual during the period covered by the volume (sixth, seventh, and eighth centuries). The early growth of the Slavonic peoples, an obscure and curious subject upon which it is hard to find any full or trustworthy information in any English book, is treated by Dr. Peisker, of Gratz, in a chapter entitled The Expansion of the Slavs. Three chapters are devoted to Islam. The first traces the career of Mohammed; the second describes the expansion of Saracenic power in the East; the third tells of the Arab conquests in North Africa and Europe, carrying the story down to the beginning of the conquest of Sicily from the Saracens by the Normans in A. D. 1061.

The execution of the book is very similar to that of the previous volume and to that of the "Cambridge Modern History," which has naturally and properly been taken as a model. Some writers are more scrupulously dry and exact than others, some a little more juicy than others. Dr. Rafael de Altamira's account of the Visigothic kingdom in Spain is pleasantly as well as clearly expressed, and presents in a concise form an illuminative view of a very dark and perplexing period. It is certainly not so entertaining or pictorial as Washington Irving's "Legends of the Conquest of Spain," but it

gives a more reasonable explanation of the collapse of the Gothic monarchy under the Muslim attack.

Among the other articles which have a certain measure of novelty because the facts here collected have been difficult to obtain except by ploughing through a number of books containing different and often irreconcilable views, are those already mentioned on the heathenism of the primitive Celts and Teutons, and on the circumstances of their respective conversions to Christianity. These belong to the dry category. They are strings of facts rather than connected presentations of phases of historical development; but the facts have been collected with critical care, and at least the rudiments of the subject are well set forth. In Professor Whitney's chapter on the Conversion of the Teutons in England and in Germany, there is no less knowledge and more of constructive quality. It is an excellent summary of a series of events which have been the theme of much controversy.

In the period which the volume covers four personalities stand out, overtopping all others, viz., the Emperor Justinian, Pope Gregory the First, Mohammed, and Charlemagne. Of these four the one about whom we would gladly know most, because he had the greatest influence on the world, is the one of whom we actually know least, not that there are not an immense number of stories current about him, but that it is difficult to determine how much truth there is in the stories and thereby to arrive at any positive conclusions. Mohammed is one of the five or six figures in history about whom curiosity is never satisfied. The most divergent views of his talents, as well as of his honesty and his moral qualities generally, have been taken, and although no one would now follow the European writers of the seventeenth century in calling him "the impostor of Mecca," his character and conduct continue to afford matter for endless debate. In the chapter allotted to him there is quoted a saying of Theodor Nöldeke, one of the greatest Semitic scholars of our time, that, having in his younger days planned a work on the history of the early Muslim Empire, he was finally deterred from carrying out the scheme by his inability to offer any satisfactory account of the Prophet's character. Mr. Bevan, professor of Arabic at Cambridge, England, in the critically studied, carefully written, and well-balanced account which he gives of Mohammed's life, does not attempt what Nöldeke found an impossible task. But he at least gives in a clear and compact form the gist of the data we possess. He truly observes that in the absence of all external—*i. e.*, non-Arabian and non-Muslim—sources we are obliged to rely on what Muslim writers tell us, and they are obviously very doubtful witnesses. Nevertheless, people will go on studying a personage so extraordinary, and fresh theories will continue to be formed about him, and also about the causes of the amazingly rapid course of victory which attended the arms of his disciples and successors in the century that followed his death. Mr. Bevan is chary of speculation; but he seems disposed to attach rather less importance to the Prophet's personality than scholars did fifty years ago.

> In discussing the subject [Mohammed's career] there are two opposite dangers which we must strive to avoid. On the one hand, we should beware of assuming that Mohammed's doctrine and policy were determined solely by his own personal qualities. Much that strikes us as peculiar in his preaching may in reality be due to his Jewish or Christian informants. It is likewise clear that the spread of his religion was largely governed by factors over which he had no control. All the evidence tends to show that during the first few years of his propaganda he never dreamed of acquiring political power. He strove, it is true, to convert Mecca as a whole, and not merely a few individuals, to the true faith; but this was not in view of an earthly kingdom—it was in view of the impending Day of Judgment. Even when at length circumstances placed him in the position of a ruler, his authority rested much more on the voluntary cooperation of his followers than on any material resources that were at his command. It has often been suggested in recent times that the religious movement of which Mohammed was the head coincided with a great national movement on the part of the Arabs, who, it is said, had already developed, independently of Islam, a sense of their superiority to other races, and were eager to overrun the neighboring countries. On this question it is difficult to pronounce a definite opinion, since nearly all our information about the Arabs of that period comes through Muslim channels. But in any case, the national feelings of the Arabs played a very important part in the diffusion of Islam.
>
> On the other hand, we must avoid the error of ignoring the extraordinary influence exercised by the Prophet over his disciples, an influence which was apparently due quite as much to his moral as to his intellectual qualities. The confidence which he inspired may seem to us undeserved, but it is only just to acknowledge that he used his immense power oftener for the purpose of restraining than for the purpose of stimulating fanaticism (pp. 328, 9).

The view of the spread of Islam here tentatively recognized by Professor Bevan is put much more positively by Professor Becker, of Hamburg, author of the next following chapter on the Expansion of the Saracens. He suggests that the Arab migration and conquest are conceivable without the intervention of Islam at all. "The movement itself," he holds, "had been on foot long before Islam gave it a party cry and an organization." This idea, and others bearing on the forces at work throughout Arabia in the Prophet's lifetime, are supported in paragraphs too long to quote, which set the early history of the Muslim conquests in a fresh and unfamiliar light, and give a certain novelty to this part of the volume.

The administrative system of Charles the Great receives that full treatment which is its due, and the three chapters assigned to the great Frankish King and his coronation as Emperor, two of these by a German professor and one by an English ecclesiastic, are among the best in the book. We cannot but regret, however, that the practice followed in the Cambridge Modern History of giving no references to authorities, and of drawing no distinction, in the bibliographies attached to each chapter, between works of real value and others of little or no consequence, has been continued here. It is a pity to send the student to a book whose title promises much while its contents perform nothing, as sometimes happens in these lists. Otherwise we find the lists helpful. One improvement on the Cambridge Modern History we gladly note. The historical maps are placed at the end of this volume, instead of being relegated to one which has not yet appeared. They are well executed, and a great aid to the comprehension of the text. Taking this volume as a whole, it gives us every reason to hope that the series will be of high and permanent value to the student of the Middle Ages.

CURRENT FICTION.

The Story of Mary Dunne. By M. E. Francis (Mrs. Frances Blundell). New York: Longmans, Green & Co.

This story has to do with that newly advertised institution of white slavery which has proved such a boon to the playwrights and novelists of the current season. Here again is the beautiful and innocent young girl from the country decoyed to an evil house and starved and beaten into a life of shame. The situation is that of "My Little Sister" and a dozen other recent narratives. The atmosphere is fresh, however. The very ingenuousness of the tale, its touches of frank melodrama, are marks of sincerity.

Mary is the violet by a mossy stone on a far Irish hillside. She has a lover, but he must go to America to win a home for them both. After he is gone, she aspires to earn her mite towards their future happiness. The high wages of England tempt her to cross the Channel. It is her own good old priest who puts her in charge of the "kind, motherly woman" they meet by chance aboard the boat. Then the usual thing happens. After a time, freed for the mo-

Burlingame Public Library

ment from her prison, Mary flings herself under an English motor-car. But she does not die, and after a number of incidents involving a chivalrous hospital doctor, the old priest, and her returned and prosperous lover, a happy ending is achieved. The earlier chapters of the story, with their picture of a family of Irish peasants, have a simplicity and charm which are later sacrificed to the exigencies of the painful theme.

The Spare Room. By Mrs. Romilly Fedden. Boston: Houghton Mifflin Co.

Good farce in fiction is not too common, and this, taken frankly as farce, is good. It is in two parts: the first virtually a prologue, in the form of letters; the second, which is much longer, a facetious narrative. A honeymooning couple, British groom and American bride, take a villa at Capri. It is out of repair, but it has a single available "spare room," to which, in their new pride of possession, they casually invite a number of their relatives and friends. Unexpectedly, on the same day, these persons all descend upon them. The shifts employed to house the interlopers, the complications which arise in consequence of their uncongeniality, are (to a reader in the right mood for farce) really funny. With the aid of two or three love-affairs, the situation is finally unravelled to the satisfaction of everybody concerned.

The Fire Within. By Patricia Wentworth (Mrs. G. F. Dillon). New York: G. P. Putnam's Sons.

This story makes implicitly two demands of the reader. First, he must grant that the most intimate affairs of life are proper material for the novelist. The second assumption cannot be stated baldly without injustice to the book, but it concerns the extent to which a man may act unconsciously, in a dream. If we accept Mrs. Dillon's postulates in these two matters, we shall find little to criticise in the story; for she has handled her material with sincerity and delicacy.

David Blake, a young physician, is desperately in love with Mary Chantrey, who has married his friend. Her sister Elizabeth has for years been in love with David. To shield her husband from a charge of murder, Mary exerts her power over David to make him violate the ethics of his profession. It turns out that this was unnecessary; but David's moral balance is upset by having yielded. His passionate love for Mary reasserts itself, he takes to drink, and sleep deserts him. When he is at the point of breakdown, he discovers that Elizabeth has the power to soothe him and make him sleep. Knowing that he is in love with Mary, she marries him to save him. Under Elizabeth's influence David regains his poise, and through a recurrent dream which he has had since boyhood, he is led to the discovery that he loves her. The dream love is brought into touch with waking life only through a rude shock. The working out of this device puts a severe strain on the reader's credulity, and involves the handling of delicate and debatable material.

The bits of verse prefixed to the chapters are excellent.

A Son of the Hills. By Harriet Theresa Comstock. New York: Doubleday, Page & Co.

Mrs. Comstock's story has rare merit. It conveys sympathetically a message from the "poor whites" of the Southern hills. Soon after Sandford Merton's mother died and the woman Mary came to live in his father's cabin, Sandy learned to feel that he had a mission, that he must go far away North and there learn to help his people. He bided his time and worked, and after seven years he had saved thirty dollars. He had heard of a college in Massachusetts, and one night he stole away to walk to Massachusetts. He fell ill on the way, and was taken in by a kindly bachelor, who educated him and sent him back to his people, after seven years. Of course, a little golden-haired miss is waiting for Sandy. About the two are built some of the most tender scenes in a book that is charmingly written. At times the story reaches a high dramatic pitch not without danger of toppling over into melodrama, but never quite falling. Highly effective is Mrs. Comstock's use of the mountain scene, not merely as a background, but as an active, regenerative force in the lives of her people.

Dave's Daughter. By Patience B. Cole. New York: Frederick A. Stokes Co.

The letter-writing predilections of Miss Mattie and Miss Matie, the two spinster dressmakers of a Long Island town, form the basis for the action of this story. Their naïve meddlesomeness takes an incredibly exaggerated form, but one fraught with the happiest possibilities for themselves and their friends. Noting in the paper that one Christabel Sayne is to spend $10,000 on her wedding gown, they write to her a scathing rebuke. Now, Christabel happens to be a young Western orphan, engaged to a New York society leader of fifty. She is starving to make the acquaintance of just such an unconventional pair, and promptly hunts them up. Henceforth, the spinsters think only of the girl's romance. They are astounded and grieved to find that she does not care for the match she is about to make, and that her heart is really set on a young Coloradoan, who seems too timid to declare himself. Inasmuch as all New York is agog over the wedding, the situation would present an *impasse* to any one with less courage than the dressmakers. But they find a way out.

GOVERNMENTAL EXPERIMENT.

Social Welfare in New Zealand. By Hugh H. Lusk. New York: Sturgis & Walton Co. $1.50 net.

It is unfortunate that the great strike in New Zealand broke out so soon after the appearance of this work, whose subtitle is, "The Result of Twenty Years of Progressive Social Legislation and Its Significance for the United States and Other Countries." Just twenty years have elapsed since the first arbitration statute of New Zealand was passed. Its purpose was to substitute the calm judgment of a court, the members of which might be expected to have a general acquaintance with the questions likely to come before them, and which should be presided over by a judge accustomed to hear and weigh evidence. It was characteristic of the New Zealand point of view that it took for granted the willingness of all classes of the community to submit to whatever was held to be fair and just by a court of this kind, rather than to insist on fighting a battle. Mr. Lusk says that experience proved that the makers of the new law had not been too sanguine.

The events of the last few weeks have, however, done not a little to impair the confidence bred by the experience of twenty years. In October a strike was declared which speedily attained national proportions, and worked havoc with the comfort and convenience of the general public; and in face, too, of the fact that under the law the labor-union was subject to a fine of £50 a day from the moment the strike was declared. It may be said that twenty years ago there were many who maintained that the compulsory arbitration law could not be thoroughly tested except in a period of pronounced financial depression, like that in which so large a part of the world, Australasia not excepted, now finds itself immersed.

Industrial arbitration is, however, only one of many economic and social departures in New Zealand. The fact that the sympathetic picture which Mr. Lusk has drawn of its operation is at the moment somewhat blurred, should not impair our interest in the remarkable scheme of social and industrial development which has been evolved by that far-off community. The people of New Zealand, or at least a majority of them, know what they desire, and if we may believe Mr. Lusk, they have succeeded in the main in attaining their ends. For eighteen years the colony has had a Labor Government. Immigration has been discouraged, the laboring man has taken precedence of the capitalist, small estates have enjoyed the favor of

the law rather than great, public utilities have been nationalized and municipalized—in short, a policy of state Socialism has been consciously adopted.

The aim of the present work is to trace these steps and to note dispassionately their consequences. We obtain, for example, a clear understanding of how the danger of capitalistic landlordism was averted. This danger was imminent forty years ago, and in 1872 a policy of immigration and public works was introduced which in ten years added $100,000,000 of debt to the $50,000,000 previously occasioned by the native rebellions. In 1882 the debt of New Zealand stood at about $300 for every man, woman, and child in the colony. It is not surprising, therefore, that the decade prior to the twenty years covered by the present work was one of depression and stagnation.

It is perhaps well to bear in mind that the many features of the present state Socialism in New Zealand were introduced just on the eve of, or subsequently to, the greatest industrial revival of modern times. It will be interesting to see how they stand the test of a world-wide industrial depression. It is a well-known fact that the policy which the colony has been perfecting in recent years necessitates exceedingly heavy loans in London during the next twelve months, a matter of considerable importance, in view of the present poverty of the international money market.

All this is said with the hope merely of enhancing the reader's interest in a book well worth his careful attention. The world cannot afford to ignore the remarkable experiments that have been carried on in this South Sea laboratory of economics. Mr. Lusk describes the present results of these experiments in a way to convince many that the last word has been said on the wisdom of New Zealand state Socialism. But his thoughtful and interesting work would leave a stronger impression on our mind if we could forget an utterance of about a month ago by a leading New Zealand newspaper:

> As a matter of fact, the principal weapon of the "Syndicalist" apostles is an organized and systematic terrorism. We have had an exhibition of this in New Zealand during the past few days, work having been generally suspended, not because the great majority of strikers were individually desirous of participating or because the great body of citizens were not anxious that industry should continue unchecked, but because ample police protection has not been available to prevent a temporarily successful because a very determined intimidation.

These words, indeed, picture a situation closely analogous to that which existed in the colony just prior to the policy which Mr. Lusk so painstakingly describes. One cannot read the present work without a consciousness of the irony of fate.

Carducci: A Selection of His Poems, with Verse Translations, Notes, and Three Introductory Essays. By G. L. Bickersteth. New York: Longmans, Green & Co. $3.50 net.

Mr. Bickersteth does not "put forward the translations in this book as in any sense an *equivalent* of their originals," but publishes them "in the hope that they will serve not as a substitute for, but as an *interpretation* of, the original to those unacquainted or only slightly acquainted with the Italian language." But if the disclaimer were quite whole-hearted and the purpose were quite single, surely the translations would have been in literal prose rather than in verse that is far from literal. The reader "only slightly acquainted with the Italian language" would be hard put to it, in many instances, to match the English and Italian phrases. The stanza,

> With voice as of tempest
> No yoke may confine
> Cries Savonarola
> Our great Florentine,

will hardly guide him to the understanding of the Italian:

> E pugna e prèdica
> Sotto la stola
> Di fra' Girolamo
> Savonarola.

The truth is that the obsession of rhyme and rhythm is upon the translator, and that he sacrifices thereto, most inauspiciously, the interpretation that he might have made so excellent. The "Shelley" suffers particularly from the intrusion of padding adjectives: "giovini anni" becomes, for instance, "the *tearless* years of my youth," and "quest' urna che freddo ti chiude" becomes "this urn, thy cold, *uncongenial* prison." Most of the variations from the Italian are of this sort; but the reviewer has noted some thirty passages for which the text was evidently misread.

One might forgive all this if the resulting verses were beautiful in themselves; but they are not. Carducci, in spite of the *Odi barbare*, loved true rhyme, and would have been quick to protest at such pairs as "over: Jehovah," "o'er the sea: Anadyomene," "fairer: Glicera," "old man's: countenance," "honour: on ner," "rising: dies in," "behind: grinned," "clear: Maria," or at such a stanza as this:

> Thereafter Tiber's dark-haired nymph shall rove
> 'Mid moss-grown stones, and tell
> The pilgrim how "these are the ruins of
> A shame unspeakable."

Nearly all the sonnets, however, are skilfully done, and many of the unrhymed translations from the *Odi barbare* are very good indeed, notably the "Sirmio."

The sins of omission are few, though one misses the "Ruit hora," the "Victory of Brescia," and the "Monte Mario." The sins of inclusion are worse. The presence of the "Satan" is doubtless justified; but the reader, beginning with that and finding next two poems in such wretched taste as "Per le nozze di un geologo" and the "Meminisse horret," would be quite excusable should he lay the book aside in disgust.

The introductory essay on the poetry of Carducci is excellent. It deals mainly with the practicalness of Carducci's nature and poetic purpose; with his selective realism—that is, the concrete, explicit treatment of themes instinct with poetry; and with his constant subjection of form and matter to the strict control of reason. The title of Carducci's second collection of poems is "Levia gravia," not "Levia grandia," as Mr. Bickersteth invariably writes it.

Mr. Bickersteth speaks of Mrs. Holland, whose "Poems of Carducci" (containing about twenty translations) appeared in 1907, as his only English predecessor. He does not mention Frank Sewall's "Poems of Giosuè Carducci," published in New York in 1892, which contains some forty translations—better, on the whole, than those of the two English writers. Mr. Sewall's excellent translation of "The Ox" seems to have been known, in some way, to Mr. Bickersteth, for the two versions coincide in eight of the fourteen rhyme-words, agree verbally in several cases where the English is somewhat at variance with the Italian, and have in common the two lines, "How solemn, like a monument, thou art" (a very free translation), and "All the divine green silence of the plain."

Palæographia Iberica. Facsimilés de Manuscrits Espagnols et Portugais (ixe-xve siècles) avec Notices et Transcriptions. Par John M. Burnam. Paris: Librairie Champion. 15 fascicules, each 25 francs.

The above title apparently promises a much-needed work, a history of writing in mediæval Spain presented by annotated facsimiles. Till now, there has been nothing of the kind. Collections like those of Ehwald-Loewe and Muñoz y Rivera contain valuable materials for such a history, but that history is still to be told. We are not sure that Professor Burnam's publication will bring us to the goal. The earliest manuscripts discussed are, according to the prospectus, of the eighth century, or, according to the present title, of the ninth. The prospectus further indicates that attention will centre chiefly on texts in the Spanish and Portuguese languages. If this plan is pursued, the earlier and

more important part of the history will receive inadequate treatment, and "Palæographia Iberica" prove too inclusive a term. But instead of demanding what Professor Burnam may not have intended to give, we must be grateful for what he has given.

The first fascicle contains twenty facsimiles, of which all but four are of Latin texts. One, a famous Paris codex of the "Lex Romana Visigothorum," already accessible in reproductions, is of the ninth century, eight are of the twelfth, five of the thirteenth, four of the fourteenth, two of the fifteenth. No strikingly novel or individual features appear in the later Gothic hands here represented. The most interesting are certain twelfth-century scripts which illustrate the gradual triumph of the Caroline hand in Spain. In No. v, a Lisbon codex of Gregory's "Liber Quæstionum," the writer still cultivates the old Visigothic style, but he also shows the influence of the new script. In No. vi, "Incerti Tractatus," also at Lisbon, the general effect is that of late Caroline, with a few lingering traits of Visigothic. Of much historical interest are the five plates devoted to a Lisbon manuscript in three volumes, written at the beginning of the thirteenth century and containing the dictionary and other works of Papias; plates xiv and xv reproduce pictures illustrating the ancient system of counting on the fingers.

In describing the different plates, the author gives first an account of the manuscript with a bibliographical notice, then follows an enumeration of special features of the script, including ligatures, abbreviations, and punctuation, and finally the text is transcribed. This information is satisfactorily presented and is generally, though not scrupulously, accurate. For instance, in pl. i, p. 2, the *s*-shaped sign stands for "ue" on l. 19, not 9, and is not used for an *s* in l. 24; as the transcription rightly states, the original reading is "pare*m*," not "pares." On pl. xvii, p, 67, l. 1 read "Illa," not "Jua"; l. 2, "*con*sistit," not "*con*stitit"; l. 3, "nece*ssa*ria," not "nece*ssen*tia"; l. 24, what is called *e* seems rather a false stroke corrected; l. 25, "quedam" ("quidem"?) rather than "quod"; l. 27, it is not noted that "sinc" is deleted. If here and elsewhere the transcription is inexact, it reproduces, with a rather meticulous nicety, certain palæographical minutiæ, like the occasional appearance of the majuscule *M* and *R* in the minuscule. The letter *i longa* is represented by a special sign. For the form in which the shaft runs above the line, now a capital *I*, now *j*, now both *I* and *j* (pl. 5), are used; in pl. i, l. 6, an erroneous *l* appears in *conlugali*. *J* is also employed for the form in which the shaft runs below the line. No phonetic principle is involved here; the scribe used the long shaft on a purely graphic principle, to avoid confusion with an adjacent short stroke. Spellings, therefore, like "Jn," "gustaverjt," "diujsus" hinder rather than help the object for which a transcription is intended. If such elaborateness were profitable, one might more appropriately distinguish the two forms of the ligature *ti*, which, as Loew has shown, have both phonetical and historical significance. But it is better to include all such matters in the explanation of the plates; for the reader will verify these observations from the plates, not from the transcriptions.

In spite of these defects in details, "Palæographia Iberica" presents, in excellent reproductions, useful specimens of the script, especially the later script, of Spain and Portugal. Though the prospectus makes no certain statement in the matter, we hope that Professor Burnam will treat in an introductory volume the history of writing in Spain, so far as it is presented in his facsimiles.

Notes

This week Little, Brown & Co. will publish the first book of a young English writer, Arthur F. Wallis, whose "Idonia, a Romance of Old London," is a tale of love and roguery.

The same house is bringing out "A People's Man," by E. Phillips Oppenheim, and "From the Angle of Seventeen," by Eden Phillpotts.

The second in the series of books published for the Bureau of Social Hygiene by the Century Company, Abraham Flexner's "Prostitution in Europe," will be issued January 17.

Among the volumes of fiction which the Century Company will publish early this year are "William and Bill," a study of boy life by Grace MacGowan Cook and Caroline Wood Morrison, and "Home," anonymous.

Martin Secker is bringing out this week Gilbert Cannan's new novel, "Old Mole."

The religious penances and punishments self-inflicted by the holy men of India are described, with seventy striking illustrations, by the Rev. W. M. Zumbro in the *National Geographic Magazine* for December. He shows very clearly what a hindrance these five million idlers are to the development of a healthy national life in India. Texas, where more than one-third of our cotton crop is produced, and where, if all the suitable land was under cultivation, there would be a possible production of forty million bales a year, or more than double the present crop of the world, is described by Mr. N. H. Darton, geologist of the United States Bureau of Mines. Another valuable asset, to which he calls attention, is the bituminous coal area which it is estimated contains thirty-one billion tons. A marvellous industrial future is predicted for our largest State.

The magnetic work accomplished at sea is described by Prof. L. A. Bauer, of the Carnegie Institution of Washington, with plates and sketch-map, in the *Geographical Journal* for December. Sir Aurel Stein gives an account of the first part of his new expedition in Central Asia. Starting from Kashmir he crossed by fifteen passes, between 10,000 and 17,400 feet in height, an almost unexplored region to Chinese Turkestan. In many places he found extensive ruins showing that a dense population existed in pre-Mohammedan times where now it is an almost uninhabited desert. At one place there were unusually fine irrigation canals of solid stonework. Some rock tombs in Arabia are described with illustrations by Dr. F. G. Clemow, who was sent to this region by the International Board of Health in Constantinople to select the best site on the Hejaz railway for a pilgrims' quarantine station. The recent crossings of Greenland are sketched, with a map, and there are given the addresses of Lord Curzon and the Italian Ambassador at the presentation of medals to the survivors of the Antarctic expedition of Capt. Scott.

As the "Journals of Ralph Waldo Emerson" (Houghton Mifflin) draw to a close, the gleaning per year diminishes. The ninth volume covers a period from 1856 to 1863. Much of the comment is directed to the great public events then crowding one another. Emerson, except in a somewhat condescending attitude towards Lincoln, whom he personally knew, is singularly clear-sighted. Many of his utterances have prophetic weight. The present political confusion in England and America is hit off quite incidentally in the definition of classicism and romanticism. "Republics run into romance when they lose sight of the inner necessity and organism that must be in their laws, and act from whim." Again, in 1856, when men joked about secession, "South Carolina is in earnest. I see the courtesy of the Carolinians, but I know meanwhile that the only reason why they do not plant a cannon before Faneuil Hall and blow Bunker Hill Monument to fragments, as a nuisance, is because they have not the power. They are fast acquiring the power, and if they get it, they will do it." Singularly fine and Emersonian is a reflection on the multiform bereavement that may result from a single death. "When our friends die, we not only lose them, but we lose a great deal of life which in the survivors was related to them." One of the most striking fancies in the journals is this:

> Were it not fit subject for a poem, to send a soul to doom in the charge of an angel, and trace the angel's vain attempts to find a hell for it—the assimilating energy of Osman converting every place into the one thing needful, and every hobgoblin into the best company!

Such specimens may hint of the richness of these mature jottings of the sage. It is consistent with his own cult of inconsistency that he should write, "Science has never measured the immense profundity of the Dunce-Power," and less than two years later pen a contemptuous paragraph on the novels of Jane Austen, who surely was among the greatest of antidunces. Only one volume of the journals remains to be published; the whole series casts much new light upon Emerson's genius and should enhance his greatness.

Very few assertive and virile writers on economic and sociological subjects would

care to have their scattered sayings and writings, covering a period of a quarter of a century, gathered together in a single volume in such a way as to facilitate comparison and criticism. Yet this has been done in the latest volume of Professor Sumner's essays, "Earth-Hunger and Other Essays" (Yale University Press), by William Graham Sumner, edited by Albert Galloway Keller. It is a testimony to the real soundness of this great sociologist's views that his reputation suffers not at all thereby. To deny that there are contradictions would be futile, for they abound. But they are such contradictions as mark the truly great thinker, arising from emphasis upon certain points in certain connections rather than from any real inconsistency of belief. Many of these contradictions are of the sort which beset the student whose theory of life minimizes the potency of individual effort to change the operation of the great forces of social development, and yet whose native disposition leads him to make war unceasingly upon those things in society which seem to him wrong, or foolish, or futile. One or two examples will suffice. The first is furnished by what Professor Sumner has to say of ideals. In many passages the author voices his scorn of ideals, and brands their pursuit as socially injurious. Thus in the essay on "Purposes and Consequences" (page 73), he says: "It is a still more positive vice to act from an intention to attain ideals. Ideals are necessarily phantasms. They have no basis in fact." Yet on the second page after, the following sentiment closes this very essay: "At the present moment . . . the thing of the highest importance is the subjection of societal phenomena to scientific investigation, together with the elimination of metaphysics from this entire domain"—an ideal sufficiently grand for the most visionary. And throughout the book Professor Sumner continually advocates certain lines of social conduct which are none the less ideal because of a negative nature. Again, in the essay referred to, he says, "Socialism is not a subject for discussion by serious students of the science of society." Yet a large part of the book is taken up with the discussion, if not of Socialism, at least of Socialistic projects.

The range of topics covered in this volume is so great that to criticise the views advanced would be to tread upon almost every field of sociological controversy. It has been said repeatedly that one of Professor Sumner's great gifts was the ability to make men think. This book will set the reader thinking, and the very points at which the author's views challenge him most boldly will probably be where his thinking is most profitable. Those who have read the earlier volume of essays will find in this new book an even clearer exposition of the basic principles of Professor Sumner's sociological philosophy. The most important ideas which run throughout the majority of these essays are three—the importance of the ratio of men to land in all sociological analyses; the real nature of liberty and freedom, and the limitations of state control over the economic activities. The book affords an ample justification of the confidence of the editor that Professor Sumner's views on matters of this sort deal with perpetual realities, and are not evanescent but fundamental.

Dr. Preserved Smith, favorably known for his study of "Luther's Table-Talk" (1907) and his "Life and Letters of Martin Luther" (1911), now publishes the first volume of an English translation of "Luther's Correspondence and Other Contemporary Letters" (Philadelphia: The Lutheran Publication Society). This is another contribution to the rapidly increasing literature of selections of original material, a very welcome form of aid to the student as far as it goes, but, precisely in proportion to its volume, tending to confuse by its incompleteness and inevitable duplications. If an English translation of Luther's letters were desirable, it seems rather a pity that Dr. Smith, eminently fitted as he is for the task, should not have tried to make it complete, adding, if necessary, a selection of other letters by way of appendix. It is, for example, likely to prove irritating to the user of this volume to find thirty-seven letters of Luther, mostly to important persons, omitted here because Dr. Smith has already printed translations of them in his biography of Luther. A comparison with the originals shows that the editor has well lived up to his expressed intention to give a true and vivid reproduction of the writer's thought rather than an exact rendering of his language. The style is vigorous and lively, suggesting the force of Luther's own and following cleverly its varying moods. The notes, biographical, historical, and critical, are well-balanced, neither too many nor too few, and are invariably helpful to an understanding of the text. There is a useful index and a list of correspondents which would have been more useful if it had indicated whether a given letter were by or to the person named.

To the welcome reprint of the works of Samuel Butler, of "Erewhon," is added "Alps and Sanctuaries" (Dutton). It is considerably reduced in form from the original in quarto, but retains the old cuts by the author, and becomes more portable as a guide-book. In a brief introduction R. A. Streatfeild gives the circumstances under which the book was written. It is capital Butler in his most festal mood. The descriptions of places and persons are delightful, and the whole is intershot with Butler's peculiar wit and wisdom. Some of the best criticism of modern art education may be here found, but in the main grave issues are in abeyance and we have genial and lucid descriptions of the villages and pilgrimage shrines which are set on the middle slopes of the Italian Alps. A most winning and stimulating classic of the footpath.

In 1906 the trustees of the Illinois State Historical Library appointed a commission, composed of professors of history in the universities and normal schools of the State, to formulate a plan for the publication of the historical sources of Illinois, and to have general supervision over the scholarly work of the department. Shortly afterwards a general editor of the above series was appointed. Previous to this reorganization one volume of historical collections had been published, so that the present work, "Collection of the Illinois State Historical Library, Volume VIII, Virginia Series, Volume III, George Rogers Clark Papers, 1771-1781," edited with introduction and notes by James Alton James, Springfield, is the seventh volume issued under the new régime. The plan of the advisory commission for the publication of the collections marked a new era in the study of the history of a Western State. Instead of the haphazard methods of publication that had been in vogue up to this time, the Illinois State Historical Library has attempted to have each of its volumes cover a limited period or limited phase of history. The plan is to make such a clean sweep of sources, that the work may never have to be done over. To illustrate the plan, the present volume is the third of the Virginia series, the first two with the sub-titles "Cahokia Records" and "Kaskaskia Records" having been edited by Professor Alvord; a fourth volume will be edited by Professor James and will continue the George Rogers Clark Papers; and a fifth volume will deal with the financial side of the Revolutionary period in Illinois history. These five volumes will contain nearly every known document of importance that illustrates the history of Illinois between the years 1778 and 1790.

It is a pleasure at length to have a correct transcript of the famous letter by Clark to Mason, which contains the former's account of the occupation of the Illinois country, and also of his more important and longer memoir. The date of the latter has been a subject in dispute. Mr. Roosevelt in his "Winning of the West," asserted that the memoir "was written at the desire of Presidents Jefferson and Madison, and therefore some thirty or forty years after the events of which it speaks. . . . It undoubtedly contains some rather serious errors." Mrs. Minnie Cook was the first to point out, in the *Virginia Magazine of History and Geography*, the error of this late date; and Professor James has concurred with her in fixing the date of the Memoir between 1789 and '91, and in Appendix III he has printed the letters showing the conditions under which it was written. The same care as has been shown in Mason's letter and the Memoir has been shown in the other transcripts that are here published. So far as possible, these have been made directly from the originals in London, Paris, Madison, Washington, Ottawa, and elsewhere. The reviewer wonders, however, why Professor James thought it necessary to publish so many documents that had already appeared in previous volumes of the Illinois Historical Collections. It should seem that for his purposes a reference to these would have been sufficient.

The volume is preceded by an introduction of 167 pages, furnishing the history of the period. It is impossible to give unstinted praise to this part of the work, for it shows carelessness in sentence structure, but particularly a lack of logic in the whole presentation. There are also some things lacking that we should have expected to find. Clarke's expedition to the Illinois was undoubtedly the culmination of efforts by Virginia, sustained through many years, to make good her claims to the West. The fight of the Old Dominion against the attempts of the British Ministry to establish her western boundary from the time of the Proclamation of 1763 to Dunmore's War, are but the predecessors of this last attempt on the part of the seceding colony to

seize the fertile lands. Professor James has not brought out in his introduction this connection of Virginia's past attempts with this successful one. In his mind there seems to be no connection between Dunmore's War and Clark's expedition, and yet they are but phenomena of a similar kind. Again, Clark in his diary under December 3, 1777, writes: "taken in partnership by his Excellency P. Henry in taking a Body of Land." Professor James has made no attempt to explain this partnership, but when one remembers how closely Patrick Henry was connected with the western land schemes of Lord Dunmore, one can but wonder whether Clark's expedition may not have been a continuation of this patriot's efforts to make a fortune. Professor James has followed the usual account of the occupation of Kaskaskia as drawn from Clark's own statements, and yet some doubt has been expressed by previous writers as to whether the conception of the expedition originated in Clark's mind and as to whether there was so much surprise among the French in Kaskaskia as Clark describes. It was hoped that a careful study of the Clark papers would solve these problems, but the editor has not shown any interest in them whatever.

In spite of these criticisms, the introduction was decidedly worth doing. It is the first attempt to form a scientific interpretation of the Revolutionary War in the West up to the year 1781. Professor James's description of the efforts of Congress to obtain the support of the Western Indians, and to prepare an expedition against Detroit from Fort Pitt, are extremely valuable. He has clearly brought out, also, how Clark long planned to take Detroit, and has given an adequate account of his failure. Finally, the book, particularly the documentary part, is a most important contribution to our knowledge of Western history during this period.

Mr. James Davenport Whelpley would undoubtedly himself be the first to admit the defects inherent in the structure of books such as his "The Trade of the World" (Century). Generalizations respecting races and countries, always dangerous, become doubly so in a rapid-fire and necessarily brief survey, and, possibly, trebly so when this survey has to be made in a succession of more or less symmetrically constructed chapters where the temptation to the maximum use of contrast, antithesis, and epigram is, naturally, almost irresistible. With this general reservation kept clearly in mind, however, the reader will find this book of great interest, and he may have a good deal of confidence in the general truth of the pictures presented by Mr. Whelpley in its pages. The book is eminently one for the reader who wishes to be intelligently informed upon matters which furnish at all times a large part of daily news and daily comment. The general scope of the work is described in the opening pages. "The foreign trade of the world in 1912 amounted to more than $35,000,000,000. This is the great stake for which the International traders are playing the game this year" (p. 7). It is to illustrate the present position of the players in the "big game" that "The Trade of the World" is written. Separate chapters are devoted to each of the great nations of the world, and each chapter bears evidence of considerable thought and a wide knowledge of the essential facts. The style is simple and straightforward, but relieved by many interesting and pertinent phrases and anecdotes which make the book easy and pleasant reading. Particularly is this the case with the chapters on Great Britain, Germany, France, and Belgium, to which the average reader will doubtless turn with most curiosity. To the reviewer's thinking, however, it is the chapters on Japan, China, and Russia that are the most interesting and informing in the book.

Joseph Cullen Root, who died on Wednesday of last week, aged sixty-nine, was founder and sovereign commander of the Woodmen of the World. He wrote several books on woodcraft and a drama entitled "Consolidation."

The death is reported from Richmond, England, of Edith Emma Cooper, who, in collaboration with her aunt, Miss Bradley, was known as Michael Field. Their publications include: "Callirrhöé and Fair Rosamund," "The Father's Tragedy," "Brutus Ultor," "Canute the Great and the Cup of Water," "Stephania," "Underneath the Bough," "Long Ago," "The Tragic Mary," "Attila, My Attila!" "Sight and Song," "The World at Auction," "Anna Ruina," "The Race of Leaves," "Julia Domna," "Wild Honey," and "Poems of Adoration," the last almost wholly by Miss Cooper.

Science

A History of Land Mammals in the Western Hemisphere. By W. B. Scott. New York: The Macmillan Co. $5 net.

This volume marks a new era in palæontological science, and it is not an exaggeration to say that, from the point of view of general evolution, it is the most important single publication of the past year. Remembering the petty personal jealousies of the period of Cope and Marsh, it is refreshing to read Dr. Scott's dedication "to my classmates, Henry Fairfield Osborn and Francis Speir, in memory of a notable summer afternoon in 1876 and in token of forty years' unclouded friendship." In every way it is a worthy successor to Osborn's "Age of Mammals," published three years ago, and while keeping to an equally high plane of scientific worth, both in diction and illustrations, it makes an even stronger appeal to the imagination of the lay reader. The writing is clear, forceful, and devoid of all suggestion of padding. The development of the thesis is logical and takes for granted only fundamental knowledge, but demands keen interest on the part of the reader.

The first two chapters deal with methods of investigation in both geology and palæontology. The next two sketch the classification and the main features of the skeleton and teeth of the mammalia. Then follow the geographical development of the two Americas, the distribution and the succession of their mammalian faunas. The remaining two-thirds of the volume deals with the history of the various groups, from the Perissodactyls to the Marsupials. The final chapter treats of modes of mammalian evolution.

Comment is difficult because of the equal excellence of all the chapters. The vast amount of material demanded that a careful selection should be made. A single paragraph, dealing with a classic subject, will serve to show the concise treatment of those fossil forms which are fortunate enough to find a place in Dr. Scott's pages. The characters of the modern horse are sketched, and we are led back through past ages until—

Passing over, for lack of space, the transitional forms of the Wind River, we come finally to the most ancient known horses, the Wasatch species comprised in the genus † *Eohippus*, the "Dawn Horse," as its name signifies; these were little creatures ranging in size from a cat to a small fox. Despite an unmistakably equine look in the skeletons of these diminutive animals, it is only the long intermediate series of species and genera, together forming a closely linked chain, which we have traced from the Pleistocene to the lower Eocene, that leads us to regard † *Eohippus* as the ancestral type of the horses. Were only the two ends of the chain known, he would be a daring speculator who should venture to connect them. In these little Wasatch horses we have the evidence of a still more ancient form with five fully developed toes in each foot, since the front foot had four functional digits and indication of a splint, and splints, as the whole history of the long series teaches, always are found to be functional digits in the ancestor; the hind foot had three toes and perhaps two splints. This preceding form is hardly to be looked for in America or Europe; it will be found, if ever, in the region whence the great migration came. In all other respects, as well, † *Eohippus* was what we should expect the forerunner of the Wind River and Bridger horses to be. The premolars were all smaller and simpler than the molars, and the latter in the upper jaw are particularly interesting, for they had no crests and ridges of enamel, but four principal conical cusps, arranged in two transverse pairs, and between the cusps of each pair was a tiny cuspule no bigger than the head of a pin. These cuspules were the first step in the formation of the transverse crests, which were destined to assume such importance in the subsequent members of the series. The neck was very short, the body long, with curved or arched back, the limbs and feet short, and the hind limb much longer than the fore, making the relative proportions of the various parts of the skeleton very different from what they afterwards became.

With this is a vivid restoration of a quartet of the tiny Eohippus, browsing near a fallen tree on which grow fungi nearly as large as themselves.

Following such a "history" of the group Equus, we find a numbered summary of characters, seven in this case,

with a pithy résumé of the method of evolution. Thus:

(7.) The feet were much elongated and the median digit of each gradually enlarged until it carried the whole weight, at the same time modifying the shape of the hoof so as to fit it to be the sole support of the body. The other toes gradually dwindled and became functionless, though often retained as splints. The first digit (pollex and hallux) was first lost, then the fifth, then the second and fourth were reduced to dew-claws, and finally to splints. Thus the pentadactyl horses of the lower Eocene were transformed into the monodactyl species of the Pliocene and Pleistocene.

Accompanying these histories, Dr. Scott presents many theories, but with caution. As he says in his preface, "A book of this character is obviously not the proper place for polemical discussions of disputed questions. Whenever, therefore, the views expressed differ widely from those maintained by other palæontologists, I have attempted no more than to state, as fairly as I could, the alternative interpretations and my own choice between them."

One gathers from a perusal of these pages that the author very sanely rejects all extreme theories of evolution, or, indeed, any single postulate with claims to universal application. He inclines decidedly to a monophyletic origin of the mammalia, and to divergence or adaptative radiation as the dominant method, with convergence and parallelism as very important subsidiary processes in the great developmental scheme. One of the most significant tendencies of palæontologists of recent years, induced by many startling parallel and convergent characters, is a hinting at some "internal perfecting principle." Dr. Scott mentions and dismisses this as follows:

So far as we are able to follow it by the aid of the fossils, development among the mammals would appear to be a remarkably direct and unswerving process. When any long-lived phylum, made up of numerous well-preserved members, is studied, the observer cannot fail to be impressed by the straightforward course of the evolutionary process, as though the animals were consciously making for a predetermined goal, which, needless to say, they were not.

Perhaps the most important aspect of the work, as certainly the most original, is that relating to the fossil mammalia of South America. This is Dr. Scott's especial province, which he has been studying for thirteen years. All the interesting results here given are condensed from his eight volumes, relating to the Princeton Patagonian expeditions. The apparent continental isolation of these forms is quite inexplicable, and one looks confidently to the demolishing of this barrier by the discovery of extra-neotropical representatives.

In view of the tremendous field covered and the myriad facts which are detailed, the text is remarkably free from error. The few that are most noticeable relate, curiously enough, to the two extremes of the class, mankind, and marsupials and Prototheria. The specific name of *Ornithorhynchus* is no longer the time-worn *paradoxus*, but *anatinus*. On page 86 the author has failed to say that the patella is absent in most marsupials, and that in those same animals the bones of the lower leg have a decided power of rotation. A few lines farther, on the same page, the statement that "the upper end of the tibia is enlarged and extends over that of the fibula" should be amended. In *Ornithorhynchus* the fibula is much longer than the tibia, and in marsupials slightly longer. In monotremes, marsupials, and a number of higher forms the tibia does not extend over the upper end of the fibula.

Why the small *Otocyon* is called a wolf is not apparent. Fox would be more correct, and the statement that its molar formula of ¾ exceeds that of any other placental mammal is untrue, since dolphins, manatees, and some edentates have a much larger number.

A glossary of nine pages is a very valuable asset to this volume, but a few of the definitions are rather loose. The auditory meatus can hardly be defined as the entrance to the bulla, when man has no bulla. The centrum is only a portion of the body of a vertebra, and again the mastoid process is probably confused with the styloid process, as the former is never "spine-like." The slips in relation to the physical make-up of man are perhaps a result of the omission of the discussion of mankind in the Western Hemisphere, although no definite dismissal of this subject is implied. In the brief mention of the various types of fossil skulls, on page 588, no mention is made of *Pithecanthropus*. The use of the word "Klipdases" as a popular plural term for the Hyracoidea is hardly correct. In South African Dutch, *Das* is a badger, while the only English equivalent for the plural would be Dasses.

The outline drawings are excellent, with the exception of a few, such as that on page 310, which is as bewildering to the eye as the optical illusion of the pyramid of inverted cubes. The restorations are one of the most interesting features of the book. Made under the personal supervision of Dr. Scott, they are, on the whole, as accurate as we can expect, the markings and patterns being, of course, wholly hypothetical. A great many beautiful photographs from the collections of the New York Zoölogical Society add to the comparative value of these restorations. Every name mentioned in the text, both common and scientific, is indicated as living or fossil, by the absence or presence of a dagger. The index is admirable; the paper is necessarily coated and heavy, while the general make-up is in keeping with the high excellence and permanent value of the contents.

John Phin, who came to the United States from Scotland in 1851, and for a number of years was a professor in the Pennsylvania Agricultural College, died Monday, aged eighty-four. Besides a "Shakespeare Cyclopædia," he was the author of several works on applied science, such as "How to Use the Microscope," "Useful and Precious Minerals," etc.

Drama

"The Romance of the American Theatre" (Little, Brown), by Mary Caroline Crawford, is a book largely made up of assorted extracts from earlier publications. Many of these, clipped from recognized authorities, are excellent in their way; others are of doubtful value, while some are utterly trivial or worthless. All are perfectly familiar to persons moderately conversant with theatrical affairs in this country, with the exception, perhaps, of some of the quotations from old newspapers. The original matter, relating chiefly to modern times, cannot be commended for accuracy, completeness, proportion, or judgment. In the first half of the book, which deals with the early days of the theatre in the South, the Puritanical opposition to it in New England, the experiences of travelling "stars," and the first play houses in New York, many interesting details are conveniently collected for the casual reader. For the student they are insufficient and might be misleading. Most of the sketches of noted players are hopelessly inadequate, not only in the presentment of fact, but in the almost total lack of anything like comparative criticism. Even in the cases of such prominent and comparatively modern stage figures as Edwin Forrest, Macready, the elder and the younger Booth, Rachel, Charles Fechter, Charlotte Cushman, Helena Modjeska, Salvini, Joseph Jefferson, John McCullough, and John Gilbert—many others of almost equal celebrity might be named—no reference is made to some of their most famous impersonations, or to their distinguishing characteristics as actors. Considering the existent mass of anecdotical, descriptive, and critical ready reference to all these players, it is amazing that the author, in compiling a quasi-historical account of the American Theatre, should have ignored entirely the most pertinent parts of it, and contented herself, as she seems to have done for the most part, with a haphazard use of the paste-pot and scissors. Her treatment of the contemporaneous stage is equally superficial and unsatisfactory. She writes glibly and dogmatically, but without any show of intimate knowledge, personal experience, or discrimination. Her closing assertion that the present condition of the theatre is highly encouraging is tolerably good proof of this. The book is liberally and well illustrated.

The first performance in this country of Bernard Shaw's "The Philanderer," in the Little Theatre, is a notable incident, chiefly on account of the excellence of the acting. The company, specially imported by Win-

throp Ames, had been selected and drilled in London by Granville Barker, under the supervision of the author himself. It may be presumed, therefore, that the representation gives adequate expression to Mr. Shaw's intent, and beyond question it is admirably artistic in its smoothness, finish, and nicety of proportion, and especially in its freedom from exaggeration. The play, although it shows signs of age in the selection of such topics as the early Ibsenian enthusiasts and Amazonian women, is a characteristic Shavian product and a fertile source of entertainment, although devoid of any real dramatic impulse or significance. Professedly it is a demonstration of the grotesque relations caused by the matrimonial conventions of its period, but actually the "grotesque conditions" and their consequences are alike arbitrary creations of the dramatist's fancy. The adventures of the philandering hero, in his simultaneous pursuit of the experienced and sharp-witted widow, Grace Tranfield, and the emotional conventional woman, Julia Craven, are devised simply with the view of giving Mr. Shaw vantage ground for the launching of his witty sallies—sardonic, cynical, or gay—at the various old-fashioned institutions, sentiments, or prejudices of which he is the declared foe. Not only matrimony, but the army, the church, and the medical profession, the home, paternal or filial affection, mid-Victorian sentiment, dramatic criticism, and other things are the targets for his assault. And his shafts are often winged with humorous fancy and barbed with sharpest wit. It is this piquant dialogue which gives the play its chief theatrical value, and it was delivered with delightful point—without the least trace of conscious emphasis—at the Little Theatre. Throughout the performance the tribute of laughter was frequent, but there were intervals when the continual flow of cynical wit, all in the same vein, palled by its manifest insincerity. Indeed, an audience which knew not Shaw—if such ignorance were possible—might easily be puzzled as to the author's real views on any of the subjects he discusses. It is easy to understand why "The Philanderer" has remained unacted for so long. Only such a company as has now been assembled could disguise its dramatic inconsequence and feebleness. The chief performers are Charles Maude, Ernita Lascelles, Mary Lawton, W. R. Staveley, Reginald Dance, and Reginald Besant, and they all do so well that it would be unjust to discriminate among them.

It is probable that his success with "The Case of Becky"—which, it will be remembered, was a professed study of compound personality—induced Mr. Belasco to try a second experiment in the same direction with "The Secret," the latest play of Henri Bernstein, which virtually deals with the same subject, although it dispenses with the theatrical hocus-pocus of mesmeric influence. In both cases the heroine is represented as the victim of abnormal and irreconcilable impulses which give her two distinct individualities, and thus provide tempting opportunities to histrionic versatility. The American play was founded upon a scientific medical report, to whose theories it assumed to give practical illustration, but the French work is wholly imaginary and stultifies its profession of serious psychological analysis by its extravagance and obvious insincerity. Manifestly, Mr. Bernstein selected his subject mainly on account of the emotional situations to be manufactured out of it. And in this respect he has shown his usual ingenuity. It is unnecessary to go into the details of his plot, which is as improbable in its premises as it is conventional and unreal in its final issue. His heroine is a woman who would have been an angel if she had not been a demon. She is pictured as a creature seemingly possessed of all the feminine graces and virtues, accomplished, generous, affectionate, for ten years a happy and devoted wife, but, nevertheless, dominated by a malignant spirit of jealousy which makes the spectacle of another's happiness intolerable to her. The theatricality of such a conception is evident. She intrigues against her most intimate friend, her sister-in-law, separating her from her first lover, and afterwards betraying her secret to the second, who has married her. In effecting her purpose, she involves the whole family group in one common misery and dishonor, bringing about a complete domestic tragedy. Incidentally she is compelled to confess her own guilt, thus becoming the object of general abhorrence. The remarkable technical cleverness displayed by Mr. Bernstein in reaching his catastrophe, or the theatrical efficacy of his situations, need not be disputed. And his play, if it had closed with the exposure, might have been credited with a certain measure of sincerity and logic. But he demonstrates the commercial object of his work by devising a comparatively happy ending which reduces the whole thing to ordinary melodrama. Frances Starr, as the heroine, proved unequal to the intellectual and emotional demands of a part written for that subtle and powerful actress, Madame Simone, and the interpretation, admirable in most respects, was weakened by her deficiency in the crises.

Frank Curzon has obtained the English rights of the new Parisian farce, "Les Deux Canards," by Tristan Bernard and Alfred Athis, produced recently at the Palais Royal. Probably he designs it for the use of Gerald du Maurier, as the dual hero, who, under different names, controls two newspapers constantly at war with each other.

Sir Herbert Tree has decided to revive "The Darling of the Gods" at His Majesty's Theatre in London.

The repertory season of Lillah McCarthy and Granville Barker at the St. James's Theatre, in London, was so successful that it was extended from three weeks to a month.

Sir Charles Wyndham and Mary Moore have just been acting again in "David Garrick" for the benefit of the Actors' Benevolent Fund.

Jules-Arsène-Arnaud Claretie, whose death at the age of seventy-four was reported last week from Paris, had for half a century occupied a prominent place in the list of France's literary men. His earliest work was done on such satirical papers as *Le Nain Jaune* and *Diogène*, which were strongly anti-Bonapartist. In 1868 M. Claretie, writing in the *Figaro* under the signature of "Candide," showed courage by denouncing the execution of Martin Bidauré; for this he and his paper were fiercely persecuted. In the war of 1870 he followed the Army of the Rhine and acted as correspondent of the *Rappel* and *L'Opinion Rationale*. He then became attached to *Le Temps*, and for many years his *causerie* was one of its distinguished features. When Emile Perrin died, Claretie was selected to succeed him as director of the Comédie Française. Three years later, in 1888, he was elected a member of the French Academy and was "received" by Renan. Under his rule at the Française, from which he resigned the past year, the famous company retained its ancient prestige in spite of the occasional defection of such eminent players as Coquelin, Bernhardt, and others. His rejection of certain plays, at various times, on political and other grounds, led to some severe criticism of his policy, but in all crises of this sort, whether the struggle was in the courts, the press, or his own society, he displayed both tact and resolution. His written works include, in drama: "Les Muscadins," "Les Ingrats," "Raymond Lindey," "Le Régiment de Champagne," "Les Mirabeau," "Monsieur le Ministre," "Le Prince Zilah," "Le Père," and "La Navarraise." History: "Les Derniers Montagnards," "Le Champ de bataille de Sedan," "Paris assiégé," "La Guerre nationale," "Camille et Lucile Desmoulins," and "Histoire de la Révolution en 1870-1871." In addition he wrote "La Fontaine et Lamartine," "Béranger," and "Molière."

Music

Great Pianists on Piano Playing. By James Francis Cooke. Philadelphia: Theo. Presser Co.

How the Piano Came to Be. By Ellye Howell Glover. Chicago: Browne & Howell Co. 50 cents net.

First Studies for the Piano. By Rafael Joseffy. New York: G. Schirmer. $2 net.

Not a few of the world's greatest pianists were and are persons of exceptional intellectual gifts—thinkers and wits as well as players. James Francis Cooke, editor of the *Etude*, has known some thirty of them, and with eighteen he has had talks on their art. These "study talks," as he calls them, make a book of exceptional value to students and teachers. His list includes three women: Fannie Bloomfield-Zeisler, Teresa Carreño, Katharine Goodson; and fifteen men: Bachaus, Bauer, Busoni, Gabrilowitsch, Godowski, Hofmann, Lhévinne, de Pachmann, Pauer, Rachmaninoff, Reisenauer, Sauer, Scharwenka, Schelling, and Stojowski, besides the boy prodigy, Pepito Arriola. Each of them contributes food for thought; on one point they all seem to agree—that the persistent playing of Bach is the surest way to true musicianship.

Harold Bauer warns against using Bach merely as "a kind of technical elevator," using the word technical in the common sense. Mr. Godowski, whom the critics have accused of being a mere master of technique, maintains that technique "has properly to do with the intellectual phase of the subject rather than the physical"; that it includes rhythm, tempo, accent, phrasing, dynamics, agogics, touch, etc.; and that it thus differs from the mere "mechanics" of playing. But it would create no end of confusion to accept this distinction. The conception of technique as that which relates to the mechanical part of a performance has become universally accepted by musicians and will remain in use, even though it be less flattering to Mr. Godowski than his own suggested amendment. His ideas on touch also differ from those of some of the other pianists represented in this volume; but in this case his views are more acceptable, even though Ossip Gabrilowitsch, *e. g.*, attains surprisingly good results in other ways.

Mrs. Bloomfield-Zeisler utters a protest against the exploiting of wonder-children. She gives a brief but admirable summary of Leschetizky's way of teaching, talks suggestively about programme-making, the art of hypnotizing an audience, and explains the secrets of successful appearance in public. Mme. Carreño repeats the advice Liszt gave her, not to imitate any one but to cultivate one's individuality, and she illustrates the importance of this with reference to the career of her pupil, Edward MacDowell. Her remarks on the importance of the study of musical history are also worth noting by students. Mme. Goodson warns against the wasting of time and money in sending beginners to famous artists. She, also, is a pupil of Leschetizky, and has interesting things to tell about his ways of making his pupils musical. If one of them, for example, had difficulty with rhythm, he advised her to go and hear Strauss, the king of rhythm and dance.

Wilhelm Bachaus discourses specially on two great musicians. One of them is Bach, the other Rachmaninoff, whom he considers "the giant of today." In his opinion, he is "writing the greatest original music for piano of any living composer." He is also very partial to Debussy, whom he admires because he "manages to put so much color into his piano pieces without suggesting the orchestra. Much of his music is wonderful in this respect, and, moreover, the musicians of the future will appreciate this fact more and more." Mr. Lhévinne discusses the musical situation in Russia, and Josef Hofmann expresses his conviction that there has been no progress in piano playing since the time of Liszt.

Besides recording the opinions of prominent pianists in diverse aspects of their art, Mr. Cooke contributes two valuable chapters of his own, in which he discusses, among other things, the advantages of domestic life over that of a virtuoso, and the special disadvantages to which players are subjected in this land of magnificent distances. In the case of some prominent artists the managers have the greatest difficulty in inducing them to come more than once. Rubinstein declined $100,000 and Grieg made prohibitive conditions. On the magic of magnetism, as illustrated by Paderewski, Mr. Cooke has some suggestive pages. Of special interest is his explanation of the reason why American students are apt to make more progress in Europe than at home. It is because over there the same students willingly subject themselves to strict discipline, against which they rebel at home. Thus has come about the curious situation that "teachers who have taught for years in America have returned to Europe, doubled and quadrupled their fees, and, under Old World surroundings and with more rigid standards of artistic work, have produced results they declare would have been impossible in America."

"How the Piano Came to Be" is a booklet of sixty pages, in which the history of the piano is traced from its supposed germs in the sinews stretched across the shell of a dead tortoise to the modern American grand. It is not a mere compilation from the dictionaries, but contains evidence of wide reading, with entertaining details. One of these is the odd fact that a century ago a Boston maker of pianos had to put a false English or French stamp on them before he could sell them. There are pictures illustrating the evolution of the clavichord and harpsichord into the pianoforte.

Some years ago the Schirmers published a "School of Advanced Piano Playing" by the greatest of foreign pianists and teachers who have made their home in America, Rafael Joseffy. This is now followed by "First Studies for the Piano" by the same authority. The text and the footnotes are printed in both English and German. "First studies" must not be taken too literally; it is not a book for pupils who still have to learn their a, b, c, but for those who have had some experience and can use their own brains. For these, the book is invaluable. Among the many things considered are varieties of touch, rhythm, eye-training, accompaniment figures for the left hand, scales in thirds and sixths and in chromatics.

For the first time in its history of more than a century the Philharmonic Society of London gave, a few weeks ago, a concert with an "all-British programme." Sad to relate, it "fell flat." The composers represented were not those best known; they were Frederick Austin, Von Holst, Vaughn, Williams, and Arnold Box.

At the Berlin High School of Music Prof. Georg Schumann has been appointed teacher of composition to succeed the veteran Max Bruch.

There are two things in particular that impede the progress of opera in English: the scarcity of acceptable singers and the inability of most of them to enunciate distinctly, which seems to be a growing infirmity. At any rate, Robin H. Legge makes some remarks on this point in the London *Daily Telegraph* which are worth pondering:

A number of correspondents write to point out that the diction of opera singers in English was at its highest point of excellence in the great days of the Savoy operas. It certainly was then very high. Those who are interested in the matter may hear for themselves if the Savoy tradition is still upheld by attending the various performances of the Gilbert and Sullivan operas during this week at the Crystal Palace. As a matter of fact, the now common complaint as to the difficulty of hearing the sung words when the operatic singer is English is, I think, quite a modern matter. I have no recollection of it in my early days.

Art

THE NEW ENGLISH ART CLUB.

LONDON, December 22, 1913.

The New English Art Club has just opened its fiftieth exhibition. When it opened its first, it represented all that was most advanced—according to British standards—all that was most independent, most revolutionary among British artists. It flaunted its opposition to the Academy and the Academic. The little inner group, its chief strength, went so far as to call themselves London Impressionists at a time when London still shrank from the scandal of French Impressionism. At its shows the younger generation was heard knocking at the door, in the Ibsen phrase then in everybody's mouth—powder was smelt, as a Frenchman said to me one day at one of its early press views. In its members' hands, everybody thought, lay the future of art in England; it was a society full of promise. And now that it has lived long enough for that promise to be fulfilled, now that with the round and imposing number of fifty exhibitions to its credit, it seems as if the time had come to reckon up its achievements: what does it represent, what does it stand for?

To tell the truth, it stands for little save the ease with which middle age shakes off the ambitions and hopes of youth. The powder is all but spent, the new younger generation knocks louder from without its fold than from within. Of the older generation some are dead, some have ceased to exhibit on its walls,

some have been gathered into the Academy. Wilson Steer remains, from the beginning the most faithful. He has seldom contributed to other exhibitions, he has always reserved his best for the New English, and, in consequence, has made a much more distinct impression on the public than those members who have scattered their work in many exhibitions; and it is reported—with how much truth I cannot say—that the Club at last recognizes the wisdom of his policy and proposes passing in self-defence a law to prevent members from showing anywhere save with their own society.

This year even Steer can scarcely redeem the New English from the commonplace into which it is drifting. He sends two paintings: one, a rather garish Sunset over a broad space of water full of shipping, a conscientious, painstaking statement of facts without the selection that would give them artistic value, so that it becomes a question whether the restless and chromo-like effect—the foolish sunset—Nature sometimes indulges in is worth recording at all; the other, a Breakwater stretching out an unlovely line into an empty gray stretch of water under an empty gray stretch of sky; both suggesting the weariness of the painter who, rather than continue wrestling with problems, is content to state his facts as he finds them. Indeed, signs of weariness betray themselves on every side among the older men. Prof. Fred Brown and Henry Tonks have only water-colors, and these might pass unnoticed at Burlington House. David Muirhead is gradually reducing his landscapes to a formula, and forgetting his sense of color in the process. Ambrose McEvoy's portraits are so invertebrate, so without flesh and blood and muscle to give them life, that you feel as if with the first puff of wind his sitters must blow away. Altogether, this group of painters—long since exalted into the great modern leaders by the Slade School, with which most of them are associated—now they have reached the age when they should be in the fulness of their powers, appear to have lost grip, to have come to the end of a convention that could produce agreeable results while it was fresh, and not yet staled by repetition, but that, like all conventions, cannot take the place of the sound knowledge, unwearied study and research, and continual experiment of the true master, and must, sooner or later, lead to feebleness and anæmia. This is the trouble with so many men who start out brilliantly—far more brilliantly, many of them, than the founders of the New English Art Club—and from whom much is expected, but who, with success, become content to reëcho themselves or the masters whom they follow—at a distance.

If the older men are disappointing, little more can be said for the men who, when elected some few years since, were relied upon to infuse new life and vitality into the Club. John is still a name to conjure by, but he still seems satisfied to justify his reputation by his projects rather than his performance. His chief work at the New English is a large cartoon, The Flute of Pan, a design apparently for an important mural decoration, and perhaps it would be fair to reserve a final judgment until it is finished and in place. In its present stage nothing is more obvious than the influence of the old masters. Against a rocky background which recalls Leonardo and his school, figures are grouped: to one side, three women reminiscent of Botticelli and the Florentines; to the other, men whose presence is scarcely explained since, in type and treatment, they seem born of Post-Impressionism; in one corner, a boy who is evidently John's own invention. This inconsistency, this incongruity, in detail might pass had the artist, after borrowing so much from the old Italians, gone further and appropriated the great essential of fine decoration which it is so well within their power to have furnished him. For these Italians had, above all, the sense of design which does not seem ever to enter into John's scheme of things; they understood the imperative value of composition and never sacrificed it to detail. Their figures and landscapes, however beautiful in themselves, are always subordinated to the beauty of the design as a whole—are but beautiful parts of a beautiful harmony. The figures and landscape in John's cartoon have no relation to each other, are not bound together by any rhythm of lines or any relation of spaces. John, as far as I have seen him in his work, is much where he was when, as a student, a few drawings made his name a fetich for the worshippers at the shrine of the New English Art Club. The drawings were said to be guarantees of masterpieces to come. And yet to-day one looks in vain for the masterpiece in this large, ambitious work, while the notes and studies hanging in another room have the same skill of draughtsmanship as in the old days when his every drawing was hailed as a guarantee of his triumphant future. The fault of his big design is emphasized by the contrast with the cartoons of Mrs. Sargent Florence, whose reputation cannot be compared to his, but who has studied the old masters of decoration with greater sympathy and intelligence. Her cartoons are for frescoes to decorate the school-hall at Bournville, the Cadburys' model workmen's village, and the subjects are Suffer the Little Children and The Baptism. In both, the groups are well balanced, the spaces harmoniously distributed, the lines expressive, with the result that the design tells in the working drawing, as it must eventually if the color scheme is as carefully studied.

Orpen, who became a member of the society about the same time as John, is the more distinguished painter of the two, though this year his only painting strikes one as a piece of sheer bravado—a puzzle intended to bewilder the public and trip up the critic. Sowing the Seed is the title, and those who love a story in paint may make what they will of the nude figure that, to the left of the canvas, sows the seed, the two purely grotesque figures of a man and a woman that, to the right, stand under a branch of a withered tree where a magpie perches, and the two little naked children who, with their reflections in a little pool, are the centre of the composition. But if these figures are deliberately provocative in their grotesqueness on the one hand, and their inappropriateness on the other, the canvas has the unity that John's cartoon lacks, the harmony, the balance in the placing of the figures that holds the composition together, making a fine decorative design against the cool gray of the flat background; and there is the quality Orpen almost always gives to his paint. Its self-conscious eccentricity, however, is irritating, and he is seen to better advantage in two large, simple water-colors that hang near John's drawings. In fact, both artists are most successful in their least important exhibits—one cannot help a sneaking suspicion that Orpen is ready to let the New English play second fiddle to the Academy, and to hold back his more serious paintings for the more popular institution. Certainly, neither shows anything to lend special distinction to so important an event as the fiftieth exhibition of a society supposed to represent the most distinguished and independent group of artists in the country.

If the New English in its fiftieth exhibition were positively bad, it would be to me less depressing. The regret is to see it falling into a rut where it is losing even the courage of its own traditions. For this reason I find more vitality in a respectable body like the old Water-Color Society that never dreamed of revolt in the beginning, does not now, and never will, and in its unshakable fidelity to its highly respectable, peaceful, and mediocre ideals, gives an impression of stability, permanence, like the Tower of London or Madame Tussaud's. But the New English was created for revolt, for opposition; there was no other reason or excuse for its existence. And it has long ceased to revolt, it is as academic in one way as the Academy in another.

In the late nineties, the International Society was formed as the most formidable rival the Academy ever had to fear,

the nucleus of every new movement and phase, not only in England, but on the Continent, though the International, year by year, is shutting its door upon the all-important, the international, element that gave it its name, with the result that it also is losing its original vigor. Rumors are about of the formation of another new society of the younger men, who think they have as little hope of adequate representation in the International as the New English. This means a further splitting up into groups and the consequent strengthening once more of the Academy which has triumphed again and again over the independents, partly by absorbing them, partly by ignoring them. Had the New English followed the more practical policy of uniting under its protection all the independents, all the protesting bodies, instead of degenerating into little more than an exhibiting society for the Slade School, it might have proved invincible. But it has narrowed its scope and interests until the question is whether it can get the better of its present inertia and survive a younger and more energetic society as successfully as the Academy has, up till now, survived every secession and rival institution.

N. N.

Among the twenty plates of rare works of art published in the last number of the *Archiv für Kunstgeschichte* (Leipzig: Seemann) the most remarkable are a Goya aquatint of monkeys, a Madonna by Nerocclo, a portrait drawing by Montagna, a splendid Tiepolo, the Miracle of the Manna from the Church of Verolanuova; a Nattier portrait, a Tintoretto Annunciation, a French primitive from the Fogg Museum, two delightful sheets of landscape sketches by Hans Baldung Grien, a very fantastic Cranach—the Mass of St. Gregory. An especially interesting feature is the reconstitution on one plate of a very fine Gaudenzio Ferrari triptych, of which the parts are scattered among Leipzig, Milan, and Moscow. There are also minor drawings and sculptures by early German masters. Most are chosen from little-known private collections, and in a few instances from public museums or dealers' stocks.

Hugh Arnold's "Stained Glass of the Middle Ages in England and France" (Macmillan) is the best popular work on the subject that has come to our notice. Mr. Arnold's descriptive and historical chapters are sober, accurate, and interesting. The especial superiority of the book lies, however, in Lawrence B. Saint's water-color sketches. There are fifty color plates after famous windows. Frequently a single plate contains a composition sketch and a group of significant details. Mr. Saint's water-color memoranda give the effect of stained glass better than photographs and the older colored lithographs. For minute information the student must go to the older sources, but it is surprising how much Mr. Saint has managed to convey in sketches apparently slight. For a person of antiquarian taste it would be hard to imagine a more acceptable gift.

Finance

RETROSPECT.

In glancing back over the past twelvemonth and endeavoring to determine what it has really signified in American finance, account must first be taken of the noteworthy governing influences under the sway of which the year began. On January 1, 1913, every intelligent observer knew that there were three distinct influences of the sort at work; whose actual results it was impossible to measure in advance; whose operation, in our financial markets, was certain to be conflicting, and whose concurrence left the question entirely open, which would actually play the greatest part in shaping the history of the year.

One of these dominant influences was the European money market crisis, brought to a head by the Balkan War and emphasized by dread of a general conflict and by resultant money-hoarding throughout Europe. Another, very different in its nature, was the enormously profitable crops harvested in this country towards the close of 1912, and marketed during the early part of 1913. The third influence was the new Administration and the new Congress.

It is because of the perplexing and frequently unexpected manner in which these influences have operated, and because of the fact that some movements on the markets could logically be ascribed to either of two causes in the above summary, that Wall Street has found so confusing the current explanations of the year's finance. At one time, Wall Street would learn that business was prosperous; in the next day or month, that the country was face to face with panic.

When our security markets were breaking, in the spring, one group of experts would point out that frightened forced liquidation by American investors was in progress; another, that Europe was raising money in New York, which the foreign bankers rightly regarded as the only stable market of the world, by selling its own investment holdings. When we sent gold in unprecedented sums, to France in the spring and to Canada in the autumn, people would be informed on the one hand that capital was taking flight from America because of its dread as to what might be done at Washington. Yet, on the other hand, they would hear that our own financial position was so strong that we were helping the Bank of France to restore its gold reserve, and assuming London's obligations at Montreal—both in spite of a foreign exchange market really in our favor.

The truth is, that all three influences have had at least some bearing in every important financial movement of the year. The American stock market, for instance, was beyond any question primarily depressed by the reaction on us of Europe's financial troubles. But the resultant break would certainly have been far severer, had it not been for the sound position and abundant resources carried over from the great harvests of 1912—in sequence also to a period of prolonged retrenchment and economy. And yet again, after this foreign pressure had relaxed, the Continent's political fright abated, and the great European banks regained a strong position, our own recovery would presumably have been far more rapid, but for the third and important element of political misgiving.

Taken as a whole, and with all the adverse influences, real or imaginary, kept in mind, the past year in the United States has been marked by an astonishing show of financial and economic strength. We have absorbed (as we did under similar circumstances in 1900) enormous quantities of the European holdings of our own securities. We passed through the spring with the European market closed to our own new stock and bond issues; through the summer with a minimum of financial assistance by Lombard Street to move our crops, and through the autumn without the slightest suggestion of London's relieving our "autumn money squeeze" or financing a Wall Street "boom in stocks." Instead of this, it has been America which was helping out Europe, directly or indirectly, from the 1st of January to the 31st of December.

Gratifying to our financial pride as this may be, it nevertheless has another side. The man who spends a year drawing on his personal resources to help out an embarrassed neighbor, is likely to be forced to retrenchment on his own account, and the market which takes care of the liquidated securities of another, and sends gold in return, has a similar experience to undergo. A point is sometimes reached where even a strong and powerful market will be crushed by such a process. Our own was not; but it had to accept the alternative of a distressing lack of capital to spare for its own new enterprises, and of a Stock Exchange year so dull as to amount at times to suspension of business.

All these considerations add exceptional interest to the change in the aspect of the markets in the last weeks of the year. That this change should have been ascribed unanimously to the removal of the one adverse influence which had prevailed without intermission until then—the acute misgiving as to sweeping hostile legislation against capital—gives a singular balance to the year, which began with every one pointing to Europe as the one cause for our troubles, which presently saw that influence offset by our own material pros-

perity, and which finally found Wall Street pivoting everything on politics.

As to which of these three considerations had actually the most important part in shaping the history of our markets, it is still too early to decide. Possibly it will require the lapse of another year or two—as it did after 1900 and 1904 and 1906 and 1909—before all will agree as to what was the real controlling financial influence in the year now ended.

The Nation

VOL. XCVIII—NO. 2532 THURSDAY, JANUARY 8, 1914 Reg. U. S. Pat. Office. PRICE TEN CENTS

SCRIBNER'S MAGAZINE

Some Important Announcements

Articles by Price Collier

The late Price Collier, author of "England and the English from an American Point of View," "Germany and the Germans from an American Point of View," etc., had completed several of his projected articles on the SCANDINAVIAN countries. These are expected to appear in the Magazine during the coming year.

By Richard Harding Davis

"Breaking into the Movies"

How "Soldiers of Fortune" was put on the films at Santiago.

Short Stories

By Rudyard Kipling, Sir Gilbert Parker, Henry van Dyke, Richard Harding Davis, Katharine Holland Brown, James B. Connolly, Mary R. S. Andrews, Gordon Arthur Smith, Mary Synon, Barry Benefield, Abbie Carter Goodloe, and many others.—A remarkable group of stories by Katharine Fullerton Gerould, author of "Vain Oblations."

A Short Serial: Maje

A Love Story by Armistead C. Gordon. A tender idyllic story of the old South.

THE SPECIAL FEBRUARY NUMBER will deal with the MOTOR and the HIGHWAYS

Theodore Roosevelt in South America

He will contribute to Scribner's Magazine the account of his trip of adventure and research into the Paraguayan and Brazilian interiors, through the great tropical forests which so few white men have ever traversed.

From the *New York Sun:* COLONEL ROOSEVELT IN HIS MOST ATTRACTIVE ROLE.—No living American can be better qualified to explore the wilds of South America and to describe its flora and fauna and its savage and tremendous scenery with a sympathetic and kindling interest than Theodore Roosevelt.

A Famous Writer's First Long Novel

Early in the year the Magazine hopes to begin the first long novel by an American author whose work has been not only of the first rank but based upon a deep and unfailing optimism. His short stories and poems are among the best known wherever the English language is read.

By Madame Waddington

A new series of articles—"My First Years as a Frenchwoman, 1876-9." The political and social aspects of these years are commented upon in the author's own inimitable and delightful way.

By Sir Henry Norman, M.P.

Author of "The Flowing Road."

The Alpine Road of France

The best motor-way across France from Normandy to the Mediterranean by the new "Route des Alpes."

By Rollin W. Hutchinson, Jr.

Motor-Vehicle Expert and Engineer.

The Motor-Truck and Motor Commerce

The influence of the Motor-Truck on business systems.

By Henry B. Joy

President of the Lincoln Highway Association

The Great National Road Schemes

Transcontinental Trails, Their Development, and What They Mean to This Country.

The Illustrations

The Cover in color, 10 pages in full color, 8 of them autochrome photographs in color by Earle Harrison (photographer of the Panama Canal), showing scenes of beauty along the transcontinental trails.

Subscriptions to Scribner's Magazine may be sent direct to the publishers or to any bookseller, newsdealer, or subscription agent. The price is $3.00 everywhere.

ARTIFICIAL PARTHENOGENESIS AND FERTILIZATION

By **JACQUES LOEB**, Member of the Rockefeller Institute for Medical Research.

This new work presents the first complete treatment of the subject of artificial parthenogenesis in English. It gives an account of the various methods by which unfertilized eggs can be caused to develop by physicochemical means, and the conclusions which can be drawn from them concerning the mechanism by which the spermatozoon induces development. Since the problem of fertilization is intimately connected with many different problems of physiology and pathology—we need only mention the natural death of the egg cell and the prolongation of its life by fertilization; the fertilization of the egg by foreign blood and the immunity of the egg to blood of its own species; the relations between heterogeneous hybridization and artificial parthenogenesis, between fertilization and cytolysis, and between permeability and physiological efficiency of acids and bases, etc.—the bearing of the facts recorded and discussed in the book goes beyond the special problem indicated by the title.

The Nation

NEW YORK, THURSDAY, JANUARY 8, 1914.

The Week

If any further doubts exist of the fitness of tbe Democratic party, and of Democrats, to rule, they will be removed by the test for efficiency made in the office of the Public Printer and recorded in the New York *World*. Of thirty-one employees reduced in rank and salary by the Public Printer, just thirty-one are Republicans. Of thirty-nine employees advanced in rank and salary, no less than thirty-nine are Democrats, twenty-five of them from south of Mason and Dixon's line. The Public Printer refuses to give out the efficiency reports on the basis of which the changes have been made. This is a loss to the world; for an efficiency test that functions witb 100 per cent. of accuracy is something we have not yet found. It is our earnest bope that President Wilson, with the heavy portion of his programme out of the way, will turn his attention to this formidable outbreak of efficiency in the public service which manifests itself in the form of Pindell Ambassadorships, and the exemption from civil-service rules, by means of rider legislation, of Government positions.

The virulence of tbe figbt between factions in the Socialist party of the State of Wasbington is evident from the labels attached to tbem—the "Yellow Socialists" are arrayed against the "Red Socialists." A "yellow" orator, clearly not speaking from the tail of a cart, declared that "the contention of the 'red' faction tbat a man has to be cracked over the head with a bluecoat's billy, or occupy a berth in an obscure corner of a box-car, before he understands the needs of the working class, is all bosh." But has not the grandson of a celebrated American poet proved that a course in penury and abuse will alone bring, by inner light, a conviction of the higb justice of Socialism? Can't such a man better expound the esoteric in Comte and Bebel than any silk-stocking waiting in his library for inteilectual conversion? Yet one is shocked to learn tbat the city offices of Seattle and Tacoma have obscured the question of principle. A "get-together meeting" two weeks ago closed witb a widened gulf, the "reds" flinging at the "yellows" the question how they reconciled sympathy for tbe downtrodden with an itching to reserve the city plums for pockets already well lined, the "yellows" casting aspersions of the same kind on the "reds." After all, Socialists are not so different from the ordinary man when it comes to office-bolding.

For a genuine case of the courage of conviction, commend us to the *American Economist*. In its closing issue for the year 1913 appears a column which by its extraordinary typographical display must attract every eye, and which we can here but feebly reproduce in ordinary print. Its heading is "The Tariff —Cause and Effect." Then come a series of "boxes," headed Prosperity or Adversity, as the case may be, with the date of the beginning and the ending of that state of things, and finally the designation of the tariff condition of the country at the time. Thus Prosperity and McKinley Protection went hand in hand from October 1, 1890, to September 27, 1894, at which latter date Adversity instantly took possession of the field along with Wilson Free Trade. Many people, as we all know, felt that there was a pretty bad break in the reign of Prosperity when the panic of 1893 set in, in the first half of that year; but to any one firmly planted on the rock of protectionist conviction it is plain that this impression was a mere delusion of the senses. Bank failures, bankruptcies, railway receiverships, etc., have an ugly look, but in reality prosperity continued unbroken for some fourteen or fifteen months after the panic started, and only came to an end on September 27, 1894. As for the so-called panic of 1907, it remained a mere hallucination from first to last, for it is safely tucked away in the Dingley Prosperity era July 24, 1897, to August 5, 1909, which was followed by the Payne-Aldrich Prosperity era August 5, 1909, to October 3, 1913. So long as we have journalists who show such unflinching adherence to cardinal principles in the face of the worst that facts can do by way of discouragement, the country's institutions are safe.

The deliberate remaking by the Ohio Reference Bureau of the recently passed Direct Legislation bill is an interesting example of expert mending of amateurish legislation. All the remedies proposed for the last summer's scandals are highly instructive as to the workings of the initiative and referendum. The principal suggestions number no less than eight, and tbe Governor is insistent that tbe amendments shall pass if the measure is to remain on the statute books. The perjury and forgery laws must be so broadened tbat false petition is a felony. No circulator of petitions may work outside his own county, and none—to exclude professionals—may collect above 200 signatures. Oath as to the genuineness of a petition must be made before the County Clerk, not a notary public. All petitions must be filed with the County Board of Elections, and tbat body must have power to investigate the signatures. Only registered electors, as by a recent Oregon reform, may sign petitions, so that the man who does not take trouble to vote is barred. Expenditures in bringing about a direct election must either be totally prohibited, or the corrupt practices act be made to cover them, and circulators required to make sworn financial reports. Tbese are broad changes, but Senator Owen, of Oklahoma, and Senator Bourne, of Oregon, testify that they are in the main essential, and the Ohio press agrees that frauds have made the present measure intolerable. Critics will remark that if a deliberative and informed Assembly moves so faultily in an important matter, a wide electorate ought to be more than cautious in drawing up and voting on essential laws.

Justice Hughes had a forcible passage in his remarks at a dinner to Judge Cullen on Saturday nigbt. Tbe general tone of tbe speeches, as was natural enough at a gathering mainly of lawyers and judges, was that of deprecating anything like an attack upon the judiciary. But Judge Hughes, while abundantly sympathizing with the view that the courts must be upheld as a necessary part of our system of government, and as, on the wbole, a great bulwark of justice, dwelt upon the fact

that the repute of judges is largely within their own keeping. He pointed out that an able and vigilant judge of high character and great personal weight has it in his power to cut down the law's delays and ignore a lot of legal red tape and really expedite trials. English judges are all the time doing this. Ah, yes, we are told, but this is not permissible under our "system." It is a grave question, however, whether the system is so much at fault as personality. If we were to adopt the English system, yet were to go on putting poorly equipped and self-distrustful judges upon the bench, it is doubtful if we should see any decided improvement.

The report of Senator Borah on the reign of martial law in the West Virginia coal strike confirms every main contention of those who brought about the Congressional investigation. With the civil courts in full operation, and without evidence that the popular bitterness would impair their function, the military authorities arrested, sentenced, and punished men in violation of the Constitution of the State and the nation. Even arrests made outside the zone of martial law resulted in military trial. Worst of all, penalties in excess of those permitted by law were imposed on the arbitrary ground that public intimidation was demanded. Certain aspects of the Governor's attempt to preserve order and stop rioting and murder by use of the militia may have been justifiable; but certainly the outline of the situation furnished by Senator Borah shows that decision upon the guilt or innocence of those charged with violence could have been, and should have been, left to judge and jury, and that in the light of the statutes.

It may not be entirely regrettable in the public interest if the general method of railroad promotion and construction here employed should be found unprofitable.

This unsympathetic sentence from a 16,000-word report by the Massachusetts Public Service Commission on the Hampden Railroad follows a decision by which the promoters are left many dollars out of pocket. They had asked for authority to raise their capitalization to $3,900,000, but were allowed only $3,300,000. Whereas the company's officials averred they have spent $4,400,000 in constructing the road, 14.85 miles long, in the opinion of the Commission "the reasonable and proper cost incurred" was $3,367,789. Thus it not merely scales down the expected profits of the builders, but leaves them with an admitted loss of $67,789. The Massachusetts press notes the decision as checking a threatened "flagrant scandal." More instructive to the outsider is the moral warmth with which the Commission actually gloats over a loss involved in extravagant and inflated construction methods. A minority report indicates that the incident will give an impulse to the movement in Massachusetts for making actual value, not cost, the basis of railway capitalization.

Thrifty New England is summoned to go itself one better. It has capitalized its summer and autumn, confesses a writer in the Boston *Globe*, by drawing visitors to "its picturesque mountains, its vast forests, its rocky shores and sandy beaches," so that "its mild, temperate summer of glorious sunshine has been a stream of gold pouring all over the five States." What remains to be done is to capitalize the winter as successfully. For an example, New England is pointed to Switzerland. A few years ago, it is reminded, only invalids visited the Alps in any season except summer. But "St. Moritz awoke to the glorious possibilities of the Swiss winter. Mammoth coasting slides and skating rinks were made, and the crowds came." Now, what Switzerland has done, cannot New England do? Let her build "a double-runner slide from the top of Mt. Washington to Sebago Lake." Let her construct "a skating rink with a fine pavilion and orchestra where young and old could skate to music." As for rivals, "the South has no winter. The Western plains are bleak and dreary. Winter in Canada is like summer in the Sahara, in that it is too much of a good thing." The conclusion is irresistible. "It would mean millions to New England." How the shivering Pilgrims would have been comforted if they could only have known!

It is no new criticism that Dr. Pickering, director of the Harvard Observatory, makes of the Government's policy in relation to its astronomical work. The national observatory at Washington is called the United States Naval Observatory. It has always been part of the naval establishment, and its director, under the law, must be an officer of the navy. The consequence is too well known: the work of the observatory falls far short of accomplishing the results which the liberal appropriations made for it would justify the astronomical world in expecting. It seems next to impossible to get Congress to move in the matter. The reason for this lies partly, no doubt, in the maintenance of the conventional pretence that the researches carried on by the observatory are called for by the interests of the navy or of navigation; a thing which is true in only an extremely small degree. But of course there is a more solid obstacle in the persistent clinging of the navy to its prescriptive privileges. It is an absurdity that this great national institution of pure science should be under the control of a series of men successively "detailed" to take charge of it as a mere episode in a naval career, instead of being directed by one of the foremost astronomers of the country, chosen for his special ability in such work, and devoting his life to it. The fact that astronomy is a science in which American achievement has, from an early period in our history, been of eminently distinguished character only emphasizes the anomaly of having the Government's own observatory work carried on under the direction of amateur officials.

Wisely administered, the chain of banks to make small industrial loans which Julius Rosenwald announces should help meet a pressing need. State and city legislation, protective associations, and alert public prosecutors have done much in a negative way to combat the ubiquitous loan-shark. But positive attempts to drive rapacious moneylenders from their field have been almost entirely limited to the work of institutions like our thirty-five "Remedial Loan Associations," which last year loaned $22,000,000 to the poor of our thirty largest cities. In spite of protective legislation, wrote President Ham, of these federated associations, recently, "there can be no advance of permanent value until philanthropic citizens provide sums, subject to a limited return, by which the urgent needs of wage-earners may be provided for." In Europe this function of issuing money to de-

serving borrowers, secured by personal property, assignment of wages, or even a mere pledge, has in great part been assumed by the State. Mr. Rosenwald's scheme is founded on one originated by the present Italian Minister of Finance. In France, the *monts de piété* have been a shield of long-tried adequacy against extortion.

The growth of the registration area for American vital statistics is slow but sure. Thus, the Census Bureau's mortality figures for 1912 report the lowest death-rate yet—13.9 per 1,000—in an area now covering 63 per cent. of the population. Missouri, Kentucky, North Carolina, and Minnesota are among the latest States to enforce the registration of births and deaths. In 1880, when the mortality rate was 19.8 per 1,000, the registration area was 17 per cent. of the population; in 1900 the mortality rate was 16.5, while the area had risen to 37.9; in 1910 mortality had dropped to 15 per 1,000, and the registration area increased to 58.3 per cent. The connection between a growth in area of accurate statistics and the betterment of national health is narrow, but clear; one of the most potent weapons of State, city, and national sanitation must be trustworthy measures and standards of population, birth, sickness, and deaths. For this reason it is urgent that the Census Bureau and the various humanitarian and medical agencies should succeed in their endeavors to widen the field in which such figures are available. At present it includes but twenty-two States. Even great commonwealths like Illinois and Kansas have only city regulations on the subject.

The small boy must begin to feel that a conspiracy exists against him. The latest piece of evidence is the establishment of a scientific test for the distinction between hunger and appetite. That there is such a distinction is no news, but hitherto it has not taken a vast amount of cleverness to obscure it. Now all that the doubting parent has to do when his child asks for something to eat between meals is to have the victim swallow a small cigar-shaped rubber balloon, fitted with long rubber tubes, inflate the balloon through the tubes, and attach the latter to sensitized paper. If the muscles of the stomach grip the balloon and drive out the air, the amount of hunger is automatically registered on sensitized paper, and the parent may act accordingly. But if nothing happens, then the parent knows that his doubts are justified, and that his child is not suffering from hunger, which is a sensation arising in the stomach, but is merely subject to appetite, which is an affection of the brain. All that he will then need to do is to explain this distinction to the child, and go back to his book.

There is obviously something like a propaganda against Philippine independence now carried on in this country, and some persons are curious enough to ask what interests are behind it and are footing the bills. No one objects to fair argument on the subject. The thing is in politics, and public discussion of the Administration's plans for the Philippines is fully in order. Nor need there be any suspicion of the entire sincerity and disinterestedness of some of those who stoutly hold to the opinion that it would be a great mistake to set up an independent Filipino government short of a generation or two hence. Ex-President Taft maintains this view, no doubt honestly, and he is quite within his rights in presenting it as forcibly as he can on every fit occasion. But quite apart from this kind of advocacy, there is evidence of an organized movement, with lecturers, etc., designed to create a public opinion adverse to turning the Philippines over to the Filipinos. And in connection with the cost of this undertaking, there are unpleasant stories afloat about development companies and concerns engaged in exploiting the resources of the islands. If they are, indeed, paying out money here so that they may be able to make a great deal more money there, their course is one that needs only to be stated to be severely condemned.

Americans will have to school their lips in order to say Viscount Bryce. Probably most of them will continue to speak of James Bryce, just as they do, despite his elevation to the House of Lords, of John Morley. But that the honor which has come to Mr. Bryce was fairly earned, not even his political opponents in England deny. One reason that he may have had for accepting it is the fact that it will close those foolish English mouths which have prated about his not having been a successful Ambassador in this country. It may be, also, that a delicate compliment to the United States is intended. This could have been rendered explicit if the title had been made, in accordance with the practice in the case of Wellington and Kitchener, Lord Bryce of Washington and Baron of the American Commonwealth.

A "Polterabend" dinner given by a rich family at Berlin, to which a New York newspaper thought it necessary to devote a half-column of cabled description, brought together guests "the aggregate wealth of whom was estimated by one of those present at $100,000,000." But this only shows what a poverty-stricken city Berlin is. In New York it would be a poor-spirited *parvenu* who could not rally at his table representatives of at least $1,000,000,000. At a really glittering affair of the kind no one would be admitted at all if he had less than $50,000,000. Mention of that sum recalls the fact that, full forty years ago in New York, a religious editor, describing a church wedding, wrote in an awed way that the group in front of the altar was worth at least $50,000,000. It was expected that the Almighty would be duly impressed. But nowadays the figure has gone up and it would take $500,000,000 to make much of a sensation in Heaven.

The balance of power in the Balkans is threatened and the European chancelleries are said to be disturbed by Turkey's attempt to purchase a fifteen-million-dollar Dreadnought now building in an English shipyard for the Brazilian Government. Because Turkey's plan for regaining her lost islands is so simple it may be assumed that it will not be allowed to come to pass. The Powers may find it necessary to lay an embargo on such sudden acquisitions of naval material by small nations in time of peace. On the part of Brazil and Argentina, such action would be received with vehement protest. Speculation in Dreadnought futures seems to be a well-established business with these South American republics, which always have a ship or two on the point of completion and are always ready to sell for a fair price to a Government hard beset.

TRANSCENDENTAL FOREIGN POLITICS.

There is a story of a man asking after a friend of his youth, and expressing surprise that he had not gone far in public life, because, he added, "when I knew him as an undergraduate in college he was a great expert in foreign politics." One knows the callow type. The expertness consists in remaking the map of Europe at will, in launching navies and armies at each other, and, in general, in working out the conceptions of destiny and historical inevitableness and race-clashings and world movements which form themselves in the imagination of a young man, possibly a little touched in the head. But a similar tendency is sometimes met with in children of a larger growth. Men much better entitled than a college student to be known as experts in foreign politics occasionally allow their brooding over possible complications to betray them into an unreal and almost fantastic treatment of their subject. The whole thing becomes to them transcendental—something in which pure theory may operate. In their absorption in study of the weapons and potential fighting power of nations they forget the men and women of flesh and blood who make up the nation.

Of this weakness in a certain class of writers and publicists we are just now having instructive examples, both in this country and in Europe. In England, for example, the question of the great burden of taxation for increasing armament is becoming acute. It is getting into politics. A large delegation of Liberals recently waited upon the Prime Minister to protest against any enlargement of the naval estimates. And Lloyd George, with his instinct for discovering what the plain working-people of the land are thinking about, has lifted up his voice against spending more money on battleships. Now, this is the juncture which Admiral Mahan seizes for putting before the British public his conviction that the British navy is alarmingly weak. It is not possible to follow his reasoning, in the fragmentary reports of it given by telegraph. But we would not make light of it. Whatever Admiral Mahan writes is pretty sure to be worth serious attention. If he asserts that the British navy is not strong enough to be dominant both in home waters and in the Mediterranean, he no doubt can give reasons for that opinion. But the point is that he expresses himself merely as an abstract student of naval power. He discusses not likelihoods but possibilities. His writing is that of a transcendental philosopher. It will interest theorists; but whether it should much influence English statesmen saturated in the facts of the situation at home and abroad, aware of the failure of past naval prophecies, and conscious of the intense strain caused by excessive Dreadnought-building, is highly doubtful.

In connection with our own Mexican problem there has lately been a starting up of the high-priori theorizers. At their head stands the London *Spectator*, which draws a fancy picture of the United States conquering and annexing Mexico and extending American jurisdiction all the way from Canada to the Panama Canal. Such articles have a way of appearing in the *Spectator*, which is, as a rule, sober and learned, but now and then seems to find restraint irksome and gives its imagination a fling. This is easier in foreign politics than anywhere else; and accordingly we get apocalyptic visions of vast reshiftings in the Orient, sweeping readjustments in Europe, and now this dream of the United States taking over Mexico with ease—we seem to remember that the *Spectator* had previously said that we should need an army of 500,000 men and several years' time—and instantly bringing about order and settled government. A few other visionaries almost as sanguine are appearing among the persons with whom the New York *Sun* is obtaining interviews on the subject of our possible armed intervention in Mexico; though most of the opinions gathered are strongly against any hasty step in that direction. It is notable that nearly all those who favor aggressive military action towards Mexico do so with their mouths filled with large phrases about civilization and race-qualities and the book of fate. Sentiment has before now joined with sordid interests to bring war or the peril of war.

Now, we do not affirm that all this transcendental way of looking at the matter is pure folly. Some of the considerations advanced may yet appear to have weight. But what seems perfectly clear to us is that the present is no time for our statesmen to be rhapsodizing about world-movements and race-struggles, or to be speculating dreamily on how their policies will look a hundred years from now. Their problem is of the day. What they should fix their gaze upon is the facts as these actually exist. If this makes their course seem a little grandiose, so be it. They need not stand in fear of criticism if they only keep the peace, while seeing to it that our national obligations are honorably met. This policy will be called hand-to-mouth and rule of thumb, but no matter for that. It is better to be cautious, to advance step by step, and to deal with each situation as it arises, than to run blindly off with some swelling phrase of vanity, some formula of *Weltpolitik*, which may land us in unforeseeable miseries. It may not be magnificent, but it is common-sense to wait and watch and hope for a better turn in Mexican affairs.

THE MORGAN ANNOUNCEMENT.

Mr. J. P. Morgan, in announcing Friday his firm's decision to withdraw from the corporation directorships now held by members of the firm, admitted that the action was taken largely in deference to public sentiment. He referred to the undoubted mistrust with which the general public has come to look on representation by a few great banking institutions, on the boards of the great railway and industrial companies, so extensive as to suggest the possibility of uniform domination or control. This popular dislike must be admitted to have taken at times a highly exaggerated form. Public men like Senator La Follette, not being content with pointing out visible or potential evil arising from the practice, have allowed a vivid imagination so far to run away with them as to conjure up a financial organism of their own, peopled by wicked spirits who, in the Senator's own words, can "create artificially periods of prosperity and periods of panic."

The Congressional "Money Trust debate" of 1912 was full of such strange conceits and superstitions. But the Money Trust crusade was nevertheless not a movement without a cause, and the cause lay in company management and affiliations, concerning which even conservative and cool-headed observers confessed misgiving.

The danger in the system did not lie primarily in what was done through these so-called "interlocking directorates," and nothing is more certain than that the allegations of malicious conspiracy, put forth by the La Follettes and the Lindberghs, were mere raving. But a condition was created by this machinery of representation, on two or three dozen boards, by a few great banking interests, which had the potentiality of undoubted danger. For such a statement we do not need to rely on the arguments even of hostile critics. It was one of the most powerful financiers who shared in this distribution of control from whom the Pujo Committee was informed that "excess of power in a limited number of men is always a menace," and it was another, the head of a great New York financial institution, who told the same Committee that "it has gone far enough," and that while in good hands the system might do no harm, "if it got into bad hands, it would be very bad."

But the truth also was that the machinery which had been constructed was of a kind which its own authors were themselves scarcely able to control. That is to say, they might, as Mr. Baker did, deprecate further extension of its scope; but they were nevertheless swept along with it. Its extension seemed to be carried on, despite their own willingness to let the movement stop where it was. It probably could not have been stopped, except either by absolute force of prohibitory law or by such outright abandonment of the system which made the movement possible, as has been formally announced, in his own firm's behalf, by Mr. Morgan.

Such financial episodes as that which now seems to be somewhere near its end do not occur accidentally; but, on the other hand, they are by no means always the result of deliberate design. The much-discussed Money Power, in the shape of representation of a few great banking interests on the boards of all the great corporations, was primarily an outcome of the period from 1893 to 1897, when the country's largest railway and industrial companies had gone into insolvency and when the task of setting them on their feet again devolved on the international banking interests. That those interests should be personally represented on the boards of the companies, pending their financial rehabilitation, was a condition positively fixed by the capital, home and foreign, which was needed for the undertaking and without which it was not possible.

To an extent, similar representation on the boards of the huge railway and industrial combinations of a few years later was stipulated by the capitalists who "underwrote" the stock. But it is hardly possible to deny, as a simple historical fact, that in the turmoil of financial ideas which then prevailed the original purpose of such directorships—the guaranteeing of sound and conservative policies, as against the recklessness and incompetency which had previously prevailed—was quite lost sight of, in the new conception of companies with perpetual directorates, so manned as to prevent either change of control or inconvenient competition. The people have been pretty steadily occupied, ever since 1901, in doing away with the theories which grew up then with such portentous suddenness.

The Northern Securities decision stopped the progress of the movement through the "holding company" device. It seems to be the spirit of the day to solve the later problems, inherited from the period of financial infatuation, through frank recognition of, and concession to, the public's attitude by the financial interests themselves. In this respect, the action, taken with much dignity and straightforwardness by Messrs. J. P. Morgan & Co., is as impressive a sign of the times as last month's voluntary dismantling of the Telephone and Telegraph combination.

THE LIFE EXTENSION INSTITUTE.

In a brief prospectus, the Life Extension Institute, just incorporated in New York, sets forth its object, its plan of operation, the personnel of its organization, and the prospects of usefulness which its founders see before them. The object is "to lengthen life by applying modern science." The means by which this object is to be promoted are of twofold character. The Institute has "a Hygiene Reference Board of nearly a hundred leading experts on various subjects pertaining to health," the purpose of which is "to help determine the truth on hygienic questions referred to it"; and the Board "will aim ultimately to settle scientifically, so far as possible, the many disputed questions of personal hygiene" and will endeavor with "the cooperation of savants throughout the world to solve such fundamental problems as how best to ventilate our houses and how best to clothe and feed our bodies." The distinctive feature of the Institute, however, is its system of health-inspection of individuals, which is set forth as follows:

> The method to be used to prolong life is very simple and the same as applied to ordinary machinery—inspection and repairs. Any person, whether a policyholder in a company which employs the Institute or as an outside individual, may have an expert examination made of his physical condition. If he is entitled to the examination as a policyholder, he has it without cost to himself.
>
> After the human machine has been inspected, the individual will be advised to see his family physician, who will be furnished a full statement of the results of the examination—high blood pressure, or whatever the disability or disabilities may be.

Thus the Institute is designed to be a self-supporting business enterprise; but two-thirds of any profit there may be above 5 per cent. on the capital invested is to be applied to "extending its public usefulness." Finally, the names of the men prominent in the organization are such as to offer strong warrant for the expectation that its work will be carried on upon a high plane. Among them we note ex-President Taft, Col. Gorgas, Dr. William H. Welch, Prof. Irving Fisher, and others of national and international eminence. Mr. E. E. Rittenhouse, whose devotion to work of this nature in connection with the Equitable Life and the Provident Savings is well known, will be president of the Institute.

That such a provision for competent medical examination of individuals, at little or no cost to the person examined, is capable of doing a vast amount of good will hardly be questioned. The early discovery of slight impairments, which would induce the man involved to consult his doctor before it is too late, cannot fail, in thousands of cases, to avert developments which, in default of such timely knowledge, result in disease, disability, and premature death. But it will not do to ignore the objections to a general resort to the practice, even from the standpoint of physical health, pure and simple. So long as there is selection—so long as only those go to the medical examiner who person-

ally feel that it is advisable for them to do so—the benefit doubtless vastly outweighs the harm; but there is room for harm as well as good. There is, to begin with, the danger of a false diagnosis—and diagnoses may be mischievously false in degree even when they are right in kind—which is far from being a negligible quantity; but even if the diagnosis is perfect, it is by no means certain that imparting of it will be of physical benefit to the person examined. The knowledge of a slight "impairment" may, through its psychic effect, do the individual vastly more bodily harm than the measures prescribed by his physician will do good. We believe that it is distinctly an open question whether the introduction of yearly medical examination as a universal practice would increase the average term of human life.

Nor will it do to look upon a question of this kind as conclusively determined by its physical results. Even if it were demonstrated beyond a doubt that the average length of human life would be increased by the universal practice of periodical medical examination, it would still remain a question whether the establishment of that practice was desirable. There is such a thing as paying too dear for a few added years of life. A hearty man who goes about his work and his play, his duties and ambitions and pleasures, without a thought of his health, may, through having this or that unsuspected danger thrust upon his attention, suffer an impairment of happiness, and even of usefulness, for which no mere prolongation of existence, and no ordinary improvement of physical health, can supply a recompense. In this matter, men present an infinite variety. There was a world of wisdom as well as of wit in the reply of the old lady to a great hygienic expert who wrote to ask her how she accounted for living to the age of a hundred. "Account for it," she said, "what nonsense! I have done just as I pleased, and the Lord has kept me alive."

By an odd coincidence there appeared in one of the New York papers on the same day with the publication of the prospectus the announcement of a forthcoming article by a physician, long connected with the Health Board, who "believes that institutes to examine each citizen annually should be established. Whether Dr. Biggs's idea is that such examination should be obligatory we cannot say, but the use of the word "citizen" seems to look that way. The truth is that there are a number of "movements" in our day that point to the kind of control of personal life of which such a proposal would be an illustration. Compulsory vaccination and other sanitary regulations stand in an entirely different category; they are measures for the protection of the public health or the maintenance of such standards of living as are indispensable to decency or civilization. But that a man should be compelled to have the condition of his own health officially investigated in order to prevent a possible shortening of his own life would be an intolerable invasion of reasonable personal liberty. There is no danger that anything of the kind will be attempted in the near future, but there is no telling to what a point the fanaticism of race culture—or whatever the particular cant may be that fits this case—may be carried.

A GREAT PHYSICIAN.

It is because he combined with a great career as a physician the production of a notable series of works in prose and verse that the death of Dr. S. Weir Mitchell attracts such general attention throughout the country. But if he had never published a story or a poem, his name, though it would have been on far fewer tongues, would be hardly less deserving of a place of extraordinary honor and distinction. In this day of systematic and organized research, making almost daily advances in the science and art of medicine, the type of which he was one of the finest examples is overshadowed by another from which mankind is receiving measureless benefits and to which it owes unstinted praise. But the time has not come, the time never will come, when personal qualities of mind and heart and character like those of Dr. Mitchell can lose their priceless value or cease to command the affection and homage which are their due. After scientific research has done its utmost, there will still remain the need for that peculiar intuition which is the mark of the born physician, and for that combination of sympathy and force, of careful thought and unflinching will, which are essential to the highest work of the great practitioner. And in no field of medicine are these qualities of more vital importance than in that of nervous diseases, to which nearly the whole of Dr. Mitchell's life was devoted.

It would be misleading, however, to think of Dr. Mitchell as in any sense representative of a contrast between the type of the research student and the type of the practitioner. On the contrary, the foundation of his medical reputation was laid in several remarkable and original investigations which he made early in his career; investigations not belonging to the domain which he afterwards made his specialty. Nor in this domain was his work only that of the able and devoted physician bringing succor to thousands of individuals whose cases had baffled the efforts of less gifted or less masterful practitioners; for it was the originality of his methods as well as the power with which he applied them that constituted the distinction of his practice. But in research, and in the initiation of new methods, he was but one of a multitude; it was in the qualities of his personality that he stood as one of an extremely small group, the representative of a type which must ever be rare but without which the world would be infinitely poorer. In quite a different way, but perhaps even more strikingly, the power of sheer personal qualities is illustrated by another American medical career, that of Dr. Osler. It was to his rare gifts of intuition, sympathy, judgment, and personal charm, rather than to any extraordinary scientific equipment, that he owed his preëminence as a medical consultant; and the powerful influence which he exerted on the progress of medical education in America was due, above all, to the enthusiasm and loyalty he inspired in those with whom he was associated, and especially in his students.

Dr. Mitchell's literary achievements did not, like Dr. Holmes's, put his medical fame into the shade. This is both because his medical work was of more signal importance and continued to the last to absorb his energies except during his professional vacations, and because his literary productions in prose and verse, though of a high order of merit, do not possess the distinction or excellence which place Dr. Holmes's

works among the chief treasures of American literature. But in the case of neither of these eminent medical men was the turning to literary production in middle life an accident. In both cases the talent and the desire for writing manifested itself in short but striking productions in early manhood. In both cases a fuller indulgence of that desire was postponed for many years. But Dr. Mitchell continued to be chiefly absorbed in the exhausting labors of his strenuous practice; while Dr. Holmes, after the phenomenal impression made by the Autocrat, became chiefly a man of letters. In both instances we have illustrated, what it is always a great pleasure to see, the combination of literary talent with the acuteness and precision of the scientific temperament. That the combination is not so unusual as is generally believed the *jeux d'esprit* of a number of great scientists—Clerk Maxwell, for example—bear witness.

Dr. Mitchell was the last of a group of three Philadelphians, of nearly the same age, who, each in his own department, occupied a position of peculiar eminence. He was born in 1829; Henry C. Lea, who died four years ago, was born four years earlier, and Horace Howard Furness, who died in 1912, was born four years later than Mitchell. The three men were warm friends, and it is not many cities that can boast of a trio of old men at once so distinguished and possessed of such admirable and delightful traits of character. Different as were their fields of activity, there was one thing common to them all, besides their high aims and their interest in humanity. They were all three filled with the spirit of scholarship, and represented its finest traditions. If there is growing up in Philadelphia a group of men who in their old age will be worthy of being classed with these three whom she has recently lost, she is fortunate above most of her sisters.

DIALECTS ENGLISH AND AMERICAN.

To the recent British lament over the decay of the so-called popular tongue, the first pamphlet of the new Society for Pure English adds its voice. After outlining the Society's hope "to assist conscientiously in the development of English," it lays down certain preliminary principles. These chiefly look to a restoration of the old popular sense for native expression—for a speech rich in localism, dialectic raciness, naturalness in idiom and diction. Recital of the fact that in Cornish, Sussex, Northumbrian, and the other dialects is the land's real reservoir of fresh, energetic English and its best mint of new words is not new; and the statement that they are the last refuge, in their vowel sounds and syllabic rhythm, from the current slurred pronunciation, only reflects Dr. Bridges's long-familiar views. But the pamphlet falls in with a general concern over the drying-up of the sturdy vernacular, and its encrusting by an artificial, town-bred speech. Correspondents have lately gone into remote districts, only to ascertain sadly that "journalese" had thrown a mortal dart at dialects once as vital as in Eliot's Lancashire rustics, or Scott's lowlanders, or the Devon of Blackmore, or Wessex of Hardy. Some tributes paid to the indigenous tongues are only less extravagant than Yeats's claim for the unpolluted speech of the Irish peasant.

To maintain that our American problem of preserving dialects is equally important would be absurd. Diffused education and currents of democratic thought have hindered the birth of true dialects on our soil, as the migratory habits of our population have refused them sustenance. So, too, the growing dominance of urban life has worked against them. Our local colorists have reflected in fiction dozens of distinct forms of dialect, but rather by accentuating the extreme individuality of New England, or the South, or the Far West, than by faithfully reproducing the vernacular of even the most rural community. Any American understands any of our dialect writers, while he would be gravelled by the first line of modern Cheshire or Kentish or Norfolk. Our fiction does, however, indicate popular forms of speech, nowadays much endangered. The Government has reported the inroads made by the moonlight schools of Kentucky upon the sturdy negligence of the mountain tongue. The picturesque acridity of New England speech, now swamped by foreigners, was vitally distinct from the broad humor of prairie diction, now fast being urbanized; the explosive West of Bret Harte has been civilized to a degree; even in the South, the old Creole-land and the old Virginia are becoming traditional. That these lines of cleavage represented a native vigor is beyond question. The chief agents in their destruction are the schoolmaster and the newspaper abroad. The newspapers could not be written in the style of Sir Thomas Browne or De Quincey, even if such writers were available; but it is unfortunate that they and other agencies are making current a standardized speech that is driving idiomatic coin out of even remote circulation.

Such idiom smacks of the soil. Wedded to localities, its preservation seems, in theory, feasible. The life of every section is reflected in its speech. In glory of cadence no American dialect equals "The Shadow of the Glen" or "Riders to the Sea." But we have a storehouse on which we can never afford to turn the key. Take a lower-Mississippi sentence that Clemens might have copied: "There's been a fray on the river—I don't know how the fraction began, but Dan and Bill feathered into the Joneses with their rifles." Agincourt bowmen would have understood "feathered into." In the tongue of the Appalachians storm is tempest, gay is gamesome, strong is sur-vigorous, the air is the element, agriculture is tilth and husbandry, medicine is physick. The people speak in metaphor as readily as the Tudors. One can hear in the Great Smokies, as in Marlowe, of cowards whose blood is snow-broth and heroes bold as brass. To become ashamed of speech with a colloquial flavor is to become ashamed of the very speech that has primitive thews and muscles. To read the country conversations of that random walker, Clifton Johnson, in his Highways and Byways Series, and compare the shrewd point of talk in "unprogressive" with the stilted flatness of "progressive" localities, is as instructive as to compare the Lincoln-Douglas debates with present-day Congressional oratory. The homespun language has a past; in it beats the heart of deep feeling, and its sayings and phrases have a race-old distillation of wisdom.

FUN IN LATIN.

The scholars of Westminster in London have been in the habit of giving an original Latin play every year, of the nature of a "review." That is to say, the chief events of the past twelvemonth,

political and social, are made the subject of skits and jokes in Latin verse. This year's performance, which was so successful that it was given three times, had a great many amusing grinds on persons in public life, with witticisms about current fads in society. When one says that all this is good fun-making, allowance has to be made for the peculiar titillation which always comes from catching the point of a joke in a foreign language. And a special humor, of this derived sort, seems to lie in the fact that gibes at Lloyd George and jests at Larkin and puns and sly allusions at the expense of fashionable folk are found in school-boy elegiacs.

In the play, Davus, a "Misaristocrat," is easily recognizable as the Chancellor of the Exchequer. He and Simo, plainly Sir Rufus Isaacs, are discovered at table, drinking healths to "Marcone" and to a colleague absent "in urbe Bogota." This was Lord Murray, of course, whose absence in Colombia at the time of the Marconi inquiry was much remarked upon. To his health Davus drinks enthusiastically, with the hope that it will be a long time before he gets back:

Absenti socio! longa sit usque via!

Presently Chremes comes in, the "plebis turbator Hibernæ," and excitedly demands how they dared put him in jail. But Lloyd George reminds Larkin that he is there a free man, and Sir Rufus Isaacs points him to the new inscription over the prison door: "Who enters here leaves *fear* behind." And a bystander adds the comment that Larkin got out more quickly than he got in:

Exitus hinc citior quam datur introitus.

But Larkin Chremes declares that he must go on with his "fiery cross" (*ignea crux*), whereupon Sir Rufus warns him that he will himself be burned by it, if he is not careful. At this point news comes that the Lord Chancellor has resigned, and Sir Rufus says that he is willing to accept the office. Lloyd George asks him, doubtfully, if he is able to pronounce the judgment of Paris, whereupon Charinus enters, a "Chameleon Authority on Dress," and Davus exclaims: "Atque eccum Paris ipse!"

After this the fun is diverted to suffragists and modern costumes and dances. Lesbia appears with a slit skirt, and Sir Rufus offers to aid her, it being apparent to him that she had "torn something" in getting out of her "Teutonic chariot" (query, automobile?). But Davus cries out to him:

O asine! hunc mulier fert hodierna modum.

To add to the confusion, a dancer comes in and makes advances to Larkin, who cries out upon the "Gallican" and protests angrily:

Nil ego tango te; ne tu me tange.

The samples given will suffice. But the enterprise of making a Latin play as snappy and "topical" and up-to-date as a French "revue" deserves a word of comment by itself. It might be thought to prove that Latin is not so dead a language, in every sense of the term, as has been asserted. To make it a vehicle for jokes of the day would seem to show that it is very much alive. And it is not merely a question of the students, who perhaps laboriously wrote and learned their parts, but of the auditors. If the hall could be three times filled with an audience quick to see and applaud each thrust, are we right in thinking that the habit of Latin quotation has so nearly gone out because there is nobody left to understand it? For our part, we should greatly like, if we honestly could, to draw comfort for the lovers of the classics from this Westminster play; but truth compels us to state that every one who attends the performance is furnished with an English translation, and also with a sort of little "book of the play" giving the gist of it. This seems like a dashing of the last hope, yet it must not be forgotten that many a good Latin scholar, judged by modern standards, cannot easily understand the language when it is spoken, or speak it himself. A tongue that is taught as "dead" inevitably becomes dead in this sense. And so it is, as the London *Times* remarks, that a "great instrument has been lost, which should have continued to be, as it was throughout the Middle Ages, the common means of understanding and fellowship for all educated men."

THE AMERICAN HISTORICAL ASSOCIATION.

HANOVER, N. H., January 2.

Charleston, S. C., was the historic town chosen for the twenty-ninth meeting of the American Historical Association, beginning December 29. The four-score members who went by special train from New York enjoyed on the way a morning's visit at Richmond; in the afternoon, at Petersburg, they were whirled out by automobile to the scenes of the great conflict about that town; standing on the edge of "The Crater," as the peaceful rays of the descending sun fell through the trees, they listened to the picturesque narrative of a veteran who had lived through that calamitous day. At Charleston, likewise, the historic houses, the visit to Fort Sumter, and the military papers read at the meeting were vivid reminders of the past. At Columbia, where a final session was held, the members of the Association, as guests of the Board of Trade, greatly enjoyed a luncheon and an automobile view of the growing city and its thriving cotton mills.

A notable feature of the Charleston meeting, aside from the prominence of American history on the programme, and aside from the pleasant Southern flavor lent by the locality, was the devotion of many discussions to subjects other than the old-fashioned strictly political sort of history—to special conferences on religious, commercial, military, legal, and social and industrial history. These special conferences emphasized the breadth and many-sidedness of present historical study among the members of the Association. A word or two in regard to these.

The study of American religious history was commended by Professor Jameson to laymen, especially in view of the fact that the management of church affairs in America has been so much more in the hands of laymen than in Europe. He also urged that the various denominations, especially the Catholics and the Protestants, should try for a fuller and more sympathetic understanding of each other's history in America. M. W. Jernegan, of Chicago, on the basis of a careful study of letters from American missionaries, analyzed the un-Christian manner in which the early Christian colonists treated their slaves. J. S. Bassett, of Smith, dealing with the development of popular churches after the Revolution, shed a light on the heroism of the little pioneer churches as they pushed out on the frontier.

A large attendance evidenced much interest in the conference on Social and Industrial Aspects of Modern History. W. P. Hall, of Princeton, in a paper pleasing in style and sound in content, explained how *laissez-faire* doctrines in English politics broke down in the early nineteenth century under the influence of factory legislation, Malthusianism, trade-unionism, and Owenism. James Sullivan, of the Boys' High School in Brooklyn, gave an amusing account of the inadequacy of most of our history textbooks—of their failure to interest pupils because they contain too many dry political and military facts which have no direct relation to the pupil's every-day experiences and training for

practical life. He succeeded in stirring up a vigorous discussion, of which the upshot seemed to be that political history must be retained as the backbone of history; that some greater emphasis may profitably be given to the social and industrial side of history, especially for the period since the great economic changes wrought by the Industrial Revolution; but that historians must be careful not to draw, nor allow their students to draw, analogies between the past and the present, which at first sight seem attractive and interesting, but which, upon careful investigation, may prove to be wholly fallacious. Teachers interested in present economic forces must be careful not to fall into the unhistorical pitfall of reading twentieth-century motives into fifteenth-century men. To one who thinks that the present enthusiasm for socializing and industrializing history is excessive and unstable, it was noticeable that the enthusiasts denied their faith by their works. For the next morning, when C. M. Andrews, of Yale, read a careful paper on colonial commerce, none of them was present; they were either in the overcrowded room below, listening to excellent papers on the much-abused subject of military history, or at a conference on methods of teaching, or elsewhere. Yet Professor Andrews was analyzing, out of his abundant knowledge of colonial manuscript material on both sides of the Atlantic, the exports and imports, the trade routes, and the resultant social and industrial aspects of colonial life two centuries ago.

In an entertaining paper on "Legal Materials as Sources for Modern English History" A. L. Cross, of Michigan, indicated how rich for the general investigator of modern English history, as well as for the historian of the English law, are the records of the cases decided in the common-law courts, the rolls of quarter sessions, and the records of manorial courts. Some of the latter existed into the nineteenth century, even such a great city as Manchester, for instance, being under the jurisdiction of a manorial court until 1846, when the corporation of the city bought out the rights of the lord of the manor for £200,000.

In the conference on the teaching of history, out of a discussion by F. L. Paxon, James Sullivan, H. D. Foster, and others, there grew a resolution looking towards the coöperation of the American Historical Association with the local associations of history teachers for defining the content of the fields of history in the secondary schools.

In the presence of a large evening audience the president of the South Carolina Historical Society, Mr. J. W. Barnwell, gave an eloquent address in which he touched the high places of South Carolina history. Professor Dunning's presidential address, which followed, was, as one would expect, charmingly witty, keen, and convincing. Disguising his subject as "Truth in History," he showed how the critical scholarship of the nineteenth century since Niebuhr has destroyed the legends and myths of ancient Roman history, and how yet it was this legendary "untrue" history which influenced the motives of the makers of history from Dante and Machiavelli to Luther and Montesquieu. It was not the actual events at Ems, of which we now know the truth, but the untrue version of them, which occasioned the Franco-Prussian War. "The course of human history is no more influenced by what is true than by what is supposed to be true." Fortunately, Professor Dunning's address is appearing in the current number of the *American Historical Review*, where its reading is commended to all, and especially to those who believe in the economic, the geographical, or other "sundrylogical" interpretations of history.

Space will fail if we tell of many other excellent papers, of the archivists and the local historical societies, and of the business meeting, with its discussion of the system of electing officers. Suffice it to say G. L. Burr becomes second vice-president to follow A. C. McLaughlin and H. Morse Stephens in regular succession to the presidency. Evarts B. Greene, of the University of Illinois, becomes secretary of the Council in the place of C. H. Haskins, who has resigned. The regular December meeting of 1914 will be at Chicago; that of 1915, at Washington, with an extra meeting on the Pasific Coast in the summer of 1915, and that of 1916 probably at Cincinnati.

S. B. F.

THE SOCIETY OF BIBLICAL LITERATURE AND EXEGESIS.

New York City, Dec. 31, 1913.

The annual meeting of the Society, held on Monday and Tuesday, December 29 and 30, was the most successful in its history, by virtue both of the large attendance of members and of the number of papers announced in the meetings. The host of the Society this year was the Jewish Theological Seminary, in the admirably equipped building of which institution the meetings were held, as was also the dinner on Monday evening, tendered by the authorities of the Seminary to the members of the Society. The dinner brought more than sixty members of the Society together and gave an opportunity for pleasant social intercourse. A brief address of welcome was made by President Schecther, of the Seminary; and two distinguished visitors, Professor Dobschütz, of the University of Heidelberg, who is the exchange professor at Harvard University this winter, and Prof. Arthur Ungnad, who is at present filling the chair of Assyriology at the University of Pennsylvania, were called upon for brief addresses. Both scholars emphasized the pleasure that it gave them to witness the present activity of American scholarship in so many fields.

At the first session of the Society on Monday afternoon, after the routine business had been dispatched, Prof. George A. Barton, of Bryn Mawr College, delivered the presidential address, which was devoted to a survey of the literature during the past year in both Old and New Testament, as well as in Biblical archæology and some adjacent fields. Professor Barton emphasized the growing tendency both in Old and New Testament fields towards agreement on large essential questions of literary criticism, together with a frank recognition on the part of the more careful scholars of the existence of problems not yet ripe for a solution. At the same time Professor Barton condemned in no uncertain terms the endeavors made in some quarters to raise a doubt as to the foundations of modern Biblical criticism. Referring to the recent effective answer given to critics of the modern school by Principal Skinner, of Cambridge University, Professor Barton added as his own contribution the proof that the attacks upon modern scholars rested on a misconception. The critical theory, he insisted, is not in any way affected either by the circumstance that it has not yet succeeded in solving all the problems of Old and New Testament study or by lack of agreement among scholars in regard to questions of detail. Professor Barton also paid his respects to those who in misguided zeal use "Biblical archæology" as a weapon of attack against critical scholars. He showed that this kind of Biblical archæology was entirely unscientific and either misapplied or misunderstood the real bearings of excavations and other phases of archæological study.

No less than thirty-five papers were announced in the printed programme, to which number several more were added after the meetings had begun. It was impossible for all the papers to be read in the three sessions arranged for. A compromise was effected by curtailing the time allotted for the reading of the papers and limiting those who had announced several papers to reading only one. If the activity of the Society continues to grow in the same proportion as during the past few years it will be necessary to arrange for one or two additional sessions. As on former occasions, there was a preponderance of papers in the field of Old Testament study over those in the New Testament. Indeed, this time the number of New Testament papers was so small, barely a half-dozen, that one is tempted to

ask the question, What is the matter with the New Testament scholars in this country? Are they so much occupied with teaching and routine duties as not to find time for investigation, or is the small showing of New Testament scholarship at the meetings of the Society due to timidity, or to other causes? To be sure, what the New Testament papers lacked in numbers was made up by the quality, though all but one or two of these papers were of too technical a character to be reported here.

Professor Bacon, in a brief abstract of his paper on "Jesus as the Suffering Servant in Paul," remarked upon the fact that there appeared to be scarcely any appeal in New Testament writings to the famous 53d chapter of Isaiah. Professor Torrey, of Yale University, placed convincing evidence before the members for his thesis that the Book of Acts reverts to a Semitic source, and that this source was in all probability Aramaic.

Of the papers relating to the Old Testament the same general remark applies as to those in the New Testament field, namely, that the majority were of a technical character; some of them, indeed, technical to a superlative degree. Of most general interest was the address by Prof. Warren J. Moulton, of Bangor, Me., giving an account of the year spent by him in Palestine as the director of the American School of Archæology at Jerusalem. Professor Moulton made no less than five different tours with the students of the school in Palestine and Egypt, and was fortunate enough to discover an exceedingly interesting painted tomb, at Bêt Dschibrîn, which, while dating from the Christian period, contained many symbolical representations that were clearly survivals of an earlier age. Such painted tombs are quite rare in Palestine, and the one found by Professor Moulton forms a valuable complement to a still finer specimen discovered a number of years ago by Professor Thiersch, of Munich, and Dr. Peters, of New York.

One of the most important announcements made at the meeting, though not bearing directly on Biblical studies, was by Professor Clay, of Yale University, who was fortunate enough to come into possession recently of a fragment of a cuneiform tablet which proved to be part of the Sumerian original (or prototype, as Professor Clay calls it) of the famous Code of Hammurapi. It was known that this Code, the Babylonian text of which was discovered in 1900, was a translation from the Sumerian, and it is of great interest now to find portions of the original language of the Code turning up through dealers in antiquities.

An unusually interesting communication was that presented by Prof. Nathaniel Schmidt, of Cornell University, on the Sins of Jezebel, which showed conclusively that the accounts of this queen in the Book of Kings represented in part distorted facts and in part involved such incredible assumptions as to reveal their late origin; the purpose was to reflect on the character of the wife of Ahab, who as a foreigner was not looked upon with favor by the pious compilers of later days.

Another paper of real value was that by Professor Friedländer, of the Jewish Theological Seminary, who, on the basis of a plausible interpretation of Jeremiah iii, 16, sets forth new reasons for believing that the Ark of the Covenant actually disappeared at the time of the destruction of the Temple in 586 B. C., and that at the time of the catastrophe it was thrown or placed in the chamber in which the wood for the temple sacrifices was kept.

An interesting feature in connection with the meeting was the exhibition of manuscripts and early Hebrew prints in the upper floor of the building of the Jewish Theological Seminary. This collection was merely a sample of the rich treasures acquired by the Seminary during the less than two decades of its existence. Among the 141 specimens displayed there were such treasures as a copy of the Genoa edition of the Psalms, of 1516, in Hebrew, Greek, Arabic, and Aramaic, with a Latin commentary in the course of which there is a mention of the discovery of America by Christopher Columbus—interesting as the first reference to the event in any printed work. The exhibition also included a copy of the edition of the Psalms with Kimhi's commentary printed in Bologna, 1477, which is generally regarded as the first Hebrew print. There was also the copy of a Hebrew Bible printed in Brescia in 1494, the second complete edition of the Old Testament, which is of special interest as the one used by Martin Luther. A Hebrew book issued from the press of Soncino in 1491 is noteworthy as the first Hebrew print with woodcuts. A work of Petras Niger, printed in Esslingen in 1475, contains the first Hebrew characters printed in Germany. The exhibition gave to members an opportunity of seeing what is now the third largest collection of Hebrew and Rabbinical litreature in the world.

At one of the business sessions announcement was made of the appointment of Prof. James A. Montgomery, of the University of Pennsylvania, as director of the American School of Archæology in Jerusalem for the coming year, 1914-15.

By unanimous vote Prof. Nathaniel Schmidt, of Cornell University, was elected president of the Society, and Prof. Charles C. Torrey, of Yale University, vice-president.

The report of the managing committee of the American School at Jerusalem gave an account of the activity of the school during the past year, and emphasized once more the need of gathering an immediate fund of at least $100,000, to erect a suitable building and provide for a permanent director of the school. Land for the proposed building was purchased some years ago, and it is to be earnestly hoped that efforts will be made during the coming year to obtain the necessary funds for the erection of a suitable home for archæological research in so important a centre as Palestine.

ENTRANCE EXAMINATIONS IN HISTORY.

TO THE EDITOR OF THE NATION:

SIR: Of those who take the College Entrance Examination Board's examination in history, a very large proportion fail every year. In June last 70 per cent. of the candidates in American history failed to pass. This fact, of course, creates no little comment, and some indignation; and the demand for some explanation of so great a mortality is reasonable. The explanations are various. It is charged that the questions are too difficult. When an investigation of the questions shows that this charge is not true, the blame is laid on the persons who read the answers. These readers are said to be too severe. The last explanation to date is that the American Historical Association is trying to use the College Board to elevate standards of history teaching "unduly." The following paragraph is from the New York *Evening Post's* (November 22) notice of the annual meeting of the College Board:

> The committee on examination ratings presented a report, in which the Board's history examinations were discussed. It was pointed out that the results in history were poorer than in any other subject, and that secondary schools were evidently not doing the work called for by the requirements recommended by the American Historical Association. It was said by some that through the influence of the American Historical Association the College Entrance Examination Board had been used as a lever in an attempt to elevate unduly the standards of history-teaching, and that the standards set up were unattainable, not only from the point of view of the maturity of the students in the secondary schools, but also from the point of view of the time that can be given to history in the programme of study in even the very best schools.

Now it may easily be conceded that history is badly taught in many secondary schools, as in many institutions of other grades. It may even be conceded that the American Historical Association has been guilty of trying, very modestly, to improve the teaching, though there are many who would deny that this compliment is deserved. It might be conceded, though it cannot be proved, that the secondary school pupils are too immature to study history properly, or to meet the sort of examinations set. All of these things are largely matters of opinion; and all of us

can, this being the case, lay the blame as far from us as our arms will reach. The last clause of the paragraph quoted, however, has in it a statement the accuracy of which is open to somewhat more definite discussion. What about the time assigned to history in the secondary schools? Is it sufficient? Is it reasonable?

It is assumed that the schools had in mind by the writer of the paragraph are those which prepare boys for the College Board's examinations. Therefore they know what the examination is meant to embrace. History is what is called a one-unit subject. It is understood in all educational circles now that the College Board's units stand for the result of a year's work in a subject on which the student recites five times a week. Yet it is perfectly well known to every one who has looked into the matter that those who complain about these examinations in history are giving their students three-hour courses in history and expecting them to pass an examination based on a five-hour schedule. Physics, for example, is more likely to receive six hours than three or four. It should receive five, since it is a one-unit subject. The languages and mathematics receive at least five hours a week for each unit.

Now this is no plea that history receive five hours. It is not even a plea that history be recognized as a college-preparation subject. It may not be. The field may be too large and too indefinite. This is not a plea for anything but an honest recognition of one or two elementary facts: First, whether or not a unit is to represent a five-hour course; secondly, whether or not the examination in a five-hour course should be so set that those who take three-hour courses can pass it; thirdly, whether it is fair or reasonable for the principals who send up students with a three-hour course to try to lay the blame for failures where the blame does not belong. One of the first things our boys and girls need is candor and fairness. One doubts whether such an attitude towards standards is likely to train them in these qualities.

EDGAR DAWSON.

Normal College, New York, January 2.

TITIAN'S PHILIP II.

TO THE EDITOR OF THE NATION:

SIR: The newspapers yesterday gave us news of the sale by Sir Hugh Lane to an American lady of Titian's original portrait of Philip II. The portrait is of so great interest that it is worth while to have every detail of its history, so far as may be, correctly recorded. This was not done in most of the newspaper accounts over here, which stated that "since it left the painter's easel in the sixteenth century the work has only passed through four hands" (*Daily Telegraph*), and further that before Sir Hugh Lane "acquired the canvas it had been the treasured possession of the late Professor von Lenbach, who purchased it from the original owners, the Giustiniani family, of the Palazzo Barbarigo, Padua."

The picture has certainly passed through more than four hands since Titian's death, nor did Sir Hugh Lane purchase it from the Lenbach family. On the painter's death, in 1576, the canvas passed to his son, Pomponio Vecelli, who squandered his patrimony and finally sold his house and its contents to Christoforo Barbarigo. Ridolfi (see "Maraviglie dell' Arte," Venice, 1648, p. 181) mentions the portrait as owned by Gli Signori Barbarighi di San Polo. Later this picture and the original portrait of Francis I (the original of the picture in the Louvre) passed to Count Sebastian Giustiniani Barbarigo, of Padua. When they were in Padua, they were seen by Dr. Bode, of Berlin, who (as the story has been told me) desired to purchase them for Berlin, the price then being only a few thousand marks for the two. Not being able to procure the money, he persuaded Professor von Lenbach to buy them, hoping to get them later from him. The professor, however, refused to part with them (though they were the cause of litigation in the German courts), and after his death they were sold by his widow, through Heinemann, the Munich dealer, to Messrs. Agnew, of London. This was in 1911. While in Agnew's hands they were offered to various buyers, among others the late Mr. Morgan and the Boston Museum, for a price considerably less than the Philip is now reported to have brought. Finally Sir Hugh Lane bought the Philip, and it has been in his "collection" only a few months, he being the fifth and not the fourth owner. RICHARD NORTON.

JEFFERSON AS ARCHITECT.

TO THE EDITOR OF THE NATION:

SIR: Every student will heartily second your praise of Dr. Lambeth's "Thomas Jefferson as an Architect" for its service in reproducing certain of Jefferson's architectural manuscripts. Unfortunately, however, your review gives the impression that the book is a thorough presentation of Jefferson's achievements in architecture. The neglect of important documents previously published, which have been held to lessen Jefferson's part in the design of the University of Virginia, leaves this considerable aspect of the question for further discussion, while an evident lack of familiarity with other circumstances at the time prevents Dr. Lambeth from pointing out Jefferson's most vital significance.

Dr. Lambeth's speculations as to what Thornton may have sent Jefferson in reply to Jefferson's request for sketches for the University should have been rendered unnecessary by the publication of Thornton's answer by Mr. Glenn Brown in the *Journal of the American Institute of Architects* for January, 1913. Mr. Brown, who, as author of the official history of the Capitol at Washington, is familiar with Thornton's work, even makes the statement that the drawings preserved at Charlottesville are exactly the kind of drawings that Thornton made for the Capitol and other buildings, and that he feels confident they are the ones Thornton sent Jefferson. In this matter, at least, we must take Jefferson's part, for Thornton himself states that he sends only two "specimens of the orders," and comparison of the Corinthian capitals in the Virginia MSS., for instance, with those in drawings of Thornton's, leaves no room for doubt that the former were the work of one relatively an amateur in draughtsmanship. To Jefferson is due the credit for the design of the University, in spite of his adoption of several of Thornton's suggestions. Such absurd superiority to Thornton as Dr. Lambeth ascribes to him (p. 93), however, is discredited by the most casual comparison of the published documents.

Jefferson's real distinction is one at which Dr. Lambeth merely hints; it rests in the first instance on his design for the Capitol of Virginia, which Dr. Lambeth mentions only in passing. This design, the exterior of which followed as closely as possible that of the Maison Carrée at Nimes, he sent from Paris in 1785 with the expressed purpose "of introducing into the State an example of architecture in the classic style of antiquity." Both in form and in principle this was the beginning of the classical revival in the United States. The architectural career of Thornton here did not begin till 1793, that of Latrobe till 1797 at earliest. Neither of these men, moreover, though they used pure classical forms, followed the method of the true revivalists who later covered the country with literal reproductions of ancient buildings, their interiors converted to modern uses. It was Jefferson who initiated this method, calling down on himself the just complaint of Dr. Dunglison, the medical lecturer he brought from England, that he was used to "planning the architectural exterior first, and leaving the interior to shift for itself." However much we deplore the revivals of earlier architectural styles during the nineteenth century, we must recognize that such revivals were not less expressive of contemporary culture, dominated as it was by the newly discovered historical method, than previous styles have been in their own periods. Of this characteristic tendency in American architecture Thomas Jefferson was pioneer.

REVERSED INSTRUMENTS.

TO THE EDITOR OF THE NATION:

SIR: The January number of the *Century Magazine*, on page 377, reports the following interesting incident: "Many thousands of the poor Russians followed while a military band with reversed instruments played Tchaikovsky's dirge." Beresin, in his "Skizze der inneren Organisation des Dschudschi Ulus" (Arb. d. Orient abth. d. Ak. d. Wiss. 1864, p. 387), mentions the weird music fashionable at the Court of the Khan of the Golden Horde at Kiptchak. Can it be that the Russians, under Tartar domination, have invented musical instruments which upon solemn occasions can also be played upside-down?

I am neither very musical nor very familiar with Russian history. Can any of your readers tell me what sort of effect a reversed band has, and is there a chance of hearing such music well played in this country?

HENDRIK WILLEM VAN LOON.

Washington, December 28, 1913.

PROFESSOR PEARSON'S CONCLUSIONS.

TO THE EDITOR OF THE NATION:

SIR: Your article on "Eugenics and Common-Sense" (December 4, 1913), is timely and excellent. The writer has, however, fallen into serious error in his reference to Professor Pearson's conclusions respect-

ing the effect of alcohol on offspring (Galton Laboratory, Memoir, No. 10, 1910). Professor Pearson did not personally conduct any direct investigation on this subject similar to those carefully made by Drs. Rudolph Demme, Taav Laitinen, W. C. Sullivan, and others, who have shown clearly the extensive ruin of children by parental drunkenness. What Professor Pearson and his associate, Miss Elderton, did was simply this: They took the somewhat carelessly collected data relating chiefly to a slum district in Edinburgh, gathered by charity workers for another purpose, and drew elaborate conclusions, without using any corrective factor—the facts respecting an equal number of children born of abstaining parents. Practically all the children studied were those of drinking parents. There was no comparison with children in normal, temperate families. Conclusions so reached are obviously most untrustworthy and misleading. All this was pointed out by many eminent specialists some three years ago, in the controversy which followed the publication of the Memoir, in such papers as the London *Times*, the *British Medical Journal*, the *British Journal of Inebriety*, and others. These criticisms completely discredited the so-called "findings" of Professor Pearson.

JOSEPH H. CROOKER.

Literature

THE FAR SOUTH.

Scott's Last Expedition. In Two Volumes: Vol. I, The Journals of Capt. R. F. Scott, R.N., C.V.O.; Vol. II, The Reports of the Journeys and the Scientific Work Undertaken by Dr. E. A. Wilson and the Surviving Members of the Expedition. Arranged by Leonard Huxley, with a Preface by Sir Clements R. Markham, K.C.B., F.R.S. New York: Dodd, Mead & Co. $10 net.

Had we lived, I should have had a tale to tell of the hardihood, endurance, and courage of my companions which would have stirred the heart of every Englishman. These rough notes and our dead bodies must tell the tale, but surely, surely, a great rich country like ours will see that those who are dependent on us are properly provided for.

So closed the last message to the public of Capt. Robert F. Scott. Thanks to the recovery of his journals, the tale has been told in spite of his own tragic fate, and the hearts that have been stirred know no bounds of race or tongue. It hardly needs to be added that his appeal to his countrymen to care for the material wants of those dependent upon himself and his companions was at once and abundantly granted. And it was fitting that after this was done the friends of Capt. Scott and his party should see to it that the story should go to the reading world in a dress worthy of its inherent nobility. Typography, paper, and binding are all admirable, but the wealth and excellence of pictorial illustration are especially to be commended. The frontispiece of the first volume reproduces in photogravure an oil portrait of Capt. Scott by Harrington Mann, a lovable face, with the highest grade of British devotion to country, duty, family, and friends unmistakably stamped thereon. Dr. Wilson holds the same position in the second volume, the plate being reproduced from a photograph. There are sixteen colored plates from water-color drawings by his hand, and a half-dozen photogravures from his sketches, in addition to above two hundred and fifty photographic illustrations, mostly by Herbert G. Ponting, the official photographer of the expedition. Eight well-defined maps make it easy for the reader to keep his geographical bearings, and the dates are indicated at the head of the pages right through the two volumes, aids which any reader will appreciate who has tried to keep his chronology and geography in hand in his perusal of Stefánsson's new volume. The index, however, is surprisingly weak at important points. For instance, nowhere under the names of Scott or Wilson or Bowers will the reader find any reference to the story of the discovery and burial of their bodies, related on pages 237-8 of the second volume.

Capt. Scott went into the southern ice with an unusually congenial and well-assorted band of companions. Each was well qualified for his particular part, all had faith in him and he in them. Given such weather conditions as Amundsen found, sledging from the Bay of Whales, thirty degrees to the east, a few weeks earlier, and Scott's arrival at the Pole and safe return, by the route which he actually took, would have been sure and fairly speedy. Against his choice of McMurdo Sound as a base, no criticism can justly be offered. It had its proper place in the general plan of a comprehensive scientific expedition, and there was as yet no known reason for suspecting that the western portion of the Ross Barrier, where it encounters the mountain slopes of South Victorian Land, might present weather conditions incomparably more severe than those obtaining on the meridian of the Bay of Whales. Antarctic weather is at best an uncertain quantity, however, and one cannot read this tragic story without coming to the conclusion that Capt. Scott and his party took too great chances in the amount of food and fuel left at the various depots, at all events as far as to the Beardmore Glacier. Evans and Oates, the two who died before the final catastrophe, had given grave signs of weakness before the serious shortage of food and fuel came on, but it is plain enough that with a gallon or two of oil and a few pounds of food in their little tent, Scott, Wilson, and Bowers would easily have worn out the blizzard which caught them only eleven miles from the next depot on March 21. Here, with but two days' food and fuel enough to make tea but twice, a continuous howling gale with blinding snow outside their tent, they lingered at least until the 29th, the last day on which Scott's freezing arm could move the pencil. And the last words were: "We shall stick it out to the end, but we are getting weaker, of course, and the end cannot be far. It seems a pity, but I do not think I can write more. For God's sake, look after our people." Over this closing sentence were written the words "Last entry." When found, eight months later, Scott's sleeping-bag was open and his arm thrown across the body of Wilson, possibly never drawn back into the bag after that last entry was made. There were letters to his wife, his mother, and other relatives and friends written during those terrible days of cold and hunger, but no single word betraying any break in that absolute self-mastery which has fixed the place of Capt. Scott as an example of noble manhood for untold ages to come. And when their sledge was digged out of the snow, upon it was found thirty-five pounds weight of geological specimens from the moraines of Beardmore Glacier, dragged wearily along for the benefit of science for days after the party had given up all but the slenderest chance of life.

While it is true, as we have indicated, that a bit more of food and fuel at the proper points would have turned disaster into victory, yet the story as Capt. Scott's own journals tell it, even before a score of pages have been read, brings an impression of impending ruin and keeps that impression alive and growing almost as steadily as a tragedy of Æschylus marches to its catastrophe. If one imagines that Scott himself did not feel this, let him read the journal entries carefully for, let us say, the six or seven weeks leading up to April 17, 1911, when a new manuscript book is headed with the words of Sir Humphrey Gilbert: "He is not worthy to live at all, who, for fear and danger of death shunneth his country's service or his own honour, since death is inevitable and the fame of virtue is immortal." Twelve miles from Beardmore Glacier, on the way to the Pole, he writes: "A hopeless feeling descends on one and is hard to fight off." And at the Pole: "Now for the run home and a desperate struggle. I wonder if we can do it." These were no words of weakness, but a clear-headed conception of the meaning of the unexpectedly severe atmospheric conditions with which the expedition had been struggling almost continuously since its arrival in McMurdo Sound. Indeed, the struggle had been

so severe that Capt. Scott would have had ample excuse for deciding not to attempt the Pole at all, and still no one can feel like blaming him for following his original plan to the end, nor would any of his party have received with favor a suggestion to do any less.

He was quick to see the probable outcome of Amundsen's appearance in the Bay of Whales. "There is no doubt," he writes, "that Amundsen's plan is a very serious menace to ours. He has a shorter distance to the Pole by sixty miles. I never thought he could have got so many dogs safely to the ice. His plan for running them seems excellent. But above and beyond all, he can start his journey early in the season—an impossible condition with ponies." Not for a moment, however, did he think of altering his plans and entering into a scramble for priority. "The proper, as well as the wiser, course for us is to proceed exactly as though this had not happened. To go forward and do our best for the honor of our country without fear or panic." And so he was not really surprised when, on the afternoon before his arrival at the calculated location, a small black flag flying from a sledge runner stuck into the ice told him of Amundsen's success. "This told us the whole story. The Norwegians have forestalled us and are first at the Pole. It is a terrible disappointment, and I am very sorry for my loyal companions. Many thoughts come, and much discussion have we had. To-morrow we must march on to the Pole, and then hasten home with all the speed we can compass. All the day-dreams must go: it will be a wearisome return." Scott's calculations fixed the location of the Pole within a fraction of a mile of the point indicated by the marks of Amundsen. This, together with the fact that their converging paths of approach met so short a distance away, tends to increase confidence in the substantial trustworthiness of such observations, in spite of the inherent difficulties, which serious explorers do not deny or minimize. Readers of Peary and Amundsen will remember their admissions on this point.

The journal for the remaining seventy days wrings the reader's heart at every point, as the spectre of oncoming disaster looms ever larger and gloomier through the whirling snows. The drop of 10,000 feet from the plateau to the Ross Barrier, which was expected to bring some relief from the severe temperature, is followed only by a marked change in the opposite direction. Edgar Evans, his strength all run down, his extremities frozen, his mental faculties giving way, dies at the foot of the Beardmore Glacier from concussion of the brain, through a fall. Oates struggles on for four weeks, and then, seeing that the end is near in any event and that his weakness is lessening any slight chance that the others may have, deliberately walks out of the tent into a whirling blizzard and disappears, some twenty miles south of the point where their fate overtook the remaining three. One searches the journal in vain for any word of Scott indicating a suspicion that the disaster came through censurable action or inaction on the part of any one concerned. The oil that he found in the Barrier depots was less than he had expected. He did not know why, but it did not occur to him to blame any one. The explanation now given for this fatal shortage is this: The tins of oil left for the return journey had been exposed to extreme changes of temperature. The oil was especially volatile and the occasional outbursts of bright sunlight tended to vaporize it and thus allow its escape through the corks. This process was facilitated, we are told, by injury to the leather washers about the stoppers, due to the extremes of cold. One can hardly avoid the thought that more careful consideration in advance would have suggested the possibility of just such losses and provided against them by better protection of the tins, but it is a satisfaction to know that there is no warrant whatever for any suspicion that the tins were depleted by members of the supporting parties who returned before the Pole was reached.

In all this tale of tragedy the one thing that grips the mind most powerfully is the strong manhood and lovable personality of Capt. Scott. When the proper time comes, and that ought not to be long, the first volume of this work, his own journals and last letters, should be presented in an edition cheap enough to be within the reach of all. We do not mean by this to depreciate the importance of the second volume, telling of the various lines of exploration and research undertaken apart from the Polar journey; but in these busy times of many books, the strong moral tonic of the first volume, with its essential unity and comparative brevity, should have its broader chance at the public attention by itself.

CURRENT FICTION.

Fascination. By C. C. Lowis. New York: John Lane Co.

The title is due to a minor part played by an East Indian snake charmer, the story being of Burmese life. The general theme is one Kipling has often put into far less verbose form: the marital entanglements brought about by the narrow scope of white society in the over-sea empire. Mr. Cavisham, wife, and daughter no sooner arrive at Mindaung, where the tottering old man is to engage upon some ethnological work, than the young wife and the resident Governor, Chepstowe, who tells the story, feel an irresistible attraction towards each other. The remainder of the book, excluding small parts dealing with the love affair of the daughter and the Vice-Governor, is concerned with this fatal triangle. The wife is quite willing to accept the situation, to the point of encouraging Chepstowe to wait for the death of the failing old man. But the sturdier fibre of the Governor finally asserts itself. "I looked into the future. I saw old Cavisham a confirmed invalid, failing slowly, fading away, bed-ridden; and his wife, sprightly and unconcerned—forever, as I had uncouthly phrased it, 'out in the veranda with the other beggar.' And that philandering other beggar, who waited, smirking there with his indecent cold-bloodedness, to step into a dead man's shoes, was always—myself." And he cuts the knot by marrying a young woman who comes out from home. A sense of humor atones for lack of varied incident.

The Lure of the Little Drum. By Margaret Peterson. New York: G. P. Putnam's Sons.

The insidious appeal of Eastern sensuality to what is vicious in the Occidental nature, is personified in Ishat Khan, a young Indian prince, who has acquired at Oxford the manners of a gentleman and the mental processes of a Mephistopheles. The victim of his wiles is an Englishwoman who has inherited a streak of bad blood from a disreputable mother. Upon her introduction into Anglo-Indian society, Esther immediately becomes acutely conscious of two natures struggling within her, one responding to the seductions of the subtle Ishat Khan, the other crying for protection to a certain nice, thick-headed, kind-hearted English boy. She marries the latter. Ishat Khan bides his time. The little drum of the title is his wedding gift to her, a toy which symbolizes the fascination upon which he relies. The husband proving more chivalrous than helpful, Esther at length succumbs to temptation and consents to be carried off to Ishat Khan's harem. Redemption obviously can only come through death.

The author is surprisingly free from any tendency towards the Kiplingesque; she makes no pretence of penetrating very deeply into the mysteries of the Asiatic mind. Her theme is developed in a competent and, we might say, business-like fashion. It would need more profound insight into character, or a more potent suggestion of exoticism, to make the story memorable.

The Egotistical I. By Ellen Wilkins Tompkins. New York: E. P. Dutton & Co.

This book in no wise falls into the

class which its name suggests. It is rather an uncommonly refreshing compound of personal memoirs, little nature-talks, and philosophic revery brought down to a very practical, homely level. The hero or narrator is a simple gentleman arrived at the youthful age of sixty years. He is not even redeemed from positive ugliness "by a pair of keen, penetrating eyes overshadowed by bushy eyebrows." As he says, "One must possess at least one such characteristic to rise above the average, and it is one of my proud boasts that I am a simple American gentleman, clean-shaven, and endowed with a generous supply of common-sense." In his quaint old-gentlemanlike way, he tells of his acquaintances, the Imaginary Listener, the Youthful Pessimist, the Chance Acquaintance, the Young Doctor. His pursuits and the incidents of his life have their share of interest—his garden and his fowls, his summer trips, and his match-making. In his moments of revery he describes the efforts of his mental or "other self" to free his physical self from the commonplace. He laments over the dying art of conversation, and defends the rôle of fibbing in society. In short, the book contains many pleasing ideas expressed in clear terms of everyday life. Its charm lies in a simple flowing style and in the very ordinary nature of the incidents and reflections. The love-story of the Young Doctor and the Youthful Pessimist is a recurring theme.

FLORENCE NIGHTINGALE.

The Life of Florence Nightingale. By Sir Edward Cook. New York: The Macmillan Co. 2 vols. $7.50 net.

The author of "The Life of Octavia Hill," which was recently reviewed in these columns, has had here a kindred task, and has discharged it with equal zeal and discretion. Miss Nightingale's fame has rested upon a wrong, or at least an insufficient, conception of her character and achievement. Nothing is more difficult than to persuade the world of its error in such a case. The truth is, it does not care to be bothered with a re-judgment of its idols. The legend of Florence Nightingale is a very pretty legend as it stands; but it is a pity that a great figure should be remembered as merely romantic or picturesque, and the present biographer has at least made it unnecessary that Miss Nightingale should be so remembered.

"The popular imagination of Miss Nightingale," he says, "is of a girl of high degree who, moved by a wave of pity, forsook the pleasures of fashionable life for the horrors of the Crimean War; who went about the hospitals of Scutari with a lamp, scattering flowers of comfort and ministration; who retired at the close of the war into private life, and lived thenceforth in the seclusion of an invalid's room—a seclusion varied only by good deeds to hospitals and nurses and by gracious and sentimental pieties." Such, when she went to the front, was the impression seized upon by England, which had been horrified by reports of the neglect of her soldiers in the field; and the impression has never been outlived. It was fixed by the romantic tributes of Longfellow and Miss Yonge, as well as "by the fact of Miss Nightingale's seclusion, by the hidden, almost the secretive, manner in which she worked, by her shrinking from publicity, by her extreme reticence about herself. It is only now, when her papers are accessible, that her real life can be known."

Even Miss Nightingale's service in the Crimean War was far from being, what fancy made it—a sort of glorified "fluke." The frontispiece to the first volume of this work seems, in the light of the past, to have a prophetic value. It is taken from a water-color sketch of Mrs. Nightingale and her two daughters. The mother and her elder daughter (elder by a year) have the furbished and sidelong prettiness of born members of the fine world. The younger child, at eight, though she wears, by fate, the family smile, looks straight forward, with serious brooding eyes: even her dress is plain. Her father was a man of wealth, who loved and succeeded in the rôle of country squire on the grand scale. Her mother and her elder sister were all that the wife and daughter of such a man should be. They asked for nothing better than the life of luxury and social diversion which had been allotted to them. The child Florence, on the other hand, seems to have been early aware of a "call." She exhibited the strange spectacle of a pretty girl with nothing to worry about refusing to be contented with that nothing. She was not an ascetic or humorless person, and enjoyed dancing, and dining, and visiting, as far as they went. But they did not go all the way with her; she was still only a child when she began to astonish and distress her family with aspirations for some career of usefulness. She was frowned upon; and her loyal affection for her people, her whimsical appreciation of their total inability to understand her, long prevented anything like an effectual escape into her own world. The problems of nursing and sanitation had fascinated her even in girlhood, but she was a woman of thirty-four when the need in Turkey freed her to the full exercise of powers carefully trained and developed against all sorts of obstacles to meet precisely the necessity of that hour. She was still beautiful, graceful, an aristocrat in appearance and in manner. No doubt these qualities, with her gentleness and self-sacrifice, acted beneficently upon the poor fellows who lay wounded and helpless in far Turkey. But her more important service was a service of wise administration, of unfailing attention to detail. She came back to England after the campaign a physical wreck, not as a result of the more obvious hardships of camp life, but because she had denied herself all rest of mind and body while the task was in hand.

Her subsequent career, through years of semi-invalidism to extreme old age, was distinguished for its exercise of the same unusual powers. The present record shows that her Crimean experience was in a sense the beginning of her active life—a spectacular episode which served as a starting-point for more valuable achievement. The whole problem of the health of the British soldier had been opened up to her; the foundation of her later work as hospital reformer and pioneer in modern nursing methods had been laid. Later, her interest in the health of British troops in India led to absorption in the wider questions of sanitation in the East—questions which for forty years occupied much of her time, and to which she gave all the vigor of her mind and will. The record of these activities is an essentially sober one; but derives charm from the keen and flexible humor which shines from the correspondence of this remarkable woman, and which always safeguarded her from the extravagances of the mere theorist and reformer.

Monarchical Socialism in Germany. By Elmer Roberts. New York: Charles Scribner's Sons. $1.25 net.

Mr. Roberts is a master of the art of condensation. He compresses twelve chapters within the limits of 176 pages, and he accomplishes this without being baldly terse. He etches rather than photographs, and we read him almost as much for himself as for his subject. He begins with a distinction between "paper Socialism," which represents the aims of the Social-Democratic party, and "monarchical Socialism," the Socialism in being, the only collective ownership of mines, railways, lands, forests, and other means of production existent by acts of the Crown in coöperation with Conservative Parliamentary majorities. This distinction between theory and fact immediately arouses expectation, which is no sooner aroused than satisfied.

In 1911 the Imperial Government and various German state governments took profits of $282,749,224 from the industries which they conducted. Estimating the capital value at a 4 per cent. ratio, we find the value of the productive state-owned properties to be $7,068,729,600. The federated states being taken together, 38 per cent. of all the financial requirements for governmental purposes were met out of profits on Government-owned enterprises. Including the

Imperial Government, a newcomer with relatively few possessions, about one-quarter of all the expenses of the state and the Imperial Governments for the army, the navy, and for all other purposes, were paid out of the net profits on Government businesses, not including the tobacco, spirit, or match monopolies.

Such astonishing facts would seem to imply a profounder distinction between the economic and social conceptions of the Germans and those of other nations than most persons have supposed. Nowhere else do we find collective ownership an actual working force to the extent that we do here. The representatives of the monarchical principle in association with the conservative classes have accepted this way of thinking, and it has entered into the very texture of their ideas of government, and is supported by the great orthodox economists, such as Schmoller and Wagner. Indeed, the author of the present work is convinced that it is slowly making Germany fundamentally different, industrially and politically, from the United States, Great Britain, France, or any country that comes into comparison with the Fatherland.

Mr. Roberts's brief but graphic chapter on the German railway policy concludes with some expressions singularly timely, in view of recent utterances in the United States. Notwithstanding the immense differences between American and German railways in ownership and in variety of conditions, it may be, he thinks, that partly by legislation and partly by the coöperation of some of the powerful railway managers in the United States, a close national control might be developed from the foundations already laid. Political considerations and the permanent well-being of the wealth massed in railways might cooperate in building a system of control, subordinating railways, to their ultimate advantage as dividend-payers, to industrial, commercial, and farming interests as an entirety. The railway captains, declares our author, would lose something of the joyousness of free-lance independence (as a matter of fact, it would be hard at the moment to find a railway captain with any signs of joyousness about him), but they would be more solidly effective as corps commanders in a coördinated army. They might also draw larger allotments of revenue for their shareholders as a result of saving the waste of working alone and by "concentrating attention upon service to economic unity rather than to economic war."

The industrial spirit of the German people seeks, we are told, to prepare the growing generation for "achievements in production as imposing in contrast with the present as the work of to-day is compared with that of the eighties. Compulsory sanitary living and other legislation requiring a minimum of social well-being have lengthened the average life and increased the height and bodily frame of both sexes. The German mind has now a stronger physical instrument with which to work than the generation that fought with France. The training of that instrument is expressed intensely in relation to skilled production by the work of the continuation and trade schools. Mr. Roberts's description of this aspect of German state Socialism, in the chapter entitled The Passing of the Unskilled, is more than interesting—it is inspiring. He touches upon the labor exchanges and unemployment insurance with vitalizing effect. The friendly spirit towards the Trusts and the taxing of the increase in land values are among Mr. Roberts's subjects in which Americans can at this time find much to interest them. There are also some entertaining remarks about the growth of the German navy and about the play instinct in Germany.

Mr. Roberts has done his work so well that it is easy to forget the heavy burden of taxation that rests upon the German people, and the complaints, deep if not loud, which one hears from time to time regarding the effects of certain features of this programme—State insurance, for example—on the economic welfare of the Fatherland.

Railway Problems. Edited by William Z. Ripley, Ph.D. Revised Edition. Boston: Ginn & Co. $2.50.

This second edition—the first appeared in 1907—contains much new matter. In the introduction Professor Ripley points out that a good deal of railway history has been made in the last few years, and he has now recast the 1907 collection of cases and documents so as to allow room for some of the principal new developments; such, for example, as the dissolution of the Union Pacific and Southern Pacific, the Minnesota rate case, and a number of important decisions of the Interstate Commerce Commission. He has also included some interesting descriptions of early railway building taken from Mr. H. G. Pearson's life of John M. Forbes and a paper on the complexities of interstate rate-making by Mr. Theodore Brent. The aim of the book has been to enable advanced students of transportation to work by the "case system," so generally used in law schools, and those who wish to penetrate below the surface of the question will find Professor Ripley's collection of large and timely interest.

In the case of such a book as this the reviewer's chief concern is necessarily with the scope and character of the matter brought together, consisting, as it does, so largely of judicial decisions and commission rulings. It is not easy to suggest any very important improvement upon Professor Ripley's selection, having in mind his purpose in making it. So far as the question of court decisions and the like are concerned, the cases chosen seem to be the leading cases. It may be suggested, however, that in the next edition the decisions in the "advanced rate" cases in 1910 and in the case now pending should be given, for the reason that they will undoubtedly prove to be a landmark in the history of transportation in the United States. The present case (that of the railways in classification territory) is of enormous importance, by reason of the principles involved and the precedents that may be established, and as it is an outgrowth of the 1910 case, both should be included. Doubtless, the fact that the 1910 decision left the main points unsettled governed Professor Ripley in omitting it, but when the present case is decided, that will no longer be the case. It may also be suggested that among the documents of historic interest which are well worth attention of transportation students are the discussions of Prof. Dionysius Lardner, in the very early days, of the principles governing the industry, and also the famous Louisville & Nashville annual report of 1873-4, written by the late Albert Fink, in which the question of the "operating ratio" was thoroughly explained, once and for all.

Notes

Mr. Harry W. Laidler is bringing out this week, through Lane, "Boycotts and the Labor Struggle," with an introduction by Prof. Henry R. Seager.

"Bransford in Arcadia" is the title chosen by Eugene Manlove Rhodes for the appearance in book form (Holt) of his "Little Eohippus," which ran as a serial.

Dr. Neville Figgis's book on "The Divine Right of Kings," which has for some years been out of print, will shortly appear in a new edition containing three further essays —Jus Divinum in 1646; Bartolus, and the Development of European Politics; and Erastus and Erastianism. It will be publishel by the Cambridge University Press (Putnam).

Early in February McBride, Nast & Co. will publish the following books: "Panama, Its Creation, Destruction and Resurrection," by Philippe Bunau-Varilla; "How France is Governed," by Raymond Poincaré; "Lord London," by Keble Howard, a tale of achievement which closely follows the career of Alfred Harmsworth, Lord Northcliffe; "The White Gate," by Warwick Deeping; "The Autobiography of a Princess," by Charlotte Amelie, and "Cecil Rhodes, the Man and His Work," by Gordon Le Sueur, one of his confidential secretaries.

A limited edition of the Keats relics bequeathed by the late Sir Charles Dilke to Hampstead is in preparation by Dr. Wil-

llamson, who will be responsible for the editing and facsimiles. Mr. Buxton Forman will contribute an introduction; the publisher is John Lane.

Prof. C. Alphonso Smith, of the University of Virginia, makes an appeal in a pamphlet issued by the Bureau of Education at Washington for the coöperation of all who desire to see the old European folk ballads, still surviving in this country, collected and classified. In his great work on "English and Scottish Ballads" Professor Child noted incidentally that versions of seventeen ballads in his list were to be found in the oral tradition of Eastern States, ranging from Maine to South Carolina. Through concerted effort, thirty-nine others have now been discovered, and it is requested that the search be continued while there is yet time and that the results be sent to Mr. P. P. Claxton, Commissioner, Washington, D. C.

Specialists in Elizabethan literature will be grateful to Charles Crawford for his scholarly reprint and editing of "England's Parnassus" (Oxford University Press). The text of this reissue has been made from a copy in the Bodleian Library, and from two copies in the British Museum one of which was possessed by Dr. Richard Farmer. One of Dr. Farmer's marginal annotations confirms, in Mr. Crawford's judgment, an old rumor that the initials of the compiler of this anthology found on the title-page stood for Robert Allot; for we read in Dr. Farmer's hand, "I have since seen a copy with Robert Allot's Name printed at length." Allot, it appears, was an honest but careless workman and was hampered by a slovenly printer. "Out of thirty-one cases in which the same passages are used twice, Allot makes no less than twenty-two differ each time that he writes them down." He also seems to have got his manuscript copy badly confused. Mr. Crawford argues plausibly that Allot, in writing down the selections, used large sheets of paper, and then for the sake of convenience cut them into pieces. This would have been proper if he had not employed so many "idems"; naturally when the passages were shifted about an "idem" often became misleading. But by consulting so far as possible the editions which the compiler used, Mr. Crawford has succeeded in bringing some sort of order out of Allot's confusion. His corrections are put in the notes, which also contain much interesting speculation. A single instance of Allot's or his printer's carelessness in handling text speaks volumes. Markham in one of his poems had written,

Although they crown'd his valure by accord.

This is printed,

Although they chain'd his valour by a cord.

Yet "England's Parnassus," with all its sins, furnishes numerous interesting problems of bibliography and literary history, and Mr. Crawford, both by this convenient reprint and by his copious notes, has appreciably lessened the difficulty of solving them.

If "studies" is a rather large word for the articles and addresses making up the two volumes of the late Whitelaw Reid's "American and English Studies" (Scribner), they show, on the other hand, a thoughtfulness and insight that one is not accustomed to find in such collections. One turns to the opening address, for instance, with some apprehension for the outcome of an attempt to deal with The Rise of the United States in an hour. But Mr. Reid could be concise without heaviness; he could handle familiar material without making it dull, and he manages to paint a real picture of a vast scene on a small canvas. These qualities are more strikingly displayed in the address on Lincoln. By skilful selection of such comparatively neglected points as Lincoln's ambition, his low ideals of civil service, and his life in Illinois previous to the debates with Douglas, the American Ambassador contrived to give his Birmingham hearers a fresh and yet undistorted view of a hackneyed theme. This address opens the second volume, which, for most readers, with its estimates of Jefferson, Burke, Byron, and the virtues and vices of journalism, will be more interesting than its companion, which in the main expounds its author's ideas of the Monroe Doctrine and the problems arising from the war with Spain.

Upon Jefferson's inconsistencies, Mr. Reid was hard, while not forgetting his unique position in history. There was nothing of the mere diplomat in what he had to say of the author of the Declaration of Independence. Indeed, one very seldom has occasion to remember that a diplomat is speaking. This consciousness obtrudes itself, however, in the address on The Scot in America and the Ulster Scot [*i. e.*, Scotch-Irish]. For, while the Ambassador did not fail to remind his Edinburgh auditors of the existence of unworthy emigrants from their shores to America, he employed most of his time in reciting a list of notables that leaves one wondering whether we have ever had a public man who, if his ancestry were investigated minutely, would not be discovered to have Scotch blood in his veins. Mr. Reid avoided any difficulties in the subject of the Revolution by taking the now-familiar position that the war was for the rights of all Englishmen. Of Talleyrand, for whose memoirs he wrote an introduction, and of Byron, he uttered commonplaces. The concluding portion of the second volume is headed "An Editor's Reflections," and contains two addresses delivered in the seventies, and the first Bromley lectures, given at Yale on two days in February, 1901. It is interesting to observe how his prophecies in the earlier lectures as to newspaper tendencies were unfulfilled, although in the later ones he stuck to his doctrine of less quantity and better quality of news than are now provided. His notion of editorial independence was qualified to mean party loyalty without subserviency, but in general he upheld higher ideals in both preaching and, one is glad to say, in practice than most newspapers even yet have seen fit to follow.

John Kenlon has written a readable book about an interesting subject in the volume "Fires and Fire-Fighters" (Doran). The sub-title, "A History of Modern Fire-Fighting, with a Review of Its Development from Earliest Times," explains its scope. The book would have benefited, we think, by the elimination of much of the earlier historical part, for which space allowed only the most abbreviated review at best. In his presentation of modern methods and conditions, which he might be expected to know most thoroughly in his office of chief of the New York Fire Department, Mr. Kenlon is clear and convincing. He deals with the fire perils and problems in garages, in hotels and schools, and takes up the special conditions of seaport cities. The appalling disasters which have taken place in factories and theatres in recent years, with terrible loss of life, lead him to urge the need of better fire protection, chiefly by use of automatic sprinklers and improved exits. Public opinion in many States has forced the adoption of more stringent laws for protection of human life from fire, but there remains much to be done in this respect, and the enforcement of fire laws is lamentably lax. Perhaps the ordinary reader will find his greatest interest in the narrative part of the book, in which Chief Kenlon graphically describes some of the great fires of modern times. The San Francisco, the Baltimore, and the Equitable building conflagrations have their lessons, either in the field of fire prevention, by improved building construction and equipment with extinguishing apparatus, or in methods of fire fighting. The last chapters in the work are devoted to a description of apparatus and the organization of a modern fire department. He makes a strong argument against the proposed two-platoon system.

Patience Pennington's "A Woman Rice-Planter" (Macmillan) is a book that gets close to the ground and to the negro, and mingles unusual agricultural and sociological interest. Its literary value is in its picture of what Owen Wister, who writes the introduction, calls "the highly accentuated characteristics" of the rice-plantation coast of South Carolina, and in a story of really heroic effort. The writer, daughter of an ex-Governor of South Carolina, invests all her slender funds in the family plantation of Cherokee, and with the uncertain aid of hands and renters, and in the face of many natural obstacles, successfully manages the huge enterprise. Her dangers, her ventures, the patience-exhausting performances of the colored folk, her interest in the growth of the crops and in the animals which are her only real companions, are related in simple and vivid diary form. Not heavy tomes of sociological exposition could give so vital a picture of Southern life and problems. The courage of the book is notable. Her hands would get into debt, and neither cajolery nor threats could move them to payment; hired to plough by the acre, they would turn up just a sufficient number of furrows to cover the ground with an appearance of fresh earth; they would row for miles to steal her harvested rice by night; they would do nothing by directions, and nothing right; their communal morality was of the most primitive, distorted kind; and yet she always feels hopefully that in keeping their cabins erect, their burying grounds clean, their rice-fields green, their sons out of the urban gulf, her indomitable efforts are their own reward. Under her hand some of the unsophisticated negroes become friends well worth her and the reader's attention. Without deep resources of description or narrative talent, her faithfulness to detail and her enthusiasm in her work have made a book of genuine historical value to the South.

"History of Ohio, the Rise and Progress of an American State" (Century History Co.), by Emilius O. Randall and Daniel J. Ryan, in five volumes, is a "popular" work written to glorify Ohio and Ohioans. Accuracy is sacrificed to pride of State. Yet there are some good portions in this book, particularly the first two volumes, which treat the history of Ohio before the State was founded; although such a disproportionate amount of space devoted to the territorial period gives the work a curious perspective. Mr. Randall, author of this part, has long studied the period and has produced a readable narrative. At times, however, he shows a surprising ignorance of general American history, as when on several occasions he hopelessly mixes the Quebec act of 1774 with the Proclamation of 1763. The last three volumes are not so well organized and show a very conscious effort to attract subscribers by the exploitation of the lives of individual citizens at the expense of the general narrative, and many subjects which should have found a place have been inadequately treated or crowded out. The excellent school system of Ohio, for instance, is neglected, as is the even more important mingling of the Southern and Northern elements in the population.

It is highly improbable that any one will read through "The Lawyer, Our Old-Man-of-the-Sea" (Dutton), by William Durran, with a "foreword" by Sir Robert F. Fulton, unless he is impelled by the strong sense of duty of a reviewer. Nearly one-half of its contents is found in the twenty-six appendices which follow the text, and which consist largely of newspaper clippings of a miscellaneous and sensational character. Not infrequently, foot-notes to the text are again printed in the appendices. Why they are repeated is not explained. Certainly this repetition is not to be justified on the score of their worth. The professed purpose of the author is to aid in the reform of the English legal system. He assumes that "the common law" is the equivalent of "legal chaos"; that "law and justice were living in unity" until the Norman Conquest, when a foreign judiciary was imposed upon the English people, and the lawyer began his career of domination. Now, with a barrister as Prime Minister of Britain and another as President of the United States, the lawyer "bestrides Empire and Republic, one foot in either hemisphere, a bewigged, begowned, bespectacled Colossus."

Every chapter in this volume is pitched to the same note—the utter balefulness of the lawyer and all his works. "Our Old-Man-of-the-Sea" must be cast off. We must stop recruiting our bench from the bar. We must exchange our common-law principles for the continental code, that we may have less need of consulting lawyers. We must abolish jury trials, because "success with juries is the passport for the lawyer's promotion to the bench or to high office in the legal hierarchy." We are assured that—

> Advocates are the spoilt children of the State. Juries are the special pets of advocates. The jury system is the palladium of the Bar. Its vested interest, its special pleading, have contrived to cast a glamour of pseudo-sanctity around farcical verdicts. The Judge knows they will be reversed on appeal. Precisely. Appeals and fresh trials bring grist to the Bar. That is the vicious circle of Legalism. Our Continental neighbors have found and applied the remedy.

The author seems blissfuliy ignorant of the fact that one of the greatest historians of Continental Procedure is as devoted to the jury as the most perverse English lawyer. Professor Esmein declares that "a great civilized nation cannot renounce it, without losing its rank." Mr. Durran seems to be equally ignorant of the fact that, while he is advising his countrymen to exchange their legal institutions for those of the Continent, a body of German reformers is anxious to substitute the English legal system for their own. The attitude of these reformers, we are told, is "one of extreme pessimism, not only in respect of the quality of the work done by the courts, but also of the merits of the Civil Code." It is safe to wager that if Mr. Durran will read German and French periodicals with as sharp an eye to legal scandal-mongering as he has kept on English publications, he can gather quite as many clippings as he has reprinted in this book; clippings which will show that what he calls "the craziness of our outfit of private law" is equalled if not excelled upon the Continent.

The second volume of Worthington C. Ford's "Writings of John Quincy Adams" (Macmillan) covers the five years from 1796 to 1801. At the beginning of the period Adams was still Minister at The Hague; but in June, 1797, he was transferred to Prussia, arriving at Berlin early in November. It was France, however, and not Prussia, that held the centre of the stage; and the correspondence, both before and after the transfer, is mainly occupied with the aggressions of France on American commerce, the shifty course of the Directory, the X. Y. Z. affair, and the vexatious question of claims. Adams early noted the suggestion that France might attempt the conquest of Louisiana, but rightly concluded that the project would give way to more pressing concerns at home. His intense patriotism, growing visibly in fervor as the devious course of European politics unfolded before him, did not prevent him from perceiving and weighing the hostile opinion about him; as when, for example, he notes a widespread impression, "propagated with great zeal and industry in every part of Europe," that the union and prosperity of the United States depended upon the personal influence and popularity of Washington. For Monroe's diplomatic performance he expresses only contempt, and condemns unsparingly his relations with Thomas Paine. Adams was convinced that the Directory intended to force a war between the United States and Great Britain, and that it was willing to dismember the Union in the hope of procuring an alliance with a new confederacy of the Southern States. Aside, however, from their well-informed comments on the newspaper and official opinion of the day, the letters do not shed a great deal of new light on the diplomatic history of the period. The forty-two Silesian letters, written during a three months' journey in 1800, and published in the Philadelphia *Portfolio* the following year, are not reprinted by Mr. Ford; and numerous other letters are, as in the first volume, given only in part or relegated to foot-notes. In February, 1801, Adams was recalled, but the letter of recall did not reach him until April 26, the day after the last entry in this volume.

"Word-Formation in Provençal," by Edward L. Adams (University of Michigan Studies, Humanistic Series, Macmillan), is an expansion of a doctoral thesis presented in the department of French and other Romance languages at Harvard University. Its purpose is to study the various processes by which new word-formations occurred in Provençal, an offshoot of Latin, and to give a good tabulation of all such formations. The details of the subject are considered and set forth clearly. Especial emphasis is laid upon word-formation by means of suffixes and prefixes, the most common of all processes in the development of the Neo-Latin vocabulary. To cases of parasyentheta, of post-verbals, of compounds, and of hybrids, the requisite space is given. The book is a model of painstaking investigation and lucid exposition. The task involved was not one likely to tax the fancy, but it called for long and patient endeavor in the collecting and sifting of scattered facts, and this the author has bestowed upon it with praiseworthy result. We have here a valuable addition to our manuals for the study of specific problems within the domain of Romance philology.

Apparently the demand for books on South America has become so great as to make it worth while to publish even the most superficial travel sketches. Every publisher must have a "South America" on his list. If the exterior of the book is sufficiently attractive, it seems to have all that is necessary from the bookseller's point of view. Alas for the unwary purchaser of "Two on a Tour in South America" (Appletons), who, caught by the lure of the pretty colored map on the front cover, expects to learn something about South America from the contents! Mrs. Anna Wentworth Sears and her husband took a flying trip a couple of years ago and touched at the principal ports. Most of the time was spent on board ship, and naturally a large part of the volume deals with shipboard gossip. In places this is lively and entertaining, but when a woman can write a whole volume about a voyage taken with her husband and refer to him on every page as "Orange-Blossom," the day of marvels is not over.

"Crime and Its Repression," by Gustav Aschaffenberg, translated by Adalbert Albrecht (Little, Brown), is the sixth number of the Modern Criminal Science series of translations, and is perhaps the number first to be recommended to one seeking a general acquaintance with the field of criminology. The treatment of the subject is comprehensive, and statistical rather than philosophical, and the book is marked on the whole by sober judgment and an avoidance of extreme views. Naturally, the writer rejects Lombroso's theory of the born criminal, although he admits that a large number are mentally defective. In his view the chief cause of crime is alcohol—here he is doubtless extreme, and the book is a rather sweeping condemnation of the drinking-habits of his German race; and the next cause is poverty, mainly, however, as the cause of overcrowding in tenements. As for remedies, the only permanently hopeful remedy will be an improvement in economic conditions. As an actual deterrent, punishment has accomplished little, yet the idea of deterrence should be

retained because of its educational value. More hopeful is the possibility of reform through the inducements offered by indeterminate or suspended sentences. In any case, the immediate centre of gravity is not the law, but the execution of punishment. And here he quotes from Krohne: "Even if you have the best law, the best judge, the best sentence, and the prison official is not efficient, you might as well throw the statute into the waste basket and burn the sentence."

Superstitions of the ages regarding gems and jewels have been assembled in an astonishing compilation in "The Curious Lore of Precious Stones" (Lippincott), by George Frederick Kunz. While the book is devoted primarily to the lore of precious stones the text and illustrations give the author a legitimate chance to display his knowledge and appreciation of the artistic and technical qualities of the stones themselves. Æsthetic considerations, nevertheless, are quite properly subordinated to details of the fabled properties of amulets, luminous stones, crystal balls, religious gems, and stones believed to possess planetary and astral or therapeutic influence. The quest goes back to the early Stone Age where "there is no trace of either idols or images." It emphasizes the virtues attributed to stones in classical antiquity and the Middle Ages, and it includes lore of the present age which, Mr. Kunz urges, "could afford us nearly as many examples of faith in talismans and amulets as any epoch in the past, if people were willing to confess their real beliefs." The descriptions of these superstitions reveal prodigious erudition, involving citations from many literatures, sacred and profane, ancient and modern. They constitute a work that is not less extraordinary in its way than Mr. Kunz's sumptuous "Book of the Pearl."

The practical spirit of the University of Wisconsin upon which Prof. John R. Commons touches in the opening chapter of his essays, "Labor and Administration" (Macmillan), is well exemplified in his own work. It is in his dealings with the concrete facts concerning labor matters that he is at his best; his philosophic and more abstract disquisitions are the least satisfactory portions of his book. He is, in fact, more what he himself calls a "social engineer" than he is a "college professor," as most people understand the term; and the reviewer is confident that he will not resent this characterization. Chapters vi to x, inclusive, bearing upon labor unions and their characteristics; chapters xii and xiii, dealing with municipal affairs, and chapters xx to xxii, inclusive, describing Wisconsin's methods of dealing with industrial education and industrial conditions within the State, are well worth study, for they convey to the reader the results of first-hand knowledge and personal experience. Especially is this true of the Wisconsin experiments in which Professor Commons has himself borne large part. It is perhaps in the chapters on organized labor that the reader will find most food for thought, especially in the chapter on the Union Shop (vii), that on Unions of Public Employees (viii), and that on Unions and Efficiency. Professor Commons leans with some partiality to the side of "labor," but notwithstanding this, what he has to say is worthy of attention. The general impression left on the reader's mind is that coöperation by means of organization on both sides offers the best solution of the problems arising in the relations of capital and labor. Education —on both sides—is an indispensable preliminary to this coöperation.

Students will be glad to learn of the appearance of a new French edition of Fitzmaurice-Kelly's "History of Spanish Literature" (Colin). The original English edition (1898) has never been revised; the same is true of the Spanish translation; and the original French translation is now nine years old. The present book, however, is far from being a reissue of the other editions. It is an entirely new work, recast and rewritten from beginning to end. The author has brought his subject abreast with the times, having utilized all the important monographs which have appeared in the years since the last issue. During that interval also a whole new school of poetry and fiction has sprung up in Spain. These authors are thoroughly treated in the final chapter. The serviceable bibliography of Spanish literature which has accompanied the previous editions has now grown to such proportions as to demand a supplemental volume. Fitzmaurice-Kelly has given an unusual proof of virtuosity by acting as his own translator, a *tour de force* in which he seems to have been very successful. His book in its newest form will continue to appeal equally to the literary specialist and the general reader.

During the Middle Ages and period of the Renaissance no Latin author, save Virgil alone, enjoyed a greater vogue than Ovid. In his "Ovid and the Renascence in Spain" (University of California Press), Prof. Rudolph Schevill tests that author's influence upon Spanish literature. During the Dark Ages Ovid was banned by the austere, but the "Ars Amatoria" offered the charm of forbidden fruit to many a choice spirit. Soon the discovery was made that Naso's licentiousness was not what it seemed, but was, instead, a profound reservoir of moral truth. Specious allegorical elucidations of the text made the pagan poet respectable, and even Christian. In the twelfth century his works held a prominent place in the school curricula. Troubadours and Minnesänger drew from them much of their conception of love-making as a fine art. In Spain, Juan Ruiz, Archpriest of Hita, is the supreme exponent of the Ovidian influence during the Middle Ages. Mr. Schevill proves that he not only knew Ovid at second hand through the "Pamphilus de Amore," but also enjoyed a direct acquaintance with the source. In an "Ovidian tale" the interest centres on an attempted seduction of the heroine. This seduction is always carried on according to fixed precepts. The characters generally belong to the lower or bourgeois classes. The tone is realistic. Fiction of this sort found a wide vogue in Italy earlier than in Spain. Mr. Schevill regards it as "a logical outgrowth of the peculiar social life of the Italian cities in which highly centralized activities were dominated by the prose of mercantile interests, and yet colored by an artistic and passionate interpretation of every-day life." The *genre* is as easy to isolate as the romance of chivalry, the pastoral, or the picaresque novel; though, of course, the Ovidian influence may appear sporadically in these other *genres*. The author gives a careful analysis of the works of Boccaccio and Æneas Silvius Piccolomini and their influence. In Spain the most celebrated and characteristic "Ovidian tale" is the dramatic novel usually called the "Celestina." The *genre* finds its most artistic expression in the "Celoso Estremeño" of Cervantes. In these and later works it is not always easy to determine whether the Ovidian influence is due to direct acquaintance with the author, whether it represents a continuance of the mediæval tradition, or whether the impulse came from Italy. Mr. Schevill also enumerates the various translations made of the "Metamorphoses" into the Spanish and the influence of this poem upon Spanish writers, notably Cervantes and Lope de Vega. He has given us a thorough and stimulating study in comparative literature. Important generalizations are reached. Monographs like this, coördinating ancient and modern culture, are all too few in America.

Wallace Bruce, author, and former United States Consul to Edinburgh, died Friday at his winter home in Florida. He was a resident of Brooklyn, N. Y., and was sixty-nine years of age. Among his published works are the following: "The Land of Burns," "The Yosemite," "The Hudson," "Old Homestead Poems," "In Clover and Heather," "Scottish Poems," and "Leaves of Gold."

Science

"The Efficient Kitchen," by Georgie B. Child, is announced for publication next month by McBride, Nast & Co.

Another State list of birds is always welcome, especially when available at cost, as is the concise, paper-bound volume, "The Birds of Connecticut," by John H. Sage, Louis P. Bishop, M.D., and W. P. Bliss (Bulletin No. 20 State Geological and Natural History Survey). The authors have brought within the limits of 350 pages a summary of the State's knowledge of the birds, leaving identification keys to more general bird books. After a brief account of the topography, and of the history of Connecticut ornithology, Part I gives a list of the three hundred and thirty-four recorded species. Under each we find its status, the earliest and latest records, the breeding dates, and a few lines describing the nest, eggs, and any important or unusual observations. The most noteworthy of the appendices is an elaborate bibliography of the State ornithological literature. Part II is by Dr. Bishop, and deals with the economic side, treating of each group in turn. Very careful consideration is given to the game birds, hawks, crows, blackbirds, and English sparrow. "Regarding the Crow," Dr. Bishop writes, "the evidence is about the same as with the Blue Jay; and it is probable that the good this bird does in destroying grasshoppers, cutworms, etc., is far outweighed by the evil in killing the young of insectivorous birds." The starling and English sparrow are unqualifiedly condemned, and elaborate directions for trapping and poisoning are given. The farmers and lovers of birds of Connecticut will

find much of value and interest in this excellent State publication.

At the second international conference on the world map held in Paris in December, thirty-three Governments, including China, Guatemala, and Siam, were represented. Noteworthy features were the considerable part taken in the proceedings by the delegates of the Latin-American states, and the announcement that the Chinese Government intended to make topographical surveys.

Dr. Charles Phelps, who for many years had been surgeon to Bellevue and St. Vincent's Hospitals, died in New York last week, aged seventy-nine. During the Civil War he served as volunteer surgeon on the Arago, when that ship was fitted out for conflict with the Merrimac. He wrote, besides various monographs, "Traumatic Injuries of the Brain."

Dr. Silas Weir Mitchell died at his home in Philadelphia, Sunday morning, in his eighty-fifth year. His death was due to an acute attack of grip. After a public-school training in Philadelphia, where he was born February 15, 1829, he entered the University of Pennsylvania, but did not graduate, owing to illness in his senior year. He took the degree of M.D. at the Jefferson Medical College in 1850, and in later years received the following honorary degrees: M.D. from Bologna; LL.D. from Harvard, Edinburgh, Princeton, and Toronto Universities. An early incident in the life of the young medical student, who was hesitating between two professions, in both of which he was destined to become famous, has often been told. He had sent a portfolio of verse to Ticknor & Fields; the publishers referred the manuscripts to Dr. Oliver Wendell Holmes, who advised the poet of twenty-seven to make secure his position in medicine before attempting literature. Thus, in 1856, Weir Mitchell turned his undivided attention to the profession in which his father, himself a physician and professor of note as well as an author of some success, had predicted he would fail. For twenty-five years he worked and studied, practiced and wrote. Experience in the Civil War directed his attention to the care and cure of nervous diseases, and he began those especial researches which resulted in the "rest cure" and brought him world-wide fame. More than a hundred publications on physiology, toxicology, and various troubles bear his name. His published works include: "Researches upon the Venom of the Rattlesnake," 1860; "Gun-shot Wounds and Other Injuries of the Nerves," 1864; "Wear and Tear," 1873; "Rest in the Treatment of Disease," 1875; "Fat and Blood," 1877; "Researches on the Venoms of Poisonous Serpents," 1886; "Doctor and Patient," 1888; "Clinical Lessons on Nervous Disease," 1895; "Relations of Nervous Disorders in Women to Pelvic Disease," 1897; "Nurses and Their Education," 1902; "The Evolution of the Rest Treatment," 1904; "Rest Treatment and Psychic Medicine," 1908; "Hephzibah Guiness," 1880; "Thee and You," 1880; "A Draft on the Bank of Spain," 1880; "In War Time," 1882; "Hill of Stones," 1883; "Roland Blake," 1884; "The Masque," 1886; "Prince Little Boy," 1887; "Far in the Forest," 1888; "Cup of Youth," 1889; "Psalm of Death," "François Villon," 1890; "Characteristics," 1892; "Francis Drake," 1893; "The Mother," 1893; "Philip Vernon," 1895; "Mr. Kris Kringle," 1896; "Collected Poems," 1896; "Madeira Party," 1897; "Hugh Wynne," 1898; "Adventures of François," 1899; "Dr. North and His Friends," 1900; "Autobiography of a Quack," 1900; "The Wager," 1900; "Circumstance," 1901; "Pearl," 1901; "Comedy of Conscience," 1902; "Little Stories," 1903; "Youth of Washington," 1904; "Constance Trescot," 1905; "A Diplomatic Adventure," 1905; "The Mind Reader," 1907; "A Christmas Venture," 1907; "The Red City," 1907; "The Comfort of the Hills," 1909; and "John Sherwood," 1911.

Drama

The radical label on conservative goods is so attractive in certain quarters that one would feel no surprise if Mr. Henry Rose's little book, "Henrik Ibsen: Poet, Mystic and Moralist" (Dodd, Mead), which deals almost wholly with Ibsen's ideas, and treats even these in a highly selective and idiosyncratic fashion, should attain a considerable popularity. The first trait of this expurgated Ibsen is respectability; he is insistent on contracts, especially marriage contracts, and he disapproves of Nora's departure from home; he wishes people to be *innocent* and *useful* (the italics are ours); he favors truth and freedom, but only under the supervision and chaperonage of the still higher ideals of love, duty, and service; he is as truly a religious mystic as any saint in the Roman hagiology; we have good hope that he believes in personal immortality, and even in redemptive and providential accident. "Et duræ quereus sudabunt roscida mella." Jane Austen, Maria Edgeworth, Mrs. Hemans herself, would be satisfied with these impeccable credentials. The hysteria which recoiled in groundless alarm from the mild precepts of this orthodox gentleman is fittingly rebuked. The destiny of Ibsen in the next generation is to supply texts for the birthday book, the autograph album, and the worsted sampler; to be read by the Pastor Rörlunds of the coming decade (with whom one instinctively associates Mr. Rose) in the garden-room to Mrs. Holt and Mrs. Rummel at afternoon meetings of the Society for the Lapsed and Lost.

We have no wish to ridicule ideals some of which have earned the respect of mankind by undoubted contributions to its welfare, but merely to indicate the bias which has gone far to frustrate the excellent intentions of Mr. Rose in his conscientious and carefully written book. He ignores or discredits or re-interprets whatever disagrees with his personal conviction, and is aided in the task of self-beguilement by a singular courage to which a constitutional mildness serves both as mitigant and support. His literary sense is not delicate; he draws a parallel, for instance, between "The Master Builder" and "Macbeth," in which Solness's vague and indirect responsibility for the deaths of the two children is counterpoised with the murder of Duncan, and Hilda Wangel figures as the analogue of Lady Macbeth. He concedes that the correspondence in the latter case is not minute. The reasoner in Mr. Rose is much ahead of the critic; he has patience, order, and coolness, and, where the intellectual demands are not too heavy, he can reason justly, even happily. The fallacy of Dr. Stockman's "majority" argument has never been more deftly exposed than in the following sentence: "The fact that the leader is ten years ahead of the majority no more proves that the majority is wrong than it proves that the leader himself was wrong ten years ago." In point of style, Mr. Rose has made himself rare in our perverted generation by the practice of a method which ought to be normal and prevalent; he has written an English at once thoroughly careful and absolutely plain.

It is plain that "The Legend of Leonora," by J. M. Barrie, which was produced in the Empire Theatre on Monday night, must have been subjected to radical alterations since it excited the "boos" of a London audience, as it did on its first representation. As it is played here, the greater part is in a mood of burlesque, which might confuse, but would not be likely to excite serious opposition. Briefly put, the theme of it is the feminine tendency to be governed by emotion and instinct rather than by logic and moral sense, and the chivalrous disposition of man to sacrifice both conviction and interest when subject to feminine emotion and feminine appeal. Leonora, the heroine, an exquisite creature, representative of all that is best and most dangerous in her sex, has thrown a man out of a train and killed him, because he refused to shut a window when she told him that her little girl "had a cold." She is unaffected by remorse, and neither she nor her friends can discern any discrepancy between the punishment and the offence. When she is tried for murder she takes possession of the whole court, entertains her friends, directs the procedure, establishes confidential relations with the judge and jury, confounds the counsel on both sides by her explanations and admissions, and, having hopelessly ruined her own case to the consternation and despair of the judge, kindly accompanies the jury when they retire, and, of course, induces them to give a verdict of "not guilty." All this is sheer burlesque, but burlesque of a highly superior kind, extravagant in incident, but full of humorous fancy, close observation, keen analysis of motives and manners, and entertaining satire upon conventions of English court procedure. But the main theme, the quality of unexpectedness in the feminine character and the inevitable submission of chivalrous man to feminine appeal and glamour, is enforced by all sorts of ingenious device. If the piece is too light in texture to stand the test of criticism as serious drama, it constantly supplies food for reflection and is productive of admirable entertainment. It is uncommonly well played at the Empire.

H. B. Irving is busily engaged in the preparation of the new version which he and Max Pemberton have made of Sardou's "Patrie." The late Henry Labouchere had an unfortunate experience with this play when he produced it in the St. James's Theatre, of which he was then manager, forty years ago. A modified spectacular adaptation of it had a long run in this city not long afterwards under the management of Augustin Daly, at the Grand Opera House.

The Drama League Series of Plays, announced by Doubleday, Page & Co., are to

he selected by a committee whose members are drawn from the Drama League and the publishers. The first two volumes of the series will be "Kindling," by Charles Kenyon, and "A Thousand Years Ago," by Percy MacKaye.

D'Annunzio's "Le Chèvrefeuille," which has just been produced at the Porte St. Martin in Paris, is a drama of love and intrigue which is supposed to take place in an ancient castle. One critic characterizes it as "often beautiful in detail, but in the mass vague and baffling, devoid of any real dramatic vigor."

The site in Bloomsbury, London, which now has been definitely acquired for the Shakespeare Memorial National Theatre, is about 47,700 square feet in extent, and has at present only three street frontages —Gower Street, Keppel Street, and Malet Street. Another roadway, which will be made parallel to Keppel Street, will furnish a fourth frontage, and it is probable that the theatre will be surrounded by a margin of garden. The idea of an island site, to which the Shakespeare Memorial National Theatre committee has remained fairly constant, will thus eventually be carried into effect. At a comparatively moderate price a site has been obtained which far exceeds the utmost requirements even of a very large building, and which will place the theatre in the centre of what may well be a handsome open space. Dignity is, of course, an important consideration in the scheme, but whether the gain in that respect is a sufficient set-off to the disadvantages that may arise from the distance of the site from the theatre zone is a point to be proved by experience.

The demand of the eminent French tragedian Mounet-Sully for the right to present himself as a candidate for election to the French Institute has created a stir in Paris. During the past thirty years the Institute has refused to admit actors, first on the ground that they "created" nothing, and, secondly, because of a law dating back to the Revolution. This point of law is explained by a French correspondent to a London journal as follows:

When the Institute was organized in 1795 by the National Convention, it was divided into three groups: the physical and mathematical sciences, the moral and political sciences, and literature and the fine arts. The third group of seats was divided into eight groups of six, the last being assigned to "music and declamation." Accordingly three actors, Molé, Préville, and Monvel, were elected to the Institute. Strangely enough they were all comedians, and Talma, the great tragic actor, was passed over in their favor. Seven years later, in 1802, an order of the Consuls completely altered the constitution of the Institute. The fine arts were separated from literature, and the three seats which had been assigned to "declamation" were given, without any compensation to engraving; and, finally, when the Academies were restored in 1816, the actors had no longer any place at all in them. In 1910 M. Maurice Faure reopened the question in his report on the Budget des Beaux Arts, by recommending that the three seats should again be assigned according to their original constitution.

M. Mounet-Sully has announced that if he is not elected to the Institute while he is still exercising his art, he will refuse any appointment which may be made thereafter; and he demands that the ancient constitution of the Institute "by which there should always be three actor members shall be restored by the Government."

Music

A NEW ITALIAN OPERA.

Dozens of new operas are staged in Italy every year, but it is very seldom that one of them crosses the boundary of that country. In April, 1912, there was produced at a provincial theatre an opera entitled "L'Amore dei tre Re." It attracted sufficient attention to be accepted for the Scala in Milan, where it was produced last season with such favorable results that it has been kept in this winter's repertory, while fifteen other opera houses in Italy and Spain are said to have accepted it. Its first performance in America was given last Friday at the Metropolitan Opera House. The first act fell flat, but the second was applauded enthusiastically, and the third also pleased the audience, wherefore the opera may be recorded as a genuine first-night success. Nevertheless, it is not likely to remain in the repertory, for reasons to be given.

The story on which the opera is based is admirably suited for operatic treatment. The three "kings" who give the opera its title are Archibaldo, a mediæval feudal lord, head of a band of barbarian invaders who have taken possession of an imaginary part of Italy called Altura; his son, Manfredo, who has married the native Princess Fiora, who does not love him; and the man she does love, Avito, the Alturian Prince who has been bereft by the invaders of both his throne and his fiancée. In the first act Archibaldo, though blind, discovers that Avito has been making love to Fiora. In the second act Manfredo has returned from a military expedition, but soon is obliged to leave again. He gives Fiora a scarf, begging her to wave it as a farewell from the battlements. While she is doing this, Avito once more appears. She begs him not to tempt her any more, but his passionate pleadings finally weaken her and she yields to his embraces. Again Archibaldo appears on the scene, and this time she does not deny her guilt; whereupon, in an excess of fury, he strangles her. In the last act her body lies in the crypt of the chapel, surrounded by flowers and mourning women and men in white. Seeing Avito approach, they hastily withdraw. He kisses Fiora's lips and instantly feels the effect of the poison that had been put on them by Archibaldo to trap her lover. Before he dies, Manfredo also appears. "Avenge yourself!" cries Avito; but Manfredo, believing in his wife's innocence to the end, also kisses her lips, and Archibaldo enters to find his son dying.

Sem Benelli, the author of this tragic poem, is among the best-known of Italy's contemporary poets. Its one weakness —and a serious one—is that there is not sufficient action for a three-act opera; but what plot there is is constructed with consummate skill. The scene where Fiora confesses her guilt and the enraged king commits the murder is one of the most impressive tragic episodes on the operatic stage. Its effect on the audience was greatly heightened by the combined personal charm and artistic achievement of Lucrezia Bori. This young Spanish prima donna has the freshest and loveliest voice of all the singers now engaged at the Metropolitan. Vocally, her Fiora was flawless; she has the gift of acting with the voice, which only two or three other singers possess, and in the potency of acting and the charm of facial expression she rivals Geraldine Farrar, whom in many ways she resembles. Even death does not end her art, for she shows herself the superlative actress still while her lifeless body lies on the bench, and when it is carried away by the King.

Should "The Love of Three Kings" prove a success here, it will be chiefly due to the way this scene is presented, and to the marvellous art of Mr. Toscanini in building climaxes and revealing the charms of orchestral coloring in the score. For these, to be sure, the composer must have first credit. His name is Italo Montemezzi. Though he is barely thirty years of age, this is his third opera, the other two having been failures. They doubtless served their purpose in developing his operatic instincts. In his new opera he shows a genuine talent for dramatic effect, for suiting the music to the poem, line by line, and for rising to heights of tragic grandeur. Unfortunately, it is merely talent, not creative genius. Scholarly he is, and conscientious, as well as ingenious, a master of effects and impassioned in pleading; but to an expert it is obvious that there is no real creative power. All the good qualities that can be credited to Signor Montemezzi are things that can be taught and learned; what he lacks is the one thing that cannot be taught—the gift of creating original melodies—the same old story, alas!

It is this lack of individual melody in both the vocal and the orchestral parts that made the first act fall flat; most of it is surprisingly dull. In the second act the fact that the music is melodically uninspired is hidden, even from some trained ears, by the growing interest of the drama, culminating in a thrill. In the final scene the contrast of the two mourning choruses, one at the bier, the other in the distance, is remarkably impressive; yet in this music, too, there is not the note of crea-

tive genius. Nevertheless, the opera was worth producing. Besides the points in its favor already noted, it has the merit of brevity, and the composer is to be commended for not imitating Debussy, Strauss, or Puccini, as well as for avoiding the cheap and silly cacophonies of the musical "cubists."

The *International* has issued a musical number, with contributions by Daniel Gregory Mason and Cæsar Serchinger. Hereafter there will be a regular department of music in this readable magazine. It will be conducted under the auspices of the National Society of Music, which is engaged in preparing an extensive work entitled "The Art of Music." Among the contributors to this are Debussy, R. Strauss, Elgar, Ernest Newman, and Reginald de Koven. In the December number of the *International* Mr. Serchinger takes up the cudgels for Arnold Schönberg. He thinks that all talk about that bold composer's "insanity" and "viciousness" is silly.

Of Mascagni's many operas only one, "Cavalleria Rusticana," has proved a lasting success; nevertheless, he keeps on adding score to score, and his failures seem to be as profitable as most other people's successes. His latest work, "Parisina," had its first performance anywhere on December 15. The Scala at Milan was crowded to suffocation, although the price asked for an orchestra chair was $20. Probably the fact that the libretto was provided by Gabriele D'Annunzio had something to do with this result. The story is, of course, an unsavory one, and while it was not recognized as a poetic masterwork, the verdict of the critics was that it offered the composer good opportunities. Of these, we read, he did not take advantage to the fullest extent. The vocal parts contain a good deal of uninteresting recitative. The treatment of the orchestra shows the influence of Richard Strauss, whose "Salome" seems to have become a model for Italian composers. The love duos frequently suggest Wagner's "Tristan," and the harmonies of the modern Frenchmen also are in evidence. On account of its extreme length and the scarcity of original melodies, it is not believed that "Parisina" will survive long. The composer conducted the first performance and some of the scenic arrangement had been made under the poet's directions.

Mozart's birthplace, Salzberg, has a new Mozarteum building, the opening of which will be celebrated by a music festival lasting from August 12 to 20, 1914. The programme is most alluring. The Philharmonic Society of Vienna will give three symphony concerts under the direction of Arthur Nikisch and Dr. C. Muck. These concerts will show the development of symphonic music in Austria, from the classics to Brahms and Bruchner, with three Mozart symphonies as the centre of it all. Under Madame Lilli Lehmann's artistic direction "Don Giovanni" will be given in Italian (three performances); Dr. Muck will conduct; Mmes. Lilli Lehmann, Geraldine Farrar, Joanna Gadsky, and Messrs. John Forsell, McCormack, and A. de Segurola will appear in the principal parts. With the gracious permission of his Majesty the Emperor, the Viennese Imperial Court Opera will give two performances of Mozart's "Entführung aus dem Serail," Franz Schalk, conductor.

Among the many chamber-music associations, that which styles itself the Capet Quartet of Paris has, since it began to travel to all parts of musical Europe, come very much to the fore. Even in the large capitals of Germany and Austria, which nearly all boast their own indigenous artists famous for ensemble playing, the Frenchmen have been admitted to be inferior to none in their special field. Greater delicacy of execution, nicer balance of tone, or a truer understanding of the entire classical repertory can be found nowhere, it is asserted by those who have heard them.

Sir Frederick Cowen has been invited to conduct a concert of his own compositions at Monte Carlo next month. The pieces he has chosen for this occasion are, doubtless, what he regards as his best works: the "Scandinavian" symphony, the "Phantasy of Life and Love," and "The Butterflies' Waltz."

With the exception of Camille Saint-Saëns, the most prominent pianist in France for some decades was Stéphane Raoul Pugno, who died on Saturday in Moscow, during a Russian tour. He was of Italian descent on his father's side, and was born at Montrouge (Isle de France) on June 23, 1852. His mother was from Lorraine. His father was a dealer in musical instruments in the Latin Quarter of Paris, and among these Raoul grew up. His talent developed early. At the Conservatoire he was a special protégé of Ambroise Thomas, and he won prize after prize. The Prix de Rome he could not get because of his not being of French descent. He successively held the post of organist and choirmaster in several churches in Paris. For some years he was professor of harmony and the piano at the Conservatoire. He also became known as the composer of some operettas, an oratorio, and piano pieces. But after 1893 he became best known as pianist. He made several successful tours of the United States, the first being with Ysaye.

Art

Charles Conder, His Life and Works. By Frank Gibson. New York: John Lane Co. Illustrated. $6 net.

Charles Conder was one of the most brilliant members of that self-admiring and self-indulgent group of young geniuses who twenty years ago found fame through the press of Leonard Smithers and through Mr. John Lane's *Yellow Book*. Poets and painters alike, they were saturated with the current French symbolism. Except in a somewhat strenuous bohemianism, they cannot be called a robust lot. Almost to a man they died in the thirties, leaving rather exquisite intimations than complete and consistent works. In temperament—and they were all very strong on temperament—they were classic pagans, or mystics, or exquisite decadents, after the French type—in short, the most un-British set that may well be imagined. Pictorially, Charles Conder, New Zealander by birth, Australian by education, French decadent by preference, and Londoner by residence, was a faithful representative of the mood of the group. They repaid his leadership with an extravagant admiration, in which his brilliant and winning personality naturally blended inextricably with his art. The cult spread, and for a matter of fifteen years Conder has been a shibboleth. To possess some scrap of silk delicately tinted with his brush was to hold a patent of æsthetic nobility. Five years after his death the spell is still strong. Charles Conder and Augustus John, these are the names that are unfurled before the skeptic as to a worthy English art.

From Frank Gibson's memoir and essay it seems possible to us to surmise a very definite artistic temperament. To do so becomes something of an act of divination, for Conder's uneventful life is merely sketched, and his work is passed in somewhat descriptive and perfunctory review. Still, what is done is done carefully. The work is listed with surprising thoroughness. Campbell Dodgson has catalogued the prints. Then the charming little folio contains more than a hundred plates representing Conder's work in all its phases. It is upon these reproductions and memory of the New York exhibition of two years ago that we must rely. Mr. Gibson's work is dignified and adequate, the fitting tribute of an old friend, but precisely its discretion is its weakness. Let us indulge a reasonable indiscretion in the hope of genuine portrayal.

Charles Conder was born in 1868 in New Zealand and trained chiefly as a landscape painter in Australia. At the age of twenty-two he was a Parisian, and a Parisian he remained through residence for a matter of four years, and by æsthetic inclination always. It was the Paris of Verlaine and the Japanese Club, of the glory of the symbolists in letters and of the impressionists in painting. Conder drank deeply of it all. Watteau seen through Verlaine's "Fêtes Galantes," a modicum of Whistler and the Japanese, later a strong tinge of Goya—these are the influences delicately combined in Conder's work. Anquetin became in a degree his guide, Toulouse-Lautrec his friend. Through his early years in France he continued to paint landscapes, but by his twenty-sixth year he had developed the peculiar style and medium that brought him fame. By the slightest iridescent indications on silk, in water-color, he could create a little pastoral world. Such drawings were usually in the form of fans, but occasionally in more conventional forms. Now and then he painted strips of silk

for wall decorations, and sometimes penciiied the ribbons that adorned a frock. A sultry and quite entrancing feminism is the note of this work. The embodiment is the most superficial—in a technical sense Conder never mastered the trade of the figure-painter—but the emotion is fully conveyed. It is the specific nature of this emotion that must occupy us.

In pearly silken regions women pass slowly or more languidly recline. Some are clothed, but their bosoms strain under the light coverings. About the half-revealed forms of other women the draperies cling as they fall away. The postures and motions of all are hesitant, ambiguous. These fair denizens of pearly realms seem bewildered by half-sensed desires. Their world is saturated with the warmth of sex, but they know not to whom to give themselves. The mood is a curious middle stage between the wistful muted amorousness of a Watteau and the frank sensuality of a Goya. The light is often crepuscular, but rarely at all specific, and occasionally the whole design is shot with crimson, green, or blue, after the fashion of an illumined stage. It is a woman's world. There is no struggle in it except perhaps the eternal struggle between mind and temperament. Which is to win, no spectator will doubt for a minute. Unmistakable as are the sensuous implications of Conder's art, they are also very subtle and diffused. What is present is not desire for a particular person, nor even of sex; rather an urgent and smouldering desire for desire. It is precisely the languid dulcet note of a book that to Conder personally and to many of his generation was a gospel of beauty, "Mademoiselle de Maupin." No painter has caught the mood so completely as Conder, and this implies a consummate artistic tact. To steer with Gautier a course between perversity on one hand and grossness on the other, to elevate green sickness to an æsthetic, to present the bewildered human animal without waiver of pathos and grace—all this requires a sentimentality most highly intellectualized.

Obviously, such feats are proper to times of decadence. And, in fact, Conder's exquisite and personal gift could assume importance only in some interspace when the sense of great art was lost. Despite a few charming Whistlerian landscapes, there is little of the open air about him. The roses which he sheds so generously about his women might better be orchids. He himself is an exotic in England. His single note is sounded with such vibrant exquisiteness as, once heard, to be quite unforgettable. Among the minor lyrists of an age that overvalued the lyric cry, he is one of the most complete, distinctive, and accomplished.

His later years were passed between his delightful home at Chelsea and dearly loved spots in France, Italy, and Spain. Like most of his companions, he had burned himself out prematurely. He died in 1909, only forty-one years old. Nothing but repetition of his successful vein is promised by his last works. With most of the group to which he belonged his quality remained that of a charming and perverse adolescence. He never developed an adult style and was fortunate in going before his youth had wholly passed.

The following volumes are promised early next month by McBride, Nast & Co.: "The Art of Nijinsky," by Geoffrey Whitworth, with ten illustrations in color by Dorothy Mulloch; "The Craft of Hand-Made Rugs," by Amy Mali Hicks, and "Baroque Architecture," by Martin S. Briggs.

The British Museum has recently purchased a Roman mosaic of great interest. It was discovered at Romain-en-Gallia, the site of a Roman town on the bank of the Rbone, opposite Vienne (Isère), to the south of Lyons. The mosaic is distinguished by completeness, only small portions being restored. It measures about 12 feet by 10 feet 6 inches, and formed the floor of a room. The design consists of a central panel with four medallions, one at each corner. The central panel contains a nude figure with a hound; the medallions respectively Dionysus, wreathed; a bust of a young Satyr; busts of an old Satyr and a Mænad, and busts of a young Pan and a Mænad. Each of these medallions is surrounded by a square border, the corners of which are filled with birds. The prevailing colors in the mosaic are black, white, red, and yellow, but other shades are also introduced. Though not comparable with the finest work in this style in Naples and Rome, this mosaic is of finer workmanship than that of the provincial work found in Britain and Africa. The squares employed are indeed exceedingly small, particularly in the panel and the medallions, and they have been pieced together with extraordinary skill.

A. E. Gallatin has done a useful thing very well in "The Portraits and Caricatures of James McNeill Whistler, an Iconography" (Lane). Twenty-nine self portraits are recorded, of which three have been challenged by various authorities. Many of the self-portraits are slight or in small groups, and none represents the mature man satisfactorily. For this one must look to such portraits as Chase's and Boldini's and to the photographs, which Mr. Gallatin faithfully registers. There is a tantalizing mention of a collection of unfinished self portraits at London, access to which was denied the cataloguer. Whistler was a shining mark for the caricaturist. It is surprising that only thirty-five examples have been found. The diligence of Mr. Gallatin's iconograph quest is shown by the fact that he records the cover design for a Whistler cigar. There are twenty cuts, ten of which are first publications. Like its attractive predecessors from Mr. Gallatin's hand, the little book is fastidiously made and the edition limited.

"Animal Sculpture" (Putnam), by Walter Winans, is a book of terse practical advice by an artist who has won high awards. Modelling should be from memory, and the all-important matters are right placing of the main muscles and right slant of the chief planes. If this be done, and it must be done not from immediate observation, but from analytical knowledge previously acquired, the contours will take care of themselves. Mr. Winans advises making two plaster casts of the model thus blocked out, one to keep in reserve, one to be used for adding details in plastacine. The method proposed is highly intellectual and disciplinary. Its use would do away with absurdities of pose and balance which have disfigured much of the animal sculpture of the past. We agree with Mr. Winans as to the value of sheer concentrated observation fixed by slight sketches. One models what he knows rather than what he sees. Mr. Winans's position is that of the realist. His scorn of Greek animal sculpture, supported by a single illustration which is not Greek, will not be shared by many art lovers. It is disconcerting to find Barye barely mentioned in such a book, and the Colleoni statue called Colonna and located at Rome. Such opinions and errors suggest lack of culture, but culture is not the point of a book intended for craftsmen. The practical counsels seem to us almost without exception sound, and the whole tendency makes against the superficiality of much modern sculpture.

The sub-titles of books seldom attract attention, and the ordinary reader of the volume on "Charles Follen McKim" (Houghton Mifflin), by Alfred Hoyt Granger, will be likely to overlook the fact that it claims to be no more than "a study" of the life and work of the great architect. To those who knew McKim most intimately, however, the book must seem inadequate on the one hand and somewhat misleading on the other. Biographically it is clearly too slight a sketch to have great value; and as a discussion of McKim's mode of work, and of the results accomplished by him, it can scarcely be said to be accurate. An author nowadays who produces a profusely illustrated book should remember that many of those who open its pages will judge of it very largely by its pictorial contents. And in this Mr. Granger does both McKim and those who worked in partnership with him no little injustice. In his text he indeed tells his reader that a number of the plates presented are included rather to show the influence of McKim upon the work done by his firm than to suggest that the buildings referred to were his own creations; but this fact will be overlooked by the casual reader who is certain to be led to impute to McKim certain buildings that bear no trace of his authorship. Injustice is thus done not only to McKim, but also to his partners, especially to his younger partners, whose personality is lost in the firm name, and to whom he was ever ready to accord the very fullest credit. It is nothing less than a serious blunder, for instance, to have included among the illustrations a photogravure of the new Municipal office building in New York, which was not designed until after illness had compelled him to withdraw entirely from practice. McKim's great influence within and without his atelier is not to be ques-

tioned; and it was an influence which always pointed to perfection. But he was associated throughout his career with other men of strong individuality; and it is neither fair to him nor to them to suggest, even by indirection, that their personal taste was subordinated to his. The book, however, has its value as an enthusiastic appreciation of a great architect, and we may, therefore, overlook the fact that it is defective in critical acumen. It is, as it were, a wreath of laurel laid upon the tomb of McKim by one who feels that his own life was enriched by contact with him; and it may be accepted as representative of the respect and admiration of that large number of the younger architects who feel that they owe a debt of gratitude to the master who inspired them with devotion to ideals. The book is beautifully printed, and the illustrations are well made.

Finance

BEGINNING THE NEW YEAR.

The first business day of the new year was marked by curiously opposite movements in the home and foreign money markets. At New York call money rose to 10 per cent., a figure not surpassed at any time in 1913. At London, on the contrary, discount rates declined ½ of 1 per cent. to the lowest figure since the opening of October, and at Berlin a decline of ⅜ brought actually the lowest rate since the outbreak of the Balkan War.

High call loan rates at New York for the opening of the year are not altogether unusual—14 per cent. was quoted at the opening of 1910, 20 per cent. at the opening of 1908, 40 per cent. at the opening of 1907, and 125 per cent. at the opening of 1906. But in 1910, when January opened with 14 per cent., such an inflow of cash to New York ensued that the maximum rate from the middle of that month to the end of March was 3½ per cent. In the preceding year, with 20 per cent. for call money, the highest quotation for the two next months was 3.

To many people who scanned the tape between ten and three o'clock on the first business day of the new year, or who ran their eye over the afternoon newspapers' financial pages somewhat later, the action of the markets was undoubtedly disappointing. There had been such an outburst of cheerful talk and prophecy, in the financial comment and forecast of the several preceding days, that it seemed the plain duty of the Stock Exchange and the money market to act in character. That prices on the one should have moved uncertainly, and that rates on the other should have risen to a figure higher than any in 1913, was unpleasantly like a dash of frigid water on the glowing expectations.

One is not compelled, however, to take it immediately for granted that this introductory movement is the keynote of 1914, or to apply to the financial situation the analogy of the traditional citizen who constructs on January 1 a new programme for his life and conduct, and on January 2 has to report a day's performances closely resembling those of the previous year. A market has to put some distance between itself and the "year-end readjustments" before it can begin to show its actual character. Even the year of easy money and after-panic revival, 1908, was ushered in with the Wall Street call-money rate at no less than 20 per cent.

The calendar does not always settle the course of events, and the passing into another year is no guarantee that another set of governing influences is in operation. Yet it is hard to shake off the belief that events have combined, at this particular turn of the year, to alter rather strikingly the complexion of affairs. Wall Street, which always likes to have its superstitions fulfilled, may have had a certain satisfaction in the outcome of such a numbered year as 1913; but gratification that the ill-omened Wall Street year is ended will undoubtedly be the leading sentiment of the hour. This feeling certainly will not be weakened by the unanimous admission that, whatever may be the general forecast as to 1914, the actual situation has necessarily been changed by the bewildering succession of important occurrences in the past three weeks.

The financial community may, in its own judgment, prophesy good or ill from the enacted Banking and Currency law, from the Telephone Company's truce with the Government, and from the long step made towards the peaceful and harmonious ending of the "Money Trust" agitation, through the announcement, by the Morgans, of their firm's retirement from "interlocking directorates" on which it is personally represented. It is possible enough for the reasoners of Wall Street to insist that each of these developments may mean derangement of an agreeable *status quo*. But even the discontented critics will be the first to recognize that through these changes we at least part company with some important underlying factors in the uncertainties of 1913, and that now it is possible to look ahead.

It is possible also, in contemplating the more recent of these occurrences, to set up a very fair argument that they are bringing American finance in general, not from a safe and normal anchorage into an unknown sea, but from an exceedingly tempestuous course, whose end could be surmised by no one, into the old and well-charted channels of the past. The markets and the financial community have been observing, listening, and learning, since they were informed with angry exaggeration, during the exchange of political compliments in 1912, that to abandan these hazardous financial experiments of the decade past would be to "revert to the business methods of half a century ago."

CHARLES FOLLEN McKIM

A Study of his Life and Work

By ALFRED H. GRANGER

"A sympathetic and enthusiastic sketch of the life and work of one of the greatest leaders in the new American architecture. . . . With absolute loyalty and enthusiasm Mr. Granger depicts the man himself, with his passion for simplicity, for truth, for perfect beauty. His modesty, his wit, his bubbling humor, coupled with a certain sensitive restraint and self-repression; his generosity, his kindness to younger men; his fidelity to all high ideals are emphasized. . . . It is a book to be treasured by every lover of architecture."—*Boston Transcript.*

Lavishly illustrated. Boxed $6.00 *net. Postage extra.*

REMARKABLE DISCOVERIES IN EGYPT

PROF. FLINDERS PETRIE now devotes his entire time to the Egyptian Research Account (Society), whose discoveries relate to the history, arts and sciences of ancient Egypt, and to its pre-dynastic age. The Society, managed by a Committee of forty eminent men and women, publishes an annual quarto volume, profusely illustrated, of great value, that should be in hundreds of public and private libraries. Circulars of the explorations and books freely furnished. Address REV. DR. WILLIAM COPLEY WINSLOW, 525 Beacon St., Boston.

THE FLOWERY REPUBLIC

By FREDERICK McCORMICK

Is the most authoritative work on the new China. $2.50 net. By mail $2.70.

D. APPLETON & COMPANY, New York

The Justice of the Mexican War

A Review of the Causes and Results of the War, with a View to Distinguishing Evidence from Opinion and Inference.

By Charles H. Owen

Formerly of Staff, Fourth Division, Second Corps, Army of Potomac.

12°. $1.25 *net.* *By mail,* $1.40.

It is the contention of this book that those who declare the Mexican War unjust base their charges largely upon mere opinion. The Mexican War, in Major Owen's belief, was fought in enforcement of the Monroe Doctrine.

"The work is ably and entertainingly written. Page after page holds the reader and quickens interest."—*Chicago Advance.*

"The book is well worth reading as a patriotic defence of our Government and its Armies."—*Literary Digest.*

Comments of NOTED EDUCATORS

"Exceeds my expectations."

"Indispensable to all students of education."

"Serves the interests of professional education better than any other work."

"Combines the highest measure of scholarship and practical availability."

"Admirable in clearness, comprehensiveness, and balance."

"In the publication of this work the editors and publishers have done the country and the world an important and lasting service."

"The most valuable contribution to the study of educational progress throughout the world."

"A masterpiece, an enduring monument."

"Of unique value, a work of standard worth."

"Fills a place in the plan of Education that has long needed to be filled."

"The most useful work on Education that has ever been published."

OPINIONS OF LEADING REVIEWERS

"This Cyclopedia ought to go into every school and public library in the land, and become accessible to every teacher and every school official, and to all others who have to do with the organization, administration, or teaching-work of our schools."—*Literary Digest.*

"A masterly work, one long needed, and one that will be keenly appreciated."—*Journal of Education.*

"The undertaking is of exceptional interest, and of great value. It addresses itself in fact not only to all teachers, from kindergarten to university, but to a large body of intelligent outsiders. The scheme is comprehensive, dealing both with history and present conditions. Our warmest thanks are due for this 'open sesame,' this godsend to all educators."—*N. Y. Sun.*

"There has been hitherto no encyclopedia of education in English. The present publication, therefore, meets a real need, especially since its merit entitles it to approval as a worthy companion of the German and French educational encyclopedias. The editors have shown discrimination in the selection of contributors, and have succeeded well in securing harmony and proportion."—*N. Y. Evening Post.*

"In the present immense and varied literature of education—a subject now looming larger than ever in the public mind—not teachers only, but the many who are either officially charged with, or attracted toward, an intelligent participation in the treatment of educational problems, are here furnished with the succinct and comprehensive information they require. This includes every aspect of education. Here is found, not only the information required in a handy reference book of cyclopedic range, but also an assemblage of systematic treatises on every phase of the subject."—*The Outlook.*

An illustrated prospectus describing the work and containing press comments and personal indorsements will be gladly mailed to any address on request. Complete in five volumes, the set $25.00. Liberal terms of payment to teachers.

ARTIFICIAL PARTHENOGENESIS AND FERTILIZATION

By JACQUES LOEB, Member of the Rockefeller Institute for Medical Research.

This new work presents the first complete treatment of the subject of artificial parthenogenesis in English. It gives an account of the various methods by which unfertilized eggs can be caused to develop by physicochemical means, and the conclusions which can be drawn from them concerning the mechanism by which the spermatozoon induces development. Since the problem of fertilization is intimately connected with many different problems of physiology and pathology—we need only mention the natural death of the egg cell and the prolongation of its life by fertilization; the fertilization of the egg by foreign blood and the immunity of the egg to blood of its own species; the relations between heterogeneous hybridization and artificial parthenogenesis, between fertilization and cytolysis, and between permeability and physiological efficiency of acids and bases, etc.—the bearing of the facts recorded and discussed in the book goes beyond the special problem indicated by the title.

is called to the remarkable progress now being made by

THE NORTH AMERICAN REVIEW

under the new editorship of

GEORGE HARVEY

THE November Number, the first to contain the complete Editorial Department and the leading article by the Editor, was the largest edition in ten years.

The December number was so greatly in demand that it was necessary to print three editions.

The January number was completely sold out four days after publication.

The gratifying way in which the new North American Review has been received leads us, with greater confidence, to invite subscriptions from those interested in authoritative reviews of our rapidly widening national affairs, and of the great movements in Science, Art, Literature, and Religon.

Yearly subscriptions at $4.00 should be sent through your local magazine dealer, or direct to

THE NORTH AMERICAN REVIEW

FRANKLIN SQUARE NEW YORK CITY

LETTERS AND MEMORIALS OF Wendell Phillips Garrison

Editor of The Nation, 1865-1906

In one volume, crown 8vo, 300 pages, with photogravure portrait.

During the forty-one years in which he edited the *Nation,* with a thoroughness, ability, and conscientious devotion unsurpassed in the records of American journalism, Mr. Garrison was an indefatigable correspondent, never employing an amanuensis, but writing tens of thousands of letters with his own hand to his contributors, who embraced practically all the leading American scholars and critics of the period. From a dozen groups of these, which have been kindly loaned by the recipients, a sufficient number of selections has been made to illustrate the relations between Mr. Garrison and his great corps of contributors, the frankness and tact which he exercised towards them, and the wide range of his interests, tastes, and sympathies. The volume also contains a brief sketch of his life, a dozen of his best poems, and several of his characteristic editorials, reviews, and essays, besides a fine photogravure portrait.

Price, $1.50 *net postpaid.*

Longmans' New Books

Vices in Virtues and Other Vagaries

By the Author of "The Life of a Prig," etc. 8vo. Pp. viii+96. $1.20 *net.* (Postage 7 cents.)

CONTENTS: The Vices of Gardening—The Vice of Loving without Liking—The Ungentlemanliness of Ladies—The Fool and his Adjective—The Vice of Common Sense—Vices in Charities—Talking to Think—The Joys of Indigestion—The Vice of Unselfishness—The Vice of Being Too Previous—Reviewing—The Vice of Finishing—Fleeting Pleasures—Principles—Misers, Ancient and Modern—Ill-health as a Profession.

Painting in the Far East

By LAURENCE BINYON. *New edition.* Crown 4to. Pp. xx+295. $6.00 *net.* (Postage 29 cents.)

Interest in this subject has lately widened vastly, and new stores of information have become accessible; so that this New Edition, thoroughly revised, with many new and additional illustrations, has been made necessary. It is bound in silk cloth, ornamented, in a style suitable for presentation purposes.

Thirty Years in Kashmir

By ARTHUR NEVE, F.R.C.S.E. With 24 Illustrations and a Map. 8vo. Pp. viii+316. $3.50 *net.* (Postage 17 cents.)

Dr. Neve has charge of the Mission Hospital at Srinagur, but this volume is mainly concerned with his mountaineering trips among the stupendous Himalayan ranges in the vicinity. He has also a great deal that is interesting to tell about the people of various races and religions who inhabit the valleys, and from whom his medical help gained him a warm welcome at all times. The natural surroundings have inspired sojourners in Kashmir and other Himalayan countries to produce some of the finest books of travel found.

Splendid Failures

By HARRY GRAHAM, Author of "A Group of Scottish Women," "The Mother of Parliaments," etc. With 8 Portraits. 8vo. Pp. xii+268. $3.00 *net.* (Postage 15 cents.)

The Nation

NEW YORK, THURSDAY, JANUARY 15, 1914.

The Week

We are loath to credit the statement, although it appears in the Progressive Chicago *Evening Post*, that Gov. Johnson of California has been forced to reconsider his decision to retire from politics because of failing health, on account of the upheaval the announcement caused in the ranks of the California Progressives, "with several party leaders anxious to fill Mr. Johnson's shoes." He finally decided to remain in politics, we read, "to save the Progressive State machine, as it was popularly understood," but has only now let it be known which office he will try for. As he has chosen the Governorship again, this leaves the Senatorship the prey of what we should have to call Progressive politicians, if there were or could be such a thing. They manage these things much better in Kansas, where a few Progressives who were unable to attend a meeting called to consider the question of candidates for Governor and Senator, simply endorsed the candidacy of Victor Murdock and Henry Allen for any office, State or national, for which they might run. The heart-burnings in California are duplicated in Massachusetts, where the six Progressives who made the election of a Republican Speaker possible are suffering verbal discipline by Charles Sumner Bird and others. Perhaps this bitterness is increased by the fact that only the refusal of three Democrats to vote for the Progressive candidate prevented his election on the first ballot.

In a letter to the New York *Herald* no less an authority than Capt. H. C. McClellan, of the Revenue Cutter Service, retired, now superintending the construction of lifeboats and apparatus for the Life-Saving Service, denounces in severe terms the provision of the Seamen's bill requiring passenger vessels to carry "two able seamen" for each lifeboat. Shipowners and experts at the London Conference have already pointed out that this provision is doubly vicious—it lays an unreasonable burden upon commerce, and it utterly fails as a measure of safety. In recognizing only able seamen as boatmen, it overlooks the fact that these men may never have had occasion to go into a boat, and may be utterly incompetent oarsmen. In excluding stewards and hands below decks from the boats, it disregards the fact that they are frequently the best of oarsmen, who have proved their superiority in actual competition. The test of boatmen should be a practical demonstration before the inspectors, and, as Capt. McClellan recommends, the bill should be modified with this end in view. This would also relieve the shipowners. As the bill stands, great liners with fifty or more boats will have to carry a force of deck seamen with virtually nothing to do but wait for some marine disaster. Mr. Robert Dollar vouches for the statement that "it would be an utter impossibility to get seamen enough of three years' experience to man the boats." To permit the use of qualified stewards would be only just. Despite certain merits of the bill, such faults as this go far to justify the opinion expressed in a letter which we print to-day, from Prof. Herbert C. Sadler, of the University of Michigan, that it is a tissue of contradictions and special legislation.

Ten of the twelve States whose Legislatures meet this year are to be objects of effort by the National Child Labor Committee to improve the laws relating to that subject. No one of the ten has the eight-hour law for all workers under sixteen, and three, Georgia, Maryland, and Virginia, allow children under sixteen to work at night. Georgia is also in agreement with South Carolina and Mississippi in allowing children under fourteen to work in factories; in Georgia the age limit is as low as ten years, and even this is not enforced. Stricter inspection is needed in more than one State, and the Committee is urging a State Bureau of Factory Inspection in Georgia, Louisiana, and Mississippi. In a few States the laws are weakened by exemptions, as in New Jersey, which enforces a fourteen-year limit for factories only, and permits children of any age to be employed in other pursuits during the day out of school hours. Upon these exemptions the Committee is severe, but it is in reference to them that impartial observers may have two opinions. Much depends upon local conditions. Moreover, one of the larger educational movements of the day is vocational training, which often takes the form of combining teaching with practice.

The snarl in the administration of the Mothers' Pension law in Massachusetts seems a flat contradiction of the main claim made for the bill—that it would put a new leaven into local charity. At its passage there was hot debate whether its aid should be distributed through local overseers of the poor or through special appointees. It was asserted that the appointees would be sociological experts, fully conversant with the theory and methods of poor relief. On the other hand, it was felt that to put it in the hands of the regular overseers would educate each community into a gradual revolution of its attitude towards the destitute. It would learn to help them as a matter of public policy. Yet the overseers have imbibed so little of this "broad public spirit" that the private sources they once represented are all dried up. In plain violation of the law's provision against State aid for less than one year, they are clamoring for funds in temporary cases—as when a husband goes to jail for six months, leaving his family in want. The merits of the case are clear, for the law was not meant to supersede, but to supplement, existing relief agencies. The Massachusetts press is doubtless justified in its hope that the local officials will see the light; but meanwhile the situation is of interest to other States, where the chief opposition to mothers' pensions comes from private or organized charities.

The Pittsburgh Morals Efficiency Commission has found in eight months' work the basis for recommending a potpourri of reforms—the censorship of motion pictures, the sterilization of criminals, the inspection of employment bureaus, a minimum wage, and the use of schools as social centres. Chief interest, however, will attach to its cham-

pionship of eugenic marriage legislation, especially in the light of considerations joined with it. The one most potent weapon in the reduction of vice the Commission believes to be early marriages, to encourage which it emphasizes good housing, cheaper living, and even vocational education, as permitting the easy conversion of youth into self-responsible, wage-earning manhood. If it can reconcile "eugenics" legislation with this principle of early marriage, the Commission will have done much for the enlightenment of such bodies as the Wisconsin Legislature. The most vicious aspect of such laws as that now meeting general condemnation in Wisconsin, and driving hundreds of couples across the border, is that they place artificial barriers before the very contract which fosters all the virtues of family life, from thrift up. It is the duty of lawmakers to recognize the old discovery new made by the Pittsburgh Commission—that marriage itself is a force unrivalled in making for social purity. This is not saying that safeguards of somewhat the character of those aimed at in the Wisconsin and other laws are necessarily in conflict with this principle; but the matter is one to be approached with the utmost caution.

We believe that the right sort of sex education is greatly needed. When we come to the specific definition of what is the right sort, or of how it is to be given, we find ourselves less inclined to speak dogmatically. Mrs. Young seems satisfied that sex hygiene has made a place for itself of acceptable value in high-school instruction, but she holds in abeyance her opinion as to its place in the primary schools. —[Chicago Evening Post.

An honest statement of a problem on which there is a vast amount of loose and disingenuous chatter. Out of the laboring mountains of talk not even a respectably sized mouse of concrete suggestion emerges. Just what of sex knowledge are you going to impart to the child, and at what age? What answer will you give the child on specific questions that he is always asking? At what age are the lessons of elementary biology that he has been studying in plant life to be brought home to him? Just what kind of ignorance is it the object of sex education to remove? How ignorant in reality is the child of the things he is assumed not to know? How derelict have the schools been hitherto in dealing with the problem to the extent that schools can be expected to deal with it? A definite statement on this subject from educators who have given their minds to the subject would be welcome. If in the interests of the child we have decided to abandon our supposedly prevailing reticence, let us be thorough about it. Let the honest facts be discussed instead of burying them under euphonious and vague terms like "sex hygiene."

Mrs. Ella Flagg Young favors instruction in sex hygiene in the high schools. She is in doubt as to the elementary schools. The question thus resolves itself into one concerned not with children at all, but with adolescents. But if it is with boys and girls of fourteen we must deal, the problem takes on a much simpler aspect. What "education" is necessary for children of this age that could not be conveyed in a single half-hour's talk on the subject of physical cleanliness, on the respect the individual owes to his body, and on the social implications of the violation of the laws of right living? One could cite the case of intelligent school principals twenty years ago or more, long before sex hygiene got into the headlines, who now and then gathered their boys into general assembly just for such a brief word of caution and appeal. A mere quarter of an hour twice a semester by the head of the school or the school physician would probably meet the requirements of the situation.

Canada's established reputation for enlightened treatment of the Indians can but gain from a departmental report showing them to be increasing at the rate of 2,000 a year. In 1912 there were 104,956, while 1913 closes with 106,490. Nearly all of them live in good dwellings; they have 326 schools, enrolling 11,144 pupils; while in spite of their supposed susceptibility to disease, the death-rate has been cut to 21 per thousand in the most populous communities. They earn wages amounting to $6,000,000 yearly, and cultivate 60,000 acres. "Industrious and contented," says the Montreal *Gazette*, "they compare favorably with the Dominion's other residents." In their prosperous absorption into civilization is a constant proof of the wisdom of Canada's policy of letting them shift for themselves, within certain protective regulations. Their present estate would certainly compare favorably with that of the tribes once confined so closely by the strict American reservation system. Of this, the merit was to protect the Indian while it educated him; but it also treated him as irresponsible, and cut him off from actual contact with civilization.

A pathetic personal interest, rather than political importance, attaches to the announcement that Joseph Chamberlain will not again accept election to Parliament. Chosen to this one, he has never been able to take his seat, though he dragged his broken frame to the Speaker's desk in order to sign—or, rather, pitifully to make his mark upon —the roll. It has long been evident that his public career was closed by the cruel physical disabling which fell upon him; and now his definite retirement will be taken merely as one sign more that his political battles are over. In the spectacle of so strong and masterful a man compelled to spend his last years in gray and hopeless invalidism, there is a theme for a tragic poet.

On the same day that Mr. Chamberlain announced his retirement from public life, another statement was issued, of a quite routine character, but having a close relation to the leading feature in the last phase of Mr. Chamberlain's public career. The returns of the British Board of Trade for the year 1913 show that the exports of the United Kingdom for the year increased by about $180,000,000 above 1912, and imports by $120,000,000, an increase in the entire foreign trade of $300,000,000. The aggregate of that trade, accordingly, was somewhat above seven billions of dollars, the exports being $3,200,000,000 and the imports $3,800,000,000. Mr. Chamberlain launched his "tariff reform" campaign in 1903; the total foreign trade in that year was slightly more than four billion dollars, and in the ten years that have since passed it has grown to the tremendous figure of seven billions recorded in the figures just published. And exports have increased at a decidedly more rapid rate than imports. In 1903, they were less than a billion and a half; ten years later, they are nearly three billions and a quarter. This great growth, both in exports and imports, is partly to be accounted for by the world-wide rise of prices; yet this goes com-

paratively but a small way towards explaining it. There has been, ever since Mr. Chamberlain began his protectionist crusade, a steady and enormous growth of British foreign trade; yet the very centre of his attack rested on his confident assertion that the growth of the foreign trade of England was bound to come to an end if she persisted in her free-trade policy.

The London "verdict" which by compromise convicted Edwin Drood's uncle of manslaughter, coupling a plea for mercy with a recommendation for judicial severity, partook of Dickens's own satiric hostility to legal inconsistencies. "Nothing serious in life!" exclaimed Mr. Snitchey. "What do you call law?" "The one great principle of the English law," says "Bleak House," "is to make business for itself." Most of Dickens's lawyers, from Dodson and Fogg down, are what we should call shysters. The face of Quilp's attorney—low forehead, a wen-like nose, deep red hair—was "one of nature's beacons, warning off those who navigated the shoals and breakers of the world, from that dangerous strait, the Law." But if the youth who had been a reporter in Doctors' Commons knew of what he wrote, it was of conditions that were already beginning to dissolve. Shaw, Chesterton, and all the eminent Drood "jury" are witnesses that the spirit of ridicule for any social fault persists in England; but in legal procedure, at least, it has an insubstantial target. Whether this spirit did more in mending matters than the downright assaults of men like Bentham, is scarcely debatable. Much as didacticism in literature is out of fashion, the writings of men like Mr. Alger and Judge Swann might furnish our own fiction a hint. While not bad to the Dickensian degree, some of our court procedure would still justify Mr. Snitchey's further retort to the man who thought law a joke: "If you ever went into it, you would change your mind."

The entire citizen militia of the Transvaal has been called out because of threatened disorders arising from a general railway strike. South Africa is a remote spot, and in this country we have been catching the merest echoes of a bitter labor warfare which began last year and seems to have been only temporarily allayed. In the recent mine strike in the Rand, the situation approached that of civil war. In one riot a hundred lives are said to have been lost. As a result of that conflict the mine owners were made to recognize the existence of intolerable conditions under which the gold-diggers carried on their work. One of the main objects of the present sojourn of Col. Gorgas in South Africa is to combat the ravages of disease among the Rand workers. The railway strike is wider in its scope. It has affected both of the former Boer republics and may easily extend to the whole of United South Africa. Time brings its revenges when the national militia, largely made up of men of Boer descent, is called upon to maintain order against the industrial and railway workers, of whom the white element is predominantly of British origin.

The acquittal by the court-martial of Col. von Reuter and Lieut. Schad, the Zabern military tyrants, is a grievous thing and one that will react upon the German army throughout the Empire. It illustrates clearly how firmly militarism is in the saddle and the army clique stands by its own. To judge from the testimony cabled to the American newspapers, the guilt of these officers seemed beyond question; indeed, Col. von Reuter openly avowed his deeds and assumed the responsibility therefor. In his speech to the Reichstag at the time of its censure of him, the Chancellor went out of his way to emphasize his regret that trouble-makers were seeking to cause a break between the army and the people by exploitation of the happenings at Zabern. But this decision of the court-martial will do that very thing, and to a tremendous degree; for it makes it clear that the army holds itself above all civilian law and entitled to arrest civilians, sabre them, break open the doors of their houses, put them in jail for merely laughing at the military, and generally to exercise complete autocratic power. It is inconceivable that the German people as a whole will submit to anything of this kind. The verdict will also intensify the difficulties of the Chancellor, whose position is shaky enough already.

The Terrible Turk seems determined to be the *enfant terrible* of the Balkans. Constantinople's reported intentions to equip herself with a full-sized Dreadnought for the recovery of the Ægean Islands has put Greek nerves on edge. Now comes active Turkish intervention in Albania, the newest of the world's kingdoms. Albania makes a very attractive kingdom on paper, but there is to be no particular rush among cadets of Europe's royal houses to assume sovereignty over a nation of excellent marksmen from behind a rock, and chronically opposed to the payment of taxes. Turkey no doubt counts upon the resistance of the Mohammedan majority in Albania to any Christian prince whom the Powers may impose on them. This mountain-land, which for long was the bane of its Turkish masters, seems likely to prove a thorn in the side of the Powers who brought the new kingdom into being, and particularly of Austria. There is no likelihood that the Ottoman will recover anything of the territory he has lost. But there must be sweet revenge for Turkey in the fearful price which her conquerors have already paid for their prize, and seem likely to pay.

Greece's new Ambassador to the United States is Agamemnon Schliemann, a name which cuts across the boundaries of race and time. The son of the distinguished scholar who wrote the modern epic of Troy and Mycenæ with his spade would seem to be peculiarly qualified to act as representative of the newer Greece which as a result of the Balkan wars is stretching out towards the boundaries of ancient Hellas. His qualifications do not end there, for the new Ambassador is the son of an American citizen. The elder Schliemann was in California at the height of the gold rush, was naturalized, and never gave up his rights. This is a fascinatingly complex situation, which at the same time calls up and refutes much that has been said about the "mongrel" character of the modern Greek people. It may be that little of the blood of the men who fought at Salamis and Arbela runs in the veins of the modern Greeks, who are most frequently described as a mixture of Slav and Saracen elements. Yet there is such a thing as spiritual heritage, and it finds expression in statesmen of the Venizelos type, to whom the glories of twenty-five hundred years ago are both an ideal and a fulcrum for moving popular sentiment towards the attainment of that ideal.

THE GOVERNMENT AND THE NEW HAVEN.

The announcement, Saturday afternoon, of an agreement between the New York, New Haven & Hartford Railroad Company and the Government is primarily important as another evidence that the peaceful and amicable enforcement of the Anti-Trust law is the order of the day. It is also of particular interest because, in the case of an exceedingly complicated combination of properties subject to the law, the terms of the agreement prove, first, the willingness of the corporation to conform to the principle of that law; secondly, the Government's disposition to take a reasonable attitude in regard to solving the practical difficulties of the proposed dismemberment; and thirdly, the belief of the railway's officers that such difficulties can be surmounted.

A year ago, it is probable that a good part of the community would have questioned the likelihood of any of these three results. The New Haven's attitude then was, to fight to the last ditch against any surrender to the law. This attitude has been voluntarily reversed. It was then assumed in many quarters that the Government would impose conditions—as to instantaneous disposal, on an unwilling market, of holdings of stock in other corporations—which would involve a ruinous financial loss. But the chairman of the New Haven now declares, in outlining the plan of settlement, that the Attorney-General is "broadminded in considering the business and commercial welfare of New England and of the railroads in New England"; that he "recognizes the obligations incumbent upon the directors to conserve, just as far as circumstances will permit, the full value of all of the properties," and that, "so far as the department properly may, it will help the directors to discharge their obligations in protecting the stockholders in working out the details of the plan for the various properties."

This means that abundant time will be allowed for the necessary liquidation. And as for the very prevalent idea of a year ago, that such dismemberment would inevitably injure the property itself, the New Haven's chief executive further states that, despite the practical difficulties of the problem, the properties eventually will, "without doubt, be made not only good properties to serve the public, but in due time better properties for returning an income to the owners of the securities."

It would be difficult to exaggerate the significance of the episode, in the light of these three considerations. The settlement need not even be described as a compromise, as the Government's "meeting the company half-way." It is an absolute agreement, by both Government and company, on the principle of the law, on the practicability of enforcing it, and on the application, in such enforcement, of the "rule of reason" already vindicated by the United States Supreme Court. We imagine that, in the New Haven's case, it will not be many years before the financial community itself will look back at the Government's intervention in the company's affairs as having saved the enterprise from a disastrous future. For such an outcome was clearly foreshadowed, if the policy were to be continued whereby the company, in the nine years between 1903 and 1912, had increased its own capitalization from $93,000,000 to $417,000,000; of which increase, as the Interstate Commission showed, $204,000,000 "had been expended in operations outside its railroad sphere."

We have indicated that the paramount teaching of the incident is the fact that the peaceable enforcement of the law, in other quarters where its application has been doubted or resisted, is now reasonably assured. Pending such general readjustment, there is, indeed, no reason why the Administration should relax its firm insistence on obedience to the law, or should abandon such active measures as may in any single case be necessary to insure obedience. But the events of the past few weeks no less positively teach, in our opinion, that the era of peaceable settlement is not the time for piling up new and drastic remedial legislation, or for throwing fresh agitation into the field of American finance, at the moment when these sufficiently delicate problems of undoing the errors of the past are patiently working out.

There are, no doubt, some questions of company legislation which remain for early consideration, as a natural supplement to what has already been accomplished. These questions are pretty well understood, and are purely constructive in their nature. Even they will need ample time for proper consideration—notably the matter of regulation of security issues of the railways. But legislation which involves the further great unsettlement of existing financial institutions, and especially legislation which infers the introduction of new and debatable experiments, can safely wait until time has worked out the process, now under way, of bringing back our financial methods to the sound and normal basis which existed before the rash undertakings of a dozen years ago.

The growing spirit of confidence, in the business community at large, has had its principal origin in the belief and hope that a period of rest from the political uncertainties of the past few years is now at hand. That this confidence should be maintained is of the highest necessity, not only to the successful solution of the problems relating to the dismembering of illegal combinations, but to the successful application of the two great laws which the Wilson Administration has already placed upon the statute books.

FREE SPEECH AND PROFESSORS.

PHILADELPHIA, January 6.—Trustees of the University of Pennsylvania will undertake at a meeting on Monday, it is said, to establish boundaries within which certain members of the faculty will be required to restrain themselves in their public utterances.

Whether anticipation of this particular situation had anything to do with the action taken by the American Political Science Association the other day in regard to professorial freedom, we are not in a position to say. But there occurs, every few years, some case of the kind which attracts national attention; and the Association was therefore, in our judgment, well advised in appointing a committee to report on the broad question of the situation in American educational institutions as to "liberty of thought, freedom of speech, and security of tenure by teachers of political science." That the report of this committee will wholly remove the trouble is too much to expect; but there is every reason to hope that it will serve to stamp upon the minds of university authorities a better knowledge and a fuller recognition of the demands of academic freedom and the grounds on which those demands are justified.

In the comprehension of the subject, both by university authorities and by the public generally, there has been a

great advance within the past twenty years. There was a time when many persons of intelligence and standing, and in particular many college trustees, were content with saying that to dismiss a professor for the enunciation of unwelcome opinions was not a denial of his right to free speech, but only of his right to the institution's money. One sees this notion still cropping up occasionally, but it has quite lost its vogue. The question is not an abstract question of the legal right of free speech; it is a question of the status and character of the university professor. It is the business of the professor to teach the truth, as he has come to see it through his study of the subject he is discussing. It is an indispensable part of the validity and integrity of his work that he shall feel this to be his duty. To tell him that if in the performance of this duty he runs counter to the opinions or desires of the holders of the purse-strings he will be discharged, is to penalize honesty and independence, to reward servility and cowardice. What the upholders of academic freedom maintain, in so far as it relates to the "rights" of the professor at all, is his right to membership in an honorable profession. To say that he can hold his place only on condition of suppressing judgments that are not to his paymasters' liking would be to degrade the professorate in much the same way as the judiciary would be degraded under a régime in which the recall was not merely permissible, but was habitually resorted to whenever a judge's decision was not to the popular taste.

But the principle of academic freedom rests on broader grounds than the personal rights of professors. The question touches deeply the whole spirit of university life; even more for the sake of the students than for that of the professors the intellectual integrity and independence of the professorate must be upheld. Moreover, the influence of university professors, taken as a whole, is one of the powerful factors in the moulding of public opinion. It is safe to say that, in this respect, it stands, or at least is quite capable of standing, next in power to the newspaper press. The influence is less direct, but it is more steady and continuous; it is less perceptible, but it has a way of filtering out, through successive strata of the population, until it leavens a great lump. And this influence is, on the whole, beneficial, tending to the preservation of sane and wise views of political issues. No doubt there are among the professorial body a certain number of foolish extremists, a certain number of shallow and sensational ranters. No doubt, also, there are a certain number of strong men who, from the point of view of the conservative, are sadly in error. But it must be plain upon a very little reflection that in order that the opinions of the sober and conservative shall have weight with the nation, it is indispensable that the heterodox and daring shall have the right to speak as they think, and to retain their chairs. Let it be known that nobody can keep a university professorship unless he conforms to a given code of opinion, and any appeal to university opinion must necessarily become a farce. There is a point, of course, beyond which freedom becomes pure license and where, for obvious ethical reasons, the trustees of an institution must intervene. All things human are in a way a matter of compromise. But in practice the point of unquestionable license is seldom reached, and it is safer to err on the side of liberty.

As for the actual status and attitude of professors of economics and political science in this country at the present time, we believe that it is, on the whole, very nearly all that can be desired from this standpoint. Of this, Columbia University is a striking example. We have taken occasion to find fault with its government in regard to a different aspect of the professor's freedom—the question of teaching methods and of the free play of personality. But as to freedom of opinion, and particularly in the field of economic and political science, it would be difficult to find any fault. The president of Columbia is one of the leading conservatives of the country, and the trustees are doubtless in the main of his way of thinking. Yet almost every professor in those departments is a good deal of a radical, and several of them have been among the earliest champions of what a few years ago were generally regarded as very advanced radical policies. None of them is in the slightest danger of molestation. And a similar condition exists in many of our leading universities. So far from being fortresses of capitalism, as many people imagine—and as perhaps they were, to some extent, a quarter of a century ago—the American universities have been distinctly responsible for a considerable part of the impetus behind the "progressive" movement which has come to the front in recent years. The reason for the action of the Political Science Association is to be found less in existing conditions as a whole than in the evil that shows itself here and there, and in the essential importance of asserting a principle which is always in more or less danger of being lost sight of.

PROFIT-SHARING OR LARGESSE?

Referring to the announced distribution of $10,000,000 out of the prospective profits for the year 1914 to the wage-earning employees of his company, Mr. Henry Ford has stated that he regards it as not at all an act of charity, but simply a fair division of the net returns of the business. Upon the abstract question there is room for a great deal of pretty disputation. But the practical issue which this extraordinary distribution presents relates not to the moral quality, or the social quality, of the act, but to its bearing on the subject of profit-sharing in general. Call it fair division or call it largesse, as you will; the question is whether the act of the Ford Motor Company is calculated to promote or to discourage the spread of the profit-sharing plan in the industrial world.

Without trying to answer this question we may note some of the factors that enter into the case. One of these is the psychological element involved in the immediate spectacle. In the past few days profit-sharing has been discussed by thousands of persons who until then had scarcely heard of the term. Among them are probably many employers who are thinking of it, if not as a practical probability, at least as something more than a mere academic fad. Some of these may go so far as to inquire into the history of the subject in France, in England, in Germany, in this country, and look up books or Government reports relating to it.

But while the mere stirring up of interest is calculated to promote the spread of the profit-sharing idea, there is much in the particular exemplification that is calculated to have the opposite effect. Anything comparable to

the bounties which are to be given by the Ford Company is so obviously out of the question in general as to give fresh point to one of the standard objections raised against the profit-sharing plan. An article in a recent volume of the *Economic Review*, by a thoroughly friendly writer, puts this objection to the schemes very clearly:

> They would, if generally adopted, introduce a great inequality in the remuneration of one and the same grade of labor. The inequality, in fact, would be exactly proportioned to the inequality of the realized profits of the various firms employing that grade of labor. . . . Now, *inequality* of remuneration is very soon felt to be *insecurity*, since the weekly wage comes to be taken as a minimum, and the standard remuneration (*i. e.*, the sum which a man will complain of if he does not get) is the wage plus the average share of profit in the industry. For this reason the trade unions are not as unreasonable as they might appear to be when they choose to work for a rise of wages throughout the industry rather than for a state of things in which each firm should give its employees a share of the profits.

In the case in hand, the inequality here referred to is exhibited on a scale far beyond anything that this writer could have had in mind; and accordingly the very plethora of the success which the profit-sharing plan seems to have at its disposal in the Ford plant is the cause of its serving to accentuate not the feasibility, but a conspicuous difficulty, of that plan. As actually pursued in the many establishments which have successfully tried it, this difficulty has been hypothetical rather than real. Thus Mr. T. C. Taylor, who is one of the most ardent advocates of the plan in England, and whose firm has practiced it upon a very just plan for thirty years, says: "In twenty years the number of our workers has increased from 600 to 1,400, and we have apportioned as the workers' share near £100,000." This is pleasant, but it means an average distribution of only about $25 a year to each worker. Taking all the profit-sharing enterprises in the United Kingdom on which data could be obtained, the Labor Department of the Board of Trade finds that the average amount thus falling to the working people forms an addition of 5½ per cent. to their wages—which is not very different from the experience of Mr. Taylor's firm. Additions ranging all the way from nothing to this amount, or even several times this amount, would constitute no seriously disturbing inequality. It is precisely in such a highly exceptional case as that of the Ford Company that the adoption of the plan brings in a discouraging factor which may more than counterbalance any stimulus that it furnishes to the profit-sharing system.

In favor of that system, in one or another of its forms, a great deal is to be said. Its central recommendation, both from the narrowly economic and from the human standpoint, is its capacity for infusing into the ranks of the workers the feeling that they have a personal stake in the prosperity of the enterprise for which they are laboring. In that modification of the profit-sharing idea which is embodied in the Taylor method of "scientific management," the case is somewhat different, for there the stake of each worker is expressly measured by the quantity of his own individual output. But whatever particular form it may take, the idea of introducing, wherever it is practicable, such a relation between employer and employed as makes for a keener interest in his work on the part of the worker, and a more human interest in the worker on the part of the employer, is one that is worthy of encouragement. If the Detroit episode shall stimulate the study of the practical possibilities of profit-sharing, it will have been so far of good service to the country.

THE HARVARD-TECHNOLOGY MERGER.

The news that an alliance between Harvard University and the Institute of Technology has at last come to pass is striking chiefly by its unexpectedness. After the failure of the attempt of President Eliot and President Pritchett to amalgamate the institutions in 1904-05, and the receipt of the McKay millions by Harvard, it was supposed that the project was dead—as it was in the form in which they had urged it. Now their successors, Presidents Lowell and Maclaurin, have brought about a union which is in several aspects one of the most original and remarkable developments in our university evolution, if only because we may now see the extraordinary phenomenon of a student who has spent four years at the Institute receiving a Harvard degree as well as a Technology one. If we understand the terms of the merger—to which, happily, the Sherman Act does not apply—some of the Institute's students will hereafter be studying for two degrees in two different institutions, while some will be qualifying only for the Institute's degree, and all will be taught by a corps of professors holding rank in both institutions.

This is obviously the very opposite of what was planned during the years 1904 and 1905. The scheme which was then considered was the physical removal of the Institute to Harvard and its becoming in its entirety a college of Harvard, as Oxford and Cambridge have their numerous colleges with separate entities. It was hoped that near-by Tufts, too, would ally itself on similar terms, since President Eliot's idea was that Harvard would naturally develop upon English university lines. But the Technology alumni and faculty would have none of this, and a Supreme Court decision prohibiting the corporation from selling its land for these purposes came to their rescue. There followed the McKay bequest of $4,000,000 to Harvard, with promise of much more after the passing of certain lives, and so Harvard, lamenting as it did the growing up of two great engineering schools almost within sight of each other—the Technology is building superb new quarters on the Cambridge side of the Charles River basin—established in 1906 the Graduate School of Applied Science, with the idea that it should become for science what the Harvard Law School and Medical School are for their branches of learning.

In this there has been the completest disappointment. Harvard has to-day less than sixty graduate students of applied science, while the Technology has 250 graduates, or former students of other colleges, seeking its degrees. It is a pretty clear case that not means and able teachers alone can create a great school, and now Harvard wisely evacuates the whole field. Its fifteen professors of civil, mechanical, mining, electrical, and sanitary engineering go over to Technology, and Harvard by itself will offer no further instruction within its domain in these subjects. With the professors go the funds of the Lawrence Scientific School and about three-fifths of the McKay money, or about $60,000 a year—eventually it should approximate $250,000 a year—to be used, if the will is followed, for salaries, upkeep of

buildings, and scholarships for meritorious students.

For President Maclaurin this is an extraordinary achievement; for slight concessions to Harvard he obtains great means for the Institute and leads in the movement to avoid needless duplication in institutions of learning. Moreover, in the five years of his presidency he has also obtained the new site and a magnificent group of educational buildings. More than that, he has accomplished the seemingly impossible: he induced the State of Massachusetts to vote $100,000 a year for ten years for the support of the Institute. He has still to obtain the money for dormitories, and he has yet to prove that he can develop a great educational leadership.

One regrettable feature there is. We learn from Boston that the Technology and Harvard faculties had but two days' warning, and were not officially consulted. This executive haste savors quite too much of some of our big business mergers, with their "vote first and discuss afterwards" policy. What does an American faculty exist for? It used to be held that a prime purpose was the discussion and formulation of large educational policies, such as are involved in a momentous move like this. But we are out of date. A faculty is now but a technical staff; our presidents are captains of industry. What would fifteen Munich professors say to being switched to Halle without their assent on two days' notice? But if that is unthinkable, it is at least possible to congratulate our college world upon a great and memorable advance, whatever the mistakes of the manner of accomplishment. Particularly, President Lowell deserves credit for willingness to face the fact of Harvard's non-success in the field of applied science.

IS AMERICAN VITALITY DECLINING?

The meeting of the National Conference on Race Betterment will doubtless direct attention once more to the question of the increase of American mortality in the higher age-groups. Mr. E. E. Rittenhouse, president of the newly formed Life Extension Institute, and other insurance authorities have for some years insisted on the gravity of the conditions. The outstanding fact, which nobody disputes and which is certainly very striking, is that while in ages below forty-five the rate of mortality is steadily diminishing, at about that age this tendency not only ceases but is reversed. The mortality in the ages from forty-five to fifty-four is somewhat higher now than it was in former times, and in the ages from fifty-five to sixty-four it is markedly higher. The conclusion drawn is that there is something about our way of life which grows worse instead of better from year to year. The advance of medical science and sanitary regulation has saved the lives of infants and of persons formerly carried off by infectious and zymotic diseases; but against this gain must be set an increase in the number of deaths among people of middle age.

In point of fact, however, the increase in the death-rate at the middle ages of life does not prove the deterioration alleged. We are not asserting that the conclusion is false, though we are inclined to think it so; but we do say it does not follow from the premises. A simple and extreme hypothetical case will suffice to show this. Suppose that, under a given state of things, out of every thousand persons taken at the age of twenty-five, ten died every year for the following forty years, so that at the age of forty-five eight hundred were living, and at the age of sixty-five, six hundred. Now imagine that through some advance in medical science every one of the persons who had formerly been carried off between the ages of twenty-five and forty-five had his life prolonged exactly twenty years, while the rest lived just as long as before. The consequence would be that among persons of the ages from twenty-five to forty-four the death-rate would be zero, while for the ages from forty-five to sixty-four the rate would be greatly increased above what it had been. At the age of forty-five, instead of 10 deaths among 800, a death-rate of 12½ per thousand, we should have 20 deaths among 1,000; and at the age of sixty-four there would be 20 instead of 10 deaths among the 600 survivors.

It is by no means improbable that what is thus grossly indicated on a magnified and impossible scale has in fact been going on in a degree sufficient to account for the actual statistics without the supposition of any increase of evil in our ways of life. Take the figures given in an article by Lewis I. Dublin, statistician of the Metropolitan Life Insurance Company, in the December number of the *American Journal of Public Health*. They relate to the whole of the registration States as constituted in the year 1900, and give a comparison of the mortality of various age-groups in that year with the mortality for the year 1911. Among females, singularly enough, the phenomenon we have been discussing does not present itself at all. Among males, the death-rate in the age-group forty-five to fifty-four advanced from 15.8 in 1900 to 16.1 in 1911. In the age-group from fifty-five to sixty-four it advanced from 28.9 to 30.9. It is almost exactly stating the case, therefore, for the entire group of twenty years, if we say that there was one more death annually among every thousand persons in the year 1911 than in the year 1900. Now, as the general death-rate in this country has been steadily declining as far back as the records go, it is certainly an extremely reasonable conjecture that this one additional death among a thousand persons is to be ascribed not to worse conditions destroying some lives which in the older time would have continued longer, but on the contrary to the survival for many years of some life less hardy than the average, which in the earlier days would have disappeared much sooner. Or rather, to carry the war into Africa, is it not probable that much more than this increase of one death was brought about in this latter way, and that the death-rate for the ages between forty-five and sixty-five would have increased more sharply than it has were it not for the actual improvement of conditions?

Into the statistics of mortality from the various degenerative diseases by which the conclusion that we have been questioning is supported, we cannot enter. We must content ourselves with saying that similar considerations cast doubt on the validity of the argument drawn from these statistics. But there is one point of signal importance to which we must draw attention. Among the causes that affect the death-rate in any given age-group is the composition of that group as regards occupation and economic conditions. It is quite possible that the increase in the number of deaths at the ages above forty-five may be due to a larger number of persons reaching these ages among the classes engaged in hard and life-shortening toil.

The effect of increasing the usual duration of life in these classes would be to increase the death-rate at the middle ages of life; and, owing to the great number which such an improvement would affect, a very slight prolongation of life among them would be sufficient to make quite a perceptible change of this kind. So far from concluding, therefore, from the increased death-rate between fifty-five and sixty-five, that the conditions among the working classes are worse than they formerly were, it is at least a probable supposition that this phenomenon arises from the prolongation of life among the least-favored classes into ages which in former times they comparatively seldom reached.

INDUSTRIAL LABOR IN ART.

It is fitting that Pittsburgh figures in the brief list of cities where the sculptures of Constantin Meunier are to be exhibited. People familiar with steel-mills, foundries, mines, and manufactories should respond to an art that specializes in the materials of this industrial age. Meunier's Melting Steel, The Miners, The Smithy, Factory Work, Returning from the Pit, with his unfinished Monument to Labor, represent the heroic in industrial labor. In closest touch from his youth up with the mines and mills of his own Belgium, he has put the dramatic intensity of toil into a new setting. In the pleasure evoked by his work, a main element has been its novelty. That the industrial was synonymous with the ugly, that the æsthetic eye could look only with aversion upon the harsh lines of factories and the black clouds which their chimneys rolled against the sky, has been almost a convention. Yet into the tense groups about the pouring-ladle and the electric drill Meunier has put a vividness and a sympathy that make his sculptures popular wherever seen.

Unusualness of background and action does not alter the fact that Meunier's main claim to attention is not his tincture of iconoclasm, but an element as old as life itself—man laboring and overcoming. His work has suggested Millet more than any one else. Each strove to reflect human toil, and to convey a conception of the dignity of primitive labor. Largeness and serenity are keynotes of most of the productions of both. But in giving his types a touch of the august, Millet invoked the help of old traditions of the soil. The husbandman, in youth, is archetype of the earth's fruitful vigor; in age, of its patriarchal dignity. So far as toil has been the subject of treatment in any art, linking it to the earth whence it and man sprang together adds the poetizing touch. The harvester of Millet joins hands with Virgil and Theocritus, Boaz and Abraham. But Meunier puts in a transforming light toil that has been held brutalized. When the laborer went up to the city, he passed from the sweetness and grace of the fields to grubbing under man-made conditions. The change was like that of Ruskin's little plot of grass, beautiful in its surroundings till an iron railing made it ugly. At the present day, as no less than a century ago, the dignity of hard work is not in the mechanic, working amid clangor and competition and fret, but in the one whom Dr. Wakefield pronounced, after the priest, the noblest of men—the tiller. Just here come Meunier's sculptures to enlarge this dignity to the point of universality.

Such art has especially a function in helping a working age adjust itself to its newer conditions. The spirit behind the work of Meunier and his fellows is the healthy impulse to follow life into its ramifications, searching for new ways of giving it artistic treatment. It necessarily deals in the unconventional; but in the end it carries its message home. A part of its usefulness may be in showing that those who work at the forge, in the mine, at marble, bronze, or coal, no less than the hewers of wood and drawers of water, are dressing and keeping the wilderness; but it points the larger lesson that to cut off, in the division of mankind's pursuits, any considerable body from artistic idealization, is suicidal narrowness. An American philosopher once spoke of the world's rough and dirty work as necessary but ignoble employment to which it might be well, in time, to draft men turn by turn. The emergence of a Meunier from a coal-pit rebukes such utterances. His production can distil out a soul of goodness from the rankest tangle of modern steel and brick. The catholicity and democracy which they spell sustain the self-appreciation of burdened groups, while broadening their sympathies.

THE AMERICAN PHILOLOGICAL ASSOCIATION.

New York, January 4.

The forty-fifth annual meeting of the Association was held at Harvard University, December 29-31, in conjunction with the annual meeting of the Modern Language Association. It had been thought that the interruption of the joint meeting with the Archæological Institute of America, which had been the habit of the past eight or ten years, might interfere seriously with the attendance. Such fears, however, proved groundless; the attendance was uncommonly good.

Of the seven sessions, three were held with the Modern Language Association. Of these two were evening sessions, one of which was devoted to the annual address of the president of the American Philological Association, the other to the annual address of the president of the Modern Language Association. The former, Professor Harold North Fowler, of the Western Reserve University, dealt with "The Present and the Future of Classical Studies in the United States." He considered the causes that lead students away from the classics, and dwelt on the special need in our times and in our country of such studies, and held, with refreshing optimism, that devotion to the study of the classics would surely continue if teachers of the classics remained enthusiastically convinced of their value and their abiding vitality, and communicated that enthusiasm to pupils.

An important part of the third joint session was the address in memory of Francis A. March, for many years professor at Lafayette College, a scholar of the highest distinction in ancient and modern languages, a teacher of consummate skill, and an active member of the two associations. This address was by Prof. James W. Bright, of the Johns Hopkins University.

The joint meeting with the Modern Language Association was voted a great success. In point of fact the scholarly and the material interests of the two associations touch at many points. The profounder work, both in Romance philology and in English, is impossible unless laid on a classical foundation. Nor can a thoughtful student of German literature forget that to the vivifying influence of Greek language and literature, at the end of the eighteenth century, Germany owes the impulse which made her one of the dominant intellectual forces of the nineteenth century. In the pedagogical field, too, the attention now given to the application of the direct method to the teaching of Latin and Greek has caused teachers of the classics to give increased attention to the teaching of the modern foreign languages.

One most impressive result of the

great numbers in attendance was the spectacle presented at the informal smoker held in the great hall of the fine new building of the Harvard Club in Boston. The hundreds of men gathered there joined in the singing of various songs; the singing of Gaudeamus Igitur, led by the great organ in the hall, was especially inspiring.

The papers presented at the meeting of the American Philological Association, whether actually read or merely read by title, numbered forty-five. They deal with a very wide variety of subjects. At one session papers concerned with the Greco-Roman theatre were grouped; at another there were successive papers on Greco-Roman religion.

The American Philological Association is a national association, but geographical considerations (the distances to be travelled and the cost of such travel) prevent many of its members from attending its sessions. Indeed, such difficulties led to the formation of a Pacific Coast division of the Association, which has had an active life for some years, and is planning now to hold two meetings in each year. Bearing in mind these considerations, one finds interest in the following table showing the number of papers emanating from the classical teaching staffs of various colleges and universities: Brown, 1; Chicago, 2; Columbia, 3; Grove City, 1; Harvard, 3; Illinois (Univ.), 1; McGill, 1; Michigan, 2; Minnesota, 1; Missouri, 1; Northwestern, 2; Pennsylvania, 4; Pittsburgh, 2; Princeton, 1; St. Stephen's, 1; Texas, 1; Union, 1; Vanderbilt, 2; Vassar, 4; Virginia, 1; Washington and Jefferson, 3; Western Reserve, 2; Wisconsin, 1; Yale, 1.

Questions dealing with the pedagogy of the classics never receive real consideration at the meetings of the Association; and this circumstance lent special interest to that part of the address of Professor Hohlfeld, of the University of Wisconsin, president of the Modern Language Association, in which he urged that Association to make proper provision for the pedagogical interests of the teachers of modern languages, especially those in secondary schools. In the classical field these interests are amply cared for by such organizations as the Classical Association of New England, the Classical Association of the Atlantic States, and the Classical Association of the Middle West and South.

Twice recently, however, the American Philological Association has been invited to lend its approval to movements primarily pedagogical in their nature. At the recent meeting the joint committee on grammatical nomenclature, appointed several years ago by the National Education Association, the Modern Language Association of America, and the American Philological Association, presented a report recommending the adoption of certain grammatical terms for use in all language teaching, in Greek, Latin, French, Italian, Spanish, and English—on the ground that the terms endorsed by the committee gave identical terms for identical grammatical phenomena, so that the general adoption of them would make for economy of time and labor in the teaching and the learning of these languages. Since the copies of the report did not reach the members of the American Philological Association till its meeting was half over, and there was therefore no opportunity to examine thoroughly the sixty-three pages of the report, it was felt by many members that all consideration of the report should be postponed to the next annual meeting. A motion for such postponement, without prejudice to the merits of the report, was presented. However, after a debate of nearly two hours, which at all times was deliberately kept away from the merits of the report itself, and from the more fundamental question whether uniform grammatical terminology was necessary or desirable, the following resolution was, by a vote of 36 to 19, substituted for the motion of postponement:

> Resolved, That the Association express its sense of the desirability of uniformity of grammatical terminology in the work of the schools; and recommend that the schools follow the general lines of the report of the Joint Committee on Grammatical Nomenclature, with the understanding that this recommendation does not carry with it approval of all the terms proposed in the report.

The officers elected for the year 1914 are as follows: President, Edward Capps, Princeton; vice-presidents, Carl Darling Buck, Chicago, and Edward P. Morris, Yale; secretary-treasurer, Frank C. Moore, Columbia; executive committee, Charles Knapp, Columbia; Henry A. Sanders, Michigan; John A. Scott, Northwestern; Kirby Flower Smith, Johns Hopkins; Arthur L. Wheeler, Bryn Mawr.

Charles Knapp.

THE ARCHÆOLOGICAL INSTITUTE OF AMERICA.

New York, January 4.

The annual meeting of the Institute was held in Montreal, at McGill University, January 1-3. The attendance of members, aside from those in Canada within easy reach of Montreal, was less than normal. All of New Year's Day and all Saturday morning were given to the business of the Institute—affairs quite unrelated to the reading and discussion of papers. The most important items of business transacted were the re-election of Prof. F. W. Shipley, of Washington University, St. Louis, as president, and the passage of a motion authorizing the executive committee to enter upon the publication of a bi-monthly non-technical journal, to be known, probably, as *Art and Archæology*, as soon as a guarantee fund of $4,000 shall be actually in possession of the Institute. Further details concerning the journal, such as the selection of a managing editor and associate editors, were referred to a special committee.

The total number of papers presented was thirty-two. An interesting point is the circumstance that a considerable number were not archæological at all: at any rate, they did not deal with those works of form and substance with which it is the special province of archæology, in the accepted sense of the term, to deal. Further, the complete stoppage of excavations at important sites in Greece, Asia Minor, and Africa, as the result of the wars involving Greece and Turkey, made the current year somewhat barren of important new discoveries. One other fact was made clear, at least to the present writer, by the experiences of the meeting just closed: some plan must be worked out by which the business of the Institute may be transacted in full before the reading of papers begins. This is necessary in order that a speaker may have among his auditors the leading members of the Institute, those, in a word, best competent to value and to discuss his paper. At the recent meeting their time was consumed in committee meetings which, though begun before the reading of papers was in order, continued long after such reading was under way.

Charles Knapp.

THE MODERN LANGUAGE ASSOCIATION.

Easton, Penn., January 3.

Well above three hundred members and their "gests" (as the official programme has it), probably the largest number in the history of the Association, attended the thirty-first meeting on December 29, 30, and 31, held under the auspices of Harvard University. The meeting was a joint one with the Philological Association; the last occasion on which the two societies met together was in 1900. The admirable way in which the wants of all were met and their pleasure administered to speaks well for the care of the local committee of the University. There were the reception and the luncheon at the Harvard Union, the opening of Mrs. Gardner's house in Fenway Court on Tuesday afternoon, and the smoker at the Harvard Club of Boston, at which Dr. Crothers furnished the "smoke-talk" to the delight of his four hundred hearers.

At the joint evening session of Tuesday Prof. A. R. Hohlfeld, of the University of Wisconsin, president of the Modern Language Association, discoursed on "Light from Goethe on Our Problems."

Goethe, he said, sympathized with *Weltlitteratur*, with its implication that those who study a foreign language and literature come to have a broader tolerance for other nations and a deeper knowledge of their own. Goethe also recognized that there should be a harmonious synthesis of conflicting ideals, so that one should sympathize with research as well as with teaching. In the work of the Association there had been a marked decrease recently in articles dealing with broad pedagogical subjects; in 1884 half the articles of the *Publications* were of this nature, whereas since 1892 there had hardly been one. The college ideal of teaching has given way to the university ideal of research. An effort should be made to restore the balance, and this could best be done by the establishment of a journal that would seek to give the many teachers of the country expert advice on matters of broad pedagogical interest. The third matter in which, according to Professor Hohlfeld's view, Goethe can illuminate our ideas is in the outlook for the future. The real promise lies not in a return to the old humanism, but in a richer and deeper study of the natural sciences. Goethe, the poet-scientist, took a broad outlook upon nature and got from his study of natural science æsthetic and moral direction in his life and art.

The more specialized papers of the meeting varied in interest and in range, and were read by representatives of nineteen institutions, extending from Harvard University to the Universities of Texas and California. Only two could be called philological in the narrower sense, one on the Germanic preterit by Professor Prokosch, of the University of Texas, and the other on "*Ye* and *You* in the King James Version" by Professor Kenyon, of Butler College.

A paper of more than specialized interest was on the myth of the "noble Indian" by Professor von Klenze, of Brown University. Early travellers to America described the Indian sometimes as savage, sometimes as kindly, since they had no thesis to prove. Later writers, however, who would extenuate the atrocities of the Spaniards in Central and South America, made the Indian savage and bestial. This injustice evoked a defence by the Spanish Bishop Las Casas in 1552, who represented the Indian as gentle and kindly in contrast to the cruel Spaniard. The Bishop's book was at once taken up by the enemies of Spain and Catholicism, so that it went through forty editions in seven languages, and gave rise to the widespread conception of the noble red man that prevailed through the seventeenth and eighteenth centuries, and that played a great part in the imagination of Europe.

Two other papers were concerned with America: one was a strong plea by Professor Mead, of Wesleyan University, for concentrated, systematic, and immediate work on an American dialect dictionary; the other was a report by Professor Lomax, of the University of Texas, on his rescuing of American folk-songs. Professor Lomax has nearly a thousand ballads, most of them for the first time now reduced to writing, which he took down from oral delivery. The ballads belong to eight marked types: those of the miner, the lumberman, the canal-boatman, the inland sailor—especially of the Great Lakes—the soldier, the railway man, the negro, and the cowboy; to which may be added those of the "down-and-out class"—the "dope fiend," the "jailbird," the convict, and the tramp. The ballad is full of life in the open, vigorous, expressive of supreme physical endeavor, and is composed by men away from home, like the Arizona cowboy thus described:

I've seed a lot of places where I'd like to stay,
But I gits a-feelin' restless an' I'm on my way;
I was never meant for settin' on my own door sill,
An', once you git the habit, why, you can't keep still. . . .

The sun is sorter coaxin' and the road is clear,
An' the wind is singin' ballads that I got to hear;
It ain't no use to argue when you feel the thrill,
For, once you git the habit, you can't keep still.

Almost identical ballads will be found in widely separated parts of the country.

There are many war songs still unprinted, especially from the Civil War, and the rebel songs are better than the Yankee.

Professor Scott, of the University of Michigan, in a paper on "Vowel Alliteration in Modern Poetry," combated Professor Saintsbury's contention that there is no such thing as vowel alliteration. He argued, chiefly from his study of the verse of Milton and Tennyson, that it is genuine and effective. The alliteration is not due to the sonority of the vowel sound, but to the glottal catch, or the unmarked sound of consonantal value before the initial vowel. This catch is not so marked in England as in Germany; it is fairly common in America, especially in the West.

Probably the most original contribution presented at this meeting was on "Chaucer and the Seven Deadly Sins," by Prof. Frederick Tupper, of the University of Vermont. It was a continuation in very much condensed form of his article in the *Nation* of October 16, 1913, on Chaucer's treatment of love in the "Canterbury Tales," and it sought to show that certain of the pilgrims in their persons, prologues, and tales illustrate the seven deadly sins, and that the Parson's tract is the culmination of a long-sustained *motif*. Parallels with Gower, the marked pointing of the moral in each of the tales dealing with a particular sin, the assigning of each of these narratives to the representative of the vice under rebuke, the linking of these tales with the Parson's sermon, are the proofs by which the conclusion is reached. A new irony is discovered in the fact that the story-teller sometimes incarnates the very sin he preaches against, as in the cases of the Pardoner, the Wife of Bath, and the Manciple.

Professor Kittredge presented a motion, which was almost unanimously carried, that the secretary of the Association should ascertain by post-card the wishes of the members concerning the use of the so-called reformed spelling, which had been adopted some years ago and is now employed in the publications.

The president of the Association for the coming year is Prof. Felix E. Schelling, of the University of Pennsylvania, and the vice-presidents are Professors von Klenze, of Brown University; Bourland, of Western Reserve University, and Tatlock, of the University of Wisconsin. The place of the next meeting has not yet been decided upon.

JAMES W. TUPPER.

NEWS FOR BIBLIOPHILES.

Some time ago the Paris weekly, *Les Annales Politiques et Littéraires*, offered prizes for sonnets which were to be addressed to French authors, living or dead. It is not remarkable or especially important that this call elicited 2,872 responses, nor even perhaps that of this number all but half a dozen contained fourteen lines of twelve syllables each; but it is a matter of real significance that a competition instituted by a periodical of popular character and of modest circulation in a country which is no longer one of the most populous, should call forth twenty such genuinely poetical and uniformly perfect sonnets as are now published in *Les Annales*. The result in this country, if it were possible to imagine a popular American illustrated weekly instituting such a contest—in view, especially, of the difficulty of making clear to the ordinary reader of such an American periodical just what a sonnet is—would have been very likely to be a mass of fantastic nonsense, and the judges would probably have selected the most fantastic for distinction; but Auguste Dorchain, himself a graceful poet and as sane as any Philistine, has chosen to reward twenty candidates whose work is entirely free from the grotesque and the violent. The list, which, by accident or design, shows exactly ten classic titles and ten names of contemporaries, has at least two sonnets that deserve to live. One is the noble apostrophe to Cornellle, with the stirring end-lines that warm the blood:

Et nous sentons tes vers, comme les mots d'un juste,
Claquer au vent de l'âme ainsi que des drapeaux!

And the sonnet to Edmond Rostand, beginning

Nous t'aimons à genoux, gravement, tendrement,

shows an admirably sustained beauty.

The prefatory statement by Auguste Dorchain is worth translating. His definition of the sonnet is extremely well done:

That which is lacking in the work of those candidates whom I have qualified as simply respectable is the knowledge of what I will call the interior laws of the sonnet, which make of this poetic form a sort of drama in four acts, with its exposition, its intrigue, its dénoûment, arriving, by a skilful progression, at a final climax which, by the idea, the image, or the stamp of the line, reverberates, concludes, illuminates all the rest. And many of them are not clear, either, that throughout these fourteen lines there cannot be one weakness of rhyme or of language. A sonnet must be a finished and perfect work of art.

And more valuable than all definition is the story how Dorchain himself once helped finish the faultless structure of one of José-Maria de Heredia's "Trophées":

Ah! if I had time, I should tell you how Heredia often left a sonnet on the stocks for years, simply because he had found one weak word in it, and because he knew that the strong word, the characteristic word, the only true and possible word, existed, and that he should find it sooner or later. And I would even tell you how one day I had the happiness—and I am very proud of it—to find for him one of those words, without which he would not have included in his "Trophées" one of the sonnets he loved the most. It was the one called "Tranquillus," and consecrated to Suetonius and his villa at Tibur. "C'est là," said the condemned text:

. . . C'est là
Que l'ont hanté Néron, Claude, Caligula
Et Messaline *errant* sous la stole pourprée. . . .

"Errant! what a feeble word, my friend," cried the master, "to express the shame of that Empress prowling about among the dives of Suburra. I shall never give my sonnet to the *Revue des Deux Mondes* with that word in it. Find me the word I should have, and I will try to find for you a better line than that impossible third line in the poem you have read me."

Two hours later, a "petit bleu" brought me three excellent substitutes for my line; and at the same time Heredia received from me a pneumatic dispatch with this proposition:

Messaline *rôdant* sous la stole pourprée.

which is the definitive text.

How many contemporary versifiers could duplicate this charming experience?

ROY TEMPLE HOUSE.

Correspondence

THE SEAMEN'S BILL.

TO THE EDITOR OF THE NATION:

SIR: The resignation and return of Mr. Furuseth, president of the Seamen's Union, from the International Congress on the Safety of Ships, compels attention once more to the Seamen's bill, now under consideration of a House Committee.

Why did Mr. Furuseth resign? Simply because he found that the combined opinions of representative thinking men of all nations of the world—men who are thoroughly sincere and well qualified by training and experience to form opinions on all matters pertaining to ships—did not agree with his own. The presumption of a man who has never designed, built, operated, owned, or commanded a ship—at any rate during the last nineteen years—in stating that in his opinion the International Congress was not doing the right thing simply because it did not follow his prejudiced ideas as to lifeboats and manning the same, is naïve, to say the least of it.

Mr. Furuseth expects to appear before the House Committee and try to force his ideas upon them. The hearings will be resumed shortly, and it is to be hoped that the future meetings will be conducted in a fairer and more truly American manner than heretofore, and less as a one-sided criminal court. One member, a shrewd lawyer, for reasons best known to himself, is evidently bent upon bringing out only those things which are favorable to the bill, and is endeavoring to confuse most of the shipowners who have appeared, and who, on their side, have no lawyer to bring out the points they wish to take in rebuttal. He would not allow one of our best-known naval architects even to mention anything in connection with the effect of the bill upon the operation of vessels, because, foorsooth, he was not a steamship manager. Every one who has even the remotest knowledge of shipbuilding knows that this very question of operation is one that enters into the design of every ship, and it is often the naval architect who advises the shipowner as to the type and design of vessel that should be built for his service.

If we follow such methods of procedure to their logical conclusion, Senator La Follette had no right to bring up the bill in the first instance, because he has confessed that he knows nothing about ships and has obtained his knowledge second-hand—not from those who design, build, operate, sail, or own ships, but from a man (Mr. Furuseth) who has been haunting the galleries of the Senate for the last nineteen years.

It will also be interesting to see if Mr. Furuseth will be allowed, without question, to give testimony on many points upon which he has at present an obsession, but upon which he can scarcely qualify as an expert according to the present methods adopted by the Committee.

To any thinking man the whole matter has been conceived in ignorance, forced to an immature growth by the milk of ambition of its mother and nurse, and in its present weakly adolescent state and inability to stand upon its own feet, is receiving the necessary support in the way of artificial legal props. Let us hope that in these days of eugenics both it and those of a similar breed may never be allowed to reach the adult stage.

It is one of the most obvious plays for the labor vote, at the expense of our none too prosperous mercantile marine, that has ever occurred; and the most amusing, if not pathetic, thing about it is the way that the leaders of this party seem to be able to "bluff" our lawmakers at Washington. The real opinions of the rank and file of labor are by no means always those of their loquacious representatives, and any man who stands out for fair play and justice will, in the end, get the reputation and following that he deserves, without selling his birthright for such a *"mess* of pottage" as the Seamen's bill.

HERBERT C. SADLER.

University of Michigan, January 7.

THE SENSE OF SMELL.

TO THE EDITOR OF THE NATION:

SIR: I deplore with a recent contributor to one of our leading literary magazines the fact that our sense of smell seems of late years to have lost caste. But I particularly lament the effect this state of things has had upon our fiction. Our writers nowadays rarely draw on this sense; or if they do, it seems to be merely in a perfunctory manner. They feel, apparently, that for convention's sake it is still necessary to refer certain odors to certain situations, but trusting that their readers will not be able to smell the difference, they content themselves with using any trite formula. Most of these formulæ are too well known to need specific instances. For example: the complementary smell of a New England spinster story, lavendar; of a tale of camp life, pines; of a June romance, roses. If the question were to be put—What is the odor of the Maine coast?—any reader of American fiction would answer unhesitatingly, "cod." And I fancy that more than one of us crossing the Vermont line for the first time has been surprised that he did not at once smell maple sap!

But, fortunately, those who mourn the decline and fall of the sense of smell at home may find solace abroad in the work of the Russians—which leads one to infer that, as a people, they still have good noses. One could multiply without end examples from their great story-tellers of cases in which the sense of smell gets its due. Their perceptions, far from being conventional, are keen and fresh, and they are not dragged in simply for form's sake, but are an integral part of the matter. The impression on the reader is correspondingly deep. Every one who has read Turgenev's "Smoke" will remember the heavy fragrance of the violets which was so oppressive to the hero and played so important a part in the story. And who can ever forget the mouldering smell of that cellar-bakery in Gorky's "Twenty-six and One"? It is as strong as the story itself. Or of those dens of darkness and drink which Dostoievsky's villain-hero haunts?—degrading, nauseating smells of the underworld that are part and parcel of Raskolnikoff's terrible punishment.

What is more, the Russians lay this neglected sense under contribution for delicate and subtle, as well as for striking and theatrical, effects; and to this end they follow their noses with analytical sensitiveness. Tcheckov's Kvaschin, in "A Rainy Day," smells not simply of drink, as he would have done to an American novelist, but of "Madeira and fine liqueurs." In the corners of Shoemaker Anton's shop in Artzybachev's story of that name hangs a stale stench, not of leather alone, but of "leather, oil, and wax." Along with such an obvious smell, the same author thinks it worth while to note in another place the evasive *odor of melting snow.* But for sheer refinement of impression, I know of no instance equal to the following, which occurs in that most remarkable of all Russian stories of revolution, Artzybachev's "Shadows of the Morning": It is a February day, and the heroine has just come from a walk into the room of her lover.

"She remained standing by the table," the text reads, "and from her soft black jacket radiated the fresh, sweet smell of the cold." The tribute here paid by one of the greatest living artists to the frosty fragrance so beloved of children (and such others as have not yet been overtaken by adenoids) will perhaps bring some small comfort to those who, like the writer, regard with dismay the immense loss to our literature resulting from our failing appreciation of the sense of smell. HELEN MCAFEE.

New York, January 10.

JOHN DAVENPORT AND LADY VERE.

TO THE EDITOR OF THE NATION:

SIR: In an article by Franklin B. Dexter, entitled "The Life and Writings of John Davenport," in the New Haven Historical Society Papers, Vol II, p. 216, it is said:

In 1628, we have the first two which are preserved [in the British Museum] of a series of nine letters from Davenport to Lady Mary Vere, whose religious life appears to have been under his direction.

A search in the British Museum Catalogue of Printed Books does not appear to show that the British MSS. to which Dexter refers or any calendar of them has been printed. Five of the letters are in A. B. Davenport's "History and Genealogy of the Davenport Family in England and America." They are dated as follows: 26 December, 1629, written from London to Lady Vere at The Hague, where her husband's "military exploits" had taken her; November, 1633, written from Amsterdam, where Davenport had gone after his resignation from St. Stephen's Church, London, to Lady Vere at The Hague; 21 July, 1635, written from Amsterdam to Lady Vere at Hackney; 25 December, 1635, written from Rotterdam to Lady Vere in England; 28 July, 1639, written from New Haven to Lady Vere in England.

A careful search has thus far failed to locate printed copies of the other four letters. Dexter mentions two as having been written in 1628, and states that one of them, dated June 30, makes reference to Davenport's quarrel with Bishop Laud. In the list of Davenport's writings given at the end of Dexter's article, the remaining two letters are dated January, 1636, and 13 November, 1647.

I should be glad to know if these letters, or any others not noted by Dexter that throw light on the relations between Davenport and Lady Vere, exist in print or in any manuscript collection outside of the British Museum. HELEN L. SULLIVAN.

No. 66 College Street, Providence, R. I., January 9.

ANCIENT EMPIRE.

Greek Imperialism. By William Scott Ferguson, Professor of Ancient History in Harvard University. Boston: Houghton Mifflin Co. $2 net.

Readers of Professor Ferguson's "Hellenistic Athens" will expect in the present study a fresh and vigorous restatement of historical problems partly complementary to, partly in extension of, his former theme. Nor will they be disappointed. In his introductory chapter, Imperialism and the City-State, he defines empire as "a state formed by the rule of one state over other states. It is immaterial in this connection what form of government the ruling people prefers." This both provides for the imperial democracy of Athens and explains how Sparta, usually thought of as a self-contained oligarchy, came to assume, in her turn also, the imperialistic rôle. Mr. Ferguson, with all his scholarly interest in his theme, rarely shows any tendency towards special pleading. He states the case for the Athenian democracy as well, perhaps, as it can be done. And, at the very outset (p. 2), he shows himself alive to the presumptuous arrogance of our cant phrase—"the white man's burden." His book, cut short by no artificial break before or after Alexander, is a discussion of the entail of imperialism passed on from Athens to Sparta, from the orthodox Hellenes to Alexander and the Diadochi, with their far-flung empires ripening for the Roman harvest.

The Athenian empire, as Thucydides represents Cleon's words, was "a despotism exercised over unwilling subjects." Athens, as Mr. Ferguson points out, denied her "allies" the right to secede. And Athens had not even the excuse of a debatable interpretation of a Constitution binding upon sovereign and federated states. The specific objections most often urged against the imperial democracy of Athens Mr. Ferguson considers unwarranted. His candid discussion is not, however, equally convincing at all points. Arguing, as is perhaps natural, from the side of the home government, he speaks of the economic give and take. Impecunious Athenians were settled on lands taken from the allies. "In payment therefor reductions of tribute were given." This was, no doubt, sound economic expediency for the imperial government, but it is not clear how the dispossessed inhabitants were beneficiaries. The general objection that the democracy resulted in moral and intellectual mediocrity is more successfully met by a résumé of the contemporary intellectual output. The notion that Athenian history played itself out upon a miniature stage must be revised by the statement (p. 43), fortified by the context, that "the world which Athens under Pericles sought to dominate must have had a population of over 20,000,000."

In the chapter From Sparta to Aristotle Mr. Ferguson, after a needless fling at the English excavators in Laconia, points sharply the contrast between Athens and Sparta. Athens inoculated her whole democracy with the spirit and culture of the aristocracy, "the whole people, thus ennobled, being supported on the shoulders of the tributary allies." In Sparta the nobler art of the earlier day—whether native or imported—together with the aristocracy was destroyed in the sixth century B. C. Sacrificing all of this, together with certain fundamental instincts of civilized humanity, to the "vocational training" of the military barracks, Sparta escaped the episode of formal tyranny only to subject herself perennially to the ephorate, which, like the tribunate at Rome, was "tyranny in commission" (p. 84).

Certain strictures on the political ideas of Plato and Aristotle form the transition to the treatment of Alexander's empire. Mr. Ferguson points out (p. 102) that Plato's model in his "Laws" was "an emended and perfected edition of Sparta." Again (p. 113): "The birthmark which we have noted on Plato is an unreasoning hatred of democracy. That which mars above all the political thinking of Aristotle comes from the aversion instinctively felt by his age for imperialism." Mr. Ferguson would doubtless be right in implying that Plato's ideal justice, despite his apotheosis of Spartan militarism, would hamstring the sinews of imperial expansion, but his "youthful" Republic is profoundly constructive for the imperial democracy of the intellectualized conscience. His Recall is the "recall of the noblest in the soul to a vision of the most excellent in the ideal" (Rep. VIII, 532, C); his Referendum the revising of shifting opinions according to "the pattern that is laid up in heaven" (Rep. IX, 592, B).

Alexander the Great, overleaping the circumscribed walls of Aristotle's city-state, transmuted into material empire his master's suzerainty over the physical and metaphysical universe. He displayed a feverish energy in founding Greek city-states. Hellenized "towns by the score sprang up behind him on his line of march." Nor did he shrink from unhellenic practices in order to inoculate the Orient with Hellenism. With well-advertised and well-staged ceremony he had himself deified among his new subjects. As their incarnate god he became fully naturalized. In this *proskynesis* of cities our author sees "an absolutism such as Europe—and for that matter Asia—had never known before and has never ceased to know since." The "signal service" of this *proskynesis* was, he adds, "that it made possible the lasting union of all the city-states of the world in a single great territorial state."

Mr. Ferguson's analysis of the varying practices pursued by the Diadochi is instructive. Ptolemy Lagi discarded the Persian bride, imposed upon him by Alexander's policy, and married a Macedonian princess. Thus the splendid Ptolemaic dynasty, lasting 271 years,

showed from its inception a return to Hellenism. Even the soldiers, "multiracial though they were, . . . all spoke Greek." And in religion there was established a *rapprochement* between Greek and Egyptian. Later on, however, under stress of military necessity, the Greek element was diluted by native intermarriages, "so that a considerable half-breed and bilinguai population developed—Greek in the outward things, fellaheen, according to Polybius, in character and culture."

In the chapter on the Seleucid Empire is clearly brought out the persistence of Alexander's projection of Hellenism upon the Orient. The Greek language and laws, Greek cities, gymnasia, and musicai contests grew and multiplied. Over all presided a motley choir of native and Greek deities with the living Emperor as chief city-god. "Greek ideas and customs became a ferment which stirred the peopies of Asia to the depths" (p. 207). As was inevitable, the Hellene succumbed in the end. The Seleucid empire was weakened by internal revoits, but it was crushed from without by the ever-advancing Roman, on the one hand, and the Indo-Scythians on the other. To the latter Mr. Ferguson assigns a large rôle. As the Roman conquerors carried Greek influence to the West, so these Indo-Scythians—the Yue Tchi of the Chinese—acted, after the collapse of Greek sway, as purveyors of Hellenic influences to the Orient. "It is an amazing spectacle," he says (p. 194), "to observe how Hellenistic civilization flowed simultaneously back the channels to the springs of Italy and China whence came the floods which overwhelmed the Seleucid empire."

Finally, in the Empire of the Antigonids a more genuine Hellenism reasserted itself. "It was not Macedon but Greece which took the proud Roman victor captive and bore the arts to rustic Latium" (p. 216). Mr. Ferguson does well to elaborate the character of Antigonus Gonatas. Unlike Alexander, Antigonus, a worthy pupil of Zeno, did not see fit to outrage and nullify real Hellenism by posing as a god.

We are reminded, too, of the passing of the city-state and how even the ethnic bond is cancelled and replaced by a federal bond. Why this empire also succumbed is aptly illustrated: "In the art of government the Antigonids were resourceful, but to lift up a jelly-fish on a spear-point is an impossible task. Yet that is what they had to do in Hellas." It might be fair to add, in the spirit of Shelley's "Hellas," that a more esoteric imperialism remained uplifted on the bronze spear of Athena Promachus.

One matter of style might raise question. How far is it desirable to strain the English reader's vocabulary by seminaturalized Greek words? *Proskynesis*, explained and italicized, is justified as a technical term, but other non-resident aliens, like *ethne*, *hegemon*, and *Perioecs* (*sic*), seem much in evidence. "Zoo" (though a "dictionary" word) is an intruder on an otherwise dignified context, and "piazza" (in the Italian sense) might be better provided for. "Chronus" for Kronus (p. 143) is a natural confusion. It was already known in antiquity, but is now edited out of the verse of Cratinus cited by Plutarch.

But such matters are insignificant in a book which is welcome alike to the special student and to the general reader.

CURRENT FICTION.

Circe's Daughter. By Priscilla Craven. New York: Duffield & Co.

John Ward, M.D. By Charles Vale. New York: Mitchell Kennerley.

The Devil's Garden. By W. B. Maxwell. London: Hutchinson & Co.

The time is now comfortably past when Albion could be accused with justice of subordinating her fiction to the taste and morals of her Young Persons. Perhaps this is so because her Young Persons no longer exist; or perhaps they no longer exist because this is so. At all events, the reader of liberal mind has now a two-to-one chance of finding the latest English novel unfit to pass around the family circle. This is true, to be sure, of the latest American magazine. But in the novel—despite the efforts of an enthusiast here and there—we remain, as usual, somewhat behind the English fashion. Give us a little more time, and we shall doubtless be devoting our best local talent to the physiology of the human goat.

The Circe of Priscilla Craven is *hirca humana*, the female of the species. We do not follow her through the detail of her more active career. We simply learn that she has passed through youth to middle age with distinguished success in her chosen *métier:* that is, she has been the mistress of many men without ceasing to be the wife of one, and consequently without sacrifice of her social position. That is a charming scene in which we are introduced to her in conversation with her eldest daughter (by one of the many). Mrs. Iverson rather prefers Claudia to her younger daughter because she is of her own physical type:

"You and I are just the right height. I think this modern girl by the yard is a mistake. None of the famous women such as Jeanne du Barry and Ninon de Lenclos were very tall. Patricia will make most men look ridiculous."

"Perhaps Pat doesn't want to be a Ninon de Lenclos," suggested Claudia with a twinkle.

"Nonsense, every woman wants to be a Ninon de Lenclos, if she could have the chance. Don't be taken in with this talk of 'I wouldn't.' It's a case of 'I couldn't.' Most women have to be virtuous, because they can't be anything else, and they make the best of it."

Claudia desires to be virtuous, but she has her mother's blood in her, and a loveless marriage almost results disastrously for her. She is not a wanton, but "*une amoureuse*." Her symptoms are described minutely, and it is only because she has unconsciously given her heart (thank Heaven, she has a heart!) to a good man that she remains technically a good woman till her husband's death provides for a comfortable curtain.

The most vivid person in the story is hardly concerned with the main action—Fay Morris, the little music-hall singer, a bit of true and moving portraiture, a spade who is rightly (since we have disposed of the Young Person) described as a spade. One droll thing about this narrative is that, despite its very "modern" substance, its style is that of the gentle romancer, the William Black or the Mrs. de la Pasture of blameless memory. And there are lapses from sophistication into a delightful ingenuousness, as in the description of the American among Claudia's admirers: "In some ways he was not unlike Colin Paton, save that he had the American restlessness and nerviness, and that he lacked the fine polish and self-possession which a man may possibly acquire, but is usually associated with families that can count back many centuries, and that have always tried to uphold the best traditions of English manhood."

The problem of inherited sexuai taint, here treated as if it concerned merely Claudia, is the main problem in "John Ward, M.D.," and is presented as capable of no merely personal solution. John Ward is a country physician from choice. His grandfather, Lord Daventry, had planned for him a more ornamental career. The grandfather has lived the life of a voluptuary, and in age pretends to regret only his years and disability. Cynicism is his pose, and he is far from holding himself up as an awful example; but inwardly he is consumed with fear lest his grandson, who, he knows, inherits his temperament, shall succumb to it. Ward himself is conscious of his danger. Only will power and hard work give him a chance of salvation. Till well past his first youth he resists his familiar devil, makes himself indispensable in a rough mining community, and almost attains a state of peace. Then comes into his life a woman of the Circe type, a woman breathing sex. She casts her spell upon him. It is not altogether an evil spell. She has a "past," but it has been a past of seeking for the true love which John Ward at last embodies for her. But Ward realizes, and makes her realize, that they are both essentially abnormal and decadent, and that a mating be-

tween them would be a crime against the race. So he sends her away, hopeless but obedient. The verdict is ruthless: "She must deal with her own problem. Man had taken much from woman, for his lust and his desire and his love. But he had given more, pretending when illusion was gone; yielding to her weakness, as to a child's; deceiving her, for her vanity's sake; killing his soul, that her body might live. . . . Dreamily, he felt his kinship with those who do things, walking steadfastly in a known path. . . ."

John Ward's decision is as much the fruit of his mysticism as of his conviction that he is "the Beast." In Mr. Galsworthy's "Dark Flower" the physiology of passion has the floor. There also we find the older generation, conscious of the chances of heredity, discussing its erotic experiences with the younger. And there we find a picture of the belated passion of age for youth: that dreadful obsession of desire which no doubt does come to many men who have passed their physical prime. It is a theme which, a few years ago, no reputable writer of English fiction would have ventured to deal with. Mr. Galsworthy's restrained and imaginative handling deprives it of grosser offence.

In "The Devil's Garden" Mr. Maxwell puts himself under no sort of restraint. The story is this: A man long married to a woman whom he worships as the embodiment of purity finds that she has just yielded herself, to gain his advancement, to an old man who has seduced her in childhood, and whose mistress she has been before their marriage. He murders the old man. The crime is not brought home, and the pair are reconciled, have children, and pass quiet years. Then the man finds himself the helpless victim of a passion for a child who has been adopted into his family. She returns his feeling as instinctively and completely as the young girl of Mr. Galsworthy's story. Like Mr. Galsworthy's hero, and Mr. Vale's, he dismisses her. But he knows that nothing will keep them apart till they have fulfilled their natures. Loathing himself and life, he finds a way to death consistent with "poetic justice." The seducer of his wife (and of many others, including her aunt and her cousin) has not died without leaving a monument. A motive here seems taken pretty directly from Ibsen's "Ghosts." The old libertine Alving left money to found an orphanage. This aged reprobate leaves half his fortune to the founding of a home for unprotected girls. His murderer and successor in lustfulness dies in the flames of the burning "home" after saving seven of its innocents. This is the pleasantest thing in the story. Mr. Maxwell is most conscientious in recording the symptoms and progress of his patient's disease.

A NOTABLE EDITION OF DONNE.

The Poems of John Donne. Edited from the Old Editions and Numerous Manuscripts, with Introductions and Commentary by Herbert J. C. Grierson. New York: Oxford University Press. 2 vols.

A carefully prepared text of Donne's poems, with proper commentary, has long been a desideratum for those interested in the transition from Elizabethan to Jacobean and Caroline literature, and this want has been amply filled by the present edition. Mr. Grierson's work will take an honorable place among the scholarly editions by which the Oxford University Press is, in a way, reproducing for us the *corpus* of English letters. Donne has been well treated by E. K. Chambers in the Muses' Library and by C. E. Norton in his Grolier Club edition, but neither of these editors had the patience, or the opportunity, to go through the bewildering manuscript material which it was necessary to collate in order to establish an authoritative text, and they have not, in the judgment of Mr. Grierson, been always wise in their choice of readings from the various printed editions.

It is not expedient here to follow the minute analysis of the editions and manuscripts which forms the substance of the second, long section of Mr. Grierson's introduction. He has himself summed up his method of procedure under these heads:

(1.) To restore the text of 1633 [the first collected edition, published two years after the author's death] in all cases where modern editors have abandoned or disguised it, if there is no evidence, internal or external, to prove its error or inferiority; and to show, in the textual notes, how far it has the general support of the manuscripts.

(2.) To correct 1633 when the meaning and the evidence of the manuscripts point to its error and suggest an indubitable or highly probable emendation.

(3.) To correct throughout, and more drastically, by help of the manuscripts when such exist, the often carelessly and erroneously printed text of those poems which were added in 1635, 1649, 1650, and 1669.

By the aid of the very full *apparatus criticus*, printed at the bottom of the pages, we thus have all the material that the most exacting student could require to form his own judgment of the words actually used by Donne. For the ordinary reader, who goes to such an author for literary profit and enjoyment, there is always a question whether the presentation of such details does not more bewilder than assist; for there is undoubtedly a certain annoyance in having the attention drawn from the poetic content of a passage to consideration of the choice among readings which for the most part, though not always, offer no substantial difference of meaning. But obviously such textual labor in the case of a poet like Donne, whose works did not appear under his own supervision, should be done once for all and exhaustively, and it will now be comparatively easy for Mr. Grierson himself, or another, to produce a popular edition better than any we yet possess. Such an edition would also properly adopt modern spelling and punctuation, and avoid the repulsiveness of a *literatim* reprint, whatever may be the value of pedantic exactness in such a task as Mr. Grierson has at this time undertaken to accomplish.

It is, of course, a debatable matter whether so much weight should be given to the volume of 1633 as Mr. Grierson thinks proper. Under the conditions of publication no one of the four principal seventeenth-century editions, as Mr. Chambers says, "is of supreme authority," and, in preparing his text for the Muses' Library, he might plausibly argue that he "had no choice but to be eclectic." In particular a special claim might be set up for the edition of 1650 [virtually identical with the unique copy of 1649 in the Harvard Library used by Professor Norton], which was the first to appear with the sanction of the younger Donne. But Mr. Grierson has had no difficulty in showing that "Donne's son did nothing to fix either the text or the canon of his father's poems," and a comparison of the present edition with its modern predecessors will convince most candid readers that the general adherence to the *editio princeps* of 1633 is justified by the results. For evidence of this we may open Mr. Grierson's "Commentary," which occupies the major part of his second volume. Two examples, taken almost at random, will set forth the nature of this evidence, and will at the same time illustrate the character of the bulk of the annotations.

The first note comments on the thirteenth line of "The Relique," as follows:

Where mis-devotion doth command. The unanimity of the earlier editions and the MSS. shows clearly that "Mass-devotion" (which Chambers adopts) is merely an ingenious conjecture of the 1669 editor. Donne uses the word frequently, *e. g.*:

Here in a place, where miss-devotion frames
A thousand Prayers to Saints, whose very names
The ancient Church knew not, &c.
Of the Progresse of the Soule, p. 266, *ll.* 511-13.

And: "This mis-devotion, and left-handed piety, of praying for the dead." *Sermons* 80. 77. 780. [Query: Is "miss" an etymological variant for "mass," from Latin *missa*?]

The second example we will take deals with the twenty-fifth line of "Elegie VII," as follows:

Thy graces and good words my creatures bee. I was tempted to adopt with Chambers the "good works" of 1669 and some MSS., the theological connection of

"grace" and "works" being just the kind of conceit Donne loves to play with. But the "words" of 1633-54 has the support of so good a MS. as *W*, and "good words" is an Elizabethan idiom for commendation, praise, flattery:

> He that will give,
> Good words to thee will flatter beath abhorring.
> Shakespeare, *Coriolanus*, I. i. 170-1.

> In your bad strokes you give good words.
> Shakespeare, *Julius Cæsar*, v. i. 30.

Moreover, Donne's word is "graces," not "grace." "Your graces and commendations are my work," *i. e.*, either the commendations you receive, or, more probably, the refined and elegant flatteries with which you can now cajole a lover, though once your whole stock of conversation did not extend beyond "broken proverbs and torne sentences." Compare, in *Elegie IX: The Autumnall*, the description of Lady Danvers' conversation:

> In all her words, unto all hearers fit,
> You may at Revels, you at Counsaile, sit.

And again, *Elegie XVIII: Loves Progresse:*

> So we her ayres contemplate, words and heart,
> And virtues.

These are strong matters for those who go to a poet for delight, but are well done, once for all. Add to such textual discussions an abundance of other erudition, such as the reprint of the music for one or two of the songs, and some notion will be had of Mr. Grierson's second volume.

This second volume contains also an introduction which deals with "The Poetry of Donne" from the point of view of literary criticism. It is an excellent piece of work, and judicious, but it naturally leaves much to be said.

National Supremacy: Treaty Power vs. State Power. By Edward S. Corwin. New York: Henry Holt & Co. $1.50 net.

In the opinion of Professor Corwin, the supremacy of the national Government attains its highest reach in the exercise of the treaty-making power. He holds Senator Root's view that "in international affairs there are no States; there is but one nation, acting in direct relation to, and representative of, every citizen in every State." But he presses the doctrine much further than Mr. Root does. He insists that the treaty-making power extends to many things to which the legislative power of Congress does not extend by the Constitution. Accordingly, if the President and Senate enter into a treaty covering such things, Congress may pass all laws necessary and proper to carry the treaty into effect, although in so doing it deals with subjects which the Constitution expressly reserves to the States. It follows that while Congressional legislation is limited ordinarily by the police power of the States, it is not so limited when it is enacted to carry into effect the provisions of a treaty.

The author admits that there is much authority opposed to this conclusion, and endeavors to explain it away as obsolete. The view which he discards, however, has received the emphatic approval of a writer whom he cites frequently. (See Butler's "Treaty-Making Power," Vol. II, pp. 48, 49, 52, 64, 245.) It has been reaffirmed, within a few months, by the Supreme Court of Oregon in these words:

> The power of the State by proper legislation to protect health, to promote the morals, and to prevent the introduction of infected articles of trade that would necessarily injure property or affect persons is a matter of self-preservation, and such rights are not intended to be invaded under any clause of the Federal Constitution. (Spaulding vs. McNary, 64 Ore. 491, 496.)

On the other hand, the doctrine contended for by Professor Corwin was championed by the retiring president of the American Bar Association, in his annual address at Montreal, last summer. Both Mr. Kellogg and Professor Corwin admit, however, that Congress has not felt disposed to exercise the power which they claim for it. After referring to the demands made by the Chinese and Italian Governments on behalf of their citizens, who had been outraged in Wyoming and Louisiana in violation of their treaty rights in this country, both writers point to what they consider a humiliating fact, that Congress has refused to enact legislation for the enforcement of such rights in the Federal courts. Mr. Kellogg does not hesitate to characterize this Congressional neglect of duty as shameful. And Professor Corwin, though more courteous, is equally critical of our default in Federal legislation. May not the unwillingness of Congress to enter upon this kind of enactments indicate its doubt of the unlimited supremacy of the treaty-making power?

Even our author feels it necessary, or, at least, desirable, to close his volume with a statement of his reasons for believing that the police power of the States will never be endangered by the doctrine which he champions. One reason is that Congress has the power to abrogate treaties. Another is "that it is of primary interest to the United States that the police powers of the States shall not be essentially abated by treaty."

In other words, the President and Senate may be counted on not to press the unlimited power of treaty-making unduly. If they do, Congress can formally abrogate the treaty or can refrain from enacting legislation necessary and proper to its enforcement. Whether it is worth while to fill a volume with arguments and authorities for the existence of a governmental power which ought not to be exercised, is questionable. If "it is of primary interest to the United States that the police powers of the States shall not be essentially abated by treaty," it should seem to follow that a treaty purporting so to abate them would be an attempt (to quote the words of Mr. Root) "to make provisions regarding matters which are not proper subjects of international agreement, and which would be only a colorable, not a real, exercise of the treaty-making power." At any rate, the practical consequences of the author's doctrine that the treaty-making power is unlimited, but ought not to be so exercised as to abate the police powers of the States, are not very different from those of the doctrine that the treaty power is limited by State police powers.

My Father: Reminiscences of W. T. Stead. By Estelle W. Stead. New York: George H. Doran Co. $2.50 net.

William Thomas Stead was one of the most striking figures of later Victorian England. By birth and education he belongs in that long line of dissenters through whom from generation to generation the English conscience has found one outlet for expression. From Browne the Separatist, John Cotton and the Puritans, through Fox, Bunyan, and Wesley, down to Gen. Booth and Stead, these rebellious witnesses have had certain common resemblances which more than outweigh their differences. In Stead's case the point of chief interest is the use he made of the modern tool—journalism.

He was born July 5, 1849, one of a dozen children of a Congregational minister, settled in a poor parish near Alnwick. He got his chief schooling from his father. A vivacious intelligence, healthy curiosity, and a very real religious sense were his salient characteristics. At fifteen he was apprenticed as an office-boy in a merchant's counting-house at Newcastle-on-Tyne. There he invested his penny savings in the *Sporting Life*—he was passionately fond of cricket and other sports—and in cheap reprints of Shakespeare's plays. The book which, next to the Bible, made the most lasting impression upon him was James Russell Lowell's Poetical Works, bought with part of a guinea prize which he won for an essay in the *Boy's Own Magazine*. Lowell's poem, "Extreme Unction," "changed my life," Stead says. "The idea that everything wrong in the world was a divine call to use your life in righting it, sank deep into my soul."

In 1871 Stead became editor of the *Northern Echo* of Darlington, with which he stayed until 1880, when, to his surprise, John Morley invited him to join the staff of the *Pall Mall Gazette*. The Bulgarian atrocities had given him his opportunity, his vociferous denunciation of the Tory attitude towards them bringing him to the notice of Gladstone and the Liberal leaders. In

1884 Stead took full command of the *Pall Mall Gazette*.

The following year he gained for himself and his journal a world-wide notoriety through his exposure of the organized traffic in young women for immoral purposes. Thenceforward, until 1890, when he sold the *Gazette* and established the English *Review of Reviews*, he was regarded by the public much as one regards a stick of dynamite which may go off unexpectedly and injure friends and foes alike. So, too, during the last twenty years of his life he engaged in many agitations, social or political, which his sensational manner made easy to criticise as crankish, if not crazy.

The distrust which a large body of the public felt for him was increased by his infatuation, as they called it, for spiritualism, which he carried to the point of introducing a "Borderland" section in the *Review* and of making his office a sort of clearing-house for spiritistic records. If spiritualism ever proves its case and converts the world, Stead will doubtless figure among the faithful few who, in the early days, were unshaken by ridicule and misrepresentation. To his contemporaries, however, it seemed that Stead's efficacy as a reformer decreased in proportion as he spent more and more time across the border. For a long time before his death he waited on premonitions, and he believed implicitly in the reality of the spectral "Julia" and her messages. To students of psychic phenomena, his experience has some interest.

But it is Stead the publicist and editor who deserves most attention. Unquestionably, he exerted for a time wide influence on the British public. His support of Gladstonianism, his friendliness towards Russia during the period when Russophobia was John Bull's favorite malady, his stanch support of the peace movement, his championship of the oppressed regardless of their race, creed, or party, are among the positive achievements of Stead's career, while his attack on the "Maiden Tribute" seems to the present reviewer the most courageous act in modern journalism. To-day, when "white slavery" has become the topic of conversation in the nursery, and the agitation is carried on in ways which may do more harm than good, it is almost impossible to imagine the effect produced by Stead's "Apocalypse of Evil" in 1885. In England, as in other Anglo-Saxon countries, the policy had long before been adopted of assuming that the social evil did not exist because it was tacitly agreed not to mention it. When Stead broke through the silence, there was a momentary consternation among the partisans of Cant, and then they recovered their nerve and punished, not the monsters whom he had exposed, but Stead himself for exposing them! A legal quibble sufficed. Even Thomas Hardy has not imagined so fine an instance of the sardonic humor which sometimes comes uppermost in the affairs of men.

Stead took his imprisonment with religious rejoicing. "You have now the crown upon your work," Cardinal Manning wrote to him. The cynical said, of course, that he was a sensation-monger, who exploited his righteousness in order to procure notoriety. We moderns have grown skeptical of the business man who avowedly takes the Ten Commandments down to his office. So far as appears, however, Stead sincerely believed that in this crisis, and throughout his career, he was doing the Lord's work, and, certainly, he lost pecuniarily more than he gained by his fidelity to his visions. That vanity and piety may be intermingled, the lives of many very good men teach us.

Through his voice and pen the conscience of England found utterance on several matters of vital importance. Posterity, knowing him by his works, will probably value him more highly than did those of his contemporaries who judged him by his mannerisms or who suspected his motives. As the man who set himself to realize Lowell's "Pious Editor's Creed," just at the time when other editors began to see their profit in yellow journalism, he will not soon be forgotten. By one of the rare instances of poetic justice, his life, which had been crowded with dramatic incidents, closed in the wreck of the Titanic. One of the survivors, who put off in the last life-boat, says that Stead, having done all that he could for the embarkers, "stood alone at the edge of the deck, in silence, and, what seemed to me, a prayerful attitude, or one of profound meditation."

These reminiscences consist of many autobiographical passages, letters of more than personal interest, and the recollections furnished by friends—all put together and made clear by his daughter. She writes with simple fervor.

Notes

Dr. Benjamin Rand, of Harvard University, has two philosophical books in the Cambridge University Press (Putnam). One, entitled "Shaftesbury's Second Characters," will appear during the present month; the other, containing the "Unpublished Correspondence of Bishop Berkeley," will be completed in the spring. Both are the result of his researches in England and contain entirely new material on these great English philosophers.

Included in the announcements of Frederick A. Stokes Co. are the following: "Whispering Dust," by Eldrid Reynolds; "The Color of the East," by Elizabeth Washburn; "The Intriguers," by Harold Bindloss; "Sanctuary," by Percy MacKaye; "The Two Americas," by Rafael Reyes; "The Wine-Press," by Alfred Noyes, and "My Lady of the Chinese Courtyard," by Elizabeth Cooper.

We may expect shortly a new mystery story from the pen of Mary Roberts Rinehart, entitled "The After House." Houghton Mifflin Co. is the publisher.

Thomas Y. Crowell Co. will bring out this season: "The Education of Karl Witte, or the Training of the Child," translated by Professor Wiener, of Harvard, and edited by H. Addington Bruce; "The Message of New Thought," by Abel L. Allen; "How to Rest," by Grace Dawson; "The Deaf, their Position in Society," by Harry Best, and a large-type, thin-paper edition of Roget's "Thesaurus," edited by C. O. S. Mawson.

Among the publications promised by McClurg for January are "Will o' the Wasps," by Margaret W. Morley; "A Primer of Political Economy," by Alfred Bishop Mason, and "Earmarks of Literature," by Arthur E. Bostwick.

In the spring Desmond Fitz-Gerald will bring out "The Song of Labor," translated from the hundredth edition of Rudolph Herzog's "Die Wiskottens." Later the same house will bring out Herzog's collection of short stories entitled "Es giebt ein Glück."

The following volumes are announced for early publication by Small, Maynard & Company: "Mrs. Brand," by H. A. Mitchell Keays; "More About King Edward," by Edward Legge; "A Lady of Leisure," by Ethel Sidgwick; "Sunrise Valley," by Marion Hill, and "The Dog and the Child and the Ancient Sailor Man," by Robert Alexander Wason.

"The Treasure," by Kathleen Norris, and "The Philippines, Past and Present," by Dean C. Worcester, are among Macmillan's forthcoming books.

Mr. Clarence M. Burton, of Detroit, Mich., has presented to the Detroit Public Library his large collection of books and manuscripts relating to the history of the city. The collection contains 30,000 bound volumes, 100,000 pamphlets, 500,000 manuscripts, and 27,000 photographs of Detroit scenes, buildings, and personages. Included in Mr. Burton's gift are his home at No. 27 Brainard Street, and the three fireproof buildings used for his library. He has spent forty years in making the collection, and he now wishes to be sure that it shall be preserved intact.

The output of books in Great Britain in 1913, according to the *Bookseller*, was 8,473, or 595 less than in 1912. With the exception of annuals and serials, the only increase was in children's books and music. The greatest falling off was in political economy, the works on this subject numbering only 394, against 621 the previous year. There were also fewer works on law, art and architecture, travel, and religion.

The Oxford University Press issues a report of "The Celebration of the Two Hundred and Fiftieth Anniversary of the Royal Society of London." The volume contains the many addresses, in Latin and English, sent to the Society on the occasion.

To the series of Literary and Historical Atlases in Everyman's Library (Dutton) has now been added a volume on Africa and Australasia.

Scribners have now in hand the fourth "carefully revised" edition of Baedeker's "Spain and Portugal."

A "Who's Who in Japan" has reached its second annual edition, and shows a bulky volume of 1,317 pages with 134 additional pages as a supplement. The text is in English, although the names of Chinese and Japanese are given also in the native script. The book is imported by G. E. Stechert & Company.

Among George Meredith's later excursions into journalism was a series of dialogues contributed to the *Graphic* in 1873-4, under the title of "Up to Midnight," now reprinted in a thin volume by Luce. Their interest is bibliographical, not intrinsic, and the author would probably have felt as warmly upon their resurrection as he did towards the "ghoul" who threatened to search out his early leaders, in whose ears he wished the Commination Service thundered. A dozen men converse through five distinct evenings at the home of Sir John Saxon, upon such topics as the Franco-Prussian War, the Geneva Arbitration, Arctic Exploration, and Stanley and Livingstone. No character-drawing raises the attention above these outworn subjects, for the whole circle speak patently for Meredith. Nor has the talk even Meredithian merits. The author's esoteric qualities are distinctly out of place upon subjects proper to journalistic clarity, and an occasional glinting epigram scarcely lights up the waste of his pedagogic style.

An entertaining compilation is "A Century of Parody and Imitation" (Milford), by Walter Jerrold and R. M. Leonard; the title's significance lying in the fact that the publication of the "Rejected Addresses" of Horace and James Smith virtually established modern parody, which is brought down to the death of Andrew Lang. Living authors are excluded, and a few excellent examples, as R. F. Murray's "The Banished Bejant" and Aytoun and Martin's "The Queen in France," may be missed. But general completeness marks the book, even to the inclusion of poems valuable only as historical missteps in the growth of parody towards general good taste, while all, from Hogg's "The Flying Tailor" to Bunner's "Home, Sweet Home," are well indexed and well annotated.

Thomas Medwin's "Life of Percy Bysshe Shelley" was originally published in 1847. In later years Medwin amused himself, and worked off some of his accumulated rancor against Mary Shelley, by making large revisions of the work for a second edition, which was expected to appear, but did not appear, about the time of his death, in 1869. His copy of the book, with the revisions on the margins, fell, like so many other good things of this sort, into the hands of Mr. H. Buxton Forman, who has now issued an admirable reprint (Oxford University Press) with the author's proposed changes incorporated into the text. For annotations he has drawn largely on his extraordinary library of Shelleyan books and his no less extraordinary knowledge of the literary vagabondage of the period. Nothing is so obscure in Medwin's pages as to evade his elucidation; a book of which most fairly well read students of the romantic movement may never have heard is to him something which should be in any gentleman's library. In regard to Medwin himself he has no illusions; there is scarcely a quotation in Medwin's pages to the inaccuracy of which he does not call attention, and Medwin's mendacity and conceit would escape no one. But Mr. Forman is right, nevertheless, in placing high value on this biography as giving insight into the character of Shelley and his circle, though, as an ardent and full-souled worshipper of the poet, he apparently quite fails to see the damaging nature of such an admission. Medwin, indeed, was of his age, and there is in his views of life and in his manner of writing not a little which might be described as Shelley without Shelley's genius. On pages 139 and 140 of the present edition there will be found, for instance, as perfect an utterance of the romantic notion of sympathy, with its consequent sense of embittered isolation and its nature cult, as can be found in Shelley himself. It is romanticism bared to the quick.

One could scarcely get a more striking exhibit of the revolution which has taken place in the past decade in American office methods than that furnished in the volume, "The American Office," by J. William Schulze, assistant secretary of the Alexander Hamilton Institute of New York city, which has just been issued by the Key Publishing Co. It would be difficult to mention a single phase of office activity, whether relating to organization, physical arrangement, records, communication, distribution of activity and responsibility, or psychological factors, which the book does not consider. The scope and purpose of the work may be inferred from some of the chapter headings: Office Employees, Office Appliances, the Physical Office, How to Lay Out Floor Space, Creating the Office Organization, Training Office Employees, Supervision and Salary Plans, Methods of Arousing Enthusiasm, The Human Touch, Welfare Work, Office Records, and Systems. The book is full of charts and diagrams illustrating the relations between branches of the organization, photographs of model offices, and graphic devices for enforcing the points made by the author. Of course it is all in the nature of counsel of perfection; but he must be a dull person who cannot find here many practical suggestions, as well as a general spirit of enthusiasm likely to increase his interest in his own work. This book, says the author in his preface,

is intended primarily for three groups of people: (1) The young man in the office who is anxious to succeed and who is desirous of studying a book that will teach him standard office methods; (2) the student in the university or business school who aims to start his business career with a knowledge of American office practice; (3) the executive who realizes that, no matter how well he may believe his office is being managed, there are ideas and suggestions to be gathered from a study of other men's methods.

Prof. Leon Kellner, of the University of Czernowitz (Austria), who published four years ago, in German, a valuable history of "English Literature during the Age of Queen Victoria," has now supplemented this work with two tiny volumes, entitled "Geschichte der nordamerikanischen Literatur" (Göschen Collection). He has compressed into barely two hundred pages an extraordinary amount of information concerning American literature, and sketches its development with rapid strokes. Best of all, he contrives to let the great writers stand out in bold relief. His judgments are independent and incisive. Oliver Wendell Holmes evokes his greatest admiration. "The world has perhaps never seen so penetrating, keen-eyed, and, at the same time, so warm-hearted an optimist." Professor Kellner, known as an admirable translator, quotes a number of passages from the "Autocrat," aptly characterizes Holmes's address on "Mechanism in Thought and Morals," and remarks that the reader often enjoys Holmes's wit too much to appreciate his scientific importance and his deep seriousness. In Lowell Herr Kellner admires mainly the satirist and humorist, with his "pyrotechnics of delicious puns," though he does justice to his "glowing love of his country." In Longfellow he sees "the Herder of English literature," though he says that Longfellow "has perhaps taken Goethe's world literature somewhat too seriously." Herr Kellner speaks of Emerson's wide influence on modern German thought. His aphorisms are everywhere eagerly read, "while the great transcendental systems of Fichte, Schelling, and Hegel, on which Emerson's philosophical views are based, slumber, undisturbed by the great public, in the dust of the libraries."

In his chapter on our transcendental movement Professor Kellner speaks of the curious tendency in literature to put a common label on writers whom mere accident has brought together. "Emerson is miles apart from Alcott and Channing, yet they are mentioned together as 'transcendentalists,' just as Wordsworth and Southey, who intellectually had but little in common, have been handed down to posterity as members of the Lake School of Poetry." Nevertheless, in some way, striking if not altogether convincing, Herman Melville and Walt Whitman are drawn by Professor Kellner himself into intellectual kinship with the transcendentalists. Howells and James come in for discriminating appreciation. Of their "self-conscious art," it is said that "artists, in their endeavor to escape the yoke of their subject, often commit the mistake of working without any material, and thus trying to make bricks without straw." We can only allude to the telling characterizations of Hawthorne, Poe, Whittier, and Mark Twain, the last of whom, of course, occupies the most prominent place in the chapter on The Humor of Exaggeration. That on The Literature of the Soil is appropriately ushered in by Bret Harte, and is continued through Edward Eggleston, Joel Chandler Harris, and James Lane Allen to the present day, closing with a brief survey of the writers produced by individual States. Even Iowa and Wyoming are not missing from Professor Kellner's list. As evidence of his familiarity with all the phases of his subject, we may point to his remarks on Sidney Lanier, Eugene Field, and Henry C. Bunner. The American short-story gets its full share of attention, and even George Ade's "Fables in Slang" are remembered. But nearly everything in the two little volumes will be found full of interest to German readers, and much deserves to be read by Americans. We know

of no similar manual of American literature in the English language, as a comparison with some such volumes as Henry A. Beers's "Initial Studies in American Literature" and with the American addition to Stopford A. Brooke's "English Literature" will disclose.

Mr. John Masefield's "Salt-Water Ballads" and "A Mainsail Haul" (Macmillan) are not likely to affect his reputation particularly in one way or the other. They are earlier productions and are now reprinted presumably in view of their author's amazing popularity. The second volume consists of a rather miscellaneous collection of prose, much of which seems like hack work. The first volume is sufficiently characterized by its title; its verse is comparatively inoffensive—hardly more than a little tarry in patches. The best thing in it is what Mr. Masefield calls "A Consecration," wherein he defines his mission as poet:

> Others may sing of the wine and the wealth and the mirth,
> The portly presence of potentates goodly in girth;—
> Mine be the dirt and the dross, the dust and scum of the earth!

The seventh volume of "The Vulgate Version of the Arthurian Romances" (The Carnegie Institution of Washington), edited by H. O. Sommer, offers as a supplement to the vulgate cycle the "Merlin" continuation or "Livre d'Artus" of MS. 337 (Bibliothèque Nationale), in so far as this continuation differs essentially from that of the vulgate cycle. The contents of this continuation are well known from the very minute analysis of it which was given by E. Freymond many years ago in the *Zeitschrift für französische Sprache und Literatur XVII;* but no analysis, of course, can take the place of the text itself, so that the present volume constitutes a welcome addition to our materials for the study of the evolution of the prose romances. One might imagine from Dr. Sommer's prefatory note that the title "Livre d'Artus" was applied exclusively to the text which he has here published. But, as a matter of fact, Paulin Paris, who invented it, first employed it of the "Merlin" continuation of the vulgate cycle; and ever since it has been used as a general designation of works which were composed with a view to connecting the prose version of Robert de Boron's "Merlin" with the prose "Lancelot." Indeed, Dr. Sommer's volume does not contain the whole of the "Livre d'Artus" as given in MS. 337, for he omits (very properly) the earlier portion which does not differ in any noteworthy respect from the ordinary text of the vulgate "Merlin" continuation. But apart from the unwarranted restriction of the term "Livre d'Artus" to the text here printed, why should he say that its place in MS. 337 suggests that it is "a suite or continuation of the Vulgate-'Merlin'"—that is, a continuation of a continuation? Obviously not. The manuscript arrangement merely suggests that the present text was to be substituted for what we may call the second division of the vulgate "Livre d'Artus" or "Merlin" continuation. Dr. Sommer expresses the opinion that both the vulgate continuation and the present text are "*redactions* of an account of the reigns of Uterpendragon and Artus made at different dates for the purpose of linking Robert's 'Merlin' to the 'Lancelot.'" If he means by this that the two works are connected with each other, only through a common hypothetical source, we believe that he will find few Arthurian scholars to agree with him. It has been generally assumed that the present text was dependent on the vulgate, and we see no reason to call that view into question.

Dr. Sommer advances also the theory that this text in an earlier form "already figured in the *Joseph-Perceval-Lancelot* cycle as such a link and markedly influenced the *Lancelot*. The present text is part of a later *rifacimento* added by some scribe to the Vulgate-Cycle and—paradoxical as it may sound—it is considerably influenced by the *Lancelot*." That a lost "Perceval" romance ever constituted an integral part of the cycle of prose romances which in its extant form we call the vulgate is, itself, by no means an established fact, but apart from this the hypothesis here stated by Dr. Sommer is extremely improbable. We have no manuscript evidence of an earlier form, and no one is likely to accept so complicated a theory of the relations of our romance to the "Lancelot" except in the face of the strongest proof. Now, as in the present publication the editor makes virtually no effort to supply such proof (for one or two brief footnotes cannot be regarded seriously in that light), we believe that current opinions on the subject will for the present remain what they have been. As in the previous volumes, Dr. Sommer reproduces his text from the MS. without editing it—only in this case he has capitalized proper names, which is an improvement, inasmuch as in some degree it aids the reader in following the story. On the other hand, he has omitted the analysis of the narrative in side-notes which has been so useful a feature of the earlier volumes in the series. He was doubtless compelled to do this by the considerations of health which are mentioned in the publisher's note inserted at the beginning of the volume. We hope sincerely, however, that he will be able to complete his work with the "General Analytical Index" which he has promised. Such an index would be of inestimable service in the study of these vast prose romances.

The death at the age of sixty-one is reported from Glasgow of the Celtic scholar, Henry Whyte, better known under the pen-name "Fionn." A number of volumes on Celtic subjects, translations of Gaelic literature into English, and his preservation of many Highland melodies comprise his contributions to scholarship.

We record with regret the death of William Edward Armytage Axon, which took place at his home in Manchester, England, on December 27. Mr. Axon was a valued contributor to the *Nation's* Bibliophile columns, where he displayed an extraordinary familiarity with pleasant byways of literature. He was born in Manchester in 1846. At fifteen years of age he became an assistant in the Manchester Free Libraries and from 1874 to 1905 he was on the staff of the *Manchester Guardian* as office librarian. Though lacking a college education, his constant association with books, joined with unremitting industry, made him a scholar in a noble sense; he was admitted to many learned societies, received from the Wilberforce University the degree of LL.D., and—a degree which he greatly prized—the master of arts (*honoris causa*) from the University of Manchester, which was presented to him during his last illness. Mr. Axon contributed to encyclopædias and magazines too numerous to be here recorded. He also wrote and edited a number of books, linguistic, religious, archæological, and poetical.

Henrietta Keddie, the novelist, who wrote under the name of Sarah Tyler, died last Thursday in London, in her eighty-seventh year. She began her literary work while conducting a boarding school for girls at the town of her birth, Cupar-Fife. A list of her works includes the following: "Citoyenne Jacqueline," "French Janet," "The Macdonald Lass," "Miss Nance," "Women Must Weep," and "Three Generations."

Samuel Augustus Binion, who died suddenly in New York last Thursday, was born in Suwalki, Poland, in 1853, and was the author of several books, among them "Ancient Egypt," "The Babaliah," "Phyllanthography," etc.

The death is reported from Dublin of Dr. Patrick Weston Joyce, an Irish scholar of repute, who was born in 1827. He was educated in private schools and entered the service of the Commissioners of National Education of Ireland in 1845. He occupied successive positions with the commissioners until 1874, when he became a professor in the Commissioners' Training College at Dublin. He subsequently became principal of the College. In 1893 he retired from that position, but later became one of the commissioners for the publication of the Ancient Laws of Ireland. He received the degrees of M.A. and LL.D from Trinity College, Dublin. Dr. Joyce's published works include "The Origin and History of Irish Names of Places," "Ancient Irish Music," in which he collected hitherto unpublished Irish airs and songs; "Old Celtic Romances," a collection of thirteen Irish stories translated from the Gaelic; "A Short History of Ireland to 1608," "A Child's History of Ireland," and "Social History of Ancient Ireland."

Science

ALEXANDER AGASSIZ.

Letters and Recollections of Alexander Agassiz. With a Sketch of his Life Work. Edited by G. R. Agassiz. Boston: Houghton Mifflin Co. $3.50 net.

Seldom does a biography record a more extraordinary personality and career than that of Alexander Agassiz as told by his eldest son. During a boyhood of narrow means in Europe, after his father, the great naturalist, Louis Agassiz, had come to the United States, he walked from one town to another to visit his relatives, and slept on the way under a haystack or in the house of a friendly peasant, when "almost anybody would give such a tiny traveller a piece of bread or a bit of cheese," as he used afterwards to say. In his mature years in America he developed and became president of a great mining company, a man of well-earned wealth, a leader in

zoölogy and oceanography, builder of a great museum, and Fellow of the Harvard Corporation; in his later life he was the most active explorer of coral reefs the world has known, president of the American Academy of Arts and Sciences in Boston and of the National Academy of Sciences in Washington, and honorary member of many foreign academies. He may well be regarded as the most eminent American of foreign birth that the present generation has seen: our country should be proud of having been his opportunity.

Agassiz was born December 17, 1835, in Neuchâtel, then belonging to Prussia. His father, Louis, a Swiss, our great teacher-naturalist, needs no introduction to American readers. His mother, Cécile Braun, a German, was a woman of "shy, sensitive, reserved, and artistic" temperament, and it was evidently from her, rather than from his father, that the son inherited certain well-marked personal qualities which tended to limit his acquaintance all through life; for while warmly regarded by the intimate friends who knew his charm, their circle was restricted, and upon outsiders he never exerted the wonderful attraction that endeared his father to thousands. It was only within this circle that he would show not only the superb Victoria Research medal, awarded him by the Royal Geographical Society of London, but also his delight in having it: to those outside the wall he showed neither. After his mother's death, the boy came to the United States in 1849, and was fortunate in loving and in being loved by his father's second wife, Elizabeth Cary Agassiz, a most admirable woman, who might well have been the prototype of the good stepmother, discovered as a new kind of heroine by modern writers; fortunate again in his wife, Anna Russell, a most lovely girl, his pupil in his mother's school, who "knew the speech of courage and of kindness," and whom he married in 1860, but who died in 1874, a week after his father's death, leaving him a saddened man, more reserved than before. He bravely found refuge in unceasing and increasing work. He had even as a boy abundant courage, and as a man great strength, though not of robust health. He always had his own opinions, and never feared to express them: in his early school years at Neuchâtel, he refused to receive certain prizes from an official whom he disliked, turned his back upon him, and walked out of the room. In consequence of the row that followed he led a band of young confederates to attack the castle of the Prussian Governor, and smashed the windows of the dining-hall on the night of a large party at which his father was present. The father, suspecting his boy of having a hand in the affair, hurried home, but there found Alex in bed and apparently asleep. The young Prussian was made to study the violin, which he loathed; so when he left Germany for America, he celebrated his departure from the land of compulsion to the land of freedom by jumping on his violin and smashing it. He was bow oar of the Harvard University crew in the middle 50's, and always retained his fondness for rowing: in later years he occasionally appeared at the Museum so hoarse that he could hardly speak, and would sheepishly admit that he had been to a boat race the day before, and perhaps he "had shouted too loud."

In spite of Agassiz's habitual reserve, he was of short temper, and easily provoked to "speak his mind," and on occasions did not withhold it even concerning one of his fellow-oarsmen, who gave Harvard, among several other things, its crimson color-emblem. Agassiz was, moreover, over-sensitive to adverse opinion, and less patient in discussion with those who differed from him than in his own work. He never sought to appear before the public, but rather withdrew from it, for he had nothing of his father's gift of scientific oratory; but he was of great force, long persistence, and enormous accomplishment. It is in this respect that his life was so altogether exceptional, and yet most of his work was done in comparatively poor health, and under the shadow of sad bereavement. His first large task was the development in 1867-68 of certain unsuccessful copper mines, later combined in the famous Calumet and Hecla Company, on Keweenaw Point in upper Michigan. Let it be here remembered that, just turned thirty, he had had almost no training in business methods or in mining technique; that he had been brought up by a father who "possessed a hazy idea of the value of a dollar," and whose money affairs were sometimes "in a more than usually deplorable muddle." He had, to be sure, after graduating at Harvard without distinction in 1855, studied engineering and chemistry in the Lawrence Scientific School, and he may have learned a little of bookkeeping when, as teacher in his mother's school for girls in Cambridge, he paid the other teachers and kept the accounts; he had for a short time worked for the United States Coast Survey in the Far Northwest, and on returning to Cambridge in 1860 he took charge of Radiates in his father's Museum, where for six years he had some more experience in accounts and in the "disentanglement of the financial difficulties into which the cheerful optimism of his father constantly plunged not only the Museum, but also the family purse"; and for a brief period he had the management of a coal property in Pennsylvania. It was on the basis of this largely irrelevant experience that Agassiz, early in 1867, was placed in charge of the Calumet and Hecla properties, an appointment probably influenced by the fact that his two sisters had married Boston men, of whom one was then and the other later became largely interested in the mines. He put in "every cent" he had—some of it borrowed—and went to work with the avowed intention of making money so that he could afterwards spend it in becoming a "productive naturalist." He met incompetence, misrepresentation, mismanagement, and disloyalty, and overcame them all. Expenses were unexpectedly great and assessments had to be levied; a brother-in-law provided the sum called on Agassiz's stock. He was "driven to death" at one time, "fearfully blue" at another, and "some days in utter despair." His brave wife joined him in the wilderness with a young boy and a baby; when she went out for a walk she carried a revolver strapped to her belt. Winter weather was severe, accidents in and about the mines caused delay and cost money, and put a heavy strain on the man in charge. In spite of all setbacks, the mines were in good working order near the end of 1868, when Agassiz returned to Cambridge. He was made president of the company in 1871, and held that office till his death, thirty-nine years later. Under his management the company paid its stockholders the fabulous sum of $110,550,000.

And yet this was only the by-product of a man whose real life interest was abstract science; for the mine once in running order, he set it aside, except for visits of a month, spring and autumn, and plunged into work at the Museum. On November 8, 1868, he wrote to seventeen scientific correspondents, and said to one, in reply to a letter of a year and a half earlier: "Thank Heaven, I am now done with copper mines, and have returned with all my heart to my studies, which I hope nothing again will interrupt." But the strain of work at the mines had injured his health; he was severely ill in the spring of 1869. A year abroad was then made possible by the generosity of a Boston friend, and he spent the time visiting museums preparatory to his famous work on sea urchins. It is interesting to note that he carried a letter from his father to Darwin, in which the elder Agassiz wrote: "You will find Alex more ready to accept your views than I shall ever be." He saw countless zoölogists, fretted over the unnecessary formalities and delays in many museums, felt melancholy on seeing how low the French had fallen through governmental corruption, was mistaken for Bismarck on the frontier during the Franco-Prussian War, and returned home in November, 1870. Although he lost a year's work by the

burning of many original drawings in the great Boston fire, his first large publication, the "Revision of the Echini" (770 pages, 87 plates), appeared in 1872 as a four-part memoir, of which he wrote: "Nothing pleased me more than to have been able to present the cost of these volumes to the Museum." Then with a great scientific career well opened before him, in the middle year of his life came an overwhelming blow, the death of his father and his wife, and for a time he could find no incentive for further study. But he soon set bravely to work to complete the great Museum which his father had planned and as his father had planned it, and then began an unrivalled series of explorations in all the oceans of the world. His voyages far exceed those of any other scientific investigator. Forceful as he was in these great undertakings, he was minutely painstaking and cautious in his work. His wide acquaintance with the outdoor world taught him the complexity of things, and forbade alike a hasty statement of conclusions of his own and a hasty acceptance of conclusions reached by more hurried contemporaries. This was particularly true regarding the theory of organic evolution, which, as his father foresaw, he accepted as a general principle, but without admitting the correctness of elaborate schemes of descent devised by others whom he thought over-rash. So in his study of coral reefs, he insisted on the great variety of the phenomena and on the necessity of recognizing many theories of origin, rather than only one. He was offered the position of Superintendent of the Coast Survey in 1885, but refused it because he felt himself unfit for a post that should be filled by a mathematician or a physicist, and also because he did not wish to sacrifice his own scientific work. In 1904 he was offered the direction of an expedition, to be liberally subsidized for five years by the Carnegie Institution of Washington, to explore the tropical Pacific, but refused because of his age, sixty-nine; had this opportunity come five years earlier he would have "jumped at it." It is more of a loss to science than to Agassiz that he declined it.

His death occurred in the mid-Atlantic, March 27, 1910, on his way home from a winter in Egypt, with his second son, Maximilian, his companion on many journeys: he was laid in Forest Hills Cemetery beside the wife of his youth, whom he had buried there thirty-six years before. Those who were privileged to know him well found a nature which they loved as much as they admired, and what they tell excites envy of their privilege among others to whom it was not granted.

McClurg has in press a new volume in the National Social Science series, entitled "The Family and Society," by John M. Gillette.

Dr. Edward O. Otis is the author of a new volume on "Consumption, its Cause, Cure and Prevention," which is announced by Crowell.

Prof. Winslow Upton, for nearly thirty years head of the department of astronomy at Brown University and director of the Ladd Observatory since its erection in 1891, died last Thursday at the Rhode Island Hospital, in Providence. He was born in Salem, Mass., in 1853. He received degrees from Brown University and the University of Cincinnati. He became an assistant at the Harvard Observatory in 1877; assistant engineer of the United States Lake Survey in 1879; computer of the United States Naval Observatory in 1880; computer and assistant professor of the United States Signal Service in 1881, and professor at Brown in 1883. He published a "Star Atlas" for schools in 1896.

Drama

The New American Drama. By Richard Burton. New York: Thomas Y. Crowell Co. $1.25 net.

The author of this book, professor of English literature in the University of Minnesota, exhibits a thorough acquaintance with modern theatrical products in this country, of which he furnishes a scholarly summary, but some of the conclusions which he derives from his review suggest that his critical faculty is defective. His judgment is too subservient to his enthusiasm for the newest forms of drama and to a spirit of optimism which would confer the laurels of achievement upon every crude attempt. Yet he has a clear view of the true functions of the theatre, "with its rootages in play, in religion, and the universal love of life," and argues for it, ably and vigorously, at the beginning and end of the volume. He maintains that the tremendous influence of which the stage, in its different manifestations, is capable, should be subject to the same sort of intelligent direction that is employed in orchestras and libraries. He does not, however, solve the problem how such a beneficial censorship—more and more favored by thoughtful persons—is to be established. The principle is simple but the application of it intensely difficult. Professor Burton easily riddles the old managerial plea that the public must have what it wants, and points out that, even if it were sound, it would not militate against the more enlightened policy of helping playgoers to appreciate and look for superior entertainment. He adds, justly, that the managers are not alone to blame in this matter, but that a certain measure of responsibility rests upon the cultivated and respectable members of the community who remain apathetic.

When he comes to comparisons of the existing theatre and that of the preceding generation, the latest types of stage performers and their predecessors, he betrays the lack of personal experience and of intimacy with actual theatrical conditions. He is more of the theorist than the expert. He does not know the capacities of the older actors or the part which the old stock companies played in their education. Apparently, he imagines that a modern dramatic school can supply all the stage education really needed, and that the chief accomplishment of the old performers was artificial and monotonous declamation. The effect of this delusion, manifestly arising from inexperience, is shown when he undertakes, somewhat superfluously, to defend the general public from the charge of incapacity to appreciate the higher poetic drama. In advancing various reasons for the comparative failure of certain costly productions of poetical drama, he omits the most weighty of all, the present dearth of actors trained to speak verse decently or to interpret imaginative works with appropriate spirit and action. There is abundant proof, past and present, that the general public always has been and still is ready to support poetic drama when well played. It will not pay to see it butchered. The modern theatrical school, with which the Professor is so content, only produces actors fitted for the plays of modern life. Actors of the old school could be realistic or romantic as occasion demanded. If the stage is to reflect the manners and the literature of more than one time, and that the present, we must have actors who can embody other characters than their own.

In his chapter on Truth, dealing with plays of American life, he sings the praises of most of the native playwrights, from Bronson Howard and James A. Hearne to Eugene Walter, and no doubt they have contributed some solid material towards the foundations of an American drama. But in his zeal for actuality he fails to discriminate between the plays which have depended entirely on melodramatic violence—the mere shockers—and the much rarer serious works constructed upon legitimate dramatic principles, and reflecting the truth of nature in the conflict of circumstance and character. Many of the pieces which he enumerates have no real artistic or dramatic significance. The critical praise which he bestows, under the head of "Romance," upon the plays of Moody, MacKaye, Mrs. Marks, and Rann Kennedy, is amply justified, but his definition of "romance" must be extraordinarily elastic if it can be made to include the great majority of the plays which he groups under that category. Many of these are flagrant examples of a most pernicious variety of melodramatic extravagance. The char-

acteristic attributes of romance are beauty, imagination, and essential truth, the three qualities in which all such pieces are conspicuously deficient. In discoursing of humor and the social note, Professor Burton reveals powers of observation and comparison which might have been applied with profit to more than one of his preceding chapters. He is apt to be happier in the enunciation of his theories than in the illustration of them by particulars.

McClurg announces at an early date "The Green Cockatoo and Other Plays," by Arthur Schnitzler, and "Gerbart Hauptmann, his Life and Work," by Karl Holl.

Profs. W. A. Neilson and A. H. Thorndike, general editors of the Tudor Shakespeare, have brought this edition (Macmillan) to completion with a volume devoted to "The Facts About Shakespeare." As an example of what accredited American scholarship can accomplish, the book, as indeed the whole edition, is most instructive. What stands out is, as might be expected, the mass of details taken into account and the caution with which they are handled. Here is German industry combined with Yankee common-sense. The work differs from recent English editions of Shakespeare, for example, the Eversley, edited by Professor Herford, in the almost entire absence of æsthetic and philosophical criticism. It is a serious lack, especially in an edition designed for use in schools and colleges, which should endeavor to whet the student's imagination and zest. But of its kind the Tudor Shakespeare is by far the most trustworthy edition in existence. Its special virtues are perhaps best illustrated, in the present volume, by the chapter on Biographical Facts and Traditions. In no other place have we seen so succinct and orderly an interpretation of the credible documents bearing on Shakespeare's life; this is followed by an enumeration of the rumors and hearsay, the origin of each being stated, which for two centuries after his death strove to clothe the skeleton of fact with picturesque, often fantastic details. Everybody is familiar with the gossip which charged Shakespeare with poaching on the preserves of Sir Thomas Lucy, but interest is added to the rumor by knowledge of its source. In the chapter on Shakespeare's Reading, the list of books with which he must have been acquainted is also nicely based on the evidence. In this connection it might have been well to indicate more fully the advantage to which Shakespeare turned his reading, that is, the manner in which his imagination assimilated and recast it. There are enough striking instances of the sort which could have been drawn from Plutarch, Holinshed, and especially Sidney's "Arcadia" to warrant a few illuminating generalizations. In plan the book, though a work of collaboration, is thoroughly consistent and even; but the styles of the two writers are easily distinguishable, the one open, sometimes loose, the other compact yet clear.

Romance, in all its shapes, has been excluded from the local stage for so long in favor of the crudest forms of "realistic" melodrama that the successful production of such a piece as Percy MacKaye's "A Thousand Years Ago" in the Shubert Theatre is particularly welcome. This is not, in any sense, a great work, but it is entertaining and has literary qualities of an uncommon kind. The story is the very old one, of the princess whose hand was to be the reward of any suitor who might be willing to lose his head if he could not solve her riddles. Not long ago she was the heroine in a spectacle by Reinhardt, which had a great success in Europe, but failed badly in London, probably on account of inadequate performance. Now she is called Turandot, daughter of the Emperor of Peking.

Mr. MacKaye follows the ancient tale closely enough in its main incidents, but freshens it by bringing in the comparatively modern figures of the Italian Commedia del' Arte, Scaramouch, Harlequin, and Pantaloon, as inspiring motives. These, under the leadership of Capocomico, come as strolling players to Peking, having been banished from their usual haunts by modern materialistic critics, and virtually control the whole action. In a prologue, Capocomico bewails the banishment of romance from the theatre, its legitimate field, and cites the fantasy of which he is to be the protagonist as sufficient justification for its recall. He pledges himself to cure the princess of her aversion to matrimony in twenty-four hours, under penalty of death, if constituted emperor for that period, and the Chinese monarch promptly takes him at his word. Having discovered that the beggar with whom the princess is in love, and to whom she has thrown a rose, is identical with the Prince who is her latest suitor, Capocomico is able, of course, after the necessary complications, to fulfil his promise within the prescribed period. The element of suspense naturally is slight, as the issue is never in doubt, but Mr. MacKaye has handled his theme with a good sense of theatrical effect and has supplied dialogue of a vastly superior order to that of most modern spectacles. Several of his scenes exhibit graceful fancy, and one, at least—that in the prince's chamber—considerable dramatic force. The representation is also notable for some highly effective scenery, in which modern methods of lighting and coloring are employed. A dream scene, with shadow pictures, and the scene in the prince's chamber, with part of the stage lighted and part in cimmerian darkness, were especially striking. The City Gate at Peking and the Great Hall of the Emperor were also remarkable instances of the effects of spaciousness and gorgeousness to be obtained by the judicious disposition of simple draperies broadly painted. In their detail some of the sets were not altogether satisfactory, but in general design they were admirable and nicely appropriate to the fantastic theme. The acting was less felicitous than the play and its decorations, but Henry E. Dixey, as Capocomico, was a fascinating and graceful figure, and the veteran F. B. Warde demonstrated the value of an old-school training. He knew how to act and to speak.

The Scottish Repertory Theatre is to resume at an early date. The directors have arranged a spring season, which will begin at the Royalty Theatre, Glasgow, on January 19. Lewis Casson, who was principal producer for Miss Horniman's company at Manchester, is to be stage director and principal producer. The company will include several former members of the Scottish Repertory Company and others who have experience in repertory work. It is proposed to open the season with a revival of Arnold Bennett's comedy "The Honeymoon," with which there will be played a stage adaptation of Rudyard Kipling's "Badalia." Other productions will probably include, in addition to several entirely new plays, a characteristic example of the work of Bernard Shaw, one of Sir J. M. Barrie's earlier comedies, and an adaptation of one of R. L. Stevenson's short stories.

In the death of William Hawtrey the stage loses an actor of much sound capacity—if not much brilliancy—who was overshadowed by the popularity of his brother, Charles. He had acted in this country for fifteen years, and was associated with more than one emphatic success, but never established a position for himself in the first rank. Nevertheless, he knew his art, was capable of giving vitality to scenes of emotional power and pathos, and, in respect of versatility, was far superior to his more famous brother. But he lacked that peculiar vein of comedy which made Charles's fame and fortune. When they acted together in this city some years ago, William won his full share of applause without difficulty. "The Fire of Fate," "We Can't Be as Bad as All That," and "The Old Firm" were among the pieces in which he was prominent. He died in the New York Hospital, having been stricken suddenly in a trolley car. His age was fifty-seven years.

Music

"Richard Wagner, the Man and his Work," by Oliver Huckel, is announced by Crowell.

"Familiar Talks on the History of Music" is the title of a book just published by the Schirmers. The author is Arnold J. Gantvoort, of the Cincinnati College of Music.

Albert Spalding, the American violinist, has not only been winning fresh laurels abroad, but he has just given to his fellow players, through the publishing house of G. Schirmer, six pieces for violin and piano, which are worth considering. They are strongly reminiscent of Mr. Spalding's long sojourn in Italy, two of them (a "Siciliano" and a "Scherzo Giocoso") being dedicated to teachers under whom he studied in that country, and another ("Romance in C Minor") being built on the cry of a street-vender of oranges in Florence.

Frederick Corder and the London *Musical Times* are agreed that it is time to stop teaching counterpoint according to the artificial rules sanctioned by mythical authority, and follow the rules deduced from the practice of the acknowledged masters of the art. "We all," says the *Times*, "bow down to Bach as the great exemplar of the possibilities of counterpoint, yet at the same time our self-imposed rules show him to be so wrong that he would not pass an elementary examination."

The memory of America's great folksong

writer, Stephen Collins Foster, will be appropriately honored at a commemorative concert, consisting entirely of American compositions, to be given by the Modern Music Society (chorus of 100), and the New York Symphony orchestra, at Aeolian Hall, Friday evening, February 13, 1914. Maggie Teyte will be the soloist, and a feature of the programme will be a group of Foster's songs, including the universally loved "Old Black Joe" and "Suwanee River," in new harmonizations made by Benjamin Lambord, the conductor, which, while enriching the effect, entirely preserve the original spirit of the songs. Other numbers of the programme will be orchestral compositions by MacDowell and Henry F. Gilbert, works for chorus by Edward Burlingame Hill, Blair Fairchild, and Benjamin Lambord, and songs with orchestra by Arthur Farwell and John Alden Carpenter.

Mascagni was made famous largely by the winsome brevity of his "Cavalleria Rusticana." He has now gone to the opposite extreme. His latest opera, "Parisina," written in collaboration with D'Annunzio, lasted till two in the morning at the first performance in Milan. When it was repeated, the whole of the fourth act was left out.

Art

Mural Painting in America. By Edwin Howland Blashfield. New York: Charles Scribner's Sons. Illustrated. $2 net.

Ignoring the unsuccessful attempts to decorate the Capitol at Washington, we may date the revival of mural painting in America from John La Farge's decoration of Trinity Church, Boston, in 1876. Significantly it was the architect Richardson who got the commission for the painter. For thirty years to come La Farge was greatly to depend upon such architect friends as Hunt and McKim. In 1878, W. M. Hunt achieved the short-lived decorations for the Albany Capitol. Then, except for La Farge's steady activity, the movement languished until in 1893 the Columbian Exposition at Chicago employed, under F. D. Millet and C. Y. Turner as artist chiefs, Beckwith, Blashfield, Cox, Reid, Simmons, and others. The effect of these decorations, hastily improvised as they had to be, was such that mural painting came to be expected in all public monumental buildings. A few years later the completion of the Congressional Library at Washington still further popularized the movement.

Mr. Blashfield is an eminently fitting person to record and moralize a generation of achievement in which he personally has played a prominent and creditable part. His book, an amplification of the Scammon Lectures, delivered last year before the Chicago Art Institute, treats chiefly the business side of mural painting—the relations of artist, decorator, architect, and building commissioner. We feel that this is a just emphasis—and, for that matter, Mr. Blashfield deals also with the education of the mural painter—because the defects of the new movement are plainly chargeable in great measure to divided responsibility and ill-adjusted business relations.

Suppose a building commission safely piloted by the architect beyond local favorites and the alluring estimates of decorating firms to the choice of a capable mural painter, there are still many chances of failure. The mural painting is, after all, only the most important feature of a complex interior decoration. The professional decorator who does the minor work is not subject to the painter's control; both work under the remote and often indifferent jurisdiction of the architect. The estimates are cut so narrowly that the painter cannot provide the incidental and reinforcing decoration which would put his work in place. Indeed, he has no right to intrude in the decorator's field. The building commissioner and his associates are a constant source of difficulty. For reasons of convenience, the lighting of a room may be completely changed; for reasons of economy one lining stone or wood may be substituted for another. The mural painting meanwhile is in active progress, and for better or worse must fit into a light and surroundings for which it was never intended. In any case, the painting must often be adjusted to a room which is seen only in imagination. Puvis painted the designs for the staircase of the Boston Public Library from the architect's drawings and a sample of Siena marble. Had he seen the actual structure, we might have had quite a different color scheme.

Mr. Blashfield's remedy for this confusion is, first, that the architect should use his authority more strongly, and, next, that every room should be put in charge of one artist, who should be responsible for harmonizing all the details of the decoration. Undoubtedly, a certain relief might thus be procured, but these seem to us only palliatives. A mural painter's studio should be organized so that all the decorative work could be done by his own assistants. In the Renaissance this was a matter of course. At times John La Farge's studio approximated this perfection of organization. Nothing short of this as an ideal will serve, and if the amount of business involved be objected to, it should be said that no painter without organizing capacity has any business with mural painting. What is necessary is that the mural painter should work with artisans who know his ways and whom he can control. By allying himself with a decorating firm, this kind of assistance can be got. It is the obvious course for a mural painter who is unwilling or unable to organize a working studio. It should be said, too, that the best decorative ensembles in America, not necessarily the best wall paintings, have been those of the professional decorators. Their shops provide the only form of artistic organizations in which an artist of the Golden Age would find himself at all at home.

Either the architect should turn over the whole decorations of a room to the mural painter, or he should not order the pictures until the room is finished. The attempt to come out even results in painting pictures for paper rooms. A lamentable example of the practice is the Congressional Library. These are matters of common-sense and business technique. A graver defect of the present system of mural painting is that the work is done in a poor medium and in the studio. We have the absurdity of painters imitating the effects of fresco and tempera in oils, and the greater absurdity of painting a picture on a mere guess of what its lighting and surroundings are to be. We do not hold fanatically that all mural work should be done in place, but we do feel that a really competent decorator should be able to work in place and under conditions as taxing as those which confronted the fresco painter. In fact, nothing could better tone up modern mural painting than a revival of fresco painting. That would enforce methodical and competent execution with monumental simplicity of design. To-day the whole thing is too facile, and three-quarters of the mural painting in America betrays only the prevalent easy eclecticism. Very few have the gift of La Farge and Vedder of infusing such eclecticism with a distinguished and personal mood.

We agree with Mr. Blashfield in finding it a gain that mural painting is generally wanted. The infelicities of the product are perhaps no more than should be expected in work often produced under cruel limitations of money and time. At least opportunity is offered to the artist. His task is to achieve such higher gravity and competence that building commissioners will trust him more completely and treat him more generously. It is a question at bottom of culture and education, both for the artist and for his employers. On all these matters Mr. Blashfield offers advice well considered in substance and attractive in form. We wish his book a wide reading.

Mr. Percy Gardner is bringing out, through Macmillan, "The Principles of Greek Art."

A distinct land-mark in archæological research, and a new standard in publishing the results of South American archæology, have been set by Prof. R. Verneau and Dr. P. Rivet in their "Ethnographie ancienne de l'Équateur" (Paris: Gauthier-Villars). The treatment of the subject from the historical point of view is highly satisfactory;

the field work, carried on in connection with the French military commission, which measured an arc of the equatorial meridian in the years 1899-1906, has produced excellent results. The plates are marvels of the photographic art, and the authors are to be highly congratulated in having been able to reproduce stone, bronze, and pottery so artistically and with such verisimilitude. Two other volumes are promised, bringing the anthropology of Ecuador down to date. If they maintain the high standard which has been set by the present volume, the authors will indeed have earned a high place in South American research. The chief drawback to the utility of this scholarly quarto is the use, in the multitudinous notes, of numerical references to a bibliography "to be published later."

Finance

ALLOTTING "REGIONAL BANKS."

It was a foregone conclusion, when the conference committee of House and Senate decided on a minimum of eight regional banks for the new banking system (with a discretionary maximum of twelve), that a vigorous campaign would at once be started by each of the principal cities of the Union to procure the allotment of such a regional institution to itself. It should be evident that this competitive movement was bound to be more aggressive, and, on the whole, the adjustment of the rival claims more difficult, with the larger number of such Federal reserve districts.

In stipulating twelve such districts, the original House bill overlooked the necessity for strong institutions. It also missed the other considerations that harmonious action would be progressively more difficult in proportion to their number; that the disparity between the district including New York or Chicago and those covering less powerful industrial communities would be emphasized by it, and, not least of all, that a regional bank's rediscounting power would be greatly hampered if it served a district whose industrial activities were not diversified enough to distribute their demands on credit over more than a single season. The Hitchcock amendment, naming only four such districts, recognized these facts; but the conference committee compromised with its minimum of eight and maximum of twelve.

If the New York district were to be one of only four such banking areas, the task of geographical delimitation would not be difficult. But the larger number at once started controversy, in last week's hearings of the Organization Committee, named in the Act to arrange the districts. It raised the question, whether a regional institution at New York should serve the district of which this city is at present the central money market—a district including all of New England, New York, New Jersey, and possibly Pennsylvania—or whether, in order to equalize the strength of the several allotted districts, this Eastern territory should itself be divided.

The weight of testimony has undoubtedly been to the effect that the New York regional bank should be such as to possess a maximum of financial resources. It should be powerful enough, in capital resources and in its scope of authority, to perform the duties which will be imposed upon it, not only in serving a district which is already mainly tributary to it, but in conducting the country's relations with the foreign markets, in controlling the gold movement, and in dealing directly with financial Europe at an hour of home or international crisis.

Yet the argument may be pressed too far. Mr. Conant's statement that it would be better to have one powerful regional bank and seven puny ones, rather than eight puny institutions, is sound enough, if any such alternative were probable. But that is scarcely the case. Nor was the argument that a regional bank must overtop, in its capital and resources, the largest private institutions of its district, entirely convincing. The Bank of England's capital is $72,500,000; its deposits, public and private, $225,000,000. But at least two London joint-stock banks far surpass these figures; notably the London City and Midland, with its $114,500,000 paid-up capital and its $459,000,000 accounts current and deposits. When the Bank of France took on its shoulders the task of meeting the world-wide strain of 1907, its paid-up capital and surplus was $45,000,000; that of the Crédit Lyonnais was $75,400,000. The Deutsche Bank at Berlin is in such resources a larger institution than the Reichsbank.

Meanwhile, the testimony before the committee as it moves from place to place, on the question which cities shall possess the regional central banks, has its amusing side. In manner and motive, it is not unlike the presentation of claims by conspicuous individuals for knighthood on the King's birthday, or membership in the French Academy, or a niche in the University's Hall of Fame. The question is not entirely whether banking constituencies would be inadequately served without a regional bank at this or that particular city, but whether it would not be a humiliating slight for the city to be passed over. What would the character of the hearings have been, if conducted in the days when Chicago and St. Louis, Minneapolis and St. Paul, Omaha and Kansas City, were hurling scornful epithets at each other's presumption?

New York may be said, in all frankness, to have played its own part in character. In the delimitation of its district it will doubtless get, and for the purposes of the law it ought to get, a highly important stretch of territory. Yet, taken as a whole, the incidents of this banking legislation, in their relation to New York, have an indisputably humorous aspect, and to the philosophic mind they may possibly explain that mystery baffling to the ordinary New Yorker—why the outside communities do not always love New York.

Before the bill was proposed, the New York banking community insisted, with emphatic warnings, that unless the banking system was reformed immediately (on the general lines later adopted in the bill) calamity was imminent. When the present bill came up, the same community joined in protest against any legislation which should take control of the system from the hands of the banks themselves. This being denied, a campaign of the most extraordinary misrepresentation of the actual provisions of the bill was carried on—proceeding, it must regretfully be admitted, from New York. The campaign broke down; the bill was passed. New York joined in the plaudits, and at once set forth to the official organizers that pretty much all of the commercial East must be allotted to its own exclusive sphere of influence.

This interesting episode proves nothing either for or against the allotment to New York of its proper share in the Federal districts. But, on the other hand, it certainly does not exhibit, on the part of the New York banking community at any rate, precisely that quality which is known in private life as tact. When the new banking system is well under way, New York will perform the important part in it which this city has always performed in the country's financial and commercial progress. Probably Wall Street will then forget about what preceded the introduction of the system, and will wonder at "the interior's" prejudice against New York.

BURGAGE TENURE IN MEDIAEVAL ENGLAND

By MORLEY DE WOLF HEMMEON, Ph.D., Formerly Austin Teaching Fellow in History in Harvard University. Harvard Historical Studies, Vol. XX.

8vo. *Cloth,* 234 *Pages,* $2.00 *net.*

The tenure of the English mediaeval boroughs presented economic and legal conditions of landholding similar to those of to-day, especially in regard to freedom of sale. Comparison is made with Continental Tenure, and an appendix devoted to the German Tenure which has never been treated in English.

HARVARD UNIVERSITY PRESS
CAMBRIDGE MASSACHUSETTS

The February issue of THE OPEN COURT

IN celebration of the Eightieth Birthday of ERNST HAECKEL, which occurs February 16, 1914, the February issue of THE OPEN COURT will be devoted chiefly to his work and life.

THIS number will contain a special portrait frontispiece of Haeckel, taken in October, 1913, and without doubt the most recent likeness of him.

DR. PAUL CARUS, in a three-page article, outlines the purpose of this special "Haeckel Number," and in addition to words of congratulation, gives the translation of an open letter from Haeckel appealing to his friends and followers to devote any offering made in his honor to the purposes of the German Monistic League. Two illustrations taken by Dr. Carus when in Jena in 1907 are included—one of Dr. Haeckel, and a view from his study window.

A SPECIAL five-page article by Dr. Haeckel, written for the meeting of naturalists in Vienna in 1913, shows the evolution brought about in the last fifty years through the intellectual attitude toward mental and natural science, abolishing any distinct division into these two branches, and proving conclusively that natural science embraces all science. This article contains two portraits of Haeckel.

"FIFTY Years in the Service of the Evolution Theory," by Dr. W. Breitenbach, editor of the *Neue Weltanschauung,* gives a comprehensive résumé of Haeckel's scientific work, from the time of his first acquaintance with Darwin's theory, to his interest in the establishment of the Monistic League. Seven illustrations accompany this article, being reproductions of some of Haeckel's own artistic work.

AMONG the other articles in this number are: "Religion in a Monistic Interpretation," by Dr. Paul Carus; "Wilhelm Ostwald, President of the German Monistic League," by Dr. Haeckel; "Conservatism and Morality," by Dr. T. T. Blaise; "Time," a poem by Dr. Carus.

A copy of this special Haeckel number will be sent to any address on receipt of ten cents

LEGENDS AND SATIRES FROM MEDIAEVAL LITERATURE

By Martha Hale Shackford

This is a collection of translations of pieces of mediaeval literature not usually familiar to the general reader, who knows the Middle Ages chiefly through romances of chivalry.

Among the works represented are many not hitherto accessible in translation, notably: "The Purgatory of St. Patrick," rendered into English from a Middle English version, Froissart's "The Pleading of the Rose and of the Violet," "The Complaint of the Husbandman," "Sir Penny," selections from the lapidaries and the bestiaries, Rutebeuf's satire on the Parisian student, and examples of homily and allegory. **$1.25**

Animal Communities in Temperate America

A Study in Animal Ecology Designed to Serve as a Reference Work and Textbook. By VICTOR ERNEST SHELFORD, of the Department of Zoölogy in the University of Chicago.

This volume presents the principles of field ecology, illustrated by the more widely distributed animal habitats of the eastern half of temperate North America, and the aquatic habitats of a much larger territory. Six chapters deal with general principles. In several chapters the animal communities are considered from the point of view of modern dynamic ecology. A valuable feature of the book is the three hundred figures of widely distributed animals chosen to represent the chief types of animal communities and their characteristic modes of life.

The Nation

NEW YORK, THURSDAY, JANUARY 22, 1914.

The Week

The President's address to Congress repeats his policy of friendly coöperation with business which he announced seven weeks ago at the opening of Congress, and later in his speech on signing the banking bill. He assumes an "all but universal agreement in anticipation of our action"; speaks of the "atmosphere of accommodation and mutual understanding" as "a matter of sincere congratulation" which "ought to make our task very much less difficult," and asserts that "the antagonism between business and Government is over," and that, in squaring business methods to the law, "the Government and business men are ready to meet each other half-way." But what, then, of his explicit propositions? Some are concrete and positive; others more or less tentative in character. Interlocking directorates—described as such managing control of banking, railway, and industrial companies as must "result in making those who borrow and those who lend practically one and the same, those who sell and those who buy but the same persons trading with one another under different names and in different combinations"—are to be "effectually prohibited," though time is to be allowed in which to make the change "without inconvenience or confusion." Something will here depend on the full scope of the prohibitory law. Supervision by the Interstate Commerce Commission over new railway security issues is definitely advocated; and to this, we are inclined to think, even the railways will offer no objection.

Mr. Wilson's further proposal for a "more explicit legislative definition of the existing Anti-Trust law" must be judged in the light of what such a definition is to be. Ex-Senator Edmunds, a very eminent jurist and the real author of the Anti-Trust law, said two years ago of the plan for Congress to define more exactly its provisions:

> To whatever extent they change the law, they will spoil it. This for the simple reason that it does, in general terms, all that the Constitution permits it to do.

And further, on another occasion, that such an effort would involve the endless complexity of "a definition of the definition." The *Nation* has consistently maintained that a radical or sweeping amendment to the law would tend to weaken its force and confuse its application. The suggestion of a trade commission—not "empowered to make terms with monopoly or in any sort to assume control of business," but as an intermediary body for investigating and determining the actual status of a company, before invoking court procedure—is more obviously feasible. Difficulties will no doubt surround such an experiment, precisely as difficulties will surround the President's further distinct proposals for punishment of individuals rather than corporations when the law is violated, and for the absolute prohibition of the "holding company." "Personal guilt" can never be fairly established until what Mr. Wilson calls the debatable ground about the Anti-Trust law is conclusively removed.

We have thought it best to state thus frankly our feeling, not as to the merits of the President's new proposals, but as to their difficulties. It is not a programme to be hastily conceived and hurriedly placed upon the statute books, and, fortunately, no such purpose seems to be entertained at Washington. But there can be no reasonable doubt that a long step forward has been taken, through thus defining of the ends which should be, if possible, achieved by means of additional legislation, and by the new and friendly mutual attitude of Government and business.

Little attention has been paid to a change in the Senate rules which was made last Friday. It might seem a trifling affair, but is in reality of much importance; for it relates to that fundamental thing in the legislative procedure of the Senate, "unanimous consent." The change is this: hereafter no agreement by unanimous consent—for example, to file an order of business or to take a vote at a given time—shall be entered into unless there is a quorum of the Senate present. Moreover, even such an agreement can be rescinded later, if the Senate so votes. The effect is obvious. It will prevent tying up the Senate by one of those sly manœuvres such as compelled a vote on the Hetch-Hetchy bill on a fixed day. Clever managers in the Senate have been in the habit of watching their chance, when only eight or ten Senators were in their seats, and obtaining unanimous agreement that this, that, or the other thing should be done at a future date, and then this agreement instantly became as a law of the Medes and Persians which altereth not. Willy nilly, the whole Senate had to do what a half-dozen Senators had agreed that it must do. That little trick cannot be played again.

The Chairman of the House Committee on Post Offices and Post Roads makes a gallant defence of the spoils rider to the Post Office Appropriation bill. If his argument has not much to commend it from the point of view of ordinary reason or practical good sense, it certainly has the merit of quite extraordinary elevation of thought. To the common mind, the question whether the 2,400 assistant postmasters are to remain under the rules of the competitive system or not does not touch the foundations of the Government, nor would it be thought to be intimately related to the methods by which we elect our Representatives and Senators or the President of the United States. But Mr. Moon takes a higher and broader view. Here is the picture that is drawn by his statesmanlike vision:

> Not a single representative of the Federal Government, save the members of the House, and, by recent amendment, the Senators, is chosen by the American people at the ballot box. Your President is chosen by the Electoral College. . . . If you wanted to make a monarchy of this republic, all you would have to do would be to apply the civil service to Congress, the President, and his Cabinet.

Thus that remote and short-lived past when the Electoral College was supposed to exercise a real choice in the naming of the President, receives in the Tennessee Representative's imagination the significance of an important present reality; and he dips into a future of which no man has dreamed, to conjure up a state of things when members of Con-

gress and of the Cabinet may be chosen by competitive examination. The spoils doctrine is hard pressed indeed if it finds itself obliged to fly to such distant realms in search of arguments in its support.

The action of the Senate Committee in seating Blair Lee, of Maryland, popularly elected, at the same time that it rejected the credentials of Frank P. Glass, of Alabama, appointed by the Governor, puts a common-sense construction upon the Seventeenth Amendment. It is decided that the amendment is self-executing, and that State legislation to make effective the direct election of Senators is unnecessary. The contrast between the two decisions points the implied rebuke to Gov. O'Neal, of Alabama. His State has nothing but the Governor's obstinacy to thank for the fact that it has so long remained with but one representative in the Senate. He might have convened the Alabama Legislature some months ago, to call and regulate the Senatorial election; or he might, as Gov. Goldsborough, of Maryland, has done, have issued writs of election on his own authority. Instead, in the face of general State sentiment and of the plainest warnings conveyed from unofficial sources, Gov. O'Neal chose to attempt filling by appointment Senator Johnston's old seat; and when his first candidate surrendered these dubious credentials, just in time to escape the Senate Committee's decision, stubbornly appointed another. It is gratifying that the Committee's action upon a matter of principle was decisively without regard for party lines.

How unavailing with respect to their ostensible end "pork barrel" river and harbor bills can be, is brought home to Louisiana by a decision of the Interstate Commerce Commission that Red River, except for a short distance from its mouth, is no longer a "navigable stream," and that, consequently, railways may fix their rates without reference to any possible river competition in its territory. Citizens of Louisiana may be excused for being surprised at this ruling, for as much as $3,000,000 has been spent by the Federal Government upon the river which the Commission now rejects. But what was the result of this expenditure? According to the New Orleans *Item*, it produced in a single year the stupendous commerce of one passenger and sixty-eight tons of freight upon the upper reaches of the river. Yet "the Red River ought to be a busy highway of commerce. . . . There ought to be lines of tank barges . . . cotton boats . . . packet boats." For these, the "pork barrel" way has been found a failure. The *Item* urges upon the disappointed inhabitants of the Red River district support of the idea in the Newlands "river regulation" bill, which looks towards cooperation between Federal and local authorities, not in merely spending money upon streams, but in making them navigable.

As vicious a bit of military legislation as has appeared in a quarter century comes up again in the report that the Militia Pay bill lobby has obtained the Administration's support. It is erroneously stated in certain newspapers that it is to supplant the bill providing for the organization of volunteers at the outbreak of war. That is, of course, not possible. The Militia Pay bill is a raid on the Treasury, pure and simple, on behalf of the existing National Guard, and does not affect the raising of troops not now existing. For a century and more our State troops have drilled without pay; the plan is now to get the Federal Treasury to reward them for appearing at the armories once or twice a week, the excuse being that readiness to serve the State is so wanting that men must be paid to do what has been done cheerfully and willingly since the foundation of the Republic. This assertion is false on its face and ought to be resented. Never, for instance, has militia duty been so well and so seriously performed as in some of our States to-day. Indeed, the bill is open to suspicion, or ought to be, because it is urged by the men who will *profit* pecuniarily by it; it is special legislation for them.

The great intellectual city of Boston is entitled to the widest condolence. Its voters have chosen Congressman James M. Curley as Mayor. It was a non-partisan election, the only candidates being two Democrats, and the less desirable one was elected. Some years ago the new Mayor of Boston spent a couple of months in jail for impersonating another at a civil-service examination. This act of pure kindliness and good will the voters of Boston do not seem ever to have held up against him; was it not a harmless bit of unselfish friendliness? Boston's plight is extraordinarily suggestive of New York's in the days when Grant and Gilroy and similar tools of Croker ruled the city. It is the same element in the population which rules Boston to-day, and this despite the modern charter which was expected to divorce the city from partisan or factional politics through an ideal ballot and an election remote from any State or national issue. The apathy with which the contest between Kenny and Curley has been followed by the general public is also strongly suggestive of the condition of public opinion in New York about 1890.

Whatever may be the chance that the bill offered by Mr. Works to repeal the Hetch-Hetchy grant will receive serious consideration in Congress, the California Representative did right in introducing it. He gives a compact summary of his reasons for doing so. Of these, the first is that "the bill granting the right of way was passed without any adequate investigation and under a complete misunderstanding and misapprehension of the facts." That it was passed without adequate investigation is a simple matter of fact; that it was passed "under a complete misunderstanding and misapprehension" may of course be disputed. And when we say that there was no adequate investigation we are by no means unmindful of the somewhat elaborate report of the House Committee; for it is impossible to read that report with care and not find that it utterly fails to meet the questions at issue, and that it is pervaded throughout with the spirit of the advocate instead of that of the judge. Although a considerable amount of time intervened between the introduction of the bill in the House and its passage by the Senate, yet that passage took place under a hasty agreement as to the date of final action. What happened in this case was what happens so generally when the question of the sacrifice of public parks or the like is at issue. The interests eager for acquisition get in their work before the slow process of accumulating vigorous opposition has time to become effective.

In a speech recently made in the Senate by Mr. Walsh, of Montana, there is a great deal about a Mr. Perkins, who, according to testimony cited by the Senator, played a conspicuous part in preventing the building of a railway in Alaska some years ago by private capital. Nor is it possible to ascribe this conduct on Mr. Perkins's part to any dislike to the exploitation of Alaskan opportunities by capitalistic interests, for according to the testimony the reason assigned by Mr. Perkins for the refusal of the Morgan interests to countenance the building of the railway was that the Guggenheims objected to it as an invasion of their own preserves. And as Mr. Perkins is quoted in the testimony as using the first person plural in this connection—thus, "we could not allow a railroad to be built through the Susitna Valley into the Tamana"—it will be seen that the Mr. Perkins in question is none other than George W. Perkins, the eminent Progressive. Some persons may, in their haste, be inclined to pass an unkind judgment on him for what looks like sad inconsistency; but they should remember that all this alleged sympathetic activity in behalf of the wicked Guggenheims occurred long before the day on which Mr. Perkins awakened to the necessity of making this country a fit place for his children to live in.

For the State distribution of textbooks, as a natural step in the programme of making education free, something may be said; but State entrance into the publishing business is a different matter. California's experience was denounced two years ago by the San Francisco *Chronicle* on the ground that "books printed at the State printery and sold at cost carry much higher prices than the same books are sold for in other States." She has now, during 1913, according to the State Printer, distributed 1,461,623 books at a cost of $316,000, or an average of about 22 cents each. This includes $87,371.52 paid in royalties to textbook companies and individuals. Mr. Charles H. Thurber, joining with certain newspapers in attacking the plan, has quoted figures of the United States Commissioner of Education to show that the average expenditure throughout the country is slightly above 60 cents *per pupil* annually. California will therefore have to show that not more than three books per pupil are consumed each year. It should seem this could be done, but it must be remembered that the State-published books are admittedly flimsier than the old ones, and the purchase of some by the pupils ought to be encouraged. The matter is of growing national interest, for Kansas has apparently followed California, and other Western States are contemplating the step. Considerations other than economy must be taken into account, for in the development of the complex art of textbook-making much may be claimed for private competition and enterprise.

"The extent to which he's winking at this moment!" whispered Caleb to his daughter. "Oh, my gracious!"

Very much after the same manner in which Tackleton the toy-merchant "winked" at Caleb Plummer and his blind daughter in "The Cricket on the Hearth," the Powers are now laughing at our Mexican policy. Congressman Gillett is the latest critic to voice the impassioned complaint that our relations with Mexico have made this nation the laughing-stock of the world. Everybody is doing it. The German Foreign Office positively rolls with laughter as it announces its intention to do absolutely nothing in Mexico that will be displeasing to Mr. Wilson. Peals of Gallic cachinnation ring out as Paris once more declares that it will in all ways follow our leadership with regard to Mexico. Great Britain, with tears of mirth running down its face, makes it known that the British Minister at Mexico City, whom we do not like, will be removed from Mexico City. The London *Times*, grinning like a Cheshire cat, declares that "President Wilson has enjoyed, and apparently will continue to enjoy, complete freedom from anything which can be called diplomatic pressure from other Powers." Poor Mr. Wilson, who is thus set up as a laughing-stock for every diplomat from China to Peru! Is his cup of shame to be filled when Huerta, laughing like mad, goes scuttling out of Mexico City?

The wide approval in Canada of the Government's announcement that it would temporarily abandon the bill for a $35,000,000 naval appropriation marks a triumph of popular sentiment. For one thing, the opening of Parliament sees the country anxious to deal with fiscal matters, the tariff, and the redistribution of seats in the House; for another, every effort to arouse enthusiasm for an Imperial navy, as by the visit of the battle-cruiser New Zealand, has signally failed. The Canadian people have not opposed the principle of an Imperial contribution, but by direct or indirect obstruction they have been glad to avoid the reality. Premier Borden's insistence last session upon an emergency bill for three Dreadnoughts was blocked by the Liberals on the ground that it placed the ships under Admiralty control, when both parties had declared in 1909 for control by the Parliament of Canada. But Canada has very complacently suffered the quarrel over the manner of contributing to suspend indefinitely the contribution itself. Papers like the Conservative Toronto *Globe* regard the present shelving of the Dreadnought programme as unavoidable in the light of the new Anglo-German harmony; it certainly relieves Mr. Borden of a great embarrassment as he advances to meet other very troublesome legislative questions.

The end of the Leeds strike has been long in sight, but that fact will not lessen British gratification at the unconditional surrender of the municipal employees. In part this is due to the sympathy evoked by the Leeds citizens, who manned the street railways, the gas and electric works, and other public utilities the moment the workmen stepped out; in part to the lesson afforded in the workings of Socialistic theory. As in the threatened Post Office strike, as in the South African railway strike, the workers were directly employed by the public; and they ought to have been peculiarly content with their position. They were better paid than those doing similar work in private employ, and—barring gross misconduct—were sure of their places for life. The whole affair is an interesting document in its bearing on the Socialist plea for universal Governmental employment. The crushing of the strike is especially pleasing in that the employees conspired to walk out so suddenly and unexpectedly as to inflict the greatest possible inconvenience upon the city; it is a victory of united public opinion over a kind of attempted extortion.

BRYAN AND WILSON.

Certain newspapers have been gravely announcing the speedy outbreak of a "war" between President Wilson and Secretary Bryan. It might come next week, or it might come next month, but come it must. The necessary preliminaries to hostilities have been duly noted. There have been differences and misunderstandings. The neat touch of the discovery by Mr. Bryan's friends of a "conspiracy" against him has not been lacking. Ere long, we are assured, a full-fledged *casus belli* will appear, and then the cruel war will begin. But if it takes two to make a quarrel, it takes at least two to make a war; and it might be well for our military prophets to stop and ask what possible motive Mr. Wilson can have for making war on Mr. Bryan. Put the Secretary aside, if you please, as a being of stratagems and treasons, but ask how the case stands with the President. Look at the relations of the two men, not as we may fancy they ought to be, but as they in fact are; consider, too, what are the actual services which Mr. Bryan has rendered and is rendering the President; the question is simply whether Mr. Wilson has any reason for regretting that he asked Mr. Bryan into his Cabinet, or for wishing him out of it to-day.

The plain and hard fact is that Mr. Bryan, as a member of the Administration, has been to the President a political asset of enormous value. If any doubt still lingers in anybody's mind that Woodrow Wilson is a skilful politician, it would disappear after a study of the way in which he has annexed and utilized Mr. Bryan, at the same time that he has done him high honor. It was not a question of obligations to Mr. Bryan, or of paying political debts. Those might or might not have been assumed to exist. But merely on the supposition that President Wilson had great measures of constructive legislation at heart, it is now clear that he could not have chosen a better aide in that work than Mr. Bryan.

This may seem a dark saying. But the facts throw light upon it. No one who has carefully followed the course of the tariff bill, and more especially the currency bill, through Congress can have failed to see what we mean—namely, that, given the conditions in the House and Senate, particularly in the House, President Wilson could not have got elsewhere the effective assistance which he has had from Mr. Bryan. This lay not so much in what the latter did as in what he prevented. It is a common remark about the currency bill, for example, that the great wonder is, not that so much which is good was got into it, but that so much which is bad was kept out of it. Congressmen were not lacking who wanted to stuff the bad things in. In the large body of Democrats carried to Washington on the flood of 1912 there was a considerable sprinkling of wild-eyed men. They were burning with desires to do something startling against the Money Trust and other monsters, and, if they had not been held in check by somebody, would have done their best to bedevil the currency bill. Who did most to hold them in check? William J. Bryan. This is the answer which the coolest observers at Washington make. Not that Bryan made himself conspicuous in laboring for the currency bill. He gave it his blessing, but he did not speak for it; certainly he did not lobby for it; there are those who say that he did not even understand it. But quietly and often indirectly, he exerted a powerful influence in maintaining its best features intact. He did it by discouraging the amending mania of some of the ogre-hunters in the House. And the very fact that he, the original champion of the people against the bankers and Wall Street, stood for a sound currency bill, undoubtedly brought many a fire-eater into line. If Bryan declared that the measure was all right, it was not for them to say him nay. But what they thought deep down in their hearts, and what they would infallibly have sought to do, had they not been held in leash, may be inferred from the things some of them are saying now. Thus Representative Henry is railing at Carter Glass as a tool of the bankers; and Senator La Follette affirms that the currency bill is a complete surrender to the Money Power. Now we only say that if Mr. Bryan was able greatly to aid the President in subduing the raging of these heathen, then he did him a high political service. It is one that by itself would justify his selection for the Cabinet; and this sort of influence, if it is to be continued, is one that the President has every motive for wishing on his side. When Mr. Bryan ceases to be a faithful adjutant of Mr. Wilson in procuring the passage of good laws, it will be time to talk about a "war" between the two.

It is said, we know, that the President is mortified at the ridicule which has been poured upon his Secretary of State. And there have been many funny newspaper stories about the relations of Mr. Bryan to the foreign diplomats in Washington. No doubt, the latter have their little jokes about Mr. Bryan's unconventional ways, and his unconscious importation of Nebraska methods into the State Department; but at bottom they have, in fact, a genuine liking for the man. He sincerely desires to be at peace with all the world, and that makes their tasks easier; while they have come to believe him absolutely candid in all that he says to them. This may be a novelty in diplomacy, but the foreign Ambassadors and Ministers do not find it unpleasing. There is certainly no friction in that quarter. And if there is any criticism, well or ill grounded, of Mr. Bryan's policy in Mexico or elsewhere, the sufficient answer—so far as relates to any supposed coolness between the President and his Secretary of State—is that Mr. Wilson is ultimately responsible for it all, and must shoulder it all.

All told, we are convinced that a political realist, intent upon seeing the facts as they are, could not help concluding that Mr. Bryan has been of very great usefulness to President Wilson. This may be admitted without retracting a single word about Mr. Bryan's flightiness or unsoundness in some matters. All that needs to be insisted upon is that, under the circumstances in Congress, and with Mr. Bryan's honorable view of his duty to be in all respects loyal to the chief under whom he has taken office, he has been of such demonstrable value to the President, in carrying out his policies, that the talk of Mr. Wilson's being about to open a war on Bryan is mid-winter madness.

THE COST OF MANIFEST DESTINY.

A brief dispatch from Sofia gives us an idea of what the people of the Balkans have paid for the victories of the Christian nations of the peninsula over Turkey, and over each other. The figures as they stand on their face are staggering. And when all necessary deductions and explanations have been made

the result is still one which can only leave the heart sick under the burden of human waste through human cruelty. A census of the Bulgarian territories acquired by conquest in the war against Turkey shows that the male population of Bulgarian Macedonia was reduced in the course of hostilities from 175,000 to 42,500. In Bulgarian Thrace there are 225,000 male survivors out of a population of 494,000. In the district of Mustapha Pasha to the north of Adrianople, and close to the old Bulgarian frontier, 4,000 men and boys remain out of a total of 33,000. These figures are only for Bulgaria. The complete account must take notice of what happened in the territories won by Greece from Bulgaria along the Ægean coast, what happened in Servian Macedonia, and in Albania. The figures are so appalling that the mind can only seek refuge in the feeling that they cannot be true.

One correction of these statistics of depopulation does suggest itself. The fighting in the Balkans was accompanied by a migration of the inhabitants. Especially in Thrace the Mohammedan villagers retreated before the victorious Bulgarian army in numbers that amounted almost to a *Völkerwanderung*. Newspaper correspondents have vividly described this retreat of the Ottoman nation back into Asia, as it has been characterized in somewhat exaggerated terms. So, too, in that part of Macedonia which has now fallen to Greece the inhabitants abandoned their homes according as the fortunes of war shifted. When the Bulgarians first poured down towards the Ægean, a large part of the Greek population, mindful of old racial feuds, took refuge within the Greek sphere of influence. Later, when the murderous war between the allies broke out and the Greek armies forced the Bulgarian lines backward, it was the turn of the Bulgarian inhabitants to flee. But, on the other hand, such migrations must have been of entire families. Only in rare instances is it believable that the men of the family would escape and leave women and children to their fate. And the figures we have quoted are of a decrease in the male population only. Evidently it is this that has been the salient feature; and a large part, therefore, of the enormous loss recorded must be ascribed to actual slaughter.

When the war between Turkey and the allies broke out it was inevitable that the sympathies of the civilized world should be with the Balkan nationalities. There were those who may have regretted that the war should have come at a time when the Turkish nation was entering upon the road of constitutionalism and modern progress. A great experiment was spoiled; an experiment that would have shown whether the non-European races have within themselves the capacity for modern civilization, or whether it is the fate of two-thirds of the human race to succumb ultimately to Occidental domination. But even regret for the frustration of so important a test in human capacities could not swing the balance of sympathy against the Balkan allies. After all, they were the representatives of the higher civilization. The war might be costly, but the price would not be an excessive one to pay for ridding Europe once for all of the blight of Ottoman rule. The argument was frequently brought forward that better one sharp blood-letting operation and a cure than the slow process of slaughter and oppression under which the Christian subjects of Turkey in Macedonia were agonizing. It was the inevitable price that must be paid for civilization. It was an unavoidable price, if the peoples of the Balkans were to realize their destiny.

Yet the horrible fact stands out that the price which has been paid by the Balkan peoples in appalling loss of life, in the indescribable misery of the women and children who were left behind, was paid only in minor part for the triumph of European civilization over the Turk. In greater measure the dreadful saturnalia of murder and rape was the price paid for the fierce jealousies that arrayed nations of the same creed and the same race against one another. There is no getting away from the evidence that the misery inflicted by Bulgarian and Turkish armies on the villagers of opposite faith hardly measures up to the play of bestial passions that broke loose when Christian nations and allies flew at one another's throats. It was then no longer a struggle between a higher and a lower civilization. It was a ferocious grapple for territory, harbors, and revenue. And if Turkey has been reduced to comparative impotence in Europe (though even now the peril of war between Turkey and Greece is acutely felt), there has arisen in place of the old Balkan problem a Balkan problem more threatening than the old. The next ten or twenty years in Bulgaria are bound to be a period of savage hatred for Servia and Greece, a period of preparation for the day of vengeance. Civilization in the Balkans will take the form of inflated standing armies, naval expansion programmes, and an exhausted populace crushed under the burden of taxes.

There is a lesson in the Balkans for our own cheerful people who speak lightheartedly of armed intervention in Mexico on these same grounds of national dignity and destiny. Pressing indeed must be the destiny that would drive a nation into war with its attendant horrors, the loss of life, the economic waste, the hatreds engendered, the menacing problems stored up for our children to toil with and to "settle" in their turn at fearful cost. Man's astounding ability to forget is exemplified in the readiness with which we forget, and shall probably continue to forget, what war means. To the unhappy people of the Balkans has been given the rôle of serving as a reminder.

A REAL SOCIAL EVIL TREATISE.

From the pen of Abraham Flexner has come the second notable volume in the series of four undertaken by Mr. John D. Rockefeller, jr.'s, Bureau of Social Hygiene, entitled "Prostitution in Europe." Its publication is a noteworthy service. In the first place, it fills a great scientific need in straightforward, nontechnical form. For years past the desirability of such a study has been manifest; no modern book covered this field with any genuine authority. To understand anything about the subject, it was necessary to read a great amount of medical literature and numerous detailed studies of what is the most difficult of all social problems. The result has been that there has been the loosest sort of talk, not only in the public press, but by men in public life. Basing their beliefs on hearsay, or the most superficial examination, many have inveighed against American methods by the easy assertion that the European policy of toleration and sanitation was the best. These statements were difficult to refute, because of the lack of material at once accessible and scientific.

Hereafter there will be no difficulty

on that score. Mr. Flexner was selected for the task because he was a trained investigator, skilled in analysis and familiar with social and educational problems. Never having taken up this evil before, he brought to it an open mind, free from prepossessions, a fact which makes the results of his inquiry particularly valuable. Let it be said at once that those who have had a patent remedy for this social sore, like the Single Taxers and those Woman Suffragists who feel that the enfranchisement of women will end it all by the substitution of laws jointly made by men and women for those made by men alone, will obtain little satisfaction from this volume. While its note is distinctly hopeful, Mr. Flexner presents no magic remedy or cure. He has merely analyzed the problem, investigated supply and demand and the relation of the evil to the law and to public order, and has summarized at the end the outcome of all this European experience. If he finds prostitution far more extensive than is popularly supposed, he has discovered, on the other hand, like every other conscientious observer, new currents and tendencies, like those in our own country, which give ground for belief that the era of intelligent dealing with the problem is at hand. At last we are beginning, by such works as this and the studies of the various vice commissions in American cities, to know the problem as it really is.

To our mind, the greatest cause for thankfulness is that Mr. Flexner has dealt a shrewd blow to the theory that toleration, official approval, and medical inspection form the really scientific method of dealing with prostitution. They are nothing of the kind. Aside from the fact that this means government partnership with vice, and inevitable moral deterioration of supervising officials, Mr. Flexner finds that regulation is losing ground everywhere; its total abolition has been recommended in France by a special commission, while 48 out of 162 German cities have dispensed with it. The truth is that regulation never regulates, and medical control never controls. Besides offending all decency, the medical examinations are often anything but scientifically conducted, and are usually so superficial as to be worthless, as the spread of disease certifies. For the survival of regulation, Mr. Flexner declares, ignorance, tradition, misinformation, and baser motives are responsible. The officials connected with it naturally fight for their places. As for the morals police of Europe, they are in a position to sell favors, exemptions, and privileges, and, as W. T. Stead conclusively showed, are forever tempted to become procurers and abettors of the illegal system which the Government authorizes them to control. Particularly is Mr. Flexner impressed with the fact that wherever there is one registered fallen woman there are three unregistered.

Many another myth besides that of regulation does Mr. Flexner expose. The alleged brief life of the prostitute; the alleged benefit to the streets where there is toleration; the alleged relationship of economic necessity to the entering on immoral practices, upon all of these he sheds surprising light that will not gratify, among others, those who a few months ago were shrieking that a minimum wage law is the one thing needful to protect the virtue of women-workers. But he does admit the almost universal unchastity of European men. What, then, is his conclusion as to the whole problem abroad? It is that prostitution is a "modifiable phenomenon"; that summary repression offers little hope—it merely "penalizes an accomplished fact"—and is what the physicians call "symptomatic treatment," since it does not cure the disease. Yet he believes that intelligent study and scientific repression would vastly decrease human devastation, lessen disease, and render the demoralization of the woman "less complete, less overwhelming, less irretrievable"; surely very important gains, particularly if all this is done under "well-drawn, well-codified, well-executed laws." As for the rest, a slow process of social regeneration alone will bring the better day. As Mr. Flexner puts it:

> Further achievement depends upon alterations in the constitution of society and its component parts. In so far as prostitution is the outcome of ignorance, laws and police are powerless; only knowledge will aid. In so far as prostitution is the outcome of mental or moral defect, laws and police are powerless; only the intelligent guardianship of the State will avail. In so far as prostitution is the outcome of natural impulses denied a legitimate expression, only a rationalized social life will really forestall it. In so far as prostitution is due to alcohol, to illegitimacy, to broken homes, to bad homes, to low wages, to wretched industrial conditions—to any or all of the particular phenomena respecting which the modern conscience is becoming sensitive—only a transformation wrought by education, religion, science, sanitation, enlightened and far-reaching statesmanship can effect a cure. . . . Sooner or later, it [civilization] must fling down the gauntlet to the whole horrible thing. This will be the real contest—a contest that will tax the courage, the self-denial, the faith, the resources of humanity to their uttermost.

THE FIRST GARDEN CITY.

Just ten years after the founding of Garden City, or Letchworth, in England there appears a heavy volume, by C. B. Purdom, tracing its development. The tale unfolded is extraordinary. The original scheme was so goldenly idealistic; it was seized upon with such Utopian zeal, by men inspired half by Mill's social ideas and half by Morris's artistic theories; its growth to reality has been so swift, and yet so substantial. It is only twelve years since Ebenezer Howard's book, "Garden Cities of To-morrow," was laughed at by the *Times* as visionary. To-day Letchworth represents a corporation worth millions of pounds, stretching its 2,000 homes, factories, and workshops over three parishes, and inhabited by 10,000 loyal citizens, employed in works drawn from all over the United Kingdom, and even the United States. Mr. Purdom's sketch was itself printed there, in J. M. Dent & Sons' publishing plant. Every main feature of Ebenezer Howard's plan for organizing in rural surroundings a workman's city, to achieve "a healthy, natural, and economic combination of town and country life," and "to find for our industrial population work at higher wages, at more regular employment, and under healthier surroundings," has been realized.

The significance of Garden City to the outside world is as an attempt to revive the small town under twentieth-century industrial conditions. It is a mistake to think of it as a municipal or corporation enterprise, for it has been prosecuted by an association of private citizens. Nor is it to be confused with "garden suburbs," or extensions, often unwise, of existing cities. Were it this, it would only be of a kind with work long done in Germany, and now carried on in nearly every civilized land. Its idea is the daring one of building a new town, in the shortest time compatible with normal growth, "right out in the open"; a town with its own parks

and open spaces, its own agricultural belt, its own schools, theatres, and public utilities. Letchworth is itself situated on an estate of 4,500 acres, thirty-five miles from London, purchased by the Garden City Company with a subscribed capital of $1,500,000. The company lets building sites, with reservations for parks; builds and owns the roads, gas and electric plants, and water system; and enforces regulations on the height, construction, and artistic quality of all buildings. It thus shares in the government with the regularly constituted local bodies, to which, as its capital is paid in, it will gradually surrender its functions. It is assiduous in promoting communal activity and the immigration of proper industries. Their testimonials, from motor factory to pottery works, are gathered into the volume. The abundance of light and room for workshops, the healthy living conditions for the workmen, the low rents and water and lighting rates, are enumerated as making for a better class of employees, while the smallness of the town gives the staff cohesion. After Letchworth attains a certain size, further growth is to be discouraged, mainly by the establishment of rival Garden Cities elsewhere.

The spontaneity of Letchworth's growth is proof of the need it filled, a need that is felt in every populous industrial land. Seemingly, it required only the book to create the company, and the company to call the town into being; in reality it demanded a long train of conditions and circumstances. A main factor in its success has been its proximity to London; Londoners of means have invested in it, scores of trains a day carry its products to the metropolis, its people still feel a throbbing connection with the centre of English life. It should give an impulse to nothing so much as official city planning. "So far," writes Mr. Purdom, "we have seen in the new countries only a repetition of many of the follies committed in nineteenth-century Europe. In Canada, in Australasia, in New Zealand there are opportunities for building fine cities that, not in magnificence, but in their simple decent order, may secure . . . health and well-being, and be the envy of the world." Similarly, the factors that gave Letchworth its astounding development are but the factors that induce our corporations to build model employees' villages, of which there are scores in the United States and Canada alone.

This does not rob the individualism behind the Garden City plan of certain peculiar merits. The government of a new community by its founders and members should be at once more practical, and touched by higher ideals, than a government by outside authority. The choice of a fresh site, the divorce from existent cities, give scope for the expression of a real corporate personality. The circumstances of its organization, moreover, assist subsequent coöperation among residents. Letchworth has proved an inviting field for the British Co-operative Wholesale Society, which furnishes all the commodities of life at cost. Mr. Howard points out that it should also offer ground for many industrial enterprises carried on by combinations of workers in the interests of workers. Men who have planned and built for themselves a better living environment are a ready soil for other helpful social reforms.

"STIMULATING."

To-day the word is common currency, but one imagines it is the book-reviewers of a certain well-recognized class who popularized it. It supplied a long-felt want. Since pragmatism carried the day it has obviously been "unmodern" to speak of a thing or a book as being merely right or wrong, good or bad, beautiful or ugly. Literature, like the world, has become divided into books that tell the facts and books that are stimulating, books that uphold the ideal of moral goodness and books that are stimulating, books that concern themselves with the beautiful and books that are stimulating. It is only an old-fashioned book-reviewer who will point out that when a writer speaks on page 22 of the battle of Waterloo as won by Wellington and on page 54 ascribes the victory to Blücher, he must be wrong either in the one case or in the other. The modern book-reviewer will find the discrepancy merely stimulating. And if the author gives evident signs of being quite out of touch with the literature on the Napoleonic wars, and occasionally spells the name "Blutcher," he is more stimulating than ever. This is not mere kindliness of criticism. It is an entirely new conception of criticism, which finds no use for the old definite forms of appraisal. It refuses to enter into sharp distinctions between the sheep and the goats. In the modern vernacular, the sheep are "cautious" or "conservative" and the goats are stimulating.

There is a companion word: "suggestive." When a statement is obviously false, it is stimulating. When a statement has no meaning whatever, it is suggestive. To say that Queen Isabella was a pioneer of feminism when she sent Columbus on his voyage to the west, is stimulating. To write: "Ignorance is the *advocatus diaboli* in the swirl of cosmic evolution," is suggestive. Fortunate the book—and a great many books are fortunate nowadays—which lends itself to characterization as being both stimulating and suggestive! To say that the Fathers of the Constitution were a pack of rum-selling and slave-catching rascals is stimulating. To say that the Fathers of the Constitution were a body of unpractical idealists is also stimulating. It is the beauty of the new criticism that the two books which say these two precisely opposite things may be equally stimulating. But if the writer, after describing the Fathers of the Constitution as saints or blackguards, as the case may be, goes on to say that we are all the creatures of environment, and that consequently the recall of judges is imperatively necessary, he has met the requirements of criticism completely. Either as a stimulant or as a suggestive force he is a man to be reckoned with.

Stimulating to what? Suggestive of what? Heaven only knows. It is true that one can easily imagine how the sociological treatise which the up-to-date critic finds stimulating might stimulate the scholar brought up in the older tradition of truth and falsehood to a fit of apoplexy. One can imagine how the ordinary stimulating book and lecture and interview on cancer cures and eugenics and criminology would stimulate the true scientist to alternate rage and despair. But evidently that cannot be what the reviewer means. Does he mean, then, that the reading of one stimulating book stimulates the reader to the reading of another book equally stimulating? That is undoubtedly true. The flood of books which have eschewed the older methods of patient research, careful thought, and logical presentation, for the methods of stimulative authorship, is sufficient testimony on that point. The difficulties of authorship have, of course, been almost done away with by substituting stimulation for reason and fact. Only that there has arisen another difficulty. There is the inevitable law that stimulation, to remain effective, requires a constantly increasing dosage. And it is not every one, after all, that can keep on being more and more stimulating till we reach the tremendous hypodermic thrust of the stimulating Cubist and Futurist.

Fortunately, the men who are doing the serious work of the world in the sciences and the arts—and in criticism—are not particularly concerned with the ordinary book-reviewer's opinion. They are content to have their books described as cautious or conservative or even stodgy, by comparison with the stimulating writers who are busy turning out new worlds and new moralities and new artistic conceptions while you wait. Or they may even find the situation stimulating. The babel of ignorant talk and senseless talk, the revolutionary formulas that roll so smoothly off the tongue, the welter of loose thinking and unshaped speech, can only stimulate the honest worker to tighten his lips and bend over his desk or his test-tubes a little more determinedly. He can afford to wait. Time will have its toll of the stimulators and the suggesters and the provocators and the various dispensers of the various other

kinds of mental debauchery. Mr. Kipling's intuition was right. It is only in the other world that the honest workmen are allowed to splash at ten-league canvases with brushes of comet's hair. In this world the good workmen are content with humbler tasks. They are satisfied to leave the ten-league canvases and the ethereal brushes to the stimulators.

PUBLIC OPINION AND POPULAR GOVERNMENT.

OXFORD, January 7.

Mr. Lowell's "Governments and Parties in Continental Europe" is for Englishmen the best and the most trustworthy authority with regard to Continental constitutionalism. His "Government of England" is by far the most complete, as it is also by far the best, description of the English Constitution as it now exists and works. He and Bryce are, in short, for the whole English-speaking world the leading constitutionalists of the day; but I venture with some confidence to predict that Mr. Lowell's latest book,* when it has once become well known to English readers, will add a good deal to its author's already high and well-acquired reputation. The book looks at first sight like a course of lectures delivered some years ago to the students at Johns Hopkins University. But it is something much rarer than a good course of lectures addressed to intelligent youths. It is, in truth, the work of a constitutional jurist who explores with care and elucidates with success some of the many fundamental problems presented by the whole system of modern popular government as it is understood in the United States and in England. It shows that the writer of the book may be placed nearly on a level—and no greater praise can be given to any man—with Bagehot. The two writers are in some respects very unlike one another, yet they both have one quality in common: they both can take up old and well-worn questions and succeed in putting the inquiries with which they deal in a new light, and in a light gained, not by the use of paradox, but by the enunciation of plain though forgotten truths. My object in this letter is to justify my high estimate of "Public Opinion and Popular Government." It is impossible for me to follow out many of the most interesting suggestions with which Mr. Lowell supplies his readers. I shall therefore vindicate the soundness of my literary judgment by dwelling only upon two among the leading characteristics of a highly interesting book.

The first among the notable traits of this essay is that it contains a new and original analysis of the nature of public opinion.

The term "public opinion" is so familiar to us all that we feel astounded that it should need explanation. We fall into the common error of confounding familiarity with knowledge, yet the simple truth is that the things, and above all the ideas, to which we are used, are just the things which not one man in ten thousand understands; and this for the obvious reason that he never even tries to understand them. He takes them, if we may use the expression, as "matters of course." Yet from the moment that we are asked, as we are by our author, what it is that we mean by the word "public" as employed in the term "public opinion," or by the word "opinion" as forming part of the same term, we feel first surprised at the inquiry, and then acknowledge to ourselves that we have not got an answer thereto ready to hand. Let us now consider the sort of information, or, rather, suggestions, which our teacher supplies to hesitating and puzzled pupils, be they hearers or readers. He shows us that the word "public," when used, at any rate, to designate the kind of opinion which is supposed by most of us to be supreme in every democratic state, is certainly by no means easy to define. It certainly does not mean necessarily the opinion of a majority. To take an example suggested by Mr. Lowell, it would have been ridiculous to say at the outbreak of the War of Secession, that either the opinion of Southern Seceders or of Northern Federalists was the public opinion of the United States. The plain statement of the case is that there were two opinions or beliefs diametrically opposed, one of which prevailed for the most part throughout the Northern States, and the other of which prevailed in the Southern States, and neither of which could fairly be called the public opinion of the United States as a whole. It is again clear that public opinion does not require unanimity. If the public opinion, say, of France was an opinion entertained by every French citizen, we should soon find that in the first place no such public opinion ever existed on matters as to which sensible Frenchmen could dispute, and, further, that, as our author points out, the attempt to obtain a unanimity which never really exists, might, like the nominal respect for the *liberum veto* of a Polish Diet, turn out absolutely fatal to the maintenance of any rational system of government.

The public opinion for which we are in search comes somewhat nearer to the common will, which, according to Rousseau, ought to be sovereign in every democratic government. Whether, indeed, Rousseau himself ever succeeded, even in his own mind, in making clear the distinction between the common will and the will of the majority, may seem to many readers of the "Contrat Social" most doubtful. The Saint of Jacobinism, who, if he had lived during the Reign of Terror, would have been speedily sent to the guillotine by Robespierre, was a thinker the clearness of whose style often concealed the inconsistency of his thought. The truth towards which Rousseau obscurely points is made clear by Mr. Lowell. It is that men are not politically capable of maintaining a true public opinion unless they are agreed upon the aims of government, upon the principles by which these aims should be attained, and also upon the method by which the action of the government is to be determined. This kind of agreement is an essential condition for the existence of a true public opinion. It is a state of feeling which certainly may exist; it undoubtedly more or less existed in England during the greater part of the nineteenth century. Englishmen then, on the whole, agreed as to their conception of national prosperity or happiness. They agreed to a far greater extent than they themselves perceived as to the means by which national prosperity should be promoted. They agreed also that the will of the nation, that is to say the common will, or the public opinion of England, should be expressed by Parliament as representing the electors, and that the will of the nation thus expressed had a moral as well as a legal claim to obedience.

If the expression "public" needs explanation, a good deal more complete than considerations of space allow me to borrow from our author, the expression "opinion" itself receives from him, and assuredly deserves, equally careful examination. Opinion, even if it be public, is by no means always rational; it may often be more sentimental than reasonable. Yet it may be true opinion, though grounded on ideas which have little connection with logic. It may also be truly held, though adopted from others. It may be part of a man's real belief simply because (and this in itself is no bad ground) it falls in with a man's general view of life. But this general view is never perfectly true, and may be almost entirely false. Then, again, as to many topics a true public opinion can hardly exist. A sensible man, for instance, may be quite aware that on definite topics he ought to be guided by the results of scientific investigation, or, in other words, by the opinion of men who possess the best knowledge obtainable. But, then, since even scientific men sometimes disagree with one another, in this case the non-scientific ignoramus must feel that on a given topic true wisdom lies in his having no opinion at all. It causes me immense regret that I cannot follow out

**Public Opinion and Popular Government.* By A. Lawrence Lowell, President of Harvard University. American Citizen Series. New York: Longmans, Green & Co.

for your readers the most interesting conclusions which Mr. Lowell suggests as to the questions in respect of which no public opinion can in reality exist, and the decision whereof should as far as possible be left to experts.

The second leading characteristic of "Public Opinion and Popular Government" is the proof that an analysis of the nature of public opinion may make it possible, at any rate, to understand, if not always to solve, problems which puzzle thinkers and often harass the statesmen of civilized countries.

Let me explain the meaning of this statement by one salient illustration drawn from Mr. Lowell's treatise. Most of the readers of the *Nation* have, it may be assumed, from time to time defended or attacked the system of party government. How many of them, I wonder, have distinctly asked themselves the question, How does it happen that in every modern democracy party government, whether we like it or hate it, exists? Our author, at any rate, forces this inquiry upon the attention of his readers. He shows us that men of rare ability have proposed very different answers. The existence of parties, says a German writer, is to be attributed to natural diversities of temperament corresponding to the different states of maturity in man from youth to old age. The youthful man, whether he be young in years or young in spirit, is by nature a Radical; a middle-aged man is a Conservative; an old man is a Tory, or a reactionist. Other writers hold that political parties are caused by the conflict of interest between different forms of property. Gabriel Tarde, who I am glad to see receives from Mr. Lowell the respect he so well deserves, traces the growth of partisanship to the contrast between the tendency to imitate traditional custom and the tendency to imitate new fashions, while Sir Henry Maine finds the origin of parties in the primitive combativeness of mankind. Each of these explanations of partisanship may contain an element of truth, but none of them exactly meets the question in hand, namely, why the system of party government exists with more or less vigor under every form of modern democratic government. Our author supplies an answer, whether wholly satisfactory or not, to this specific question. Democracy is, he lays down, in every modern state the attempt to govern in accordance with public opinion, and, further, to govern in accordance with the public opinion of the vast mass of the citizens. Now, in a state which consists of many millions of citizens who, after all, can from the nature of things answer to any public question laid before them, only by a plain "No" or "Yes," it is absolutely essential that the persons, whether Conservatives, Liberals, or Radicals, who on the whole agree together, should get the information and receive the discipline necessary for giving expression to their agreement. And party government is the best machine hitherto invented for collecting and expressing the opinion of millions of citizens. The party leaders, or the party managers, enable the voters to act in masses. Such leaders or managers are, in fact, to use a happy expression of Mr. Lowell's, politicians who act as brokers. They may be honest brokers, who act with a view to the benefit of their country; they may be respectable brokers, who act with a view to the interest of the party which they lead and who generally are persuaded that the interest of their party may be identified with the interest of their country; they may be dishonest brokers, who care for nothing except satisfying their own lust for power, or, in the worst of all cases, their own love of money. The party system, however, is, according to our author's teaching, the outcome neither of virtue nor of vice, but of necessity. It is the one method as yet invented for supplying to millions of voters the means, I might almost say the power, of common action. This, at least, is the inference which I draw from the teaching to be found in "Public Opinion and Popular Government"; it is an inference of immense importance; it cannot be properly separated from the number of most ingenious and original suggestions made by our author as to increasing the utility and as to lessening the evils of party government.

On some other occasion I may be perhaps allowed to criticise the doctrine which I have tried to expound. I trust I may have succeeded in justifying my assertion that a sound analysis of the meaning to be attached to the term "public opinion" does, in our author's hands, lead to conclusions both of theoretical and of practical importance.

A. V. Dicey.

THE AMERICAN POLITICAL SCIENCE ASSOCIATION.

Urbana, Ill., January 10.

The Association held its tenth annual meeting in Washington, December 30 to January 1. Its headquarters were at the Shoreham Hotel. The first session, on Tuesday afternoon, was devoted to International Law, and papers were read by Mr. E. M. Borchard, Profs. Frank A. Updyke, N. Dwight Harris, and F. Wells Williams. In the evening of the same day presidential addresses were delivered by Prof. W. W. Willoughby, on behalf of the American Political Science Association, and by Prof. W. F. Willoughby, on behalf of the American Association for Labor Legislation. On Wednesday morning, December 31, a session was devoted to political theory, with papers by Prof. R. G. Gettell, Dr. Ernest Brunken, and Mr. Alpheus H. Snow. Mr. Robert Lansing, who was to have presented a paper, was unavoidably absent. His paper, however, will appear in the Proceedings of the Association. At the Wednesday afternoon session, which was devoted to legislative reference bureaus, papers were presented by Prof. Chester Lloyd Jones, Hon. Robert L. Owen, Mr. Donald Richberg, and Dr. Horace E. Flack. In the discussion that followed, Dr. Charles McCarthy, Mr. John A. Lapp, and Mr. Eliott H. Goodwin took part. Wednesday evening was devoted to Congressional procedure, with papers by Mr. A. Maurice Low, Prof. W. F. Willoughby, Prof. J. W. Garner, and Dr. J. David Thompson. Thursday morning was devoted to a conference on instruction in government. Papers were read by Profs. Edgar Dawson and J. Lynn Barnard, and a committee report was presented by Prof. C. G. Haines. The discussion at this meeting was participated in by Profs. Clyde L. King, J. Q. Dealey, E. M. Sait, Dr. Arthur W. Dunn, and Hon. P. P. Claxton, Commissioner of Education. The Thursday afternoon session was devoted to the business meeting of the Association, and reports were presented by Prof. C. G. Haines, chairman of the committee on instruction in government; Dr. E. A. Fitzpatrick, secretary of the committee on practical instruction in government; Prof. Ernst Freund, chairman of the committee on legislative methods; and Prof. Clyde L. King, chairman of the committee on city and county government.

Prof. W. W. Willoughby's presidential address on "The Individual and the State" discussed the philosophical conception of the sphere of State activity, and concluded that there were no limits upon governmental action for the accomplishment of social purposes. The state as an organ of society may properly be employed to effect social ends. The presidential address of Prof. W. F. Willoughby, of the American Association for Labor Legislation, dealt with the "Philosophy of Labor Legislation" and favored a broad activity of government in that sphere.

Dr. Ernest Brunken's paper on "Some Political Tendencies in Modern Legislation" was one of the ablest presented to the Association, and attracted much attention. At the meeting devoted to Congressional Procedure distinctly new suggestions were made by Prof. W. F. Willoughby and Dr. J. David Thompson. Professor Willoughby urged the more effective organization of Congress for the performance of its supervisory or non-legislative business, and Dr. Thompson presented among other things statistical tables of the actual work performed by the various committees of Congress.

The distinctly practical subjects discussed at the sessions devoted to legislative reference bureaus and to instruction in government attracted perhaps the greatest attention. Especially important was the session on instruction in government, at which a committee report was presented by Prof. C. G. Haines. Mr. Claxton, the Commissioner of Education, at this meeting pledged his support to the investigation undertaken by the Association with reference to political science teaching.

The discussion of methods of teaching insisted upon the practical element, and this was still further emphasized by the report of the committee on practical instruction in government. This committee was constituted for the purpose of considering plans for combining practical experience with academic training in government, and during the year it had accomplished a great deal in the investigation of this subject. Important committee reports on legislative methods and on city and county government were also made to the Association.

New committees were constituted to deal with the subjects of ballot forms and of freedom of teaching in American educational institutions.

The officers of the Association for the year 1914 are: Hon. John Bassett Moore, president; Prof. Charles E. Merriam, first vice-president; Prof. G. G. Wilson, second vice-president; Prof. L. S. Rowe, third vice-president; W. F. Dodd, secretary-treasurer. W. F. D.

NEWS FOR BIBLIOPHILES.

Reports were received last year at the New York State Education Department from 477 free lending libraries in the State, showing a total of 4,707,472 volumes in stock and a circulation of 21,530,294. These figures show a gain over the previous year of 13 in the number of libraries reporting, 285,571 in their stock of books, and 1,221,118 in circulation. Since 1893, when the present State system of supervision and aid for free libraries was adopted, there has been a five-fold growth in the number of volumes in free libraries, and a nine-fold growth in public use of the libraries. The per-capita circulation is now more than six times greater than in 1893, and notwithstanding the great increase in stock of books, the circulation per volume in stock has almost doubled. There are five times more books, and each book receives nearly twice the amount of use.

In their financial statements for the past year the libraries of the State show a total of $3,814,875 available for the year's expenses. Of this amount $1,738,420 was provided from local taxation, $687,955 from interest on endowments, $196,447 from the State (including $136,860 for support and rehabilitation of the State Library), $79,023 from gifts, $21,317 from entertainments, and $1,091,710 from balances on hand and miscellaneous sources. Library appropriations from local taxation were greater by $116,988 than in the preceding year. The amount expended for books, periodicals, and binding was $1,030,804, and for library salaries $1,661,104. Estimating salaries in terms of circulation, it appears that the libraries are paying 7½ cents in personal service for each book issued. This, however, includes libraries where circulation represents perhaps less than half the service rendered.

Of the 52 cities of the State, 46 are now provided with free public libraries, two others have subscription libraries available to all on the payment of a small fee, two provide limited library service through the public-school library, and two provide no public-library facilities whatever. The latter, however, Lackawanna and Watervliet, are in a sense parts of neighboring cities, and individuals may obtain library privileges from those cities. There are 24 villages in the State having each a population of 5,000 or above. In all but three of these, free or public libraries have been provided. They have an average stock of 9,174 volumes and an average circulation of 29,651.

The total number of incorporated villages in the State is 456. In 224 of these, or just about one-half, there are regularly chartered free libraries, and in about one-half of the remainder the school libraries provide some free-library privileges. Outside of incorporated cities and villages, there are 134 communities or districts which have regularly chartered free libraries, supported in part by district or town taxes, but depending mainly on voluntary contributions, membership fees, and proceeds from entertainments.

Of the total of $1,738,420 appropriated from local taxes last year for library support, $1,651,324, or 95 per cent., was provided by the cities. Greater New York provided $1,232,366, or 70 per cent., of this amount. Reduced to a per-capita basis, the figures mean that Greater New York is paying for each unit of population a library tax of 25 cents, Buffalo 24 cents, Syracuse 32 cents, Rochester 14 cents, Utica 34 cents, Mt. Vernon 46 cents, Albany 14 cents, Yonkers 17 cents, New Rochelle 44 cents, Poughkeepsie 43 cents, Schenectady 15 cents, Binghamton 22 cents, Niagara Falls 25 cents, Watertown 26 cents, Troy 8 cents, Auburn 15 cents. The tax per volume circulated in these cities was: Greater New York 8.6 cents, Buffalo 10 cents, Syracuse 12.5 cents, Rochester 30 cents, Utica 14 cents, Mt. Vernon 9 cents, Albany 4 cents, Yonkers 7 cents, New Rochelle 10 cents, Poughkeepsie 12 cents, Schenectady 7 cents, Binghamton 6 cents, Niagara Falls 10 cents, Watertown 9 cents, Troy 6 cents, Auburn 9 cents. It is worthy of note that several of the cities which are paying the highest per-capita rate for their libraries are getting a more than corresponding circulation, so that their tax per unit of issue is among the lowest, illustrating the fact that in many cases an increased tax makes for positive economy in results.

One hundred and ten different libraries were benefited during the year by gifts or bequests, each valued at $100 or more, the largest number of libraries ever thus benefited in a single year. The total amount of gifts and bequests is estimated at $1,123,291, the greater part of which was for buildings, grounds, or permanent endowments. The larger gifts were as follows: To Columbia University, a building to house the library of architecture and art, costing $500,000, from S. J. Avery; to New York Public Library, by will of W. A. Spencer, one-half his residuary estate and his private library; to Glens Falls, by will of Henry Crandall, estate worth $500,000, to be applied at discretion of trustees to public park, Boys' Saving Club, and public library; to Hamilton College library, $100,000 for a building from unnamed benefactor.

Of the 110 gifts reported, only three were from Mr. Carnegie, and these represent less than 3 per cent. of the total value of the year's gifts. It is worthy of note also that for every dollar given to libraries by the State, $32 was given by private donors.

To complete this survey of the library resources and activities of the State, there must be added the statistics of library facilities and circulation provided by the State Library, with its unique department of travelling libraries, which serves as a free library for all the people of the State, particularly for those without other library facilities. Last year small libraries, averaging 41 volumes each, making a total of 45,651 volumes, were sent for local use to no less than 1,114 localities or groups of readers. This was a gain over any previous year of more than 250 libraries sent out, and is double the number reported ten years ago.

In the library situation of the State as a whole, the most striking feature is, of course, the rapid development and huge totals shown by the great city libraries. Thus of the total stock of 4,707,472 volumes in all the free libraries of the State, 3,459,359 are in the cities and 2,051,743 in Greater New York alone; and of the total annual circulation, numbering 21,530,294 volumes, 18,300,454 were issued to city borrowers. But when it is considered that 76 per cent. of the population of the State is contained in cities, and that the population outside of cities is now actually less than it was twenty years ago, the development of libraries in the villages and rural districts of the State must be regarded as even more notable than that in the cities. Thus, of the 477 free libraries shown in the year's reports, 319 are outside of cities, and these have a total stock of books numbering 1,248,113 and an annual circulation of 3,228,840—an average for each of these libraries of 3,912 volumes in stock and 10,122 circulation. Of the total gain last year of 1,221,118 in circulation from free libraries, 598,077, or nearly one-half, was from libraries outside of cities, representing only one-quarter of the population.

The full strength of the showing in the smaller towns will perhaps best appear from a comparison with conditions reported in other States having State library commissions or bureaus of recognized efficiency. Thus, Wisconsin is generally recognized in the West and Middle West as a model for other States in its library system and its library propaganda. It has a population almost exactly equal to that of New York outside of cities. In the whole of that State, according to its last report, there were 165 free libraries, 90 library buildings, 987,254 volumes, and a property in library buildings amounting to $1,764,000. The extra-city poulation of New York has twice the number of free libraries, twice the number of buildings, a quarter more books, and a greater valuation in library buildings than the whole State of Wisconsin.

Indiana, with a population greater than that of rural New York and a model library law and commission, reports 145 free or public libraries and 106 library buildings, more than one-half the latter being gifts from Carnegie. Both in libraries and buildings rural New York has twice the facilities reported for the whole of the Hoosier State.

California, with a population substantially larger than that of rural New York, and with a model library system, reports for the whole State 124 free libraries supported by city tax, 21 county library systems, 54 subscription libraries, and 60 association libraries, a total of 259, of which not more than 205 are free. It has 117 library buildings, 80 of which are Carnegie gifts. The total of free libraries and buildings is at least a third less than that of the smaller population in rural New York. Even Massachusetts, which was the first State to establish a State department for library extension, and which boasts a free library for every township, has fewer free libraries in operation in proportion to population than the village and country part of New York. ASA WYNKOOP.

(Head of Public Libraries Section, New York State Education Department.)

THE SOCIAL EMERGENCY.

TO THE EDITOR OF THE NATION:

SIR: Concerning matters of sex and reproduction, there has been for many generations a conspiracy of silence. The silence is now broken. Whatever may be the wisdom or the folly of this change of attitude, it is a fact, and it constitutes a social emergency.

Throughout the nineteenth century the taboo prevailed. Certain subjects were rarely mentioned in public, and then only in euphemistic terms. The home, the church, the school, and the press joined in the conspiracy. Supposedly, they were keeping the young in a blessed state of innocence. As a matter of fact, other agencies were busy disseminating falsehoods. Most of our boys and girls, having no opportunity to hear sex and marriage and motherhood discussed with reverence, heard these matters discussed with vulgarity. While those interested in the welfare of the young withheld the truth, those who could profit by their downfall poisoned their minds with error and half-truths. An abundance of distressing evidence showed that nearly all children gained information concerning sex and reproduction from foul sources—from misinformed playmates, degenerates, obscene pictures, booklets, and advertisements of quack doctors. At the same time the social evil and its train of tragic consequences showed no abatement.

The past few years have seen a sudden change. Subjects formerly tabooed are now thrust before the public. The plain-spoken publications of social hygiene societies are distributed by hundreds of thousands. Public exhibits, setting forth the horrors of venereal diseases, are sent from place to place. Motion-picture films portray white-slavers, prostitutes, and restricted districts, and show exactly how an innocent girl may be seduced, betrayed, and sold. The stage finds it profitable to offer problem plays concerned with illicit love, with prostitution, and even with the results of venereal contagion. Newspapers that formerly made only brief references to co-respondents, houses of ill-repute, statutory offences, and serious charges, now fill columns with detailed accounts of divorce trials, traffic in women, earnings of prostitutes, and raids on houses. Novels that might have been condemned and suppressed a few decades ago are now listed among the best sellers. Lectures on sex hygiene and morals are given widely, above four hundred such lectures having been given under the auspices of a single society. Fraudulent doctors, while obeying the letter of new laws, are bolder than ever in some directions, and use the alarm caused by the production of "Damaged Goods," for example, as a means of snaring new victims. Generations of silence, enforced by the powerful influence of social custom, have been suddenly followed by a campaign of pitiless publicity, sanctioned by eminent men and women, and carried forward by the agencies of public education that daily reach the largest number of human beings—namely, the press, the motion picture, and the stage.

This far-reaching change in the customs of society is fraught with immediate dangers, because we do not know whether the mere knowledge of facts concerning sexual processes, vices, and diseases will do a given individual harm or good. The effect of such information upon any person is unquestionably determined by his physiological age, by his nervous system, by the manner and time of the presentation of the subject, above all by his will power and the controlling ideals that are acquired along with scientific facts. We have not discovered thoroughly trustworthy pedagogical principles, administrative methods, and printed materials for public education in matters of sex. So difficult and complicated are the problems, and so disastrous are mistakes in this field of instruction, that the home, the church, and the school—the institutions to which young people should naturally look for truth in all matters, the agencies best qualified to solve the problems—are extremely cautious and conservative.

Great as are the industrial and political revolutions of modern times, it is doubtful if anything so deeply concerns the coming generations as our measure of success in confronting the present social emergency.

Here mistakes will not do; here incompetent teachers cannot be trusted. Ill-advised efforts to teach sex hygiene may aggravate the very evils we are trying to assuage. Because the subject is of vital importance, education in sexual hygiene and morals must proceed cautiously and conservatively; according to tried methods, psychologically sound; always under the control of men and women of maturity, who see the present emergency in its many phases, who know how to teach, whose character is in keeping with the highest ideals of their work.

Unhappily, not all of those who have been stimulated by the new freedom of speech to thrust themselves forward as teachers of sex hygiene and as social reformers, are safe leaders. Some are ignorant and unaware that enthusiasm is not a satisfactory substitute for knowledge. Some are hysterical. At a recent purity convention a woman said, "I know little about the facts, but it is wonderful how much ignorance can accomplish when accompanied by devotion and persistence." That declaration was applauded. Some people appear to believe that they will arrive safely if they go rapidly enough and far enough, even though they may be going in the wrong direction. Young people of opposite sexes, finding evidence on every hand that the traditional taboo is removed, discuss the subject for personal pleasure. The books in the field of social hygiene which have most scrupulously and successfully avoided everything that might be sexually stimulating are not the ones bought by the largest numbers. The demand for erotic publications is so great as to warn us in advance that the new freedom will prove dangerous for many whose minds are already unclean. The propaganda for chastity is unlike many others, in that there is special danger of doing injury to the very ones in special need of help.

The American Social Hygiene Association and affiliated societies have arisen to meet the present social emergency. They are temporary expedients. Their chief aim is public education. They should frustrate the efforts of all dangerous agencies and hasten the day when the home, the church, and the school shall meet their full responsibilities in the teaching of sexual hygiene and morals.

WILLIAM TRUFANT FOSTER.

(Vice-President Social Hygiene Association, President Pacific Coast Federation for Sex Hygiene.)

Reed College Portland, Ore., January 14.

THE CONSTRUCTIVE QUARTERLY.

TO THE EDITOR OF THE NATION:

SIR: My attention is drawn to the appearance of my name in the *Constructive Quarterly* for September and for December in the list of the Editorial Board. Will you kindly permit me to say in your columns that I resigned my connection with this publication last May and at that time requested that my name should be removed from the list? DICKINSON S. MILLER.

New York, January 17.

THE NATIONAL GUARD OF PENNSYLVANIA.

TO THE EDITOR OF THE NATION:

SIR: In your issue of January 1 you refer to the National Guard of Pennsylvania, and in the next paragraph you say: "In the street-car strike in Philadelphia in 1910, a company of militia was disarmed and made ridiculous by a mob of women, which was promptly handled and made to behave by a small body of police."

To a person reading your article, who did not know the truth, it would appear that the company of militia was a part of the National Guard of Pennsylvania. As a matter of fact, it is no more a part of the National Guard than it is of the State constabulary. It is called the State Fencibles, and at the present time it is merely a social organization of which most of the members are young boys. It receives no support from the State and is supported by the city of Philadelphia.

As a reader of the *Nation* and for seven years a member of the National Guard, I think it right that you should correct this wrong impression. In the coal strike of 1902 the National Guard of Pennsylvania proved its worth and showed that it is as good as any other citizen soldiery in the country. THOMAS A. WOOD.

Bristol, Pa., January 19.

THE AMERICAN HISTORICAL ASSOCIATION.

TO THE EDITOR OF THE NATION:

SIR: In the *Nation* of January 8 there appeared an account of the Charleston meeting of the American Historical Association, in which a well-defined movement against certain existing methods was dismissed as a "discussion of the system of electing officers." This movement was an important feature of the business meeting.

I have awaited the appearance of the annual account of the meeting with some curiosity, as I rather expected that little would be said about the reasons which lie behind the well-taken objections to the present methods of electing the officers of the Association. As this is a vital question in a great and useful organization of students and scholars, I may venture to make some comments upon it.

Section 4 of the constitution of the American Historical Association, as it appears in the last official report, is as follows:

> The officers shall be a president, two vice-presidents, a secretary, a treasurer, and an executive council consisting of the foregoing officers and six other members elected by the Association, with the ex-presidents of the Association. *These officers shall be elected by ballot at each regular annual meeting of the Association.*

The last sentence is plain and unmistakable. It is the organic law regulating the election of officers of the American Historical Association. It is not possible to have a legal election of officers in any other way than that laid down in the constitution.

I have been an active, an interested, and an attending member of the Association for about twelve years. I have attended, if my memory is accurate, ten annual meetings, and it has never been my good fortune to see the provisions of the constitution relating to the election of officers carried out in an annual business meeting. May I commend this astonishing fact to the many learned gentlemen of the Association who specialize in constitutional interpretation?

It may be interesting to know something about the methods in force in the Association for the election of officers. They are something like this: The council, at its annual meeting, very obligingly, and in order that the Association may not be distracted from its scholarly repose, selects a nominating committee to name the officers. This committee keeps its action a profound secret, for reasons of state, or perhaps because the council has not given out the list, until the business meeting. When the rank and file are assembled they are politely but firmly told who are to be the officers for the coming year. It may be called unparliamentary for one of the workers in the ranks from Mississippi to call such methods oligarchical, but the word certainly fits.

It does not appear by what authority the council presumes to appoint this nominating committee. The Association itself, the creator of the council, certainly has no authority to appoint such a committee, but it seems that the council has. That it has assumed such authority seems to be beyond question.

There have been many and long-continued murmurs beneath the surface against such methods, and they at last found expression at Charleston, much to the evident astonishment of some of the leaders, and to the manifest pleasure of the rank and file.

The American Historical Association is suffering from a dangerous disease. It cannot be cured by homœopathic treatment. It is a case for the knife. If I know anything of the sentiment of the modest, earnest, scholarly men who sustain the Association, they will not submit further to arbitrary and unconstitutional methods in the administration of the affairs of one of the greatest associations of scholars in the world.

I have no personal criticism to make of any one. I do not wish to be understood as finding fault with the officers of the Association, past or present. I am not an office-seeker, for I well know that my action at Charleston prevents me from accepting an official position in the Association for years to come, if not for all time.

DUNBAR ROWLAND.

Literature

COMMERCE IN ANCIENT CHINA.

Chu-Fan-chi: Chinese and Arab Trade in the Twelfth and Thirteenth Centuries. By Chau Ju-kua. Translated from the Chinese and annotated by Friedrich Hirth and W. W. Rockhill. St. Petersburg: Printing Office of the Imperial Academy of Sciences.

This Chinese treatise falls into two parts. The first part deals briefly with the various countries with which the Chinese traded, each geographical division having a separate short chapter, and offers many curious bits of information which the author has picked up in the older chronicles, or has heard from contemporary merchants or navigators. In the second part a number of products brought to China from foreign lands are passed in review. Here we have various kinds of incense, choice nuts and condiments, costly ornamental woods, a few precious stones, ivory and rhinoceros horns, tortoise-shell, decorative feathers, ambergris, and a special chapter devoted to parrots. The very full notes with which the work has been provided by its translators and editors constitute a veritable mine of valuable information from all attainable sources regarding the matters treated of in the text.

The leading port of entry for these varied products was Canton, and the Government took good care to obtain a considerable share of the imports for itself. As a general rule, this share amounted to 30 per cent. of the goods, and as any attempt at smuggling was punished by the prompt confiscation of the entire cargo, there was probably but little loss on this score. The result, however, of an experiment made by China to augment this trade by the institution of an active propaganda among the foreign traders and by the issuing of especially favorable licenses to a number of importers, shows how risky a thing is governmental interference with the normal course of supply and demand. The volume of trade was, of course, greatly increased, but not enough buyers could be found, and the Government officials in the interior provinces had to bestir themselves to procure purchasers by offering inducements for barter (p. xix).

These mediæval maritime traders had many difficulties to contend with besides those arising from the risks of navigation. If a ship got off her course and put into the first port at hand, a pretext was often found to confiscate her cargo. Then there were the inevitable "presents" which had to be bestowed on the port officers, and as these were virtually the same for all craft, there was little or no profit for the owner of a small ship. Moreover, the individual traders had not only to guard against the rapacity of outsiders, but also against the possible dishonesty of their fellow-traders on shipboard; during the voyage each trader slept on top of his goods.

Chau Ju-kua tells us that some of the Indian traders carried with them, in opaque glass bottles, a kind of "holy water," which would still tempests if it were poured out over the sea. This may have referred to water brought by Mohammedan pilgrims from the sacred well of Zemzem, in Mecca (p. 111 and p. 113, note 2). Possibly the use of oil to break the force of the waves, which has stood the test of modern investigation, and was already practiced in the times of Aristotle and Pliny, may have some connection with this story.

In a mediæval record we need not be surprised to find mention of sorcery and sorcerers. It is stated that on the Somali coast there were many enchanters, who had the power to change themselves into "birds, beasts, or aquatic animals," and were thus able to terrorize the inhabitants. They were also greatly feared by the traders, for it was confidently asserted that, by their charms, they could paralyze the movement of a ship, so that she could sail neither forward nor backward. It is stated that "the Government has formally forbidden this practice" (pp. 130 ff.). Marco Polo

tells much the same story of these sorcerers.

Among the objects of value to be found in foreign countries, diamonds and pearls are not forgotten. Of the Indian diamonds it is said that they "look like fluor-spar" and that they would not melt "when exposed to fire an hundred times." To exemplify the hardness of the stone, Chau Ju-kua adds: "It can cut jade." The use of diamond dust for this purpose may have been of special interest to the Chinese writer, as a means of conquering the extreme toughness of jade, the favorite precious substance in China. Pearls, on the other hand, were much better known to the Chinese, and have always been much more prized among them than diamonds. While the finest specimens came from the Cingalese and Persian fisheries, China herself had extensive fisheries in the southern islands off the coast of Lién-chóu-fu; these fisheries were already exhausted in the sixteenth century. Of the perils encountered by pearl-divers in the pursuit of their vocation, Chau Ju-kua gives the following grewsome details:

> Pearl-fishers, with ropes fastened around their bodies, their ears and noses stopped with yellow wax, are let down into the water about 200 or 300 feet or more, the ropes being fastened on board. When a man makes a sign by shaking the rope, he is pulled up. Before this is done, however, a soft quilt is made as hot as possible in boiling water, in order to throw over the diver the moment he comes out, lest he should be seized with a fit of ague and die. They may fall in with huge fishes, dragons, and other sea monsters and have their stomachs ripped open or a limb broken by collision with their dorsal fins. When the people on board notice even so much as a drop of blood on the surface of the water, this is a sign to them that the diver has been swallowed by a fish. Cases occur in which the pearl-fisher makes a signal with his rope and the man holding it on board is not able to pull him up; then the whole crew pull with all their strength, and bring him up with his feet bitten off by a monster. (P. 230.)

The roundness of a pearl, a necessary characteristic of the finest, was determined by putting the pearl on a plate; if it were perfectly round, it would roll about all day. To avoid the payment of duty, traders often sewed up their pearls in the lining of their garments, and sometimes concealed them in the hollow handles of their umbrellas. Transparent stones, resembling cat's-eyes, were brought from certain streams in Malabar. They were believed to have been generated by the vitalizing force emanating from certain sparkling substances on the face of the cliffs rising above the streams (p. 88). The real cat's-eye was in the time of our author a favorite jewel for ring-setting, and these rings were frequently worn by foreigners in Canton. Indeed, the wearing of rings appears to have been looked upon as rather a foreign custom. The Tonquinese, who favored the habit, had rings which were sometimes worth as much as "a hundred gold pieces." Some were set with the bezoar stone (*mo-so* in Chinese), and if any one took poison unawares he had but to lick the bezoar in his ring and this was supposed to act as an antidote. In Borneo, at this period, a finger-ring was one of the presents to a bride, and in the Chola dominion, on the Coromandal coast, engagement rings of gold or silver were exchanged between the respective representatives of bride and groom.

It is pleasant to remark that in the time of Chau Ju-kua, the use of kingfishers' feathers for ornamental purposes was forbidden by law, the supply, such as it was (for luxury would not be denied), being smuggled in by dishonest traders. As early as 1107 A. D., the reigning Chinese Emperor issued the following edict against the use of these feathers, for the making of brocades, or for any other form of personal adornment (pp. 235-6):

> The Ancient Rulers in their governmental measures extended the principle of humanity to plants, trees, birds, and beasts. Now the depriving of living creatures of their life, in order to get their plumage for a perfectly frivolous purpose, is certainly unworthy of the kindness extended by the Ancient Rulers to all creatures. We therefore order the officials to stop the practice on pain of punishment.

The items we have presented here, gleaned almost at random, show what a storehouse of little-known and curious information the book is. There is a very full index.

CURRENT FICTION.

Irishmen All. By G. A. Birmingham. New York: Frederick A. Stokes Co.

In his latest work, a volume of character sketches, Mr. Hannay shows little patience with countrymen who "play safe" at life, content with a bare living instead of taking risks. Many a college-bred man, we are to infer, casts about for a clerkship in a Government office which, at the most, will bring him but £300 a year. "He might," says the author, "have gone into a stockbroker's office and learned to gamble. It is a dangerous sport, leading to bankruptcy sometimes, to jail occasionally; but the gambler has his great moments." Usually, the writer's tone is less direct. In the chapter devoted to the politician, whom he loves even though he understands him, the story is of Timothy Sweeny, who, having insulted a policeman, received in turn a bleeding nose:

> Timothy, who had the instinct for effect possessed by all great men, held up his dripping hands and turned his face, then rather streaky, to his admirers. "This," he said, "is the blood which I have shed for Ireland!"

It was then, I think, that we first began to realize that Timothy Sweeny would make a good member of Parliament.

Other chapters sketch the squireen, the country gentleman, the farmer, the publican, parish priest, etc. That on the farmer represents a subdued, tender side of the author which his fondness for farce all too frequently crowds out.

The Great Plan. By Edith Huntington Mason. Chicago: A. C. McClurg & Co.

"The Great Plan" is of suffrage inspiration, and involves an alliance with a millionaire's pocketbook. That is what permitted Emma to carry out the pet scheme she had hit upon as president of the Vassar College Suffrage Club. Upon leaving college, she induced her father to buy her a little castle on the Rhine from which to direct operations towards the liberation of the soul of the German *Hausfrau* from the bondage of *Kinder*, *Küche*, and *Kleider*. Her plan was to induce the German *Jungfrau* to emigrate from Germany—leaving the men behind her. The resulting depopulation of the Empire would undoubtedly bring the Kaiser to terms. Emma took up headquarters in her castle and installed lieutenants in other parts of Germany. Then began the canvass for souls. The number of women who had consented to leave home had reached goodly proportions when the Berlin police put a stop to further operations. Forthwith Emma attacked the citadel—Berlin. Working upon her knowledge of female psychology—obtained at Vassar—she made the vote a "craze." Fashionable women, including princesses of the blood, left their homes, formed a Boycott League, and took up residence far from the men. Then the Kaiser, alarmed, showed his hand. He offered the ladies a court ball at which a prize was to be given for the most becoming costume. He had put the crucial test.

Miss Mason introduces into her story prisoners in mouldy dungeons, lights gleaming in turret windows lit by the never-dying love of knights of yore, revels of crusaders at the witching hour of night, and reporters' attempts to write up the activities in the suffrage camp. How these occurrences were possible, how the entire affair worked out, whether the soul of the German *Hausfrau* was freed from bondage, whether Emma kept her vows of spinsterhood, the modest reviewer could scarcely compete with Miss Mason in the telling.

All Men Are Ghosts. By L. P. Jacks. New York: Henry Holt & Co.

In this volume are collected a number of those exercises in the direction of fiction which the accomplished editor of the *Hibbert Journal* puts forth from time to time. He is not a born story-teller; but the form of fiction is no longer even theoretically reserved for

that rare person. Few people now pretend to require that a story be a story: it may be a vehicle or a stalking-horse, a canal or a pulpit. Mr. Jacks is, we understand, a philosopher and a psychologist; but he has a human hankering for a wider and perhaps more genial audience than is supplied by the *Hibbert Journal*. And the best way to tie a knot on the street-corner is to don the robe and the posture of the professional story-teller.

That Mr. Jacks is supporting the rôle with some success is proved by the fact that two of the narratives in this collection—certainly the best two—have been printed in the *Atlantic Monthly*. In only one of them does he approach that touchstone of the highest order of fiction, characterization. But no doubt he would be the last person to claim for himself the power of making people live and breathe on paper. His method is that of the philosophical satirist; his chief obstacle a somewhat lumbering sense of humor suggestive of the eighteenth-century essay, rather than the brisk and allusive "short story" of to-day. For example, the idea of his longest sketch —that men are shadowy beings whose existence is doubted among all ghosts except a small and scoffed-at band of "researchers"—is essentially humorous; but the working out of the idea is clumsy and tedious. "The Magic Formula," the motive of which is, on the face of it, far less clear and "available" as a motive of fiction, succeeds by virtue of its delicate seriousness and its touch of mysticism. The long story of the Eastern water-carrier and his strange adventures again takes us back to those of the eighteenth-century essayists who so loved the diversion of the allegorical "Oriental tale." But the nut of the present allegory is not for common jaws to crack.

SCHOULER'S HISTORY.

History of the Reconstruction Period, 1865-1877. By James Schouler. New York: Dodd, Mead & Co. $2 net.

Thirty-three years have passed since Mr. James Schouler, a Boston lawyer in active practice, published the first volume of his "History of the United States of America under the Constitution." It was completed in 1891, in five volumes. But the author thought best to add a sixth in 1899, and we now have a seventh, which, in spite of its distinctive title, is a consistent part of the whole. We are assured that it is the last we may expect from the author, and there is added to the present volume a general index, but a poor one, of the entire work. Of the history as a whole, it should be said that the author has given it several revisions, modifying his statements as new materials have been made accessible to the public. In his final preface he properly asks that his book be judged by the last edition. If he has not written scientific history, he has at least appreciated its spirit, and he has made use of several of the large manuscript collections that have of late been opened to students. Despite his earnest effort to be modern, Mr. Schouler is an historian of the old school. He has not detachment, he does not escape from partisan bias, and he does not write with a due appreciation of cause and effect. He is a narrator of events. In the book we have an unfolding panorama. His story is readable and informing. It abounds in good portraiture and shows a fine appreciation of the human side of history. It is the history for the average intelligent man. It has been a comfort to many an editor, college student, and busy reader. It will survive in this sense, for it has accuracy of statement and sprightliness of narration.

The decision to write a seventh volume, we are told, was due to the perusal of the papers of Andrew Johnson, recently placed in the Library of Congress, and to the publication of the diary of Gideon Welles, a member of Johnson's Cabinet. Each source showed that Johnson's Administration had been misrepresented by contemporaries and badly described in history. That Mr. Schouler should have wished to vindicate the victim of so much party feeling is evidence of the author's fairness of intention. In his earlier volumes he was not free from the sectional point of view. Whether he wrote about the struggles of Federalists against Anti-Federalists and Republicans, or the progress of the great slavery controversy, or the war for the preservation of the Union, he wrote as a New England man, although it is evident he wrote in all sincerity. In his latest volume his point of view is without sectional cast. It is an illustration of the complete departure of sectionalism from our consciousness within the last two decades. So long as the South seemed likely to control the country in her own interest, and the North wished to control it in her own interest, there was sectional suspicion, and it is hard for a man to use the historical material on which he must rely without reference to this feeling. In later years the divisions in our politics have been by social classes rather than by sections. Until this seventh volume appeared Mr. Schouler could be said to be the last prominent American historian who wrote under the influence of sectionalism.

His view of reconstruction is presented with great distinctness. He not only admits the wisdom of Presidential reconstruction, but agrees that the South did very well under it until Thaddeus Stevens obtained its overthrow in order to establish a system which was as much inspired by the desire to thwart Johnson's political plans as to promote the interest of the negro. Stevens hated the President thoroughly, and he feared his project of uniting the milder men of the North with the Southerners in a moderate party which would wipe out of existence the recently organized Republican party. Of the President Mr. Schouler says: "I think of Andrew Johnson as a strong and sturdy pine in the forest, which has grown up distorted by some rocky obstruction, twisted out of shape and crooked in trunk, and yet vigorous at the core. He was stubborn in political opinions where he thought himself right, defiant, ready to fight for them; yet those opinions were just, enlightened, and such as only a sound and independent statesman could have formed." It is doubtful if a juster characterization of Johnson could be written.

During a portion of the reconstruction period Mr. Schouler was in Washington on professional business. Always interested in public affairs, he seized the opportunity to become acquainted with the important matters that were transacted under his eyes. Out of the information he thus acquired he has drawn a body of recollection which he incorporates in the volume with a modest apology. We thus get a glimpse of Washington life and many happy characterizations of public men. Especially interesting is a chapter in which the improvements in the capital are described, along with the failure of the attempt to establish self-government in the District of Columbia. These reminiscences are the most attractive part of a very good volume.

The Conquest of Mount McKinley: The Story of Three Expeditions through the Alaskan Wilderness to Mount McKinley. By Belmore Browne. Appendix by Herschel C. Parker. Illustrations from original drawings by the author and from photographs and maps. New York: G. P. Putnam's Sons. $3.50 net.

My Life with the Eskimo. By Vilhjálmur Stefánsson. Illustrated. New York: The Macmillan Co. $4 net.

It is impossible to analyze with certainty the amalgam of motives underlying the ceaseless movement of northern exploration, but the lure of the difficult and dangerous can hardly be less active than the desire to enlarge the bounds of human knowledge. In the three separate efforts that finally brought Mr. Browne and Professor Parker virtually to the crest of Mount McKinley, neither of these motives was destined to be fruitless, though it was not in their original plan that a part of the fruit of the second should be a demonstration of the falsity of a previous claim to the same achievement. To the

great majority of readers, surely, the most serious drawback in the literature of northern exploration at the present time is the probability that any new book in that field will be forced inevitably into taking up the problem of Dr. Cook, from one angle or another. As he had claimed to have reached the summit in 1906, shortly after parting from Browne and Parker, they could do nothing less in their later explorations than sift such evidence as they found for or against that claim, and all the more so in view of the odious polar controversy which had arisen in the meantime. We need only say that they found the exact place at which Cook's alleged summit photograph was taken, and found it only a little more than 5,000 feet above sea level. Evidently, Dr. Cook's later failure to distinguish between the straight line and the crooked was no sudden psychological effect of the chilly vigils of his "Polar" expedition. The time when his name can pass permanently out of current polar literature will be heartily welcomed.

In the 1910 expedition, while approaching the mountain from the southeast, from the valley of the Chulitna, they discovered Dr. Cook's peak. After bettering Cook's elevation by about 5,000 feet, Browne and Parker found this approach impossible, and withdrew. In 1912 they passed further up the Chulitna, and then, swinging to the westward, attacked the mountain from the north, this time successfully. We say *successfully*, although the few minutes' walk which would have led them to the absolute summit from the top of a series of steps which they had cut in the ice was denied to them by a fierce blizzard, with blinding snow, which would have made the recovery of their stairway impossible if once they had left it. Their observations place the summit 150 feet higher than the triangulations of the United States Government, or 20,450 feet. Professor Parker's appendix is confined to a few altitude and temperature readings at different points on or near the mountain, with an explanatory note on the method of determining altitude. In paper, print, binding, and cover decoration, the publishers have given the story an admirable setting.

The storms which, as we gather from recent press dispatches, have carried Stefánsson's ship from its base to some point at last accounts unknown to him have at least blown him good in attracting attention to his new book, telling of his life with the Eskimo, from 1908 to 1912. The work of these years was planned in consultation with the officials of the American Museum of Natural History, late in 1907, and, as Mr. Stefánsson's purpose was mainly ethnological, Dr. Rudolph M. Anderson joined him, in the interest of natural history. The ultimate aim, geographically, was the southwestern part of Victoria Island, where Mr. Stefánsson hoped to prove the presence of Eskimo in a region marked "Uninhabited" on official maps of the Canadian Government published as late as 1906. It was in the spring of 1911 that he succeeded in reaching this region, and it was here that he encountered the "Blonde Eskimo" that have taken so large a place in the press discussion of his voyage, though but a few pages are devoted to them in his book. There have been occasional references in Arctic literature to a people of this type, supposed to exist somewhere between the better-known regions to the eastward and westward of Victoria, but it was Stefánsson's good fortune to be able to put definite fact in the place of insufficiently supported rumors. He makes no attempt, as yet, scientifically to place them, but sees no historical or geographical bar to the possibility that they are descendants of the early Scandinavian colonists of Greenland. If the superficial resemblance to European types is really due to European blood, then he would regard the Scandinavian colony in Greenland as the only explanation. Such suggestions as that they are descendants of survivors of the disastrous Franklin expedition are, of course, thrown out. The type is too well marked to be due to so recent an infusion of alien blood. Possibly, the linguistic material collected by Stefánsson may help to a solution of the problem, when sifted by competent philologists, and his accumulation of folklore may yield some light. When we find him, however, stating in an off-hand way that he "also wrote down *several hundred thousand words* of Eskimo folklore in English translation" during two months at Point Barrow, within which many other activities are recorded, we cannot help feeling a little uncertain as to the possible quality of folklore so easily procured. And this feeling is not lessened by the admission in a subsequent chapter that it was only at a much later date, the last of his five winters among the Eskimo, that he could follow without effort the ordinary conversations going on in their houses.

Regardless of opinion on the point at issue, readers will tire, we think, of the frequent airing of his quarrel with the missionaries for disturbing the evolutionary balance of normal Eskimo life in general, and making it impossible for him to get any work out of an Eskimo on Sunday in particular. So far as the latter point is concerned, the baleful missionary influence seems to have swept the whole region like a blizzard, from Alaska eastward, even to settlements where the missionary himself has never set foot. That missionaries often interfere unwisely with native customs better adapted to actual conditions than any substitute from outside is true enough, but Mr. Stefánsson reiterates his objections until one begins to wonder whether, after all, he is not in the position of the traveller who cannot bear to see the picturesqueness of old Naples threatened by any advancement towards cleaning it up and making it fit to live in. With all due allowances, however, the book records a very successful expedition, the full value of which can be determined only when experts have had time to study the large collections brought back. As an explorer and collector in this particular field, his ability to do large work with little and inexpensive equipment tells heavily in his favor.

The Beginnings of Modern Ireland. By Philip Wilson. Baltimore: Norman, Remington & Company. $3.25 net.

Under the above title, Mr. Wilson has given us the first fruits of a careful study of Ireland in the sixteenth century. The present volume, which is to be followed by a second, is based upon the best authorities in print, supplemented by much manuscript material in the Record Office and at Lambeth. The research has been most thorough, and the reverse of perfunctory. The author knows his subject, and he knows it vitally—he has vanquished his notes, although they surround him at every step. One reason why he has been able to do this is that the subject has for him more than an academic interest. He deals honestly with the facts, and writes in judicial temper; but he writes from profound convictions which the studied restraint of manner serves only to make more effective. Mr. Wilson is, in fact, an Irishman who is concerned for the present state of Ireland, which he assumes to be one of "political disease"; and he is a scholar who is seeking the causes of that disease in "the past history of the country."

It might be difficult, if the point were pressed, to say what precisely is "political disease," but most men will agree that "there is something rotten in the state of Ireland," and it is not for the historian to deny that the present may be explained by the past. Now, there are different ways of regarding the past as cause of the present. The way to be profound in this respect is to say that the present is the necessary result of all the past—the outcome of "une trame continue de faits qui s'entrelacent et se succèdent sans cesse." Those who are interested to set Ireland right will be more apt to hit upon some particular aspect of her history as the fundamental cause of all her troubles; and such causes have often been pointed out, as, for example, the innate political incapacity of the Celtic character, or the vicious influence of

the Roman Church, or the incompatibility of the English and the Irish temperaments. Mr. Wilson clears the ground by discussing all these theories at some length, and with much acumen; and in the end he finds them inadequate or positively absurd. It is true that there is a national as distinct from a Celtic Irish character, true that the priests have often exercised a baneful influence; and both the Irish character and the influence of the priests greatly complicate the Irish problem *now;* but these are results, not causes, "not an explanation of the phenomena which it is our business to examine, but rather a part of those phenomena which require to be explained." The conclusion is doubtless just. It is by being oversubtle that Irish history becomes an enigma. Put quite simply, the trouble is that for the most part Ireland has been exploited for the benefit of the English aristocracy, instead of being governed wisely in the interest of all concerned. And now, after centuries of folly, the multiplied errors of the past rise up to thwart the best intentions, and wisdom itself will scarcely prove effective.

And this, we suppose, is the reason why Mr. Wilson has entitled his book "The Beginnings of Modern Ireland," although it deals with Ireland in the sixteenth century; modern Ireland being, from his point of view, the abnormal and diseased state of Ireland, he finds its beginnings in the inception of that mistaken policy on the part of the English Government which has induced the disease. The present volume is therefore concerned to present with all necessary detail the method and the immediate results of the establishment of English supremacy in state and church during the reigns of Henry VIII, Edward, and Mary.

The outstanding error of the period is naturally found to be the attempt to impose upon Ireland the English Reformation settlement. Neither the breach with Rome nor the new ritual was popular with any class in Ireland. The new ritual was unpopular, both because it was an imposition from England and because the ideas of the Christian Renaissance, which made it acceptable to Englishmen, had never gained any foothold in Ireland. The only effect of the breach with Rome was to weaken English influence in the Irish church by binding the Irish priesthood hand and foot to the Pope. Hitherto, the Papacy, having granted Ireland to Henry II, had supported English supremacy; and this support was of immense advantage to the Anglo-Irish as a dominant caste, while at the same time it created a certain national opposition to the Pope. But after the breach between Henry VIII and Clement, the Papacy gave all its influence to strengthen the Irish opposition to England; and this change weakened the position of the Anglo-Irish by attaching the Irish priesthood to Rome. The substantial result of the Reformation settlement, therefore, was to "convert the vast majority of the nation into docile children of the Roman Catholic Church." It is not superstition, but opposition to England, that gives the priests their hold upon the Irish at the present time.

The political settlement of Henry VIII has been more often commended. Mr. Wilson admits readily enough that it had its advantages. It was advantageous to the chiefs; by surrendering their lands to the King and receiving them back in feudal tenure, they obtained the protection of the King against each other, and a more effective control of their followers, who were subjected to them in the relation of tenants. But the settlement of Henry took on the character of a golden age only to those who looked back from the dark days of Cromwell's conquest; for if it had advantages for the chiefs, it had none for the mass of the people. As tenants, the people lost many of their ancient rights over the land, and the loyalty which they had shown to the elected leader largely disappeared when the leader became an hereditary over-lord. Henry had, in a word, "created Irish landlordism." And although Mary did much to restore religious tranquillity, the political and economic situation which confronted Elizabeth was more serious than it had ever been.

There is singularly little to object to in Mr. Wilson's treatment of his subject. He accepts as genuine the Bull *Laudabiliter* by which Adrian IV is alleged to have granted Ireland to Henry II. It seems to the reviewer that Scheffer-Boichorst and others have clearly demonstrated that the document is spurious. But Mr. Wilson's main argument does not depend upon the genuineness of *Laudabiliter*, for there is good reason to suppose that Adrian did offer to grant Ireland to Henry, although there is little to indicate that Henry ever accepted the offer. In connection with the debasement of the coinage, Mr. Wilson says that "financial dishonesty on a large scale dates, in Ireland at least, from the blessed era of the Reformation." Many sins may be charged against the Reformation, but the debasement of the coinage is hardly one of them. It has been maintained, indeed, that the Reformation and the debasement of the coinage were both results of some more profound economic condition—we have forgotten now just what. Since Mr. Wilson does not say that the Reformation was responsible for financial dishonesty on a large scale, it would have been better perhaps not to have implied as much. It is, however, not often, and never in any material point, that Mr. Wilson's sympathies carry him beyond the just measure.

Notes

We may expect shortly from Macmillans a new edition of "South America: Observations and Impressions," by James Bryce; "The American Doctrine of Judicial Supremacy," by Charles G. Haines, and a new edition of "Mexico: The Wonderland of the South," by W. E. Carson.

On Saturday Putnams issue "The Judgment of the Sword," by Maud Diver; a new edition of "One Generation of a Norfolk Family," by A. Jessopp, D.D., and "18,000 Words Often Mispronounced," by W. H. P. Phyfe, which is an enlarged edition of this author's similar work dealing with 12,000 words.

To provide good historical German reading for schools and colleges Prof. W. A. Adams, of Dartmouth, has edited for D. C. Heath, with notes and vocabulary, Rogge's "Der grosse Preussenkönig," which is a life of Frederick the Great.

A forthcoming book in the list of Paul Elder & Co. is "The Power of Mental Demand," by Herbert Edward Law.

In Dr. Richard C. Cabot's "What Men Live By," announced by Houghton Mifflin Co., the discussion centres on the topic, "The Call of the Job as the Doctor Sees It."

Lord Avebury's "Prehistoric Times" will appear on Saturday from the press of Henry Holt & Co., in a new and thoroughly revised edition.

The whole question of the Eastern versus the Western attitude towards life is raised in Paul Dahlke's "Buddhist Stories," announced by Dutton.

A London publication analogous to the new *Unpopular Review* is the *Candid Quarterly Review*, the first issue of which is promised by Mr. Gibson Bowles for February. It threatens with relentless exposure "insincerity, dishonesty, corruption, or aught that may bring danger or dishonor to the State."

Mr. Yone Noguchi, who is now lecturing in London, has placed with Elkin Mathews "Through the Torii," a volume of thirty-five essays, a number of which deal with English literature and art.

The London *Athenæum* notes with pleasure that Mr. Cecil Harmsworth has repaired and restored Dr. Johnson's house, at No. 17 Gough Square, and has thrown it open to the public. "A good part of the restoration consisted in burning off paint, six coats of which were removed from the woodwork of the staircase, which is left with the wood in its natural color." Dr. Johnson's own rooms on the top floor have been reduced to one, as the partition between them had nearly rotted away.

For the encouragement of historical research the American Historical Association offers two prizes, each of $200: the Justin Winsor prize in American history and the Herbert Baxter Adams prize in European history. Each is awarded biennially (the

Winsor prize in the even years and the Adams prize in the odd years) for the best unpublished monograph submitted to the committee of awards on or before July 1 of the given year. The conditions of award can be learned by communicating with the respective chairmen of the committees—with Prof. Claude H. Van Tyne (University of Michigan) as regards the Winsor prize; with Prof. George Lincoln Burr (Cornell) concerning the Adams prize.

In *Petermann's Mitteilungen* for December Graf v. Westarp describes a journey in Armenia and Kurdistan. The great agricultural wealth of the region, undeveloped from lack of means of communication with the world markets, strongly impressed him, as did the unlimited possibilities of electric power generated from the numerous mountain streams. Other subjects treated are the Spanish lake of Castañeda and the Admiralty Island, the least-known part of German New Guinea. There is also an excellent map showing the new provisory boundaries of Servia and Bulgaria.

"The Devil's Garden," by W. B. Maxwell, reviewed in the *Nation* last week and there credited to the London publishers, Hutchinson & Co., is issued in this country by the Bobbs-Merrill Co.

Mrs. Betham-Edwards is probably better known to American readers for her studies of French life than for her work in fiction, and the introduction of her "Lord of the Harvest" in the World's Classics of the Oxford University Press may cause some surprise—but it will give greater pleasure. Mr. Frederic Harrison furnishes a eulogistic preface which vouches for the authenticity of the pictures of rural life in Suffolk as the novelist knew that life in her girlhood. It is an exquisite and wholesome story.

A superb piece of work from the Riverside Press is the quarto reprint of "Washington's Farewell Address," issued by Houghton Mifflin Company in a limited edition at the price of $5 net. Montaigne type is used, and hand-made Italian paper.

From the R. R. Bowker Co., of this city, we have received "The Reference Catalogue of Current Literature" for 1913, published in London by J. Whitaker & Sons, Ltd. It is scarcely necessary to say that this standard work lists all the books now in print and for sale in Great Britain. As in the preceding issue, the Index is printed in a separate volume; it contains nearly two hundred thousand entries. For any one concerned in English publications the "Reference Catalogue" is indispensable.

It was a happy idea of Dr. Jacob Zeitlin, of the University of Illinois, to collect in one volume the writings which justify such a title as "Hazlitt on English Literature" (Oxford University Press). Beginning with the essay on the spirit of the Elizabethan age, he arranges these selected essays chronologically down to the studies of Wordsworth and Hazlitt's other great contemporaries. His purpose is to present Hazlitt's work in such form as to kindle in the student's mind some spark of the essayist's own magnificent enthusiasm and gusto for literature. To this end also he has prefixed a considerable study of Hazlitt as man and writer—chiefly the latter—which shows good mastery of the subject. There is no attempt on the part of the editor to attribute to Hazlitt critical virtues which he did not possess; possibly, however, he might have forestalled a certain coolness towards Hazlitt's enthusiasm which is likely to arise in the student's mind after the first shock of interest has subsided, by setting forth more clearly and frankly the weaker side of Hazlitt's genius. Though Hazlitt, for a man of so passionate an intelligence, was surprisingly fair and balanced in his literary judgments, one cannot but feel in him a certain lack of philosophic reflection, or of what might be called philosophic "character." He responds to good things immediately and spontaneously and passionately, but these literary reactions are often at variance with his political and social reactions. He is oftenest sound æsthetically by instinct; that is the quality of *gusto;* the higher faculty of *taste* would demand a consistent judgment from the whole nature of the man, æsthetic, mental, and moral. It is perhaps this trait of Hazlitt which makes him really more lastingly satisfactory in such personal essays as "My First Acquaintance with Poets" and "On Reading Old Books," and Dr. Zeitlin has wisely included four or five of these in his excellent volume.

Miss Dorothy Brewster's "Aaron Hill, Poet, Dramatist, Projector" (Columbia University Press), has the merit, somewhat unusual in a doctorial dissertation, of dealing seriously with a minor character of literature without attempting to magnify his importance. Despite Hill's enormous and varied activities, and despite the fact that he belonged to one of the most interesting groups of men England has known, he himself somehow fails to interest us, and Miss Brewster's careful and exhaustive treatise, though well managed, suffers a little the penalty of its subject. But for one concerned with Pope and his circle the book will have considerable value.

A French academician, not many years since, confessed himself unable, in spite of much rubbing of the eyes, to distinguish very clearly in English literature that note of national gayety which might be expected from the inhabitants of a country praised to all the world as "Merry England." Although it is only fair to remark that the Frenchman was perhaps betrayed by the modern meaning of "merry" into looking for somewhat more in the way of high spirits than the original significance of the word warrants—the phrase no more represents an attempt to characterize the national temperament than the corresponding expression, "la douce France"—still, we are forced to agree with him that English literature and English history are from beginning to end rather serious matters. Such an impression will not be greatly changed by a perusal of Prof. George H. McKnight's well-edited "Middle English Humorous Tales in Verse," issued in the Belles-Lettres series (Heath). The "Fox and the Wolf" is humorous enough in all conscience, but its humor is in large measure hardly more than a skilful presentation in English of what was already current in the European beast epic, to which England made only one other striking and apparently more original contribution, Chaucer's tale of the cock and the fox. To the cynical *fabliau* of "Dame Siriz," the widely diffused tale of the weeping bitch, the word *merry*, in any of its senses, could hardly be applied, and the humor of the minstrel romance, "Sir Cleges," is strictly of the slapstick variety. But humor is a highly conventional and hence extremely perishable commodity, and with all abatements the present collection serves as an excellent foil to contemporary productions at once more imposing and more dour. None of the three texts is conveniently obtainable elsewhere, and an elaborate introduction discussing the numerous and widely distributed versions of the stories, together with a detailed vocabulary, commends the volume to students.

A new edition, with new matter, of Hermann Hagedorn's "Poems and Ballads" (Macmillan) calls attention to his position among the younger poets of the day. As between the two impulses represented by Alfred Noyes and John Masefield, Mr. Hagedorn is allied emphatically with the former. Like Mr. Noyes, he turns by preference to the heroic and escapes from the meanness of the present by themes as scattered as Scandinavian mythology, Syrian love, Welsh legend, and Renaissance history. In most of those subjects he is quite at home. They call for moods, not thought, for a sweeping verse, and for the choice image, in all of which properties he is almost as facile as Mr. Noyes. Not that the forces of the day leave him entirely unmoved. He can chide a painted, powdered girl of fifteen, and find the heaven and hell in "this milky way of souls" which is New York, and grieve over the Senate's discrimination as regards the Panama tolls:

> Hot in the fevered blood of nations blazes
> The strife of souls. Only by clear-descried
> Intrepid equity can we endure.

But to "live issues" the writer is less inclined than to mingling in that fringe of consciousness of the age which is the Romanticist's delight. At times consorting "too precisely" with this spirit makes him a mystic, as in a long outpouring, entitled, "Wings," where he is inarticulate and hysterical:

> Hear it! The Wind!
> Wedge the shivering door,
> Tie firmer the blind.
> Wings!
> The infinite sorrow
> Of broken things
> Clutches my spirit.
> Hear it!

His appeal is most effective in more familiar, even trite themes which require him to be a simple poet, struck by beauty and slightly piqued by mystery. In this vein he sings charmingly of "The Hummingbird":

> Through the tree-top and clover a-whirr and away!
> Hi! little rover, stop and stay.
>
> Merry, absurd, excited wag—
> Lilliput-bird in Brobdingnag!
>
> . . . . . .
>
> A-whirr again over the garden, away!
> Who calls, little rover? Bird or fay?
>
> Agleam and aglow, incarnate bliss!
> What do you know that we humans miss?
>
> In the lily's chalice, what rune, what spell,
> In the rose's palace, what do they tell
>
> (When the door you bob in, airily)
> That they hush from the robin, hide from the bee?—
>
> Fearing the crew of chatter and song
> And tell to you of the chantless tongue?

When following his special inclinations

Mr. Hagedorn seldom falters; his verse has the desired "go." But until it contains some solid thought it is likely to leave the reader slightly cloyed.

Clifton Johnson's skilful reporting, with camera and pen, of American rural scenes, is carried into the sixth volume of Macmillan's Highways and Byways Series—"From the St. Lawrence to Virginia." As always, the author's main concern is with rural characters and rural talk, and the reader interested in the scenery of travel will grow impatient of the consistent blurring of the background. The chief criticism of the series as a whole, indeed, is the monotony which springs from this preoccupation with men and conversation. A farmer of New York does not talk very differently from a farmer of Wisconsin or Oklahoma, or of different matters. But having chosen his limited goal, the author achieves it with simplicity and truth, and preserves in print the picturesque flavor with which the inhabitants reveal their home life and employments. A certain distinction is lent the present volume in its sketches of survivors of the Civil War. A visit to Gettysburg, and rambles through the Rappahannock and Shenandoah valleys, where in remote districts memories of the conflict sturdily persist, follow winter scenes in the Catskills and Adirondacks, and in the coal and oil fields of Pennsylvania.

"Mercantile Credit" (Holt), by James E. Hagerty, considers in detail the nature of mercantile credit and its relation to bank and personal or consumptive credit. Several chapters are devoted to the credit man and his sources of information—mercantile agencies, travelling salesmen, travelling credit representatives, attorneys, banks, and a recently developed institution, the credit exchange. A study is made of the collector, his qualifications, his office system, and the most approved methods of collecting accounts. General readers will find of most interest the chapter on Mercantile Credit and Depressions. The author maintains that changes in distributive industry have a powerful effect upon the extension of credit and hence upon business failures and crises. The department store, the mail-order house, the branch shop, the coöperative purchasing organization, direct selling by manufacturer to consumer, all reduce the number of distributing agents, and therefore lessen the volume of credit required. Thus failures and crises are rendered less likely. On the other hand, the frequency and extent of failures increase as the products of a country become specialized and depart from the staple type. Credit based upon cotton, iron, or sugar is less subject to shrinkage in value than that resting upon highly wrought manufactured products. These and other influences must be taken into account in determining the causes of recent crises. The author maintains that an increase in credit transactions was more largely responsible for the crisis of 1893 than is generally believed. The book contains an historical and analytical examination of the bankruptcy acts of the Federal Government, and a chapter on State insolvency legislation.

Prof. W. W. Davis's stout volume on "The Civil War and Reconstruction in Florida" (Longmans, Green) adds another to the long list of monographs on American history, economics, and public law for which we have to thank the Columbia University School of Political Science, and to which the palm of definitiveness may confidently be awarded. The author modestly disclaims any pretence that his work adds greatly to the essential understanding of the period with which it deals, or that much that is new will be found in his pages. Students of American history are coming to see, however, that the working of public policy in the broad field of the nation is only to be understood fully when its course has been traced in the States also; and as an exhaustive study of a State during its seventeen most critical years, Professor Davis's work leaves little to be desired. Where the whole is so thoroughly done, comment upon the excellence of particular features is hardly necessary. Especially interesting and important, however, are the chapters on the economic adjustment of Florida to the war, with the survey of industry, State finance, and agriculture during the war period; on the conduct and treatment of the negro from 1861 to 1865; on the operations of the ill-starred Freedmen's Bureau; and on the period of lawlessness and crime which attended the imposition of Republican reconstruction. Never, perhaps, has the course of a great political party suffered such withering condemnation from historians as has that of the Republican party for the twelve years following Appomattox; and Professor Davis's study only confirms the general condemnation. The only material criticism to be passed upon the author's work is in the arrangement of the bibliography, where a fuller and more detailed annotation of the many rare items and of the Federal documents would have been helpful.

It was something of an experiment to take a local history of recognized merit and expand it to twice its original content. In the case of the "History of Lexington, Mass." (Houghton Mifflin), the experiment has justified itself. Taking Charles Hudson's "History," published in 1868, the Lexington Historical Society has revised the text, and continued the story to 1912. The revision of text involved not only identification of extracts, but the omission of sentences no longer vital to the story, and a page-to-page comparison is required to appreciate what has been done. Interest naturally centres on the account of the battle of Lexington, and the editorial committee could hardly pay a higher tribute to Hudson than by its statement that "while some new light has been thrown upon that event by modern historians, few, if any, narrations of the Battle are so comprehensive, so well balanced, and so accurate as is Mr. Hudson's." Liberal notes add to Hudson's facts, but his text in these chapters shows few changes. In one instance, that of the note on Yankee Doodle, the committee has passed over Sonneck's very careful study of its origin and use. So far then as a new edition of Hudson is concerned the committee has performed its task with judgment and thoroughness. The added chapters, bringing the history of the town and its institutions to 1912, indicate the great expansion of town life since 1868, and how far Lexington has satisfied the needs of its population. As a record of such town life the two volumes are all that can be desired. No man of national importance, except Theodore Parker, has come from its limits, and thus the connection with national history is slight, compared with that of the town of Quincy; but this fact enabled the committee to limit its labors to the locality. The second volume is devoted to the genealogies of Lexington families, in itself a great undertaking. In mechanical make-up the committee has adopted the best, so that both in content and in appearance the issue stands among the first on local history.

Prof. Charles H. Ambler's "Thomas Ritchie, a Study in Virginia Politics" (Richmond: Bell Book and Stationery Co.) supplies much information on a little known but important phase of our political history. Ritchie founded the Richmond *Enquirer* in 1804, and for forty years it was the mouthpiece of a powerful clique in State politics. He reflected the views of Jefferson, Madison, and Monroe, and in 1825 followed Van Buren, Crawford's heir, into the Jackson combination. He served the New Yorker faithfully, taking his side against Calhoun. In 1845 he went to Washington to become editor of the *Union*, founded to express the views of the Polk Administration. He was not a great editor in the sense that Greeley and Bowles were great. He did not make sentiment so much as interpret it. He bent before the blast, and often had to readjust his sailing apparatus to suit a changing wind. Owing to his close relations with the various administrations he was generally regarded as a good prophet of coming events, and through the weight Virginia had in Southern affairs he was a significant vehicle for expressing the opinion of his State on sectional matters. Professor Ambler has drawn the material for his book from the editorials of Ritchie and from the correspondence of the same editor and of other important contemporaries. His treatment is chronological and the emphasis is pretty even. Yet his book is not easy reading for even the well-informed reader. It contains few attempts at interpretation. On the other hand, it is a treasure-house of valuable matter. It makes it possible to understand better than before the gradual decrease of Virginia's power in the South and the slowly increasing influence of the Gulf States. Ritchie and his friends fought hard to ward off the triumph of Calhoun, knowing that it meant disunion. The logic of the situation was against him. When he failed Virginia was obliged to bow her head and for the second time surrender leadership. When that was done the secessionists took control of the South.

In "Italian Yesterdays" (Dodd, Mead) Mrs. Hugh Fraser's vein of reminiscence runs pretty thin. Of those vivid personal recollections which constituted the charm of her earlier volumes there is only a minimum. Much that she reports is remotest hearsay, more is compilation from reading. What we really have is a collection of historical sketches ranging from the early Christian martyrs to Pius IX. Queen Joan of Naples, Alaric, and the Man with the Iron Mask are representative intermediate topics. There is a good deal that is amusing in the book, but the random meth-

od, with constant slants in all directions, grows tiresome, and the ratio of substantial grain of information to chaff of comment and illustration is unduly small.

The death at the age of sixty is reported from Paris of Francis de Pressensé, an eminent French political writer, who, for a few months in 1880, was Secretary of the French Embassy at Washington. He then resigned from the diplomatic career in order to enter active politics. He was not successful in his candidature for the Chamber of Deputies until 1902, when he was elected to represent Lyons. He retired last year. M. de Pressensé was president of the League of the Rights of Man. One of his most important works was a history of the Union of England and Ireland. He was a constant contributor of political articles to the French press.

Science

RADIOACTIVITY.

Radioactive Substances and their Radiations. By E. Rutherford, D.Sc., Ph.D., LL.D., F.R.S., Nobel Laureate, Langworthy Professor of Physics, University of Manchester. New York: G. P. Putnam's Sons. $4.50 net.

An indication of the interest of the general public in the subject of radioactivity may be found in the proposal of Secretary Lane to conserve all lands containing radiferous ores for the benefit of the public, this benefit being expected to accrue in the possible cure of cancer. But this is not the reason for the interest in the book that lies before us, or the reason that its author, easily one of the two most important contributors to this subject, was honored with the award of the Nobel Prize, and has recently been knighted. It is for the interest of the wonderful physical relations and the adjustment of the hosts of newly discovered facts into a consistent body of theory that this book, the most recent and the most encyclopædic treatise on the subject, demands attention. Nothing can give a better idea of the rapid development of contemporary physics than the thought that the whole of our knowledge of radioactivity is not quite eighteen years old. In 1904 Professor Rutherford published his treatise containing 382 pages, followed the next year by a second edition, but the present work, the greater part of which is entirely new, reaches no less than 670 pages, and in many places is forced to treat matters with a conciseness which, though necessary, is to be regretted.

It was in 1895 that the world was astonished by the discovery by Röntgen of the so-called X-rays, with their mysterious power of penetrating opaque substances and affecting the photographic plate, and causing fluorescence, or lighting up, of certain salts exposed to their influence. This discovery suggested to Henri Becquerel the thought that certain ordinary bodies might emit similar radiations, with the result that he stated, on February 24, 1896, that salts of uranium possessed the property of emitting a type of radiation capable of penetrating through a considerable thickness of matter impenetrable to ordinary light. This power was found not to have, as at first suspected, any connection with the power of phosphorescence, but to constitute an entirely new phenomenon. It has been found that very many bodies have this power, to which the name radioactivity has been given, and the study of radioactive phenomena has given rise to a new and very important department of physics. Besides the salts of uranium, the element thorium and its compounds were learned to have these properties in large measure, and after the examination of great quantities of minerals containing uranium and thorium, Madame Curie was able to isolate a new element several million times as powerful as uranium, to which the name radium was given. It may be remarked that the very high price which radium commands (at present about $80 per milligram) is due to the enormous concentration that is necessary, and that the methods of preparation are no secret, having been described at length by Mme. Curie. In the ton of mineral handled by her there was present about 200 milligrams (about one-one-hundred-and-fiftieth of an ounce) of radium. Besides these most important substances, may be named the new elements: polonium, discovered by Mme. Curie; actinium, by her colleague Debierne, and ionium, by the American Boltwood, of Yale. The table given in the first chapter by Rutherford contains the names of thirty-two distinct radioactive substances, arranged in three families, according to their genesis.

To the original method of study of radioactivity, that of the impression on the photographic plate, was soon added a more powerful one, given by the effect of the new radiations in making gases conduct electricity, or, as it is called, ionizing them. Chapter ii is therefore devoted to the phenomena of ionization of gases, a subject studied at such great length by Sir J. J. Thomson and his students, of whom Rutherford was one. In the act of ionization the molecules of the non-conducting gas, neutral as regards electricity, are broken up into parts, charged respectively with positive and negative electricity, which constitute the *ions* (goers) that, under the influence of electric forces, travel and carry the electricity whose motion constitutes the current. One of the triumphs of Sir J. J. Thomson was the counting of the number of ions produced in a gas and the determination of the charge, always the same, and constituting the original package of electricity, now denominated the electron, the smallest thing we know, nearly two thousand times lighter than the atom of hydrogen. This ionization of the gas, then, generally air, is measured by the simplest of electrical instruments, the electroscope, whose charged gold leaves collapse when the air is ionized by the radiations in question, the rate of collapse being faster as the radiations are more powerful. It is one of the striking things connected with radioactivity that all the work is done with extremely simple apparatus, so that many of the figures in this book might have been drawn by a child, frequently representing a metal tube or box with little inside.

One of the chief results of the study of ionization comes from the fact that a moving ion is deflected by a magnet, the deflection being greater the *lighter* the ion. It is also deflected by an electric force, the deflection being greater the larger the electric charge of the ion; and it is by combining both these actions that we are able to find the ratio of its electric charge to its mass, a quantity of prime importance. In chapter iii we have treated the various methods of measurement of the radiations, comprising the photographic, electric, and the method employing the luminosity produced by the rays on screens of zinc sulphide or similar fluorescent substances. Several forms of electrometer are described, the purpose always being to measure the ionization current produced by the radiations. As an example of the care necessary in manipulation, it is stated that all sources of active matter should be kept in sealed vessels, otherwise the whole laboratory may become contaminated, and make measurements impossible.

It was soon found that the radiations are not all of the same kind, but they may be sharply divided into three kinds, known as α, β, and γ (alpha, beta, and gamma) rays. Examined by the action of a magnet, it is found that the β rays are strongly deflected, in such a direction as to show that they are negatively charged with electricity, and they are shown to be composed of small particles travelling with nearly the velocity of light The most remarkable thing about them is that the charge of each particle is found to be the same as that of the particles composing the cathode rays in exhausted tubes, with which the β rays are substantially identical. The α rays are but little deflected by a magnetic field, and in the opposite direction, showing that they are positively charged. They move about fifteen times more slowly than light. They are also small particles, many times heavier than the β particles. The γ rays are not deviated at all, and are probably not material particles, but waves similar to the X-rays.

The α rays are readily absorbed and stopped by thin metal foil or by a few centimetres of air. The β rays are about 100 times as penetrating, and the γ rays 100 times as penetrating as these, being able to be detected after passing through *eight inches of solid iron*. These properties enable the different rays to be distinguished, and a common way of measuring the activity of substances is to enclose them in an envelope thick enough to let only the γ rays pass. It is not to be wondered at, then, that many experiments are done with the radioactive substance sealed up in a glass tube. The ionizing effect of the rays is different from the penetration, the α rays producing the most of the ionization, the γ rays the least.

One of the most extraordinary experimental feats connected with the α rays is that of Rutherford himself of counting the α particles shot off from radium and of making a single α particle visible, at least by its effects. This was done by putting the radium in an exhausted tube at a considerable distance from a small hole through which the particle must go to reach the ionization chamber. In order to make the effect of a single particle perceptible, an electric field of considerable strength was imposed on the gas, so that the additional effect of the arriving α particle was magnified several thousand times, and was sufficient to move the electrometer. In the appendix we actually see a photograph of the motion of the index of a string electrometer, every tooth upon the record corresponding to the arrival of one α particle. The magnitude of this performance may be estimated when we consider the result that the number of α particles expelled per second from one gram of radium would be 13.6 times a number represented by 1 followed by ten ciphers. Of course, it is only an infinitesimal fraction of such a number that are allowed to go through the hole and register.

After four chapters on the three kinds of rays and their properties, we come in chapter viii to the continuous production and decay of radioactive matter. In fact, while the early experiments had seemed to show the surprising fact that the activity of emission of the rays went on undiminished with time, more careful measurements showed that the activity of all bodies was subject to continual decay, according to the very simple law of compound interest, namely, that the rate of *loss* is proportional to the amount remaining, or, to put it otherwise, if in a given time one-half of the substance has decayed, in the same time one-half of the remainder will have decayed, and so on. To account for this the hypothesis of disintegration of the atom was put forward by Rutherford and Soddy. That is to say, in a substance like uranium, the atoms are not permanently stable, but on an average a constant small fraction of them (about one in a million million millions, or 10^{18}) breaks up each second. The atomic explosion is violent, and results in the expulsion from the atom of one, or possibly two, α particles with great velocity. The remaining atom has a smaller atomic weight than the original one, and has quite different properties. Thus we have a spontaneous transformation of the elements, so long looked for by the alchemist and chemist. But the transformation is quite different from ordinary chemical change, in that it is absolutely not affected by temperature or other physical circumstances. It is for this reason that radioactivity is not to be classed under chemistry. The new atoms may disintegrate again, and thus we have the evolution of the radioactive substances, and their arrangement in families, with parents and descendants, of which we have spoken. Thus it has been found that uranium is the grandparent of radium, its parent being ionium, while radium has a long list of descendants, ending with polonium. Some of the descendants are gases, such as the emanation studied by Rutherford, of which there is one for the radium family, one for the actinium, and one for the thorium. It must not be supposed that these various generations are equally long-lived, for while the half-value period for uranium is six billion years, that for actinium A is but two-thousandths of a second. We may be allowed to wonder how the former number may be determined in the short time available here below, and also to be somewhat skeptical as to the relative accuracy of determinations of quantities of such enormous disparity.

In chapter ix we have an account of the radioactive gases, the emanation of radium having its half-period determined with considerable exactness as 3.85 days. The emanations are condensed to liquids by cold, like any gas, and can be absorbed by water and removed by boiling. They also diffuse like ordinary gases, and can have their molecular weights thus determined, the radium emanation being found to have a high molecular weight. In chapter x we have an account of the "active deposit," which is deposited on the surface of substances exposed to emanations, and constitutes a more or less complex radioactive substance. In chapter xiii, on radium and its emanation, in which among other things we find the spectrum of the latter, we get an account of the separation of *metallic* radium, accomplished for the first time by Curie and Debierne in 1910, by the electrolysis of radium chloride.

After several chapters on radium, actinium, thorium, and their products, we come in chapter xvii to the very interesting subject of the production of helium and the emission of heat. Helium is a gas that was discovered spectroscopically by Lockyer, in 1868, as existing in the sun. No evidence of its existence on the earth was discovered until 1895, when Ramsay showed that a gas found by Hillebrand in Washington to be given off on solution by certain minerals was identical with helium. Helium is chemically a very inert gas, and as it was found in considerable quantities associated with uranium and thorium, it was suggested by Rutherford and Soddy that it might be a disintegration product of the radio elements. Additional weight was lent to this suggestion by Rutherford's discovery that the α particle expelled from radium had an apparent mass twice that of the hydrogen atom, and might prove to be an atom of helium. This was found by Ramsay and Soddy to be the case, and they eventually had the satisfaction of seeing a tube of radium emanation in which the spectroscope revealed no helium at first, after standing four days, develop the characteristic helium spectrum. This was an event of great importance, as it was the first definite evidence of the production of a known element during the transformation of radioactive matter. It was finally shown conclusively by Rutherford that the α particles from all types of radioactive matter were identical and consisted of helium atoms carrying two unit positive charges of electricity. From the measurement of the rate of production of helium and the amount of it already found accumulated in certain minerals, it is reckoned that some of the primary uranium and thorium minerals are more than 200 million years old.

One of the properties that have attracted the most attention and given rise to the most discussion is the continuous emission of heat by radioactive bodies. The first definite measure of the amount of heat energy radiated was given by P. Curie and Laborde in 1903. They found that a radium compound kept itself continuously at a temperature several degrees warmer than that of the surrounding atmosphere. The amount of heat emitted by the radium was more than enough to melt per hour an amount of ice equal to its own weight. An active discussion arose as to the source of all this energy, and it was asked whether the doctrine of conservation of energy was overthrown, or whether the radioactive bodies possessed some hitherto unknown means of taking up energy from outside and converting it into heat; but it is now pretty generally admitted that the energy is stored in the atom, and is not inexhaustible, though very great in quantity. The enormous amount of energy released in transformations accompanied by the expulsion of α rays may be seen from the statement that the

emanation during its successive transformations gives out more than ten million times as much energy as the combination of an equal volume of hydrogen and oxygen to form water, although the latter reaction is accompanied by a larger release of energy than by any other known to chemistry. It is no wonder then that radium can produce burns and destroy diseased tissues.

The radioactive transformations also throw much light on the structure of the atom, models of which have been proposed by Lord Kelvin and Sir J. J. Thomson, representing it as a sphere made of positive electricity, in which circulate in nearly circular orbits swarms of negative electrons. It has been shown that under certain circumstances such an arrangement can become unstable, and one or more electrons would be expelled, as in radioactive changes. At any rate, it is evident that the atom is far more complicated than our old-fashioned ideas, which supposed it indivisible. In the last chapter we have an account of the radioactivity of the earth and atmosphere. As has been hinted above, it turns out that nearly everything is more or less radioactive, earth, air, rain, and snow. Geologists like Joly and physicists like Strutt have attempted careful estimates of the distribution of radioactive matter in the earth's crust, and have shown that there is more than enough to account for the internal heat of the earth. In fact, if they are right, there will not be much cooling of the earth for the next hundred million years. It will be seen how these results entirely upset Lord Kelvin's estimate of the age of the earth, made without any assumption of internal production of heat.

In an appendix we find two remarkable photographs showing the track of α and β particles made visible by their effect in condensing water vapor, and the registration of the expulsion of α particles mentioned above. We feel then that these modern magicians have actually made us see the formerly hypothetical atom. At the end we find a set of tables and an excellent index. Throughout the book one is impressed with the calm and unsensational tone adopted, absolutely free from the hysterical statements which we so often see in the press, and from any nonsense about the application of the great stores of energy of radium to drive engines, so eagerly desired by the sensational novelist. May we not in conclusion congratulate Sir Ernest Rutherford on what he has accomplished in forty-two years, and wish him an equally productive remainder of his life.

Dr. Edward Charles Spitzka, who dropped dead last week at his home in New York, was prominent as a neurologist. He was born in New York, November 10, 1852. He attended the College of the City of New York, 1870-73, and the New York University Medical College in 1873. From 1873-76 he studied in Leipzig and Vienna. Dr. Spitzka was a specialist in internal diseases, particularly of the nervous system, and served as a medical expert in cases of mental disorder; at the trial of Guiteau, the assassin of President Garfield, he testified to the prisoner's insanity. From 1881 to 1884 he was the editor of the *American Journal of Neurology*. He was the author of a "Treatise on Insanity."

Dr. Benjamin Osgood Peirce, Hollis professor of mathematics and natural philosophy in Harvard University, died on Wednesday of last week at his home in Cambridge. He was in his sixtieth year. Professor Peirce was born in Beverly, Mass., February 11, 1854; he graduated from Harvard in 1876, and three years later obtained the degree of Ph.D. at the University of Leipzig, after which he studied for a year in Berlin. Returning to America, he taught in the Boston Latin School, 1880-1881, and then became an instructor in mathematics at Harvard. In 1884 he was made assistant professor of mathematics and physics, and in 1888 he became Hollis professor. He was a member of the National Academy of Sciences, American Mathematical Society, American Physical Society, Astronomical and Astrophysical Society of America, Société Française de Physique, Circolo Matematico di Palermo, a Fellow of the American Academy of Arts and Sciences, and of the American Philosophical Society. Among his published works are "Theory of the Newtonian Potential Function," "Table of Integrals," and "Experiments in Magnetism."

Drama

W. S. Maugham's "The Land of Promise" will be issued shortly by Edward J. Clode in a profusely illustrated edition.

It is clear that as long as the world goes round moths will rush into candle flames, lawyers will dash into the Bacon-Shakespeare controversy, and professors will explain the sonnets and pluck at the heart of Hamlet's mystery. Wilbraham Fitzjohn Trench is an ex-professor, late of University College, Galway. He knows his Furness, his Dowden, the recent work of Professor Bradley, and much else. But highly as he regards, for example, Mr. Bradley's valuable work, he finds that solid critic's interpretation of Hamlet "quite incompatible with mine." And so he presents us "Shakespeare's Hamlet, a New Commentary" (Smith, Elder & Co.). He is of the opinion that he offers something "more or less new" on the source and nature of Hamlet's madness, on the Pyrrhus speech in Act II, Sc. ii, on the authorship of the sub-play (that it is all by Hamlet's hand and is not the Gonzago murder story), on Ophelia's character and her insanity, on the difference between "stage effect" and the "Shakespearean conception of dramatic effect." Mr. Trench, like most of his recent predecessors, feels that the distinctive feature of his exposition is its objectivity, its freedom from impressionistic conjecture. It is not likely that any other student of Hamlet will be impressed by his objectivity. To the writer of this note, for instance, his conception of Hamlet seems grounded less firmly on the facts of the play than that of Professor Bradley, his treatment of Ophelia occasionally suggestive but on the whole slanderous, and his theory of the authorship of the sub-play a mere "cranky" whim. If we had a volume at our disposal, we could set forth the reasons for the faith that is in us; we could explain to him that—"The rest is silence."

"Shakespeare and Stratford" (Little, Brown), a recent addition to the Literary Shrine series, by Henry C. Shelley, is a pleasantly written and well-made little book, which will be useful to tourists making a first visit to the Shakespearean country. It contains nothing new, of course, but offers a convenient, consecutive, and accurate epitome of the known facts and most of the legends relating to the poet, his family, and his neighbors. The author wisely refrains from theorizing on his own account and exhibits a judicious skepticism in dealing with the more or less plausible guesses of impressionable and credulous enthusiasts. He depends chiefly upon the researches of such qualified scholars as Halliwell-Phillipps and Sir Sidney Lee, and does not hesitate to quote the indisputable dates which prove that Shakespeare was not born in the cottage commonly revered as his birthplace, although he doubtless lived in it as child and youth. Of the authenticity of a good many of the so-called relics he disposes in curt and effective fashion, and he has some pertinent comments to make upon the petty and sordid commercialism, long a discredit to the town of Stratford, which is much more concerned about the extortion of the nimble sixpence than the glorification of the bard. It is well that a word of warning should be given to simple-minded pilgrims concerning the manifest fraudulency of the "mulberry tree" and other mementos of which the annual sale is enormous. That the original New Place mulberry may have been the actual property of Shakespeare is not unlikely, considering the slow growth of those trees and the great age to which they attain, but the last scrap of it must have been used up long ago. Of the early days and gradual development of Stratford Mr. Shelley, quoting freely from the writings of Irving, Hawthorne, and others, gives a full and interesting account, and he has a very pleasant and instructive chapter upon the Shakespeare villages, Charlecote, Hampton Lucy, Snitterfield, Wilmcote, and Shottery, plentifully illustrated with uncommonly artistic photographs of the buildings and spots most intimately associated with the poet and his connections. He has composed an admirable guide-book and has supplemented it with some notes for tourists which will well repay observation.

Sir Herbert Tree has formulated his plans for His Majesty's Theatre in London for some time ahead. To succeed "The Darling of the Gods" he has a dramatized version, by Norman MacOwan and Charlton Mann, of "The Blue Lagoon," the novel by H. de Vere Stacpoole, and a new drama by E. Temple Thurston, on the subject of "The Wandering Jew." He also has commissioned Louis N. Parker to make a new stage version of "David Copperfield," in which he

proposes to double the parts of Daniel Peggotty and Wilkins Micawber. It may be doubted whether he has the ruggedness or sincerity for Peggotty, but he ought to be able to do something striking with Micawber.

At the London Vaudeville Theatre Norman McKinnel and Frederick Whelen are to produce a new four-act play, entitled "Mary Girl," by a woman dramatist, who makes her first venture on the West-end stage, Mrs. Leonard Merrick. Her heroine is a woman in humble life, married to a man of austere, though loving, disposition. The two live happily together, content with their portion in life. Then Mary is transported into a world of which she has but the dimmest consciousness, with the result that her views, her ambitions, her outlook upon existence are materially altered. Out of this situation spring various dramatic and interesting incidents. The parts of husband and wife are to be played by Norman McKinnel and May Blaney.

Oscar Asche and Lily Brayton, newly returned from Australia, will soon revive "Kismet" in London.

George Slythe Street, appointed examiner of plays in England, in the place of the late Charles Brookfield, has edited an edition of Congreve's plays, in a series of which the late W. E. Henley had the chief charge. He was one of the circle which included Kipling, Barrie, and Wells, and is himself an author of several books. Probably his best-known novel is "The Trials of the Bantocks," which appeared in 1900, but a more popular work is his "Ghosts of Piccadilly." Mr. Street is London born. He received his education at Charterhouse School before proceeding to Oxford. His only appearance as a playwright was at the Stage Society, which produced his comedy, "Great Friends," eight years ago. He has been a not infrequent contributor to reviews and magazines.

The production in Paris of "The Playboy of the Western World" by M. Lugné-Poë was marked by the utter discomfiture of the critics. Partly this was owing to the incapacity of the French language to reproduce Irish cadences. Pegeen Mike's despairing cry, "Oh, my grief, I have lost him surely! I have lost the only playboy of the Western world," was denatured into "Oh, douleur! Je ne le verrai plus jamais. Je ne verrai plus l'unique baladin du monde Occidental." The play was variously described as "an Irish Peer Gynt," and "a rural Bernard Shaw." Some critics found a close relation between Synge and Swift. But all united in condemning the wit as being uncongenial to the French temperament.

Prof. Rudolf Genee, who was best known in England and this country for his writings and lectures on Shakespeare, is dead in Berlin; he was in his ninetieth year. A graduate of the Gymnasium zum grauen Kloster and the Königliche Kunstakademie, he became in 1859 editor of the *Danziger Zeitung* and two years later of the *Koburger Zeitung*. His Shakespearean lectures took him to the principal university towns of Germany and were carried on from 1865 to 1887. But Shakespeare was his specialty, not the limit of his scholarly interests. He wrote on English mystery and morality plays, besides much on the contemporary German stage. He was the author of monographs on Goethe, Hans Sachs, A. W. Schlegel, Kleist, and Bismarck. His latest work on the great English dramatist is entitled "William Shakespeare in seinem Werden und Wesen." As a young man he himself was a dramatist of some promise.

Music

The Life of Ethelbert Nevin. By Vance Thompson. Boston: Boston Music Co. $2.75 net.

Vance Thompson believes that Ethelbert Nevin's place in the history of music is permanent; that his songs, "born of an impulse at once personal and mysterious, have the eternal youth of the world's folk-songs." In any case, few of the world's folk-songs have been sung more frequently than his "Rosary," and few piano pieces played oftener than his "Narcissus." In distant Algiers Nevin heard a young fellow whistling it. Street musicians ground it out everywhere. He himself continued playing this piece because the audiences demanded it, but he came to the point of referring to it in a letter as "that nasty little 'Narcissus.'" As for the "Rosary," a sentimental semi-religious song, dear to the public, Mme. Schumann-Heink has called it her favorite American song. She thinks it great because in it are "heart interest and beautiful melody." She has sung it numberless times, not only in the United States, but in Germany, where the public "went wild" over it, even though she presented it in English. Wherever she sings it, she and the whole audience are "swept along in artistic transport to that anguished cry for a happiness that has escaped us. A song like that, to make all hearts beat together, is a work of genius."

It isn't—but let that pass. Nevin himself knew he had written much better things—songs like those which Philip Hale praised as characterized by "spontaneity of melodic invention" and "subtleties of harmonization." Rupert Hughes, in his book on "Contemporary American Composers," went so far as to say that one of Nevin's songs, "Autumn Mood," which did not win immediate popularity, was to him "as great as the greatest of the Lieder of Schumann, Schubert, or Franz." In view of the fact that Nevin lived only thirty-eight years (he died in 1901), the list of his compositions is surprisingly large; it fills six pages of this volume, in which they are arranged according to the year of publication. Most of them are for solo voice with piano, or for piano alone; but there are also a few pieces for violin and piano, choruses for men's or mixed voices, and a cantata, which appears to have been his longest flight.

The biography prepared by Vance Thompson consists largely of extracts from Nevin's letters to his family, particularly to his mother; those to his wife were considered too intimate and most of them were destroyed before his death. She was to him a critic as well as a helpmeet; during the thirteen years of their married life she saved everything that bore the mark of his thumb-print, thus facilitating the biographer's task. Apart from the revelation which this book gives of the personality of one of America's most melodious and popular composers, it reminds one a little of Amy Fay's "Music Study in Germany" because of the vivid pictures it gives of the life of American students abroad. Before he went to Germany, Nevin studied in Boston, of the musical life in which town he also gives some account. His aim was to become a concert pianist, and although he was never in robust health, he worked ten to twelve hours a day. Often he despaired of reaching his goal. One day, after climbing Savin Hill and gazing at the boats and steamers below, he wrote to his mother: "I almost wished I could bury myself in one of the ships, away out in the deep, and give up all the toil and worry of trying to be an artist. Oh, how discouraged I am! I don't think I shall live to be great, and I don't see how I can live if I'm not."

It was his good fortune to have for his principal teacher B. J. Lang, who stood at the top of his profession in the Boston of that day. This eminent musician, of whose methods and activities Nevin gives interesting glimpses in his letters, soon discovered his pupil's exceptional gifts and gave him unusual opportunities. At first the master sometimes got angry with the pupil, but this was nothing to what Nevin had to endure when he went to Berlin and became a pupil of Wagner's great friend, Professor Klindworth. He used to meet the pupils of this celebrity coming from their lessons, "white with anger and tears streaming down their faces"; and from what he heard he expected the professor to fling busts of Beethoven at his head, or throw him out of the window. He was promptly informed he had "much to learn," was coldly criticised, and got no praise; but when he heard that Klindworth had told one of his pupils that he had an American named Nevin who was one of the most talented fellows he had ever seen and who was sure to make a stir in the musical world, he was consoled; and subsequently he realized that Klindworth's treatment had made him work harder than any other might have succeeded in doing. Two years he remained with this pedagogue, who gradually treated him with more consideration. He also studied with Hans von Bülow.

Returning to America he had a hard

time trying to make his living as a teacher or a player. Pittsburgh welcomed him at his début as pianist, but subsequently ignored him when he needed to raise money by his playing to marry. Fortunately, his compositions began to sell, and thus he was able to give up his idea of becoming a travelling virtuoso. As a player he more and more confined himself to his own works. A critic who spoke of him as being, with MacDowell, one of the two leading American composers, declared that "MacDowell plays more like the devil" while "Nevin plays like a poet."

Failing health compelled him to make a trip to Algiers. In his earlier letters the reader follows him through his adventures in Florence, in and near Berlin, the Spreewald, Heidelberg, and Bayreuth. He worshipped Wagner, and much of his time was devoted to coaching singers in Wagnerian rôles. These and many other details are told in entertaining fashion by Mr. Thompson. His volume is adorned with a number of portraits and other pictures, and there are some pages of music by Nevin not heretofore printed.

The Vienna Royal Opera has paid over to Richard Wagner's heirs more than 1,000,000 crowns in royalties during the last thirty years. This makes an average of more than 33,000 crowns, or $6,600, annually paid to the Wagners from this one institution alone. From this an estimate can be made of the enormous income that Wagner's heirs have derived from the thousands of performances in all parts of Europe during these three decades.

The Philadelphia Orchestra, at its twelfth pair of concerts, played the funeral march from the "Eroica" symphony in memory of the late Dr. Weir Mitchell. The programme book printed also a poem on that distinguished citizen by Harvey M. Watts.

G. P. Putnam's Sons have made arrangements with Lilli Lehmann for the publication by them of a translation of her valuable and entertaining Memoirs. The translation is now in preparation by Mrs. George W. Seligman.

Elena Gerhardt, the famous lieder singer, is a great admirer of the songs of Eugen Halle, and she has put some of them on her programmes. Other singers would do well to follow her example, as these songs are far superior to many of those often sung, being modern yet melodious. And amateurs, by buying them, would help the composer, whose ill-health prevents him from earning his living.

Arnold Schoenberg, whose quartet in D minor will have its first public performance in this country by the Flonzaley Quartet, Monday evening, January 26, was born in Vienna, September 13, 1874. Now looked upon by some as a composer "whose every chord is the outcome of an emotion," he states it as his mission to free harmony from all rules. He once taught harmony in such academic institutions as Sterns Conservatory, Berlin, and the K. K. Akadamie für Musik, Vienna. As master-symbolist in music, he has, as Huneker says, "the courage of his chromatics." Concentration is the leading motive of all he does, and he has already accomplished much. Besides the Quartet in D minor, there is another, a string sextet, a symphonic poem, "Pelleas and Melisande," and a set of pieces for orchestra; choral works, piano pieces, and many songs. In 1910 he published a book on harmony which illustrates his theories.

Art

The collector, whether professional or amateur, will find in "Staffordshire Pottery and Its History" (McBride, Nast), by Josiah C. Wedgwood, much valuable and heretofore inaccessible information about the North Staffordshire potteries; yet the author has not aimed to produce a connoisseur's book. As honorable secretary of the William Salt Archæological Society, he dedicates his book "to my constituents who do the work," and he believes that it will be chiefly interesting to people to whom "the potbank and the shard ruck are as familiar and as full of old associations as the cow shed to the countryman or the nets along the links to the fishing population." He modestly hopes "that many students of history and sociology will find such a trade history as this of some value in their researches." They will. The book contains much to supplement such works as Cooke-Taylor's "The Modern Factory System" and Jonathan Thayer Lincoln's "The Factory System." Its tone is temperate and liberal. The Tory, truculently opposed to the present British Government's schemes of social reform, will find no comfort in this statement, anent a recent prohibition of the potter's right to poison his employees:

> When one remembers the intense hostility to this Home Office interference, it is curious to see how satisfactorily and easily the rules have worked out in practice. Potter's asthma is nearly extinct, and lead poisoning cases in the potteries have fallen from an average of 362 a year in the period 1896-8 to 93 a year over the years 1905-7. . . . The chief credit for this new departure should be attributed to William Owen, of the Potter's Union, and to the Duchess of Sutherland and Sir Charles Dilke.

The changes wrought by capitalism in a trade which began in the sixteenth century as a peasant industry, conducted in rude sheds in backyards, and which to-day is highly specialized, Mr. Wedgwood traces with wealth of illustrations and circumstantial detail. One suspects him of leaning backward in praising the work and character of competitors of his distinguished ancestors. While the narrative does not purport to be critical, it leaves the reader in no doubt as to the author's opinion of the periods of good taste and those of æsthetic decadence. The story of Methodism in the potteries is essential, for this influence, in the latter part of the eighteenth century, changed the potter's characteristic amusement from cock fighting to psalm singing. It affected the community's business life. "If you worked for Job Ridgway, you had to attend his chapel also." The potteries, like the textile towns, have had disturbances due to labor-saving machinery. Mr. Wedgwood, in opposition to a prevailing belief in the value of any and all machine production, asserts that "the pottery workers themselves have lost something through the introduction of machinery. The proportion of women and young persons employed in the industry is double what it was in 1850, and the work of married women is not good for the rest of the people."

"Hans Holbein the Younger," by Arthur B. Chamberlain, scrupulously sets down whatever is known about the great portraitist. This involves an enormous amount of detail and of incidental history. The work has been done painstakingly and accurately. Numerous appendices and an excellent index stamp the work as a scholar's book. It would be idle to remark that narrative ease and criticism are not to be expected. In such regards the treatment is merely adequate. Kenyon Cox's capital essay would have explained the surprising archaisms of Holbein's English manner. Mr. Chamberlain brings a judicial mind to the main problems of connoisseurship and biography. He inclines to think the little Madonna of 1514 at Basel an Ambrosius Holbein. Against many critics, he holds the famous Windsor chalk portraits to be relatively intact. The Nostell Priory version of Sir Thomas More's family he takes to be a badly garbled original, of which the face of More and the composition are Holbein's, the execution generally that of an inferior follower. Naturally, Mr. Chamberlain makes light of the romance of Magdalena Offenburg, the model for the Venus and the Lais Corinthica. Since he discusses contemporary British portraiture at length, he might well have included the Cranmer of the Metropolitan Museum, which until quite recently bore Holbein's name. Towards the Lady Lee of the Altman collection Mr. Chamberlain is noncommittal. We agree with Roger E. Fry that it is very difficult to see the actual workmanship of Holbein in this admirable portrait. Mr. Chamberlain's book immediately becomes the standard source of reference. While the appeal is chiefly to scholars, the handsome printing and excellent illustrations, many in colors, of the two folios should eminently qualify them for a gentleman's library. The manufacture is English, the publisher Dodd, Mead & Co., the price sixteen dollars net.

"Forty-three Drawings by Alastair" (Lane) is published in a choicely made folio at $12, the edition being limited. Robert Ross contributes what he calls an "exclamation point." Without this title it would be hard to tell it from the usual laudatory preface. The young cosmopolitan draughtsman Alastair—he is said to have French, English, and Spanish blood, and he certainly lives in Germany—is in many ways a reincarnation of Beardsley. He has the same exquisite sense of spotting and placing, the same piquant juxtaposition of bold blots and minutely penned patterns; and withal a very similar morbid imagination. The most powerful study in the album is the portrait of Signora Duse, a masterpiece of the overstrained sort. Without exception, the work is inspired by a curious and revolting pruriency, and the technical merits which we have in justice noted by no means redeem the essential filthiness of the things expressed.

No tourist with a grain of artistic sensitiveness can travel through rural England without being impressed by the subtle charm of the domestic architecture of that land of homes. The source of the impression is not always consciously perceived, for many of these homes, set back from the highways and embowered in trees, are so integral a part of the landscape that one does not readily dissociate them from their surroundings. Apart from the unpretentious straightforwardness of their design and the pleasing proportions of gables, wings, and roofs, their chief merit consists very largely in this oneness with their environment; and this in turn is due in large measure to the fact that they are built of the local materials, so that their style and aspect vary from one district to another with the geology and topography of the district. The contrast with modern American practice is striking in this respect, for the materials for our houses are brought from "all over," and style and design depend much more on the individual taste of owner and architect than on the kinds of stone and timber found in the vicinity. American architects are beginning to appreciate and to study English models in the effort to discover the secret of their charm and to impart something of the same quality to their own designs. The multiplication of books by English writers in this field has by no means yet exhausted the subject, and such an addition to the list as Louis Ambler's "The Old Halls and Manor Houses of Yorkshire" (Scribner) is sure to be cordially welcomed on this side of the ocean as well as on the other.

Finance

"BUSINESS" AND THE GOVERNMENT.

Last Tuesday's address by the President to Congress, on the Administration's programme for new company legislation was not only almost the single topic of this week's financial discussion, but may be described as the objective point towards which the markets have for six weeks past been moving. As defined on Tuesday, Mr. Wilson's proposals differed in no essential regard from the forecasts which had been freely sent out from Washington during the week preceding. By themselves they are fairly drastic. If proposed in the earlier stages of the Anti-Trust controversy, they would surely have occasioned great uneasiness in financial and business circles. Yet definite reports of this new policy have been accompanied by the almost continuous six weeks' rise on the Stock Exchange, by the turn for the better in general business, and by a rise in prices, after brief hesitation, even when the text of the message had been read. In part, this altered attitude is certainly explained by the reasonable and conciliatory attitude taken by the President and his law officers in recent dissolutions, and by the distinct assurance of this week's message that the Administration's purpose is "not to unsettle business or break its established courses. But the financial community's attitude also has some relation to the underlying soundness of the financial position itself, when the new proposals were set forth.

It would be a pretty subject of debate, whether the Administration at Washington is more fortunate in the rising stock market, because the rise throws a glamour of popularity over its policy towards business, or the stock market more fortunate in the Administration's policy, because that gives a concrete and continuing explanation for the rise in prices. Whichever view is taken, the Wilson Administration's good fortune must be admitted. There have been times when the Stock Exchange, with the best intentions, could scarcely have given this week's cordial response to the series of announcements. A surrender of recalcitrant corporations to the Government, announced when financial affairs were as deranged as they were in the summer of 1903 or the autumn of 1907, would either have fallen flat, so far as concerned the judgment of the financial community at large, or else, more probably, would have been denounced as the cause of all the trouble.

The extent to which a rising stock market, and the trade revival which is apt to accompany it, help the party in power and its leaders, is an old story. It has caused interesting conjectures as to the probable course of political history on certain occasions, if Prosperity, and its index in the Stock Exchange, had not moved as they did. Supposing that the Harrison Administration had ended on March 4 of 1895 instead of 1893; that the great panic of the last-named year had therefore occurred in the same Presidential term as the legislation of which it was partly the fruit, and that Cleveland's second term had then begun when the sudden business recovery of 1895 was under way—how many things in politics might not have happened which now stand on the records? Or if McKinley had taken office in 1894 instead of 1897—thus starting in a year of disastrous and unavoidable liquidation—would a Dingley high-tariff law have won the same place in popular tradition as the Wilson low-tariff law actually did, or not?

So far as regards the present, it would not be wholly easy to determine just how much of the better feeling (and of the rise on the Stock Exchange) is directly attributable to the new relations between the Government and the companies. Certainly not all of it is; and yet some part of it must be. Cause and effect are inextricably mixed in all such matters. This much may be said without hesitation—that the mere prospect of somehow removing most of the uncertainties which have so long surrounded the question of the "Anti-Trust suits" was bound to be welcomed in financial circles.

Even people who recognized that there was no way to check the monstrous tendencies of 1901 but by invoking the full sweep of the Anti-Trust law, and even people who cordially approved the forcible dismemberment of the Northern Securities and the Standard Oil and the American Tobacco, had nevertheless to admit that a mass of chaotic possibilities was left. How the law would thereafter be applied, where it would be applied, to whom it would be applied, were questions which nobody could answer confidently. There were a dozen different schools of interpretation. A spirit of uneasiness in conservative circles, and a spirit of wild suggestion in radical circles, were the inevitable result of such conditions.

We are presently to see, no doubt, how far the recent striking events in the field of government and Big Business have actually pointed the remedy. It will be said on the one hand that voluntary dissolution of a powerful company is no more favorable an outcome, so far as regards the enterprise itself, than compulsory dissolution after suit. But, on the other hand, it will certainly be suggested that, if the great combinations break themselves apart with so little inconvenience, disturbance, loss of usefulness, or sacrifice of intrinsic value, as officers of the New Haven Railway and the Telephone combination have professed in the case of their own dissolutions, then the terrors of the Anti-Trust law, as applied to all the rank growth of the eight short years which began in 1899 and ended in 1906, must have been strangely exaggerated.

The public has had its fill of argument on the other side. For years it has heard how such mammoth combinations as these were "suited to the spirit of the age," how only through them could we "hold our place in world-competition," and how, if we were to give them up, we should "revert to the business methods of fifty years ago." Since most of the same public was alive and capable of observation as long ago as 1899, it has always taken this reasoning at an easy valuation. But it would none the less be enormously relieved to have the weight of constant unsettlement and uncertainty in some degree removed. No doubt the Stock Exchange has reflected such a feeling.

BOOKS OF THE WEEK.

Allen, N. B. Industrial Studies—Europe. Boston: Ginn. 80 cents.

HENRY HOLT AND COMPANY 34 W. 33d St. New York

THE MEDICAL INSPECTION OF GIRLS IN SECONDARY SCHOOLS

By CATHARINE CHISHOLM, B.A., M.D., Medical Inspector of the Girls' High School, Manchester, England. With 6 diagrams. 8vo. Pp. xii + 208. $1.10 net. (Postage 7 cents.)

School hygiene has become more and more the foundation of our educational structure. Much has, of course, already been discovered through the medical inspection of primary schools; but in secondary schools we have still much to learn. This book was written to explain the methods and aims of medical inspection in higher schools and will be useful to the authorities of secondary schools for girls, and all who are responsible for the upbringing of young people.

LONGMANS, GREEN, & CO.

REMARKABLE DISCOVERIES IN EGYPT

PROF. FLINDERS PETRIE now devotes his entire time to the Egyptian Research Account (Society), whose discoveries relate to the history, arts and sciences of ancient Egypt, and to its predynastic age. The Society, managed by a Committee of forty eminent men and women, publishes an annual quarto volume, profusely illustrated, of great value, that should be in hundreds of public and private libraries. Circulars of the explorations and books freely furnished. Address REV. DR. WILLIAM COPLEY WINSLOW, 525 Beacon St., Boston.

READING CASE FOR THE NATION

To receive the current numbers in a convenient (temporary) form. Substantially made, bound in cloth, with *The Nation* stamped on the side in gold. Holds two volumes. Papers easily and neatly adjusted. Sent, postpaid, on receipt of 75c.

THE NATION, 20 Vesey Street, New York.

"THE DOMINATING ART BOOK OF 1913."

JAN VERMEER OF DELFT

By PHILIP L. HALE.

In the Boston *Transcript* of December 17 Mr. W. H. Downes calls this a "brilliant and readable book," and says Mr. Hale's "conclusions are logical and sound." This work fixes Mr. Hale's place as an authority upon "the greatest painter who has ever lived."

Large 8vo, fully illustrated. Buckram, $10 net, boxed; half levant, $20 net, boxed. Carriage additional. Descriptive circular on request.

Small, Maynard & Co., Publishers, **Boston**

BROWNING'S COMPLETE WORKS

Thin paper, large-type Pocket Edition. Edited by Charlotte Porter and Helen A. Clarke. 12 vols. Cloth, $1.00 per vol.; leather, $1.50 per vol.

"By far the most desirable edition yet published."—[*The Dial.*

THOMAS Y. CROWELL CO., New York

The Sonnets of William Shakespeare

New Light and Old Evidence.

By COUNTESS DE CHAMBRUN

12 *full-page illustrations.* $1.75 *net. By mail,* $1.90.

This new Edition of the Sonnets contains a readable as well as scholarly contribution to a most unsettled literary problem. There is new evidence solidifying some old theories, and there are ingenious suggestions opening up new vistas to the exploring mind.

G. P. PUTNAM'S SONS, Publishers, New York

READY JAN. 23D.

CHESTERTON'S
NEW NOVEL

THE FLYING INN

"A novel by a glad prophet on the rampage—one who views life unconventionally by standing the world on its head. 'The Flying Inn' is verbal horse-play by a humorist, mounted on the Rosinante of morality and masquerading as Don Quixote. Its humor is of the reforming kind which vanished with the last Puritan who pulled a long face and cut off a King's head.

"I like the book. Its irresponsibility is Gargantuan. It is all against proclaiming truth with a whine; when it preaches most earnestly, it laughs loudest."—*Coningsby Dawson, author of "The Garden Without Walls."*

Cloth, 12mo. $1.30 net.

AT ALL BOOKSTORES

BOYCOTTS AND THE LABOR STRUGGLE

ECONOMIC AND LEGAL ASPECTS. By HARRY W. LAIDLER. With an Introduction by Henry R. Seager, Ph.D., Professor of Political Economy, Columbia University.

Mr. Laidler's book is the first authoritative presentation of this live problem in the English language. It possesses the absolute novelty of dealing with *both* the economic and the legal phases of an important labor activity, and is moreover written in an exceedingly interesting manner. The book furnishes as well a cross section of the present labor struggle, setting forth much vital information not heretofore collected concerning the weapons used by labor's opponents.

As a member of the New York bar, a student of economics, a writer and lecturer, Mr. Laidler is well qualified to deal with this important and complex problem.

The book is invaluable to legislators, lawyers, judges, members of organized labor, employers, and students and teachers of the labor problem.

Crown 8vo. 488 pages. Cloth. $2.00 net. Postage 15 cents

ENGLISH TRAVELERS OF THE RENAISSANCE

By CLARE HOWARD, Lecturer on English Literature, Columbia University. Illustrated, 8vo. Cloth. $2.50 net.

A series of most interesting extracts from and comments on the innumerable little volumes of directions for foreign travelers issued during the sixteenth and seventeenth centuries for the guidance of English youths about to venture on the Continent. There are twelve delightful illustrations from portraits and old prints.

VOL. XCVIII—NO. 2535 THURSDAY, JANUARY 29, 1914 PRICE TEN CENTS

TWO USEFUL AND STIMULATING VOLUMES

What Men Live By

By RICHARD C. CABOT, M. D.

This book is a physician's contribution to the conduct of life.

A doctor sees people down and out. He knows that they need more than medicine or surgery to put them on their feet. He watches and studies to learn what actually picks them up when they have fallen down.

He sees all sorts of remedies tried—rest, travel, solitude, nature study, Christian Science, manual training, marriage, divorce, self-culture, deep breathing, theosophy, the simple life, the strenuous life, and many more.

His application of work, play, love, and worship to daily life and his experience of their healing powers are set forth in an inspiring and readable way.

$1.50 *net.* *Postage* 15 *cents.*

The Health Master

By SAMUEL HOPKINS ADAMS

"Few writers have done so much in a single volume to reduce the death-rate of the world as Mr. Adams does in this volume; his health master, a good physician, preaches the gospel of health—not cures—and he does it in a most interesting story. . . . Every chapter has a value all its own, and every one will find something in the book in which he is especially interested."—*Boston Transcript.*

"Suggestions and advice on matters of health and hygiene are presented in a unique but effective way. The advice is sound, the medium of a story is an acceptable means of giving it, and the book should be well received by all who are looking for a work on the general subject of how to keep well."—*Chicago Tribune.*

$1.35 *net.* *Postage* 12 *cents.*

READY IN FEBRUARY

ANNALS AND MEMOIRS OF THE COURT OF PEKING
By J. O. P. BLAND and EDMUND BACKHOUSE. Tells the story of the romances, the historic crises, the reversals and triumphs of the Manchu dynasty through the last five centuries. *Lavishly illustrated.* $4.50 *net. Postage extra.*

TERRY'S JAPANESE EMPIRE
By T. PHILIP TERRY. A new guide book (on the Baedeker model) to Japan, Korea, and Formosa, with chapters on Manchuria, the Trans-Siberian Railway, and the various ocean routes to Japan. Pocket size, with 1150 pages and 8 specially drawn maps and 29 plans. $5.00 *net. Postage extra.*

GEORGE BORROW AND HIS CIRCLE
By CLEMENT K. SHORTER. "A treasure and a delight to admirers of Borrow."—*London Athenæum.* "A sane book about a sane and magnificently wholesome man."—*London Daily Express. With frontispiece.* $3.00 *net. Postage extra.*

OUR FRIEND JOHN BURROUGHS
By CLARA BARRUS. The increasing thousands of lovers of John Burroughs and his writings will welcome this intimate book about the man, his life, and his personality. *Fully illustrated.* $2.50 *net. Postage extra.*

IN FREEDOM'S BIRTHPLACE
By JOHN DANIELS. Describes the conditions of the Boston negro of to-day, economically, socially, morally, and religiously. The book is written in a judicial spirit, and furnishes a readable contribution to sociological literature. $1.50 *net. Postage extra.*

IN THE OLD PATHS
By ARTHUR GRANT. A series of delightful essays, by an English writer popular in England and America, which recreate with charm and delicacy some of the great scenes of literature. *Illustrated.* $1.50 *net. Postage extra.*

LYRICS FROM THE CHINESE
By HELEN WADDELL. These free translations of a group of Chinese poems, some of them dating as far back as the 12th century B.C., are admirable in their faithfulness to the spirit of the originals. They breathe the fatalism, wistfulness, homely wisdom, and love of beauty so characteristic of all Oriental expression. $1.00 *net. Postage extra.*

THE LATEST FICTION

THE AFTER HOUSE
By MARY ROBERTS RINEHART. The most thrilling murder-mystery story since "The Man in Lower Ten," with the added savor of the sea, and a love story you will not forget. *Illustrated.* $1.25 *net. Postage extra.*

OLD VALENTINES
By MUNSON HAVENS. An appealing story of the course of true love and how a unique collection of old valentines came to the rescue and made the way smooth. An ideal Valentine Day gift. *Illustrated.* $1.00 *net. Postage extra.*

EZEKIEL EXPANDS
By LUCY PRATT. The further adventures of "Ezekiel," the engaging little negro boy, who won the hearts of fiction readers a few years ago. An ideal book to read aloud. *Illustrated.* $1.25 *net. Postage extra.*

THE PRECIPICE
By ELIA W. PEATTIE. An epitome of the aspirations, doubts, dreads, furtive discontent, and frank hope of women. *With frontispiece.* $1.35 *net. Postage extra.*

BURBURY STOKE
By WILLIAM JOHN HOPKINS. Written in the delightful vein of humor and sentiment which has made Mr. Hopkins's "The Clammer" a favorite book with so many readers. $1.25 *net. Postage extra.*

THE COMEDIES OF HOLBERG

By OSCAR JAMES CAMPBELL, Jr., Assistant Professor of English in the University of Wisconsin. Harvard Studies in Comparative Literature. Vol. III.

12*mo. Cloth.* 363 *pages.* $2.50 *net.*

Ludvig Holberg, the greatest of Danish writers, has hitherto been only a name to English readers. His relation to the classic theatre of the eighteenth century in France, Italy, and Germany, and his connection with the Addisonian school of essayists in England, make him a figure of many-sided interest and importance.

NOW READY

GREAT JURISTS OF THE WORLD

From PAPINIAN to VON IHERING

BY VARIOUS AUTHORS

With 20 portraits. Edited by EDWARD MANSON, Co-editor of the Journal of the Society of Comparative Legislation, and with Introductions by SIR JOHN MACDONNELL, Professor of Comparative Law in University College, London, and by VAN VECHTEN VEEDER, Judge of the United States District Court, New York. 8vo. *Cloth,* $5.00 *net.*

The aim of this volume in the Continental Legal History Series is to set forth the life, work, methods, and influence of the great jurists who have had more than a merely national importance in the development of European Law. This work is a sort of Plutarch's Lives for the History of Continental Law. Papinian, Alciat, Bartolus, Vico, Bacon, Leibnitz, Selden, Montesquieu, Cujas, Vattel, Savigny Bentham, Beccaria, Von Ihering, Mittermaier,—these and a few other names stand out as landmarks for all European Law.

D. APPLETON & COMPANY, 35 West 32nd Street, NEW YORK

The Nation

NEW YORK, THURSDAY, JANUARY 29, 1914.

The Week

The first steps towards calling the third Hague Peace Conference have attracted surprisingly little attention. The meeting the other day, at which were present Andrew D. White and Admiral Mahan, delegates to the first Conference in 1899, Charles H. Butler, delegate to the second Conference in 1907, and Judge George Gray and Oscar S. Straus, members of the permanent peace tribunal, is to be followed by a second meeting, at which a national committee will be appointed. The hope of those behind the movement is to prompt the State Department to send notes to the nations signatory to the Hague Convention, reminding them of the recommendation of the Conference of 1907 that its successor should meet in 1915, and seeking an agreement to a meeting next year. It seems generally agreed that the initiative will lie with the United States. The action already taken certainly cannot be criticised as premature. The last Conference urged that an international committee should he appointed two years in advance of 1915. This was for the preparation of a programme; but the committee has not heen appointed.

Mr. Taft has admirably summed up the anomalous position of aliens in this country under a Federal government that confers rights without heing able to enforce them. Twenty years ago the situation presented itself acutely to Mr. Blaine when the State of Louisiana would not take steps for the punishment of a mob guilty of murdering Italians, and the Federal Government stood helplessly hy. Mr. Taft's fears of what an outbreak of mob violence directed against Japanese residents on the Pacific Coast would mean are justified. The difficulties with Japan over California's restrictive land laws are vexatious enough, but the patient attitude of the Japanese Government has shown that the two nations are in no danger of going to war over the matter. It is the specific instance of moh outrage, for which no redress is offered, that stirs a people to war fury; and our national interests demand that if in some such untoward event a State court and jury refuse to punish mob violence, the Federal Government shall see to it that justice is done. Mr. Taft makes an excellent point when he shows that, while Federal authority is constantly extended into spheres that earlier generations never contemplated, the essential authority of the Federal Government in its own natural sphere of foreign relations is virtually frustrated.

The failure of the Shackleford good-roads hill to procure a rule permitting consideration of it as a "rider" on the Post Office Appropriation bill checks a measure only less objectionable than the Moon attack on the civil service, also defeated. Without a studied plan of expenditure, it would have appropriated $24,987,500 during the coming year to State road construction, and made it a national policy to suhsidize post-road improvement. It would have done this without waiting for the report of ex-Senator Bourne's commission of inquiry, created a year ago. Finally, by either of its two hazy schemes, it would have offered opportunity to the spoilsman. If Federal aid to road-huilding is ever to come, it should only he after mature consideration. Unofficially, ex-Senator Bourne has computed that road-construction will require the expenditure of a hillion dollars in the next half-century. Plainly, a heginning should not he made hy a skulking amendment to an appropriation hill.

Secretary of Lahor Wilson is the latest inventor on the market with an immigration test. The invention of immigration tests has become one of the most popular indoor games in Washington and its environs. Every other man you meet has a little formula up his sleeve by which you can exclude the kind of alien you wish to exclude and admit just the kind you wish to admit. As a result of the new craze for immigration tests, the sciences are hooming in Washington. Geography is written anew by Congressmen who are reconstructing the boundaries of Asia. And astonishing contributions to anthropology are made hy representatives of the American Federation of Labor, whose scent for racial distinctions is nothing short of marvellous. New principles of economics are embodied in bills providing for an international sliding wage-scale test. Now comes Secretary Wilson with the simplest of all tests, a weighing machine, a tape measure, and a dead-line fixed at thirty-five years.

A Wisconsin Circuit Court has declared unconstitutional the recently enacted law making a physician's certificate a prerequisite to a license to marry. This, of course, is not final, and the conclusion of the highest court in the State on the suhject will be awaited with interest. The whole matter is of interest and importance in more than one aspect. The law itself, quite apart from any question of constitutionality, appears to have been a hasty piece of work, considering the profound importance of the suhject it deals with. If we are to have regulations of this character, it should be only after the most careful consideration, both of their proper scope and limitations, and of the mechanism of their execution. If reports from Wisconsin are to be trusted, the actual operation of this law has been anything but satisfactory. And the experience is interesting, too, from the standpoint of the merits and defects of our Federal system—of the division between State and national jurisdictions. Under that system, it is possible to experiment with innovations like this without producing a country-wide disturbance, and without either arousing those antagonisms or encountering those difficulties which would attend an attempt to force them upon the acceptance of all the extremely diverse populations of the various States. But beyond hoth these aspects of the matter lies one that is of far more fundamental import than either—the question of the limits which it is intrinsically desirable to set upon the exercise of governmental control over marriage selection.

Wisconsin's workmen's compensation act of 1911 was held "the greatest piece of legislation yet put forth in the State." It followed two years' legislative inves-

tigation and was the last of many tentative drafts submitted to general criticism. But it was improved by amendment last summer, and the chairman of the State Industrial Commission now reports it working better than ever. The act is optional, but 88 per cent. of the employers have accepted it, rather than take their chances under the common law. The estimate is that 6,636 cases were settled during 1913, at an average cost of $62.89 each, or $417,374 as the total. Adding medical charges, "we have $626,061 as the probable cost of compensation for 88 per cent. of the industrial accidents of Wisconsin in one year." "The amount paid injured workmen is more than three times what they received under the old law." Yet cost to capital is the same, for through litigation "the injured workmen did not receive 25 per cent. of the sum paid by employers." Old-line insurance rates have been twice reduced during the year.

Now the United Mine Workers' convention has attempted to boycott Indianapolis by removing the meeting to another city, on account of the repression of disorder during the recent strike there. Indianapolis is a hopeless city, anyhow, as was shown by her connection with the capture of men concerned in the conspiracy to blow up bridges and other works constructed by non-union labor. The least that the United Mine Workers can do is to heed the advice of a speaker who said last week: "Men, don't spend any more than you absolutely have to in this city." If they are of the right stuff, they will eat only one meal a day in the depraved city, and sleep in the parks. But boycotting must not stop here. How many cities are there in this misnamed land of the free in which have sat courts that have granted injunctions, Governors that have called out the militia to keep order, regardless of who might be making the disturbance, juries that have condemned men for warring upon their fellow-men? Every one of these cities should be put under the ban. And it should be a thoroughgoing action. No product of such cities should be bought, no railway trip taken that involved going through one of them. All that is required is a little of the spirit of the man who got even with his face by biting off his nose.

To deal with the flood problem was the first task of the Ohio Legislature last week. The measure, prepared after general agreement between engineers, lawyers, and the legislative reference bureau, is interesting from several points of view. Partial application of the local-option principle is permitted. The "conservancy act" rests primarily on the organization of districts, each under its board of directors; and no district may be established except on petition of a specified number of freeholders. But as only ten months ago Ohio was suffering from a flood that cost scores of lives and $200,000,000 in property, unanimity of action is almost certain. Once established, the governing body has large powers: it may condemn lands, issue bonds, and exercise police powers, subject, of course, to court review. It is to regulate, widen, and deepen stream channels, reclaim wet and overflowed land wherever possible, and improve drainage. The work, by State direction, will be pushed first where the peril is greatest, and "extended to all sections where potential flood dangers exist." The reclamation of waste lands and conservation of water power are expected to be incidental but substantial benefits.

The magnitude of Los Angeles' work in bringing most of the Owens River 250 miles over the lower Sierra Nevadas and the Mojave desert has been duly recognized in the illustrated press. It is one of the enterprises vaguely called "second only to the building of the Panama Canal." The disinterestedness and courage that went into it might well rebuke San Francisco. But it is chiefly notable in justifying the decision of the city to go into business for itself rather than submit to what it regarded as the extortion of contractors. When the bids were opened eight years ago for the first engineering division, twenty-three miles, the lowest proposal was $500,000 in excess of the chief engineer's estimates. His prompt request to undertake the job with city labor was granted, and the division completed at a figure $700,000 below the lowest bid. Later, as a means of comparison, one section of twelve miles, 3 per cent. of the whole, was let. Basing the total cost on this contract, the city would have had to pay $40,000,000 instead of $23,000,000 for the aqueduct. Whether this project could have been carried out so successfully in any community headed by a corrupt Government is a question that will promptly occur to readers of the businesslike summary in the *National Municipal Review*.

Misery loves company, but not such company as Senator Bristow is having in his campaign for reëlection. If things were only as they were in the prehistoric year 1909, when Bristow was first elected! But since then has come the deluge, and in Kansas it is very hard to know which is the true Ark. Bristow thought about it a good while, and finally made up his mind to go into the Republican boat. He would have been taken into the Progressive ark for the asking, but he concluded that enough of his friends would follow him into the older boat to make it preferable. Still his friends hesitated. Now a new element is injected into the situation by the announcement of ex-Senator Curtis that he, too, proposes to return to Washington in the Republican craft. The seriousness of this announcement lies in the fact that Curtis has submitted his popularity to a severe test since the Chicago Convention by running against the redoubtable Stubbs for the nomination in 1912, and beating him on the popular vote, losing only by failing to carry a majority of the legislative districts. Can Bristow hope to win against a man who did that? To add to his troubles, William Allen White, who might have been his ardent supporter if he had selected the Progressive ark, has coined an epigram that has been caught up all over Kansas. "Bristow is guilty of a political felony," it runs. Shunned by the Progressives, suspected by the Republicans, how he must long for the good old times when all that one had to do was to expatiate upon the utter inability of the Democrats to manage the affairs of a great government!

Why are Americans ceasing to read good literature? It is the fault, of course, of the tango. Beneficial as the new dance may be in certain respects, its most ardent advocates do not claim for it that it induces a longing for Shakespeare or even Alfred Noyes. But the tango does not stand alone in this respect. The automobile must bear part

of the blame. We are the surer of the soundness of this contention when we recall that some years ago one of the greatest hindrances to the spread of good literature was the bicycle. What it was before that is less clear, although we imagine that the record would show that in the thirties good literature was neglected because of the influence of the railway, just as still earlier the invention of the steamboat caused people to lose interest in worth-while books. It is thus the unfortunate truth that in every age of the republic there has been something which has made us cease to care for good literature. Every generation has been devoted to books of the highest value, but every succeeding generation has ceased to care for them. Some day, perhaps, we shall have exhausted every other form of activity, and then our native love of good literature will no longer be denied.

In the midst of the various controversies over Panama, it is a comfort to come across one point that is absolutely free from the possibility of dispute. In his address to the American Manufacturers' Export Association last week, Prof. Hiram Bingham, of Yale, drew attention to the fact that the opening of the canal would not bring the east coast of South America a mile nearer than it was before. Everybody knows this, to be sure, but not everybody bears it in mind; and, moreover, when we say "everybody" we are perhaps too inclusive, in view of the kind of letter-addressing cited by Charles M. Pepper, formerly adviser to the State Department, as being of frequent occurrence in American business houses. The man who thinks Buenos Ayres is in Chili probably thinks that since the canal is a short-cut to South America, it is a good-enough short-cut for him to any part of South America. The western part, to which the distance by sea will be shortened, is, as Professor Bingham said, only about one-fifth of the whole. But here we at once get into complexities again. For the economic importance of access to a region is not to be measured by its area, and it is the vast mineral possibilities of the western regions of South America that are attracting greatest interest.

Just seventy-five years after the founding of the Anti-Slavery and Aborigines Protection Society in England, that body undertakes international expansion. Lords Curzon, Cromer, and Bryce are urging the establishment of an American branch. An affiliated society has been organized in South Africa. The opening of a branch in Germany within the month has attracted no little public attention. In Italy, the Society has helped rouse the Government to protest to Portugal against the slavery in San Thomé and Principe. The Society was established in 1838 as the result of a Government inquiry under Buxton, co-worker with Wilberforce and Macaulay, into the treatment of the indigenous population of the colonies. With the growth of colonizing activity in other nations, the time was ripe for extension of the Society's influence. Certain recent and widely scattered abuses have roused the feelings of men interested in backward races, and given the Society a new claim to recognition.

The Reichstag has adjourned after giving expression to its bitter discontent with militarism in something more than words. The introduction of bills prohibiting the army from making itself a self-constituted authority for the maintenance of public order shows how deep popular resentment runs over the Zabern affair. The Government, as usual, has carried things with a high hand. Not content with the acquittal of Col. von Reuter, the Kaiser has seen fit to turn his guns against the people of Zabern. The honors of the game rest with the militarists. The incident may seem another in the long chain of humiliations to which the representatives of the people have had to submit. But though Chancellors and War Ministers may continue to lecture the members of the Reichstag like so many schoolboys, the spirit of popular resentment apparently increases. The very frequency with which the Government is called upon to scold the Reichstag argues an unsatisfactory state of affairs. The effect of such untoward incidents is cumulative. Another Zabern affair may show that even the traditional patience of the German people has its limits.

Observers of Denmark's access of defensive zeal last spring must have felt that patriotism is less a mountain maid than the goddess of small countries in general. That nation has now reached the conclusion that peace has its menaces no less than war. In the best parts, Berlin and Hamburg bankers have built so many villas that the German summer population threatens to equal the indigenous. Hotels and steamboat lines belong to the Germans; walls and signboards are covered with German inscriptions; in certain watering-places, like Sandkaas, all the bathers are foreigners. The finest portion of Bornholm has been bought by a Hamburg financier, who is promoting there a German city, which he has already called "Neu Berlin." Similarly, the most scenic parts of Möen have passed into the hands of a German company, which proposes to construct a group of great hotels. The Governors of these islands, the Copenhagen press, and the democratic leaders have raised the alarm. A bill has been introduced into Parliament to expend a half-million crowns in repurchasing the site of New Berlin; and without awaiting the vote, individuals are circulating a public subscription list, which has produced 115,000 crowns. It might seem that this heated sentiment against the German economic invasion would of itself operate to lessen or stop sales.

It is natural that in Spain, more than in any other country, the devastating struggle in Mexico should be regarded with sorrow and apprehension. But the appeal for reconciliation addressed to Huerta and Carranza by Spain's leading statesmen and men of letters is a cry for peace when there is no peace. Precisely because the war has been fought so long and so stubbornly the time has passed for a temporary truce. The Mexican forces now at war cannot be harmonized in a cheery get-together spirit. One need not be a blind partisan of the Constitutionalist cause to perceive that if Mexico is to have a stable government, that government must issue out of the throes of the revolution. Peace will not come to Mexico without a fairly definite transfer of power from the oligarchy that ruled the country under Diaz to the classes that have hitherto been kept in subjection. Madero's ruin was brought about in large measure by the refusal of the old ruling class to admit that it was beaten; as events showed, it had not been thoroughly beaten. That necessary process is now working itself out.

THE NEW TRUST BILLS.

Publication at Washington of the bills drafted to carry out the recommendations of the President's message was accompanied by the promise of ample hearings on them and full debate. Any other course would be folly. No such measures should be rushed through at either the report stage or the voting in Congress. Wise as their authors may be, their work cannot be considered perfect from the beginning. These bills do not leap full-panoplied from the heads of their Jove-like framers. They come, rather, as tentative plans, to be fully discussed. To drive them through under Administration whip and spur would be a huge blunder.

The bill to prohibit interlocking directorates, allowing, as it does, two years' time in which to break up existing practices, is the one which meets with most public favor. It will probably not be opposed seriously. This is not to say that it should not be minutely scrutinized, to see that no injustice is done or abuses invited. A measure so sweeping in terms might well be in need of qualification, here and there; and exceptional circumstances may need to be recognized by exceptional provisions. As to the main intent and effect of the bill, however, there is pretty general agreement. The aim is to do away with a custom which has come to be freely admitted by all concerned to be bad. It is bad for the properties, railway or banking, bad for the directors, and bad for the public. Such voluntary withdrawals from directorates as we have lately witnessed show not only what the just feeling on the subject has become, but with what readiness the law making such withdrawals compulsory will be complied with.

Much more doubt will gather about the bill creating an Interstate Trade Commission. Its purposes are rather vaguely defined, but the powers confided to it are very great, and might be made both vexatious and hurtful. Most of them, it is true, are already given to the Bureau of Corporations. The chief thought seems to be to create a Government agency which may act as a sort of first assistant to the Attorney-General. At present, an immense burden is placed upon the Department of Justice. It has to investigate endlessly in preparation for possible suits under the Anti-Trust law; it has to study intricate proposals of adjustment made by threatened corporations, and to assume responsibilities almost too heavy for a single official unaided. In so far as the Interstate Trade Commission will be able to give the Attorney-General needed aid—in the way of inquiry, of passing upon a state of facts, and by having referred to it, with a hope of settlement, cases in an early stage of litigation—the intent is commendable. No one, however, can look at the drastic provisions giving the Commission the right to delve into all the details of private business without a little gasp of astonishment at the advocacy of such bureaucratic control by a political party which, in its early life, wrote into the Constitution the Fourth Amendment: "The right of the people to be secure in their persons, houses, papers, and effects against unreasonable searches and seizures shall not be violated."

Most questionable of all, in our opinion, is the attempt made to add new definitions to the Anti-Trust law. The great danger is that, where these are not unnecessary, they will be mischievous. On this point, the former Attorney-General, Mr. Wickersham, has written in the New York *Sun* with much force. The real questions involved seem to be confused in the public mind. There is a loose notion that the Anti-Trust law has proved ineffective. This is the reason given for proposing to insert more "teeth" into it. But Mr. Wickersham clearly shows—as other lawyers have shown before him—that the Sherman law, as interpreted and applied in a series of decisions by the Supreme Court, has been made one of the most effective statutes ever written. As a matter of fact, nearly all the practices aimed at in the new definitions now proposed have already been held by the Court to be obnoxious to the existing law. Most of them were discussed and entered into the reasoning of the Court in the Standard Oil and Tobacco decisions. Mr. Wickersham pointedly asks how it came about that many corporations have made the "honorable surrender" to the law of which President Wilson speaks in congratulation. The obvious reason is that they and their counsel have at last found out that the Anti-Trust law is not only capable of enforcement, but is enforced in a very effective way.

The reasons why it seems unwise now to amend a statute shown to be inclusive and efficient are plain. There is, first, the danger which Senator Edmunds pointed out before Mr. Wickersham did, of "defining the definition." The law has now undergone complete judicial exposition. To introduce new phrases into it might have the result both of disturbing what is settled and of provoking a great deal of new and needless litigation. And the second danger is even graver. It is that the process of prohibition may be pushed so far—as by the Stanley bill, or some of the clauses in the new bill defining unfair trade practices—as either to make the law a dead letter or business a dead thing. If the attempt is seriously made to put all commerce into a strait-jacket, and to take away from the courts the right to discriminate between reasonable and unreasonable restraints of trade, we know what will follow practically and we ought not to forget what will follow judicially. For the Supreme Court plainly announced, in the Standard Oil decision, that if the rule of reason were not to be permitted in the interpretation of the Sherman law, then the Court would be compelled to declare the entire act unconstitutional.

BETWEEN TWO WORLDS.

The death of Edward Ginn removes a man in whom the ancient idealisms bravely persisted. A lover of peace, he labored for it with voice and pen; nor did he forget his purse. Generously supporting in his lifetime an organization for the furthering of peace, he left it by will $1,000,000. It is not the amount of this benefaction—though, all things considered, it deserves to be ranked with Mr. Carnegie's gifts to the same cause—that impresses one so much as its spirit. It is a form of silent but constant protest against strong tendencies of the day. These are partly warlike, partly materialistic. The attempt is made to bind up national dignity and national development and the well-being of the people with an ever-mounting preparation for war. Yet, as the militarists grow more aggressive, so do the peace-men become more outspoken. Every needless Dreadnought means a needed Edward Ginn.

There is nothing new in the struggle between humane ideas and force. But

it does seem to have been accented and made to appear unusually pathetic in our day. Never was there so great a stirring of the social conscience; never so many men and women spending themselves upon work for their less fortunate brothers and sisters; never so widespread an interest taken in backward or oppressed races. Yet at the same time never was the demand for armament so great, never was the argument of pike and gun more freely used by responsible statesmen, never were war taxes in time of peace so crushing. We seem, in all this, to be standing between two worlds, one dead, the other powerless to be born.

How active and humane men are distracted between the two we see vividly illustrated just now in England. An issue is made within the Liberal party on the question of expending even higher sums on the navy. Fully one-third of the Liberal members of Parliament have joined in a protest against any increase in the naval estimates. The Cabinet is of two minds about it, the militarists being led by Winston Churchill, while Lloyd George is on record as holding that the time is ripe for a revision and cutting down of the appropriations for army and navy. Now, whatever else may be said of Lloyd George, it cannot be denied that he represents in a peculiar way the inarticulate strivings of the working-classes in England. It is because he is dreaming of vast policies of social reform that he looks with jealous eye upon anything that seems like squandering of the national resources upon unproductive and money-devouring battleships. Not a Little Englander—for Lloyd George has more than once uttered the large note of British pride and determination in over-sea affairs—he is mainly a champion of the poor; and as such, his opposition to the extreme militarists makes his figure one that serves to typify strikingly the drag of two conflicting forces upon public men to-day. They would be reformers and renovators, yet there is the peril of war to be provided against! They would advance boldly along the paths of civiiization, yet fears of recurring savagism deter them. They would be humane and mercifui and generous, yet they would be the strong man armed!

To Americans the problem is presenting itself just now mainly in the form of our national policy as respects the Philippines. The question is obscured by many incidentai matters, thrust into its discussion, but the central choice which the country is called upon to make is that between force and self-government, between exploitation and unselfishness. Now, as we have said many times before, honest men and good men differ in their interpretation both of the facts and of our duty in regard to the Filipinos. It is a fair subject for public debate. But every man who engages in it should first search his own heart to make sure that he has no selfish interest in arguing for a continued holding of the islanders in subjection. We can listen with patience, if not with agreement, to ex-President Taft, for no one supposes that he is speaking aught but his sincere belief, uncolored by any thought of private advantage. But the case must be different with men who are avowedly engaged in enterprises to make money out of the Philippines, and who desire that American control shall be indefinitely prolonged in order to further their projects. For such peopie to set themselves up either as authorities or as disinterested guides, is a piece of effrontery. They may be right in their opinion. But they at ieast ought to have the grace to keep still, when it is so evident that they are arguing for their own pockets. High reasoning on destiny and international relations is certain to fall to the ground with a thud when it is known that the high reasoners are intent upon capitalizing their convictions, and turning their opinions into cash.

Here is the worm in the bud of transcendental militarism and manifest destiny—this haunting suspicion of self-interest, this chuckling of armament-makers over a war-scare being "good enough" to mean their booking of more orders, this lurking fear of corruption in the purchase of guns and ships. Even the knightly *Bushido* of Japan is in danger of being tainted, if we may believe the evidence given in a German court about bribes paid to Japanese naval officers. Human nature has many unplumbed depths, but it is hard to think of a lower deep than that in which schemers, in the name of nationai glory, seek to coin money out of the blood and tears of men and women and children.

IS AMERICAN VITALITY DECLINING?

In an editorial which appeared in the *Nation* on January 15, under the above heading, we took the position that the statistics of increased death-rates among persons between the ages of forty-five and sixty-five do not warrant the conclusion that there has been a deterioration in American vitality or in American living conditions. "We are not asserting," we said, "that the conclusion is false, though we are inclined to think it so; but we do say it does not follow from the premises." We print to-day a criticism of that editorial by Mr. Louis I. Dublin, statistician of the Metropoiitan Insurance Company; and the weight to which his judgment is entitled, the intrinsic importance of the subject, and its prominence in present-day discussion make it worth while to revert to the question again.

In order to make the matter clear, we must insist first of all on the fact that our position was purely critical. We did not assert that the above-mentioned increase of mortality *is* "entirely due to the advances" in medical science, etc., that have taken place; we merely pointed out that the figures are capable of this favorable interpretation instead of the unfavorable one put upon them by the authorities we referred to. Mr. Dublin makes a good point when he draws attention to the fact that the figures relating to females seem to militate against the hypothesis we put forward, and to indicate that there are "other causes at work." But we ourselves suggested that other causes may be at work, and in particular we pointed out one such possible cause with great emphasis; but, strange to say, Mr. Dublin has taken its significance to be precisely the opposite of what it is. The point is important, and has apparently escaped the attention of writers on the subject.

Imagine the population divided into two halves—an upper and a lower balf, say—in respect to living conditions. Suppose that the proportion of persons in the lower half wbo live to ages above forty-five is much smalier than that in the upper half. And now suppose that absolutely no change takes place in the situation except that conditions in the lower half are so improved as greatly to increase the proportion of persons in that half who live to ages above forty-five. The effect of this upon death-rates

in the various age-groups would be precisely of the nature of what has actually been observed. The death-rate in age-groups below forty-five would of course be reduced; but the very improvement that had taken place in the lower half—unless it was so great as to bring its condition up to that of the upper half—would push into the age-groups above forty-five an increased percentage of persons belonging to that half, and subject to a higher death-rate than the average. Taking the population as a whole, therefore, there would be a decrease in the death-rate in the age-groups below forty-five and an increase in the death-rate in the age-groups above forty-five. We do not assert that this is what has actually taken place; but so far from having shown that it has *not* taken place, the proponents of the conclusion we are contesting seem never to have so much as considered the possibility. To test the question, it would be essential to have some means of finding the trend of death-rates classified not only by age-groups, but also by economic conditions. Of course, if it were, as Mr. Dublin appears to think, "generally agreed" that living conditions among the working classes are worse than they were thirty years ago, no statistical inquiry would be necessary; but we are quite unaware that any such general agreement exists.

Upon other points brought forward by Mr. Dublin we can touch but very briefly. He acknowledges the complexity of the subject, and is himself inclined to believe that the drift to the cities and the influx of immigrants have "played an important part in our total results"; but so long as no numerical estimate has been made of the influence of these factors, as well as others that are known to enter into the question, with what assurance can one put forward the conclusion of a real decline in vitality or deterioration of conditions? Even as to the factor of the saving of life in the earlier ages as the true explanation of many deaths at the later ages, Mr. Dublin admits its reality, both in his present letter and in his article in the *American Journal of Public Health;* and as to its extent no one has any quantitative data. And we cannot refrain from suggesting that, while it is perfectly true that the lives saved by modern advances in medicine and sanitation represent the best stocks as well as the worst, yet he would hardly deny that those advances do interfere in some measure with the selection, by survival, of the hardiest constitutions.

As for the moral effect of casting doubt on the unfavorable interpretation of the statistics, that is something which should hardly be allowed to interfere with the plain requirements of scientific reasoning. But as a matter of fact we do not admit that the moral effect of doubting that conditions are growing worse, or believing that they are growing better, is such as he fears. The most conspicuous case of progressive and unquestioned improvement relating to living conditions among the poor is that of the saving of infant lives. But the appetite for such achievement grows by what it feeds on. The more the infantile death-rate is reduced, the harder we work to reduce it still further. Health departments do not seek to enlist public sympathy or public funds for their work by concealing or belittling what has been accomplished, but quite the contrary. Whether conditions among the people who live lives of hard and life-shortening toil are better or worse than they were thirty years ago, we all know that there is plenty of reason for improving them. But in many ways it does make a great deal of difference whether the one thing or the other is true; and we shall not do well to assert either until we have gathered and thoroughly analyzed the necessary data.

STRATHCONA AND CANADA.

It is seldom that the growth of an individual and of a nation coincide so closely in time and incident as the career of the late Baron Strathcona and of the Dominion whose most distinguished citizen he was at the time of his death, with the possible exception of Sir Wilfrid Laurier. The sturdy Scotch lad came to Canada in 1838, the very same year that the Earl of Durham was sent to study conditions in British North America and to draft the famous report which led two years later to the union of Ontario and Quebec. For thirty years, while the problems of union were working out in eastern Canada, he was engaged, as factor and representative of the Hudson's Bay Company, in the vast territories of the Northwest from which was to be carved out the new Canada upon whose remarkable development the attention of the world has been fixed for a decade. He became head of the Hudson's Bay Company in Canada in 1868, the year after the establishment of the Dominion, and by virtue of his position played a leading rôle in the transfer of the company's lands to the new Dominion Government. Precisely as in the case of the new-born United States, the new Canadian Federation found in its Northwest Territory a bond of union among the older provinces, and the condition and guarantee of national expansion.

Baron Strathcona's death leaves James J. Hill, at first his rival and later his firm ally, as the last survivor of the giant race of railway builders. In actual wealth production the lands of our own Northwest may have shown a richer return. But Strathcona's great achievement, the Canadian Pacific Railroad, impresses itself more deeply on the imagination. It meant the linking up of two oceans. It testified to the bold faith in its own future by a nation hardly out of its swaddling clothes. When our first transcontinental railway was completed we were a people of nearly forty millions. When the Canadian Pacific was completed Canada had a population of a little more than four millions. When one speaks of the faith of a nation in its own future, one means, of course, the faith and the prophetic outlook of its boldest spirits. The future Baron Strathcona had bitter opposition to overcome before the Canadian Parliament would give its sanction and its support to his transcontinental road. Like our own railway builders, he was interested in politics only to the extent that politics furthered or stood in the way of his dreams of expansion. He changed his party affiliations whenever a change was necessitated by his pioneer work. Towards the end of his life, with his work completed, he stood above partisan relations. He was the one man designated by logic to serve as representative abroad of the Canadian nation.

It was in 1896 that he was appointed High Commissioner of Canada in London. His baronial title came the following year. His services took largely the form of procuring population for the regions his railways had opened up. While men like Clifford Sifton carried on missionary work in the United States, Strathcona did brilliant press-agent work for Canada in the home countries. Heavy though the flow of emigration has been from the United

States into Canada, it has in later years been equalled by the inpour from the United Kingdom. In 1908-09 the British Isles sent some 52,000 colonists to Canada. In 1912-13 the number had risen to nearly 140,000. From Baron Strathcona's native Scotland the drift to Canada has become an exodus, to the point where Scotland finds itself concerned over a depopulation problem. Strathcona's effective publicity work for Canada has been imitated, but hardly approached, by the other British dominions beyond the seas.

In this aspect of his career Baron Strathcona attained Imperial importance. By stimulating the flow of emigration from the motherland he not only contributed to the development of the Canadian Northwest, but supplied a counterbalance to the rapid dissemination of "Yankee" influence in the Northwest through the rapid inrush from the United States. Just as his earlier career at home was coincident with the rapid internal development of the Dominion, so his later career as Canadian plenipotentiary to the mother country coincided with the strengthening of Imperial sentiment which has been so notable a phenomenon of recent Canadian growth. His equipment of a regiment of horse for service during the Boer war was, like his entire career, a symbol of national development and a contributing cause. If Canada has witnessed the virtual disappearance of the annexation idea with regard to the United States and the appearance of a spirit of proud self-sufficiency in relation to this country, credit must be given in large measure to Strathcona's labors in behalf of Imperial patriotism.

VILLAGE IMPROVEMENT.

The typical American village, from New York to New Mexico, is often wanting in civic spirit. That fact is writ large upon its face. It has one focus of interest in the school, and half-a-dozen in the churches and lodges. But it lacks the solidarity that would manifest itself in a true village pride; it is a population small enough to be really a unit, and permanent enough to strike its roots deep, yet it does not organize itself. This is not true of the towns of New England, which fifty years ago looked after their lyceums, their commons, shade trees, and white palings. But the dreariness of most Western, Atlantic, and Southern villages testifies to the rule; they bear an unkempt aspect which, as William Allen White wrote, requires the touch of twilight to give it kindliness. If the traveller glances about for a cause, he may think he finds it in the rather sordid atmosphere. The country town seems preoccupied with the day's work. But the true reason lies deeper.

In a volume which Parris T. Farwell, of the Village Improvement Committee of the Massachusetts Civic League, has just issued, are summarized recent attempts to deal with the general carelessness about village appearance. The society chosen as a model, it is true, is the Laurel Hill Association, in Massachusetts, which has done remarkable work since 1853; and to New England the book gives most space. But there are also examples from the Dakotas, the South, and the Pacific Northwest which tell of accomplishment out of all proportion to their short history. There are States wherein the villages are characterized as interested in one aspect of improvement only—roads and streets, sanitation, or libraries and parks. But it is implied that their leavening power is great, if only in spurring emulation. Over one aspect of the situation in the Mid-West there is much seemingly shortsighted rejoicing. It is that outside stimulation has generally prompted local effort. A State Good Roads Association brings about the macadamizing of the streets. A travelling library system, as in Iowa and Wisconsin, results in the founding of local libraries. State horticultural societies have done wonders in provoking planting of trees and shrubs. In hundreds of small towns the railway adornment of station grounds has furnished an object-lesson. State Universities have been useful agents. But would not the impulse be healthier and longer-lived if it were self-born?

The want of spontaneity springs naturally from the constitution of the ordinary American village. It fails of initiative within itself because conditions scarcely favor the production of leaders or the recognition of leaders. As indicated by a group of writers in the *Atlantic* in recent years, there is a want of imagination, of larger interests, manifested in a petty round of gossip and of jealousies, and in a painful sense of personal or family reserve. Given a group small enough, and Neighbor Jones will be loath to suggest a local improvement, because it savors of interference with Neighbor Smith's affairs. The other conditions may be, at most, contributory causes. One that has to be considered is the rapidly changing personnel of many villages. They are not, as in Europe, inhabited from generation to generation by a family in the self-same trade, but by ever-shifting names.

It would be a serious matter if the American village's indifference to attractiveness rested on blunted perceptions. Then the proper method would be a revival of lecturers of the Oscar Wilde type, who with sunflower boutonnière could make the Chautauqua circuit echo a new gospel. Such men could point out that there is no reason why the flatness of Illinois should not be made beautiful, and deliver to Leadville's or Deseret's residents a new version of Ruskin on the mountain glory. But any town which has gone far enough in the concerted action of its citizens to provide itself with a Chautauqua is likely to be thinking also of its civic beauty. Possibly the amphitheatre itself rests in a specially designed park, part of a plan of local improvement which the distant future will consummate. With the process of natural selection between fit and unfit buildings, the prospect of our small towns is not so cheerless as the present ugly state of many would indicate. Much will depend upon the extension of those general or State agencies of which we have spoken. But at bottom, the change must follow upon the birth of a new social spirit in the village itself. Wherever, in the future, we have a beautified centre, we may be sure a set of social-minded people has been created.

THE MERRY ANARCH.

It is no longer true that to be born the eldest son of an English peer is the happiest fate one might pick out. To be born an English intellectual revolutionist is infinitely jollier. No one in London manages to get so much fun out of life as Mr. Bernard Shaw, unless it be Mr. Chesterton or Mr. Belloc. It does not matter what particular school of revolutionary thought a man belongs to. He may be an Ibsenian revolutionist

like Mr. Shaw, or a mediæval revolutionist like Mr. Chesterton, or a Catholic revolutionist like Mr. Belloc. If only a man stands up against things as they are, he has tapped the sources of inexhaustible merriment. The Atlantic cable hums with the lighthearted pranks of men whose professed business it is to undermine society. Between social explosions they are a lot of schoolboys. They hit one another with bladders, they make faces at one another, they scribble one another's names on the fences, and when they have drawn a crowd of curious citizens, they trip down the sidewalk with their arms over one another's shoulders. Sometimes they have mock trials with Mr. Chesterton as judge and Mr. Shaw as foreman of the jury. Sometimes Mr. Belloc writes a burlesque novel and Mr. Chesterton draws ludicrous cartoons to illustrate it. Sometimes Mr. Chesterton writes a book about Mr. Shaw. Sometimes Mr. Shaw writes a vaudeville to accompany a serious play by Mr. Chesterton. It is hard to imagine them as enemies of society. One would rather think of them as a band of cosmic cut-ups.

We are thus driven to believe that the traditional type of revolutionary—the sinister, heavily-bearded, and unwashed enemy of society—no longer exists outside of the books of E. Phillips Oppenheim. The up-to-date sapper of the social order does not slink through alleys and subterranean passages, but prefers to keep in close touch with the Associated Press. British philistinism cannot spoil Mr. Shaw's temper; it only inspires him to write a jolly farce like "Fanny's First Play." The cruelties and stupidities of modern life stimulate Mr. Shaw to the point where he goes out and has M. Rodin model a bust of him. When Mr. Chesterton contemplates the unholy alliance between privilege and finance which makes up modern government, when he thinks of the pretentious ineptitudes of parliamentary oratory, when he finds himself encompassed by the schemes of self-seeking fanatics and reformers, he feels so depressed that he immediately dashes off a ballad or two in praise of brown October ale. Foreigners who have long admired the peculiar traits of the Anglo-Saxon temperament will find another illustration in the revolutionist who goes about his work of destruction with a merry snatch of song on his lips. Foreigners more distantly removed in time, say, Isaiah or Amos or Jeremiah, would find it very difficult indeed to make out this new kind of prophet, who finds that the world is so full of a number of miserable and reprehensible things, he is sure we should all be as happy as kings.

The one person above all others who has a rather sad time of it to-day is precisely the supposedly comfortable, supposedly self-satisfied suburban citizen against whom Mr. Shaw has waged the warfare of a lifetime. Remember all that Mr. Shaw and his fellow-revolutionists have said about the British philistine and the elaborate conventions which he has built up to save himself the trouble of independent thought and conscience. Behind this wall of moral conventions, religious conventions, conventions of social propriety, the citizen is pictured as going about his exclusive business, which consists in the satisfaction of his own material wants; a stupid ruminative life, but pleasurable in a low way.

Yet what are the facts? While Mr. Shaw and Mr. Chesterton are romping about and throwing stones and shouting aloud in the joy of their hearts, your stolid middle-class citizen worries. He worries over his duties as a citizen, over the Poor Law, slums, child labor, milk kitchens, eugenics, military training, model dance halls, hospitals, model tenements, the decline of the rural population, the peril of moving-picture theatres, the tango, and the slit-skirt. Mr. Shaw is never so amused as when he contemplates the suburban citizen pottering about the business of reform, since every revolutionist knows that reform is itself only a stupid convention, a cheap balm for the conscience. And your moderately progressive citizen is indeed a stupid animal. Else he would recognize that this business of patching up society only brings worry, whereas the revolutionist kicks over the whole mess at once and is happy as the day is long.

Some day the stodgy middle-class citizen will discover the secret which the revolutionists have long mastered. Then everybody will turn against things as they are and life will be one loud peal of merriment. Thousands of good people will imitate Mr. Chesterton and call for barricades with the fine, orotund hilarity in which one calls for a pint of ale. Other thousands will imitate Mr. Shaw and indite roundelays against the marriage tie and in favor of state support of children. Our problems will be solved when we are all one jolly crew busily engaged in scuttling the ship of state.

CANADIAN BOOKS OF 1913.

OTTAWA, January 7.

Contemporary Canadian literature—using the word in its broadest sense—reflects to a large extent the spirit of the country. That spirit is to-day frankly materialistic. It takes pride in the vast material resources of the Dominion, in the development of great industries, in the ever-widening net of railways, in the growth of national wealth. Its idols are of the flesh. It worships the great god Success. It is too much preoccupied with the things that make for physical comfort or luxury to give much thought to those that are merely intellectual. This materialistic spirit is reflected to a large extent in the contemporary literature of all countries, but at present we are concerned with Canada alone. One finds it not only as the animating spirit in books of every description, but as a deadening factor in the circulation of books that contain a higher motive. Doubtless in all ages books have been commonly read in inverse ratio to their true worth as literature, but that was never truer than it is to-day, in this age of universal education and enlightenment. To what extent this materialistic spirit tends to deaden the development of the higher forms of literature it would be difficult to say. Whatever the reason, Canada has as yet produced no genius in literature, though it has counted, and counts to-day, many writers of fair ability, and a very few of higher rank.

This ponderous and rather pessimistic introduction is the result of wading through a formidable pile of books, of all sorts and sizes, written in or about Canada during the year 1913.

By all odds the two most important books of the year are "Goldwin Smith: His Life and Opinions," by Arnold Haultain (Toronto: McClelland & Goodchild), and "Correspondence of Goldwin Smith," edited by Arnold Haultain (New York: Duffield). Just how far Goldwin Smith may be counted as a Canadian is, of course, a debatable point. He was born and educated in England; his heart was throughout a large part of his life with Corneli; but for many years his home was in Toronto, and although he always seemed a man apart, he took a deep interest in Canadian affairs. His criticism was always too caustic and tactless to be acceptable to his contemporaries, but there cannot be any reason to doubt that, in some

respects at least, his influence upon Canadian life and thought will be real and lasting. He was largely instrumental in founding and supporting several of the best magazines Canada has possessed, the old *Canadian Monthly*, the *Nation*, the *Week*, and the *Bystander*. The last-named he edited himself for several years, and any student of Canadian affairs is lucky who possesses a set of this almost forgotten periodical. In his Life, which is rather material for biography than biography proper, as well as in his Correspondence, the man stands revealed, a rather lonely and friendless figure, with a distinctly poor opinion of most of his contemporaries and little faith in their works, but withal a champion of intellectual things in a very materialistic age, and a master of English when English was least understood. His was the voice of one crying in the wilderness, but the message may not in the end be fruitless.

In Canadian biography not much else of importance appeared in 1913. Sir George Ross's "Getting into Parliament and After" (Toronto: Briggs) is a readable volume of reminiscences, by one who has been what is known in Canada as a Liberal of the old school. Sir George Ross was chief lieutenant to Sir Oliver Mowat in the Ontario Government, and succeeded him in the Premiership. For several years he has led the Liberal party in the Dominion Senate. Emma A. Currie's "Story of Laura Secord and Canadian Reminiscences" (St. Catherines: Currie) contains some of the useful material from which historians get their sidelights on pivotal events.

In the general department of history, the year's publications are much more varied. The close of 1913 saw the practical completion of the ambitious work, "Canada and Its Provinces" (Toronto: Publishers' Association), which is appearing in more than a score of volumes, under the general editorship of Dr. Arthur G. Doughty, Dominion Archivist, and Prof. Adam Shortt, formerly of Queen's University and now Civil Service Commissioner in Ottawa. About half the work has been issued, and the balance is now in the hands of the printers, with the exception of an elaborate index which is to fill a final volume. The various phases of the country's history, general and provincial, were entrusted to writers each of whom was recognized as an authority in his own particular field, and with the painstaking editorial supervision to which every article has been subjected, the result will be a work of unusual value, creditable alike to Canada and to those engaged in the undertaking.

Two books of more than ordinary interest, though possessing nothing in common, are Col. William Wood's "In the Heart of Old Canada" (Briggs) and William Ogilvie's "Early Days on the Yukon" (Toronto: Bell & Cockburn). The former deals with a variety of topics related to the history of Quebec, and has the double charm of romantic subjects and very attractive treatment. The value of the late Mr. Ogilvie's book is in its matter rather than its manner, and yet there are vivid flashes in this little narrative of stirring events in the early days of the northern goldfields. Several volumes of informing material, perhaps of larger interest to the local student or the historian than to the general reader, are Miss K. M. Lizars's "Valley of the Humber" (Briggs), setting forth the place of this romantic stream on the outskirts of Toronto in Canadian history; Miss Janet Carnochan's "History of Niagara" (Briggs), in which is described by an acknowledged authority the story of the little town at the mouth of the Niagara River, once the capital of Upper Canada; W. S. Herrington's "History of the County of Lennox and Addington" (Toronto: Macmillan), the story of one of the United Empire Settlements in Ontario; Emily P. Weaver's "Story of the Counties of Ontario" (Bell & Cockburn), somewhat superficial but readable; Barlow Cumberland's "Century of Sail and Steam Navigation on the Niagara River" (Toronto: Musson), in which romance and commerce are entertainingly combined; and Dr. Alexander Fraser's "Brock Centenary, 1812-1912" (Briggs), containing an account of the celebration at Queenston Heights, Ontario, on the 12th October, 1912.

An important addition to the scanty literature of the Northern fur-trade is Isaac Cowie's "Company of Adventurers" (Briggs), in which the author gives an account of his own experiences and adventures in the service of the Hudson's Bay Company from 1867 to 1874. L. J. Burpee's "Scouts of Empire" (Musson) is a small book in the same general field, dealing with the lives of such Western explorers and fur-traders as Henry Hudson, Alexander Mackenzie, Simon Fraser, etc.

The Dominion Archives issues a volume of "Documents Relating to the Invasion of Canada and the Surrender of Detroit, 1812," edited by Col. E. A. Cruikshank, and has in press a second series of "Canadian Constitutional Documents" and a volume of "Pioneer Legislation." The Champlain Society did not actually issue a volume in 1913, but the annual report announces several works as either in press or approaching completion, among others volume three of Lescarbot's "History of New France," edited by Professor Grant; the "Journals of La Vérendrye," edited by L. J. Burpee; the "Knox Journal," edited by Dr. A. G. Doughty; the "Journal of David Thompson," of the Northwest Company, edited by J. B. Tyrrell; the first volume of the new edition of the works of Champlain; and Col. William Wood's "War of 1812."

A most interesting volume is Elihu Stewart's "Down the Mackenzie and Up the Yukon" (New York: Lane), a popularly written story of Mr. Stewart's official journey in 1906 as Superintendent of Forestry for Canada. Two readable and attractive books dealing with the Province of Quebec and its peculiarly interesting people are Beckles Willson's "Quebec, the Laurentian Province" (New York: Stokes), and J. Castell Hopkins's "French Canada and the St. Lawrence" (Bell & Cockburn). A particularly attractive reprint of an old Canadian book that has come to be recognized as a classic is Susanna Moodie's "Roughing It in the Bush" (Bell & Cockburn). Clarke's the "Heart of Gaspe" (New York: Macmillan) describes with sympathetic insight an out-of-the-way corner of Canada, whose picturesque scenery and simple-minded inhabitants deserve to be better known.

In the broad field of economics and public affairs there have been published during the year several books and pamphlets of considerable interest. One of these is Prof. O. D. Skelton's "Economic History of the Dominion" (Publishers' Association); another is John MacDougall's "Rural Life in Canada," an exhaustive treatment of a neglected subject of prime importance. Prof. Stephen Leacock has brought out a new edition of his "Elements of Political Science" (Boston: Houghton). Hamar Greenwood's "Canada as an Imperial Factor" (London: Collins); "Canada and Sea-Power," by "Christopher West" (McClelland); J. S. Ewart's "Kingdom Papers" (Ottawa: Ewart); John L. Morison's "British Supremacy and Canadian Autonomy" (Kingston: Queen's University); Henry Bourassa's "Spectre of Annexation" (Montreal: *Le Devoir*), and A. H. F. Lefroy's "Canada's Federal System" (Toronto: Carswell) are also contributions to our knowledge of problems of Canadian citizenship.

Nothing has been said so far of Canada's contributions to belles-lettres during the past year. Unfortunately, in the realm of pure literature there is little to record, beyond a very few volumes of verse and essays. The only notable contribution to Canadian poetry is Miss Marjory Pickthall's "Drift of Pinions" (Montreal: University Magazine Co.). While somewhat unequal in quality, this first little volume of Miss Pickthall's contains several short poems of exquisite delicacy and feeling, sufficient in themselves to mark the writer as one from whom even better things may be expected in the future. Miss Virna Sheard's "The Miracle" (Toronto: Dent) is a somewhat more ambitious volume, of magazine verse of fair quality, in the main readable and

attractive, but never rising much above mediocrity. The volume of poems by the late George Murray (Murray) contains one or two historical ballads, and several translations that make the book one worth remembering. George Murray many years ago was an intimate friend of Sir Edwin Arnold. For half a century he was closely identified with the educational and intellectual life of Canada. Since the death of Pauline Johnson, a new edition of her "Flint and Feather" (Musson) has appeared, with a number of additional poems. This edition appears with a sympathetic introduction on the life and genius of the remarkable Indian poet, who so strikingly revealed in her work the qualities of the two races from which she sprang. It remains to mention the "Oxford Book of Canadian Verse" (Toronto: Oxford University Press). The selection was in the hands of a Canadian poet, Dr. Wilfred Campbell, and to some extent the book reflects the disadvantages as well as the advantages of entrusting such work to a poet, but on the whole the collection is an admirable one and represents very fairly the characteristic work of the principal Canadian poets.

A volume of prose sketches by Pauline Johnson, "The Moccasin Maker" (Briggs), shows that she could write admirable prose, though lacking perhaps the distinctive charm of her poetry. The tenderness and graciousness with which she tells the story of her own mother's life is not unworthy of comparison with Barrie's "Margaret Ogilvie." The book contains an introduction by Sir Gilbert Parker and an appreciation by the Western Canadian poet, Charles Mair. In "Behind the Beyond" (Bell & Cockburn), Stephen Leacock brings together another collection of those delightfully amusing sketches which have marked him as a humorist with a manner that is altogether his own. His last book is hardly equal to "Sunshine Sketches of a Little Town," but there are passages in it that one would not willingly have missed.

L. J. B.

NEWS FOR BIBLIOPHILES.

The latest publication of the Bibliographical Society, No. xvi of its Illustrated Monographs, is likely to prove the most generally useful work it has yet produced. Mr. Ronald B. McKerrow, who now shares with Mr. A. W. Pollard the duties of honorary secretary, has listed all the printers' and publishers' devices which he has found used by English or Scotch printers from the beginning in 1485 to 1640. Such a list, with facsimiles of the 428 devices, would by itself have been invaluable to those who have occasion to try to answer the puzzling questions which arise in connection with so many old volumes.

Mr. McKerrow has done much more than bring this material together. He has indexed the devices according to size, the only practical means of identifying many of them, and also by names, mottoes, and initials. He has made a contribution to our knowledge of the English book, printing, and publishing trades by his notes on the transfer of devices from one establishment to another, while his readable introduction raises a number of questions for further investigation.

In connection with the detailed description of each device, Mr. McKerrow has shown a courage which would have been dangerous on the part of a less conscientious searcher. With each description, he has stated not only where he found the device, but the earliest and latest use of which he is aware. Every student who uses the book is likely to extend these dates—a single American library has carried one of them forward from 1513 to 1521—but this only goes to prove how greatly this feature adds to the practical usefulness of the volume. The fact that a woodcut in a book printed in 1521 was also in use in 1496 is not in itself important. Taken in connection with other facts, however, it helps to an understanding of what Richard Pynson's workshop was like, to know that this particular block was still in use fifteen years after he had it made. To the possessor of some old fragment in which the device is the only clue to when and where the book was printed, the importance of this fact is likely to seem very great indeed.

Mr. McKerrow's volume adds to the confusion in regard to one cut which has long been the cause of various theories among students of American books. In 1548 Edward Whitchurch, of London, printed Erasmus's "Paraphrase upon the New Testament." The title was enclosed in an elaborate border, with the royal arms at the top and those of Queen Catherine Parr at the foot. In the lower corners were the printer's initials, "E. W." The next year this border was used again by Whitchurch for the title of the first edition of the Book of Common Prayer. Whitchurch was the principal printer engaged in bringing out the Edward VI Prayer Book, a fact which may account for his exclusion from the general pardon proclaimed at the beginning of "Bloody Mary's" reign, in 1552. He thereupon disappeared from the shop at the Sign of the Sun in Fleet Street, and his scattered stock gradually reappeared in the hands of at least six other printers.

The marriage of Mary to King Philip II of Spain, and the closer commercial relations between London and the Spanish ports which followed this union, has been thought to be the probable explanation for the reappearance of Whitchurch's Prayer Book border in the City of Mexico, where it was used in 1559 for the title of Friar Maturino Gilberti's "Vocabulario en Lengua de Mechuacan," the native dialect used in the region beyond Lake Chapala. The cut had made a long journey from the heretical shop in Fleet Street, and the search for reasons to account for its travels has given ample play to the bibliographical imagination. So far the facts have involved nothing at all impossible or improbable. Now, however, comes Mr. McKerrow with the confusing information that he has seen the identical cut of the 1548 Erasmus and the 1549 Prayer Book, with the arms of Catherine Parr and the "E. W." whittled away, in use in London in 1554, in 1559, and, worst of all, in 1562. On the Mexican title-page of 1559 the arms have been altered, a common habit of the old wood-block cutters, but the letters "E. W." are in the place they occupy in the title of the Prayer Book. There seems to be only one explanation of the facts as they now stand. When the Book of Common Prayer was ordered to be used in the churches throughout England, all the available presses, working at their best, were unable to meet the demand for copies. At least six different issues of the Prayer Book appeared during the spring and summer of 1549, and these have given rise to various bibliographical questions, few of which have been answered satisfactorily. One of these, which apparently has not before been asked, is whether there were more than one of the "E. W." border cuts in use upon different presses printing the titles to the Prayer Book. If there were two, the seemingly impossible is explained.

GEORGE PARKER WINSHIP.

Correspondence

IS AMERICAN VIGOR DECLINING?

TO THE EDITOR OF THE NATION:

SIR: In your issue of January 15, you commented editorially on the question "Is American Vitality Declining?" and you were kind enough to quote some figures from my paper in the December number of the American *Journal of Public Health*, entitled "Possibilities of Reducing Mortality at the Higher Age Groups." In your opinion, the figures do not warrant the conclusions drawn, viz., that there has been a deterioration in American vitality. You would have us believe that the increased mortality between the ages of forty-five and sixty-five is entirely due to the advances in medical science, which have prolonged the lives of persons until this age-period who previously would have died at the younger ages. Indeed, you even suggest that this factor may in itself be sufficient to account for a larger increase in the mortality at the higher ages than has actually been observed, and that there may very well have been an improvement in the conditions of life rather than a deterioration.

I realize, of course, the importance of the sequelæ of the acute infections of early life, and pointed that out in my paper. My only quarrel with you is that you have seen fit to make this single point carry the entire burden of explanation. In this, I believe, your position is untenable.

Let us take the mortality of females. There has been a much larger decrease in their early mortality than that observed among males; but their mortality at the higher ages shows practically no increases, as we should expect from your explanation. In other words, there must be some other causes at work. These, I believe, include the increased consumption of alcoholic beverages and, more especially, the industrial conditions that have prevailed during the last thirty years.

The difficulty in your argument results from your primary assumption, namely, that the advances in medicine merely pro-

long life. Nothing in nature corresponds to your hypothetical case. The saving of a life in infancy is not equivalent to giving the individual a lease of life for a limited term of years, as you conceive it. As Newsholme pointed out in his famous controversy with Pearson, the babies saved through present-day infant hygiene must not be classed as weaklings, but include the best and worst stocks in the community. Recent life-saving campaigns have directed their attention not so much to curing the sick as to the prevention of sickness itself. Indeed, improved milk and water supplies have been much more potent factors in reducing mortality at the younger ages than the advances in medicine. In the larger number of cases, therefore, there are no good reasons why the life which has been saved in early years should not run on to sixty-five and over. Our present anxiety is due to the fact that the increased mortality is occurring in the age-period between forty-five and sixty-five. We should like to see the acceleration in mortality begin after age sixty-five when no serious social damage would result.

Do you not virtually admit the weakness of your case in your last paragraph? You point out that "It is quite possible that the increase in the number of deaths at the ages above forty-five may be due to a larger number of persons reaching these ages among the classes engaged in hard and life-shortening toil." That was exactly the point we desired to make. In the first place, the classes engaged in hard and life-shortening toil form the major part of our population, and secondly, it is the hard and life-shortening toil itself which must be considered as an important cause to which we must ascribe the increased mortality under discussion. It is generally agreed among students of industrial conditions that the changes in the trades during the last thirty years have been of a nature to make life harder for those engaged in them. Fortunately, these conditions are now being improved voluntarily by employers, and through the influence of labor legislation.

The question under discussion is one of the most complex in the whole realm of vital statistics. The several causes to which I directed attention in my paper are important, but I do not contend that they are all-sufficient. A number of intensive studies must still be made to determine, for example, what effects have followed from the concentration of our population in the cities. We must also determine the effects of changes in the composition and characteristics of our population.

During the last ten years, there has been an influx of Italians, Hungarians, Russians, Poles, and Jews, largely of adult age, who may have had an unfavorable influence on our figures of mortality. It is important to observe in this connection that they have congregated largely in our registration States, and that in every case the mortality rates of their native countries are higher than those to be observed in the registration area of the United States. These two factors have undoubtedly played an important part in our total results; what that is, can be determined only by further research of the most intensive character.

In conclusion, you will permit me to direct attention to the fact that your conclusions are likely to have an effect very different from the one you contemplated. Those agencies which are now engaged in improving the conditions of labor, etc., are likely to be hindered in their work if there be agreement that the increases in mortality in later life are the result of the "survival for many years of some lives less hardy than the average which in olden days would have disappeared much sooner." I am certain that you are hardly prepared to take such a stand. Yet there will be those who, in defence of their anti-social conduct towards industrial workers, will take refuge behind your encouraging interpretation of American vital statistics.

LOUIS I. DUBLIN,
Statistician of the Metropolitan Life Insurance Company.

New York, January 19.

THE HARVARD-TECHNOLOGY MERGER.

TO THE EDITOR OF THE NATION:

SIR: The editorial in your issue of January 15 on the Harvard-Technology merger contains some half truths which are misleading. In that editorial Harvard's "non-success in the field of applied science" is measured by the number of graduate students. The statement is made that Harvard has less than sixty graduate students of applied science, while Technology has 250 graduates seeking its degrees. These numbers are incorrect and not comparable. Harvard has 139 students enrolled in its Graduate School of Applied Science, and taking courses leading to degrees in applied science. The 250 graduate students in Technology are the total number of graduate students there, which therefore includes the students in all branches both of pure and applied science. Such information as is obtainable indicates that the number of graduates at Technology taking courses in those fields of applied science which are offered at Harvard is barely, if at all, greater than the number of graduates in the Harvard School of Applied Science.

If, however, the figures were as stated by you, they would not indicate "non-success" at the Harvard School. The School is quite new; certain of its departments are not as yet fully manned; its courses are more rigorous and its standards higher than those of other technical schools in this country; its curriculum occupies the whole of the twelve months with practically no break, and it is as yet known only to a small minority of the students graduating from the colleges in this country. Many students are deterred from entering the Harvard School by the high standards maintained there, or by the absence of summer vacations, or because they must have their summers free to earn money to enable them to go on with their studies.

I would submit, however, that numbers are not a satisfactory indication of success. The instructors in the School of Applied Science are virtually a unit in believing that the experiment which Harvard University has started has turned out most successfully; that the students who have been attracted to the School show a high average of earnestness and capacity; that the graduates leave with better equipment than is possible in an undergraduate or a mixed graduate and undergraduate school; that there has been success in turning out men with thorough technical grounding, a broad outlook, and enthusiasm for their profession. As other engineering schools have started to follow in the path set by Harvard University, this success should be stated, as an encouragement to continue the experiment which has been so abruptly terminated by the governing boards of Harvard University.

In another respect also, your statement of facts is misleading. No faculty of Harvard University was informed of the merger until it had already been passed by the corporation of Harvard University and the executive board of Technology. It is true that the faculty of the School of Applied Science had an opportunity to ask questions about it two days before it was finally ratified by the overseers of Harvard University; but the overseers did not seek the advice of any of the faculties or of individual members of the teaching staff, and naturally approved what was submitted to them by the corporation. The faculty of arts and sciences learned of the completed merger only from the daily papers, though it is a matter of much importance to that faculty, because the position of the pure sciences in the University is greatly weakened by the removal of the applied sciences. The trustees of the McKay Fund also obtained their first news of the merger from the daily press. Mr. McKay had specifically refused to aid Technology; but the merger is based entirely upon the University giving up to Technology all real control over two-thirds of that fund.

These matters, which are of common knowledge in the University, have some importance to the community in relation to the growing sentiment against autocratic control of universities by their presidents or governing boards. It is interesting to note that one member only of the governing boards urged delay, in order that proper consideration might be given to a matter of so much importance; and that that one person was the sole member of the teaching staff on the governing board. Harvard has thrown away its unique School of Engineering, and not one person whose opinion was of value on that subject was consulted. It is surely time that the faculties of our universities should have a larger voice in the control of educational policies.

Harvard has two other graduate professional schools which might be merged with other local schools. The Harvard Law School would enrich the Boston University Law School if absorbed by it. The Harvard Medical School might do a like service to Tufts Medical College. The arguments that might be advanced for these combinations are precisely those which carried through the Harvard-Technology merger.

THE AMERICAN HISTORICAL ASSOCIATION.

TO THE EDITOR OF THE NATION:

SIR: I am very grateful to Dr. Rowland for his communication, published in the *Nation* on January 22, which states at length the most interesting feature of the recent business meeting of the American Historical Association—a feature to which I could allude only most briefly in my report of the meeting, owing to the cruel

bonds of space limitation and not to any oligarchical attempt at *suppressio veri*. For I feel, in common, I believe, with every other member of the Association, including the officers, a keen appreciation of the courageous way in which Dr. Rowland stood up at Charleston to criticise the methods of the election of officers of the Association and to voice the opinion that the power of the Council "has increased, is increasing, and ought to be diminished." It is well that the members of the Association should be aroused by him to the fact that they have been too indifferent.

It is quite natural that the steadily widening membership and the increasingly varied activities of the Association, together with the human experience that it is oftener easier to do a thing one's self than to get some one else to do it, should have inevitably led to an increase in the powers and activities of the Council. I do not conceive of the Council as an oligarchy grasping for power, but rather as a hard-working body having increased labors thrust upon it. The Constitution of the Association says nothing about committees or their appointment. But as the work of the Association has grown with time, committees have had to be appointed. What was more natural than that they should have come to be appointed by the Council? So now we have reached the brink which Dr. Rowland has opportunely revealed. What is to be done?

If Dr. Rowland, or any one else, thinks that the general will of the members of the Association as to the choice of officers would be expressed satisfactorily and without criticism by simply following the letter of the clause in the constitution which he italicizes ("These officers shall be elected by ballot at each regular annual meeting of the Association"), I fear his optimism is excessive. For two objections would be raised. Only a small proportion of the members are able to attend the annual meeting. Not a tithe of the 2,843 members went to Charleston. Would not the absent ones say in criticism that they also ought to have some rights? They might. But in an organization like the Historical Association, in which the chief opportunity for activity is in attendance at the Christmas meeting, a sufficient reply to such critics would be that they have a right to attend the annual meeting and there ballot for officers, and that if they do not take enough interest to do this, they should not criticise. This objection, therefore, is not, so it seems to me, of serious consideration. However, in the plan outlined below, absent members would have some influence in making nominations even though they did not take part in the final ballot. There is another objection, however, which is vital and fundamental. As some one pointed out at Charleston—I think it was Professor Burr—it requires very little acquaintance with political assemblies, student organizations, and even college faculties to observe that a simple election by ballot is by no means likely to give general satisfaction. What usually happens in such cases is that a small group of men, more zealous or less scrupulous than the rest, come together beforehand, agree to support certain candidates, and spring upon the assembly an unseen slate which has enough organized support to carry the elections in a wholly unorganized mass of disconcerted electors. By a caucus of this sort a small and irresponsible minority may engineer elections by no means generally desired by the great majority.

To avoid the possibility of this and to afford an agency for ascertaining the real general wishes of the members of the Association, the Council has been in the habit of appointing a nominating committee. The Council and the committee, as they stated at Charleston, have genuinely made some effort, in going to and fro in the earth, to consult members whom they happen to meet in regard to desirable nominations for the December meeting. The only difficulty is that many an individual member may find, as does Dr. Rowland, that he himself did not happen to be one of those whom the committee happened to consult. Some years ago also the Council earnestly attempted to procure nominations by sending out to members, along with the bill for annual dues, a blank ballot for suggestions. But from some two thousand members they received less than two score replies. The experiment did not seem to be worth repetition.

In view of this situation I venture to repeat a suggestion which I heard favorably discussed on our homeward way from Charleston.

As it is essential that some canvass of opinions be made before the final balloting at the annual meeting, I suggest that the nominating committee, after learning as much as it can of the sentiments of the members by conversation, shall draw up a list of several nominations for each office to be filled, leaving space for, and expressing the hope of receiving, additional nominations. Let this list be sent to each member some weeks before the annual meeting in order that he may mark his preference among the suggested names or add nominations of his own. These marked nomination lists, returned to the committee, should be the basis for the final ballot to be voted upon at the annual meeting. This may be a little clumsy and involves some work, but it is similar to systems found fairly satisfactory by some colleges and universities for electing overseers, trustees, and alumni officers. It would not be likely to meet such apathy as did the efforts of the Council a few years ago, mentioned above; because a modest man who would hesitate to urge candidates whom no one has mentioned, is likely to be ready and eager to express a preference among names brought to his notice; and the provision for additional nominations would always give adequate opportunity to those who thought the nominating committee had not done its duty in bringing forward fairly representative names.

SIDNEY B. FAY.

Dartmouth College, January 24.

LAWMAKER AND EXPERT.

TO THE EDITOR OF THE NATION:

SIR: Professor Sadler writes in the *Nation* of January 15 that if a committee of Congress declines to hear opinion upon the ground that it is not expert opinion, the logical conclusion is that Senator La Follette has no right to offer legislation upon the subject matter, of which he admits that he has no expert knowledge.

If the professor's reasoning is valid then a prosecuting attorney has no right to draw up an indictment for murder by poisoning unless he is an expert on the physiological effects of poisons.

But obviously the framing of a proposal and the taking of evidence upon it are very different operations. Identical rules do not apply.

WILLIAM P. MORRISON.

Boston, January 19.

CAFETERIA.

TO THE EDITOR OF THE NATION:

SIR: You published some time ago an article on the word *cafeteria* and then later another one on "Pequeño Larousse Ilustrado," but failed to combine the two. If you had looked for the word in the dictionary, you would have found the following explanation: "Cafetería, f. *Cub.* Tienda donde se vende café por menor."

JOSEPH DE PEROTT.

Worcester, Mass., January 16.

A QUESTION OF HEREDITY.

TO THE EDITOR OF THE NATION:

SIR: The *Nation* has already printed two attempts to translate into English the mathematical symbols of Professor Pearson's study of the children of Edinburgh drunkards; permit me to suggest a third. Mine has at least the advantage of being somewhat more flattering to the intelligence of the world's first scholar in his field.

As I understand Professor Pearson, the comparison is not, as is commonly assumed, between children of drinkers and non-drinkers, or of drunkards and moderate drinkers, taken as general classes. That is to say, it is not simply a comparison of children whose parents are damaged by alcohol with children whose parents are not damaged by alcohol. The point of the study is that the two groups are on the same social level.

In other words, the comparison is between the children of parents who are now at a social level where they naturally belong and the children of parents who naturally belong on a higher level, but whose alcoholism has dropped them down to the level where they actually occur.

The question, then, is this: Given a child with a certain heredity and a certain environment, how will this child compare with another child whose environment, though substantially the same, is on the whole made rather worse by the parental habits, but whose heredity is on the whole distinctly better? That the second family is, on the whole, "better" than the first, is assumed to be proved by the fact that, in spite of its alcoholic handicap, it still maintains itself at the same social level as the first.

The answer turns out to be precisely what every disciple of Darwin would expect it to be—the better native protoplasm more than offsets the alcohol, and the children of hard-drinkers prove to be slightly superior to their neighbors.

Whether, therefore, one agrees or not with the opinion of your correspondent, that Professor Pearson's "conclusions are ob-

viously most untrustworthy and misleading," for the reason that "there was no comparison with children in normal, temperate families," must turn on one's understanding of what the eminent biometrician was actually trying to do. If he was studying the physiological problem of the effect of alcohol on offspring, the criticism is well made. If, on the other hand, he was studying the genetic problem of the distribution of native quality in different social classes, and selected the families of hard-drunkards merely as a convenient example of a "declassed" group who still retain something of their class quality, the weakness of his logic is by no means so obvious. All we need to know is that one group has damaged its social status by drink more than the other.

Which of these two interpretations of the paper is correct, can be settled only by the original text. E. T. Brewster.

Andover, Mass., January 20.

Literature

LI HUNG CHANG.

Memoirs of Li Hung Chang. Edited by William Francis Mannix, with an Introduction by Hon. John W. Foster. Boston: Houghton Mifflin Co. $3 net.

The remarkable biography of the late Empress Dowager of China, compiled a few years ago from the original documents, has prepared the English-speaking world for almost any surprise when the curtain is lifted which reveals the inside of Chinese life among the mighty. The "Memoirs of Li Hung Chang," purporting to be derived from a great mass of manuscripts left by that statesman, may be accepted in the Western world without much comment, because we now know that the Chinese are subject to like passions as ourselves and are able to commit indiscretions in their letters and diaries like other people. In other words, the figment of the "inscrutable" Chinaman has begun to disappear. It is not, therefore, the amazing frankness or the naïvité of these pages that excites suspicion as to their entire genuineness, but the frequency with which statements occur in them that are not in accordance with known facts. Amid so many discrepancies it is noteworthy, moreover, that the editor not only refrains from comment in the case of new material, but fails to substantiate the authenticity of certain papers included here which were gravely impugned when they appeared in the newspapers some years ago. Either the translator is much at fault or Li had a romantic contempt for accuracy that renders his testimony upon events in which he was an actor a source of fresh anxiety to future historians. The Grand Secretary may have been confused or indifferent in recording incidents in places, like Windsor and San Francisco, where he had never been. But how could he have declared that he, with representatives of all the foreign Governments, personally saw the execution of the Tientsin rioters? According to the report of the British Consul, W. H. Lay, then at Tientsin, the Parliamentary Blue Book informs us that no foreigners were present at the execution, which occurred at 5:30 on the morning of October 18, 1870—a month after the date of the excerpt attributed to Li in this volume—nor was Li himself there. Other instances occur which, if we may trust the translation, seem to imply Li's inability to speak the truth even to himself.

The documents from which the contents of this book are derived were translated, we are told, by one Major R. Emmet Roberts, a secretary of the late Viceroy, assisted by two Chinese, who are so named in the preface as to render them impossible of identification. The originals, written on scraps of paper at various periods during the Viceroy's official career, contain more than a million and a half characters, only a tenth of which have been thought to be worth translating. It does not appear that these notes were written with any other motive than the relief which an active mind finds in mere literary exercise—and Li, like many cultivated Chinese, was an acknowledged master of style. Such material at best could be arranged and condensed to useful purpose only by its author. It has fallen into the hands of foreigners whose desire to render it into idiomatic English and present only such fragments as would attract Western readers, arouses a doubt as to how truly these memoirs reproduce the actual statements and opinions of the putative author. The editor's reticence suggests that he at least has no mind to be counted among those who step in where angels might fear to tread. To his ignorance of Chinese must be attributed the rather numerous errors in the transcription of proper names, but a little diligence with easily accessible authorities on modern China might have equipped him with more sensible interpolations than those inserted between the translations of the diary. No one, for instance, who reads his Chinese history could call the unfortunate and demented Issacher Robberts (not Robberts) "the chief Christian missionary of the time in the kingdom."

Upon the most outrageous public act in Li's whole career, the murder of the surrendered Tai-ping Wangs at Suchau, the editor makes no comment at all. This savage stroke occurred, according to Boulger's "Life of Sir H. Macartney," in Li's camp, which was within a palisaded enclosure where Macartney saw the decapitated bodies lying on the ground. From these memoirs we learn that the Governor was entertaining the captured chiefs—who had surrendered on solemn promise of personal immunity—on his boat lying near the city gate, when

> a great horde of lawless fellows, some of them Imperialists, but a majority of them drunken fellows of the Wangs' army, poured through the gate killing and assaulting. I was one of the first to hear the great uproar, and believing the marauders might be intent upon dispatching me—for threats had been made in many quarters—I made my escape from the barge and hurriedly entered the city. Immediately I sent orders, by officers we met, to get troops as soon as possible and arrest all the rioters; but the orders were not quickly obeyed, and a scene of wholesale slaughter occurred upon the barge.

The description does not tally with those recorded by others who were there, but even if we are to believe Li's account of this sorry affair, we could wish that it did not leave him open to the suspicion of treachery from which foreigners are not likely to acquit him. For these foreigners he entertained at first an aversion which gradually changed during his long intercourse with them to something approaching admiration. "It is not the men personally that I dislike," he writes in 1863, "but it is their airs of wonderful superiority. Each and every one sings the same song: 'I will do this, and I will do that; I will drive them out, or I will kill them all; I'll make your army more glorious than ever; but you must let me have my own way and not interfere with me!' That is the whole style of these foreigners." Twenty years later he was moved to write: "Fully appreciating what the Christian nations did for us in a late emergency, I cannot say that I am not friendly to the people of the West." There is hearty admiration for Gordon's talents and forgiveness for his hot temper—it was much like his own—but no sympathy whatever with his chivalry towards a fallen enemy or his consideration for his soldiers. Li's greatness was intellectual, not moral. He never approached the military genius of his older contemporary, Tseng Kuo-Fan, to whom is due the credit of quelling the Tai-ping rebellion, but he attained his success in this stormy period by superior subtlety, ruthless energy, and an appreciation much beyond his coadjutors of the advantage of employing foreign military skill in the service of his Government. Yet, though conscious of the necessity of equipping China with the scientific knowledge and armaments of the West, his avarice could not resist the temptations of profiting personally by the opportunities of high office. He grew rich while the troops of the new army he created were left unpaid, and the defences of the Empire crumbled under the first attack largely through the cupidity of their sponsor.

The Viceroy's association with the famous Empress Dowager constitutes

perhaps the most interesting and obscure phase in his public career. Though he was called to Tientsin as early as 1870, and was thus brought into close relations with the Palace, we nevertheless have nothing in these papers that brings Li into political contact with the Old Buddha (the Empress) until the Japanese War. In this interval of twenty-five years the alliance betwen the two chief exponents of government by graft was so successfully cemented that the Metropolitan Viceroy became the richest subject in the Empire. The two Viceroys, Chang Chih-T'ung and Liu K'un-Yi, made it clear before they died that they thought him a partner also with the notorious eunuch, Li Lien-Ying, and responsible with him and the Dowager for a state of political corruption unequalled in China since the Ming dynasty. With his cynical indifference to any moral law that interfered with the exercise of his master passion it does not seem probable that Li could have failed to write some of the million and a half characters preserved in his various *yamens* upon this engrossing topic; but his family may observe a natural reticence as to the sources of his stupendous fortune. Yet, despite his insatiable appetite for gold, he could pretend admiration for honesty in others, like the high-minded Prince K'ung, whose death he laments in the days of the *coup d'état* of 1898: "If I could bring him back I would turn over, for the nation's sake, more than one-half of what I own; even though K'ung himself never helped me to accumulate a dollar, but rather put himself in my way two or three times." The formula is one we might expect to find in the diary of a Tammany chief, if one of these ever committed the indiscretion of keeping a diary.

The Empress herself comes in for one or two descriptive touches. While not averse to the introduction of Western learning, he approved her treatment of the reformer, K'ang Yu-Wei, and of the young Emperor, because the former was an extremist and the latter would not listen to Li's advice. In 1900 he calls her "perhaps the best personal friend I have in the world outside my own family and domicile." Yet she gave no heed to his advice, either, and when he tried to press her regarding her plans in the Boxer crisis, "she had been," he writes, "so cordial and amiable in comparison to her ordinary wont that I did not believe my further inquiry would offend her, but in an instant she was alive with wrath and angry words, and I immediately withdrew. I have seen women something like her before, but they were in my house and it was not necessary for me to get down on my knees to them." The old statesman, though discredited for a time, was again called upon to rescue the nation after the débâcle which ensued, but this was their last interview; he died ere the Empress returned from her flight to Sian. Both made what reparation they could at the end of their lives for the disasters which their unbridled avarice had brought upon their country, but they must share alike the odium of having prostituted their splendid talents in their indulgence in the most ignoble of vices.

CURRENT FICTION.

From the Angle of Seventeen. By Eden Phillpotts. Boston: Little, Brown & Co.

Our regret at learning that Mr. Phillpotts intended to close his studies of Dartmoor life with "Widecombe Fair" was not quenched by the story that followed, "The Joy of Youth." It was amusing and brilliant, but lacked the solidity of the Dartmoor tales, without altogether shaking off their manner. "From the Angle of Seventeen" has no such reminders. It is so unlike anything else by Mr. Phillpotts that one can hardly believe it is his. A humorous sketch, it would be called, rather than a story—a year out of the life of an English boy chronicled by himself. We meet him at the moment when he ceases to be head boy in a big school, and becomes a clerk in a London "fire-office." He is greatly impressed with this "busy hive of industry," which "teemed with men of the greatest ability," and himself feels "like a mere insect in a solemn cathedral where a mighty service was going on and everybody was doing their appointed part but me." He lives with an aunt who "was quite old herself, and might have been at least forty. She was not yet withered, like the very old."

Of young Mr. Corkey's labors in the "fire-office," and his success in making a respectable place for himself in that hive, or cathedral; of his contact with the rude world of the streets; his aspirations towards the stage, achievements in poetry, athletics, and social life, these pages treat. We are conscious of a Mr. Phillpotts smiling over the writer's shoulder, but never taking the pen from him. When Corkey shows the record to his aged aunt (of thirty-eight) she piques him by laughing. For a moment their relations are strained; but he forgives her, "because she's really a jolly old thing, and of the greatest assistance to me behind the scenes, so to speak. Besides, everybody knows that the feminine sense of humor is merely dust and ashes. No doubt if I had written with badinage or pleasantry, in a light and transient vein, enlivened by sparks of persiflage and burlesque, she would have taken it in a tearful spirit and cried over it. . . . We must remember that they are not as we are, and treat them accordingly." From beginning to end there is no flaw in the delicious boy-style, with its artless slang and its equally artless pursuit of threadbare "literary" phrases.

It Happened in Egypt. By C. N. and A. M. Williamson. New York: Doubleday, Page & Co.

What happened to the Williamsons in Egypt is very much like what has happened to them before this in other climes dear to the tourist. The writers do not divulge the secret of the Sphinx or other matters sacred to Egypt, but they do concern themselves with information of a more practical nature. They are particularly successful in hitting upon the most picturesque corners of the country at the most favorable moment.

In the matter of adventure, neither variety nor quantity is lacking. To a large extent, the story revolves about two young men who are negotiating with the Government for the rights to excavate "The Golden Mountain," near Cairo. One of the two is blessed with a title, the other with a romantic history and a romantic disguise. They are invaluable assets to a rich promoter who organizes expeditions *de luxe* on the Nile. To draw the millionaire crowd, a titled guide to lecture on Egypt is essential. So he buys the rights to the Golden Mountain and consents to cede them, only if the young men will agree to pilot rich tourists on the Nile. The young men consent, and then things begin to happen in Egypt. Among those who consent to be piloted is, of course, a young American heiress, whom Lord Borrow has met on the steamer.

The Sphinx in the Labyrinth. Maude Annesley. Duffield & Co.

The mere story of the book is its most suggestive criticism. The love between a beautiful invalid artist and her husband, who gave up a brilliant career in law to take care of his wife, is so deep and affecting that it moves to tears the wife's lovely cousin, a poetess, who is living with them. To the very end of the book the wife and her husband adore each other. This does not prevent, however, the husband from falling passionately in love with the cousin also. The author explains this very simply: "It has been said over and over again that a man cannot love two women simultaneously. If this is so, then Stephen Warren was the exception which proves the rule." The cousin fully returns the husband's love. But she also loves the other woman deeply, and from a sense of duty to her determines to go away and forget, if she can, the guilty love she feels. To her amazement and that of the husband, the wife, whose acute intuition has kept her informed of the love between her husband and her cousin, tells them both that she approves of

their love affair and loves them both all the more for it. The wife dies of an unsuccessful operation. The widower, after a decent period of intense grief, comes to the poetess and asks her to marry him, as their love for each is stronger than ever. To his great surprise, the poetess refuses, saying: "I can't take you away from her," referring to his dead wife. "If Camille [the wife] had remained with us, I—I—things would have remained as they were, . . ." she explains. "She understood, and it did not hurt her. . . . But now she cannot tell us what she thinks. Now she may feel differently. . . . I loved her so. I can't, oh, Stephen, I can't run the risk of hurting Camille's soul!"

The Toe, and Other Tales. By Alexander Harvey. New York: Mitchell Kennerley.

In his prefatory note of acknowledgment the author says that he is especially grateful to the editor of the St. Louis *Mirror* for accepting "The Toe" when "leading New York magazines refused it." We gather that the joke is supposed to be on the leading New York magazines. He also thanks the editors of such publications as *The Smart Set* and *Town Topics* for using some of these stories, and expresses his great indebtedness to Mr. George Sylvester Viereck "for encouragement and sympathetic criticism." We mention this note by way of permitting Mr. Harvey to place himself. His stories have the qualities esteemed by a certain group of writers in New York. There is a good deal of straining after novelty of theme, and a kind of eroticism prepared for a special audience of bachelors—lingerie eroticism, it may be called. Two of the tales, indeed—"The Toe" and "Frou-Frou"—are elaborate rhapsodies on the beautiful theme of female underclothing.

SOURCES OF HISTORY.

English Historical Literature in the Fifteenth Century. By C. L. Kingsford. New York: Oxford University Press. $5 net.

Mr. Kingsford's ability as an historical critic with no mean powers of generalization has been established by his editions of the "London Chronicles," Stow's "Survey," and his studies of the Crusades and of Henry V.

The fifteenth century is lacking in the unity and concentration of purpose which gives so much interest to the Angevin and Tudor periods. The old order of society was breaking up in the transition from mediæval to modern England. The resulting confusion and decay render the age difficult to interpret; but the creative forces were at work which were to make the Tudor period memorable in history. These characteristics of the fifteenth century are clearly reflected in the pages of contemporary histories. In the early years of the century the historical form was still the Latin chronicle, dry and annalistic, written by and for persons whose experience did not extend far beyond the confines of the monastery. They show mediæval historiography in the last stages of decay. The French wars, the rapid development of trade and commerce, the growth of civic life, and the introduction of the New Learning from Italy resulted in the awakening of national consciousness, in the spread of education, and in the rise of a new type of history, written in English instead of Latin. The "London Chronicles," the chief historical source of this period, were written for men of affairs. Interspersed with accounts of national events is a wealth of local allusions, such as elections, fires, prices, and commercial transactions. This element of utility led Nash in the following century to make the scarcely just criticism that the writers were "lay chronographers that wrotc of nothing but of Mayors and Sheriffs and the dere yere and the great frost." The "Brut," the most popular and widely spread history of the time, was written to be read for pleasure. The mere love of a good story is well expressed in the naïve remark by Caxton, one of the later compilers: "Yf I could have founden moo storyes I wold have sette in hit moo." Mr. Kingsford laments the disrepute into which the "Brut" has fallen among modern historians, for it faithfully reflects popular opinion on national events and policies. Artless and crude as these early productions in English are, they reveal a new interest in national affairs by the middle classes. Through the pages of Hall, Stow, Holinshed, and particularly Shakespeare, they fixed for centuries the popular conceptions of this period.

Verse was a natural medium of popular narrative, political controversy, and satire. Such lines as the following, written in the early part of the century, are significant:

> For common is the fairest flour
> That euer God sette on erthely crown.

Poems like the "Libel of English Policy," which foreshadowed the Mercantile System, not only gave expression to the opinions of the commercial classes, but undoubtedly exerted a powerful influence upon national policies.

Under the influence of national consciousness and the spread of learning a new era in historical writing had dawned by the opening of the sixteenth century. The histories were then written in the language of the people, from a national standpoint, with a conscious effort to handle the material critically and to give a well reasoned account. Sir Thomas More's "History of Richard III," "the first historical work of outstanding literary merit in the English language," exhibits the strongest possible contrast to the Latin chronicles with which the fifteenth century opened. "Viewed in this light," Mr. Kingsford says, "English historical literature in the fifteenth century has a real unity. In no period of equal length can we trace a development of such great importance."

Most of the sources discussed have appeared in the Rolls Series, in the Camden Society Publications, or in separate volumes. Many of the early editions, particularly those of Riley, Hearne, and Giles, are faulty, and have been severely criticised in recent years. Mr. Kingsford has provided in convenient form the results of later investigations, and by a careful study of internal evidence and a comparison of the original manuscripts has offered many original suggestions. While too minute and technical to be discussed in this review, these should be carefully weighed by future students working in this period. He has discussed several sources hitherto unpublished and has printed in a long appendix portions of more than a score of them. The volume is furnished with a full index and a useful bibliography of printed and manuscript sources.

As an evaluation of historical material along lines somewhat more restricted than Molinier's "Les Sources de l'histoire de France," the work is admirable. Though the reader frequently feels that Mr. Kingsford is overstraining the theme of literary development in a conscious effort to appeal to a wider circle, the volume will nevertheless prove valuable to the students of Shakespeare and sixteenth-century literature in general, for it traces to their origin many of the tales preserved in the literature of that period. Mr. Kingsford has made a contribution of historical and literary significance in tracing back many of the legends of Henry V to the middle of the fifteenth century, to a work now lost which purported to be "Reminiscences of the Earl of Ormonde," who accompanied the King into France. In the historical plays of Shakespeare he observes a remarkable perception of the unity of the fifteenth century which is too often overlooked: "The downfall of Richard II, the glories of Henry V, the long struggle of Lancaster and York ending in the happy union of the rival houses, were all stages in the preparation for a greater Age."

L'Anabase de Xénophon, avec un Commentaire historique et militaire. By Col. Arthur Boucher. 48 maps and plans; 400 pages folio text. Paris: Berger-Levrault. 25 francs.

In the days of the American small college three books of Xenophon's "Ana-

basis" were universally required in the quantum of Greek which was thought essential to a liberal education. Alexander the Great learned the art of war in Xenophon. Napoleon quoted him. Gen. Février, who has been the great tactician of the French army in recent years, replied to questions: "You will find it in Xenophon—the only master I have had." After so many centuries, professors who follow campaigns in documents have begun to depreciate the historical and military value of the "Anabasis," following, perhaps, Col. Mure's suspicion that "the author, without fear of contradiction, seeing that all the main actors were now dead or scattered, could assume an importance quite beyond that warranted by the real facts" (Mahaffy). The German General von Hoffmeister—"Durch Armenien und der Zug Xenophons" (Leipzig, 1911)—has, in his turn, gone over a part of the line of retreat of the Ten Thousand and tried to upset many received interpretations. What with old and new college students, with military students desirous of going through a praxis followed by leaders of armies for more than two thousand years, with readers of history who wish to know if Grote's admiration of Xenophon is justified, with those who are interested in countries which Turkey's disasters are opening at last, this very painstaking translation and commentary of a superior French officer, already known for his studies of Greek tactics and German strategics, should not lack a public. For the Greek professor, for the reference table of students even not advanced, it is a godsend.

In the minute introduction there is a statement of the historical questions involved, with a table of the marches from place to place, day by day, in parasangs and kilometres. Besides the aid furnished by geographers like Richard Kiepert and Felix Oswald, hy men on the ground, like Prince Engalitscheff and the Governor-General of Erivan, our commentator has had the unique collahoration of a Dominican missionary who—the first in modern times—has made reconnoissances of the difficult mountain region in what is still unknown Turkey. A complete analysis follows of military questions exemplified in Xenophon's account and their use in modern manœuvres.

The translation (the Greek text is not given) has been made in literal and very readable French, with particular reference to military exactness. Each chapter, according to the divisions of the Teubner edition revised by Gemoll, is followed by its commentary. Thus, as a sample of its richness and completeness, the second chapter is accompanied hy an analysis of the Greek forces; a map with description of the route and a road-sketch from Ramsay; a valuation of the length of the parasang in Xenophon and Herodotus, compared with actual measurements in kilometres; days' marches estimated by time; a table of the troops under review in separate divisions by commanders; a full explanation of the military organization of the Greeks and their formation in battle; and their order of encampment with the Persian troops of Cyrus, with plan. Perhaps not a single point of the text of Xenophon, which is a journal of march as well as a history, is neglected, down to the point where the retreating Greeks take to the sea, which calls forth an explanation of "ships in use at the time of the Ten Thousand." The conclusion is:

The "Anabasis" is a veritable monument from the historical and geographical point of view;

It is also one of the most beautiful and exact books of war left us by past centuries;

And it is one which men of war, especially to-day, have most interest to meditate upon and to apply its teachings.

Notes

Houghton Mifflin Co. is about to issue a guide-book of Japan by T. Philip Terry.

Included in Henry Holt's early spring list of announcements are the following: "When Ghost Meets Ghost," by William De Morgan; "Napoleon," by H. A. L. Fisher; "English Literature, a Survey from Chaucer to the Present Day," by G. H. Mair; "Clay and Fire," a discussion of the spiritual versus the material life, by L. W. Crippen; "Six Years a Wanderer," by A. Loton Ridger; and the following additions to the Home University Library; "Chaucer and his Time," by G. E. Hadow; "Common Sense in Law," by P. Vinogradoff; "Latin America," by William R. Shepherd, and "Unemployment," by A. C. Pigou.

"Silent Sam," a book of short stories by Harvey J. O'Higgins, is announced by the Century Company for publication next month.

"The New Ideals in the Gospel," announced by Dutton, is an English version of a book by Dr. Hermann Schnell.

Mr. Frederic Mathews is publishing, through Doubleday, Page & Co., "Taxation and the Distribution of Wealth."

Twelve volumes are now ready in the Wayfarers' Library, a new series planned by Messrs. Dent, of London. The following are the headings under which the books are classified: Romance and Adventure, Social and Domestic Fiction, Historical Fiction, Humour, Belles-Lettres and Essays, and The Open Air.

A translation has been made by Mr. C. K. Ogden of Dr. Kerschensteiner's book on "The Schools and the Nation," and for this edition Lord Haldane has written a preface. The work will be issued shortly by Macmillan.

The same house has in preparation a second part of Dr. Arthur S. Way's translation of the works of Sophocles into English verse.

Among the books which Little, Brown & Company will bring out the middle of next month are: "Sunshine Jane," by Anne Warner (the late Mrs. French); "The Substance of His House," by Ruth Holt Boucicault, and "Success at Golf," the last a volume which is prefaced by John G. Anderson, and to which chapters are contributed by Harry Vardon, Alexander Herd, George Duncan, Wilfrid Reid, Lawrence Ayton, and Francis Ouimet.

Capt. R. B. Otter-Barry and Mr. Perry-Ayscough, of the Chinese postal service, have collaborated in a book entitled "With the Russians in Mongolia," which Lane will publish at an early date.

Spring publications of McBride, Nast & Company include the following miscellaneous volumes: "Panama: Its Creation, Destruction, and Resurrection," by Philippe Bunau-Varilla; "The Political Shame of Mexico," by Edward I. Bell; "How France Is Governed," by Raymond Poincaré; "Lord London, a Tale of Achievement," by Keble Howard; "The Blue Buckle," by William Hamilton Osborne; "The White Gate," by Warwick Deeping; "Ashes of Vengeance," by H. B. Somerville; "Modern City Planning and Maintenance," by Frank Koester; "The Fairies—Here and Now," by S. R. Littlewood; "A Book of Inscriptions," by Esther Mason; "Syria, the Land of Lebanon," by Lewis Gaston Leary; "A Little Book of Killarney and Southern Ireland," by Robert Medill; "Quiet Roads and Sleepy Villages," by Allen Fea; "Caravanning and Camping Out," by J. Harris Stone; "Irish Land and Irish Liberty," by Michael J. F. McCarthy; "Training the Dog," by Robert S. Lemmon; "Cecil Rhodes: The Man and His Work," by Gordon Le Sueur; "The Autobiography of Charlotte Amelie, Princess of Aldenburg (1652-1732)," translated and edited by her descendant, Mrs. Aubrey Le Blond, and "The Antarctic Penguins," by G. Murray Levick, member of the scientific staff of the Scott Antarctic Expedition.

Wanderings in Tunisia and Tripoli are described in an interesting way by Mr. Frank E. Johnson in the *National Geographic Magazine* for January. He was able to get into close touch with the people so that his account of them is more real and vivid than that of the ordinary traveller. The desert even is made attractive. "Heat, thirst, and danger are forgotten in the glorious landscape, with its iridescent colors." An interesting incident was the visit to a wonderfully productive date plantation, the French owner of which assured him that he attributed "a great part of his success to the Department of Agriculture at Washington, D. C." The 114 illustrations add much to the interest of the article, and to many the remarkable beauty of the women, laden with ornaments, will be a revelation.

"Who's Who, 1914," comes to us from Macmillans, certainly, now as always, one of the most welcome books of the year. The present issue extends to above two thousand pages, and at this annual rate of growth the volume will soon become inconveniently bulky. Unlike the American and other dictionaries of the kind, the English "Who's Who" is not confined to citizens of one land, but includes famous names from all over the world.

In his "Famous Houses and Literary Shrines of London," reviewed in the *Nation* of October 3, 1912, A. St. John Adcock wrote

pleasantly of the buildings in London associated with the names of men and women who have left their mark on letters. His latest volume, "The Booklover's London" (Macmillan), is in a measure the complement of the former one. Here he deals not with authors, but with their creations, and the London that he shows us is peopled with the figures that walk through the pages of the imaginative literature the scenes of which are laid in the city. Here we come to Pie Corner in Smithfield, where poor Falstaff was arrested at the instance of Mistress Quickley; or we watch the Canterbury pilgrims as they sally forth from the Tabard Inn; or we rebuild the walls of old Newgate and see the shivering form of Fagin as the poor wretch huddled sleepless through his last night listening for the clock to boom out the inexorable hours, while outside, in view of the old inn that still stands, workmen were busy erecting the gallows and throwing black painted barriers across the road to keep back the curious crowds. But when we come to Dickens quotation ceases to be possible. London is pervaded with his characters, and there is scarcely a page of Mr. Adcock's book in which we are not invited to visit some scene or another which Dickens has immortalized. Indeed, if we felt inclined to criticise so pardonable an enthusiasm, we might assert that the figure of Dickens looms unduly large in these pages, sometimes to the exclusion of others whose claims to a share of the scene are equally just.

But Mr. Adcock has an ingenuous way of disarming criticism. He has attempted, he tells us, nothing in the way of research, and declares that "as a fairly miscellaneous reader, my plan has been simply to select a route and to go along it gossiping of what memories I have of the imaginary men and women connected with the places we pass by the way." Had he selected any other method the result might have been a more complete, possibly even a more scholarly, work, but it is doubtful whether it would not have lost in charm more than it might have gained in completeness. As it is, besides having written a very delightful book, Mr. Adcock has demonstrated that if there be nothing new under the sun there is also nothing so old that it cannot be viewed from a fresh angle, for we fancy he is correct in the claim put forth in his preface that there does not exist "any book on a large scale devoted to London's associations with the imaginary folk of the novelists and dramatists—with those familiar citizens who are literally free of the city and live where they will in it unfretted by landlords or tax-collectors, and who, having once walked into one or another of its streets through certain books, are walking in it always for whoever actually knows London."

In "A Short History of English Liberalism" (Putnam) Mr. W. Lyon Blease makes a vigorous and idealistic, but not unbiassed, analysis of English politics, foreign and domestic, during the last 150 years. His book is not so much a history of events as a reading of them in the light of his own conception of Liberalism. For him Liberalism is not the legislative record of the Liberal Party nor the policy of the Liberal Government. Far from it. "The failure of the [Asquith] Government to deal liberally with this [suffrage] question has been an interesting revelation of the incompleteness of self-styled Liberalism"—a display of "Toryism, in matters of sex, as complete as that of Castlereagh." In Foreign Affairs Sir Edward Grey, by his support of France in Morocco and of Russia in Persia, has sadly fallen away from Gladstonian principles, and brought dismay and disgust to Liberals like Mr. Blease. Liberalism and the deeds of so-called Liberal ministers are unfortunately too often widely divergent. Liberalism, according to the author's conception of it, is not a policy, but a habit of mind. The Liberal is the man who looks upon each of his fellows as of equal worth with himself and as entitled to equal opportunities with himself for self-expression and self-development. To Mr. Blease's Liberal, "all artificial conditions which prevent or hinder growth are perpetually obnoxious. Upon class distinctions in society, privileges of sex, rank, wealth, or creed, he wages unceasing war." In foreign policy the Liberal extends his recognition of the equal worth of individuals within the nation to a recognition of the equal worth of all nations; and nations in their dealings with one another are to be bound by the same moral rules as individuals.

The antithesis of Liberalism is egoism, imperialism, and "Toryism." With this conception of Liberalism as a touchstone, Mr. Blease tests the legislation and foreign policy of England since 1760 and deals out praise or blame according as Liberalism finds expression or not in the acts of Ministers. The Younger Pitt "was one of the greatest politicians and one of the worst statesmen England has ever had. The Pilot who weathered the storm flung all the cargo out of the ship, and steered from the high seas into dangerous shallows, from some of which she has not yet escaped." "Peel's most conspicuous virtue was his incapacity to make permanent resistance to sound argument." Cobden, Bright, and Gladstone are naturally the shining lights. "Lord Rosebery, a splendid orator, could never lead the people, because he could never understand them." Mr. Asquith, in view of his attitude on equal suffrage, is a man of little imagination:

> It is the large imagination, ever ranging beyond the bounds of the practicable and the expedient, and detecting in the obscurity of chaos the currents of new social forces, which distinguishes the greatest statesmen from those who are merely great. Peel had it, though in him it was often blind and groping. Disraeli had it, though spoilt by his mean and tawdry ideals. Gladstone had it, in full measure, and so, with less practical gifts, had Campbell-Bannerman. The mantle of leadership descended in 1908 upon the shoulders of a man who had all the qualities of a great leader except the greatest of all.

Mr. Blease's volume is not so much a history of Liberalism as a history of the partial realization of Liberalism in legislation and foreign policy. For the Liberalism of his conception was no historical evolution; it is fixed and eternal; it does not develop by a process of evolution like the programme of a political party, changing from age to age. It embodies many of the same eternal verities and aspirations, minus the singing, which characterized the Progressive movement in our last Presidential campaign. The author's closing pages are devoted to a vehement refutation of some of the anti-suffrage arguments and to a fierce denunciation of forcible feeding; in fact, his whole book is incidentally used as a vehicle for helping forward the cause in behalf of which he has already written "The Emancipation of Women" and "Political Prisoners."

In "Along France's River of Romance" (McBride), Douglas Goldring has most happily thrown his guidebook conscience, if he ever possessed any, to the winds, and as a result has produced a readable book of travel in the Loire district of France. When, after some strenuous climbing, he stood looking at the source of the Loire high up among the peaks of the Cevennes, the determination came upon him to follow the river along the whole of the six hundred and twenty-five miles of its course to St. Nazaire, where it empties itself into the Atlantic. The present volume is an account of the journey, on which he set out with a mind open to impressions of all sorts and a heart full of good fellowship for any chance companions of the way. Mr. Goldring's style is quite refreshing in its buoyancy; there is in it something of the gypsy zest for life, a Borrovian curiosity about men and things without Borrow's introspection. And so the trivial adventures of the road become entertaining for the reader simply because the author himself was so hugely entertained by them. The descriptive passages stimulate instead, as so often happens, of wearying the attention. Mr. Goldring describes only what he wishes to describe, and gives historical reminiscences only when they happen to interest him personally. He is familiar with the literature of his subject, and where a piece of descriptive or historical writing has caught his fancy he inserts it bodily in his pages. He has also a particularly pleasing habit of quoting freely chansonettes, many of them picked up by ear and remembered, from the folk poetry of the land. No credit is assigned for the illustrations, in color and in black and white, which add to the attractiveness of the book.

"Sidelights" (Scribner), by Lady Blennerhassett, is a collection of leisurely, well-informed essays on various historical and biographical subjects. Though the papers are translated, rather heavily, from the German, the type of work is much that of the British quarterlies. The siege of Paris, 1590; Taine's Study of Napoleon; Count Reinhard, a German in the service of the French; Marco Minghetti and the Risorgimento, are the topics involving large historic perspectives. Lady Blennerhassett handles these matters with dignity and fairness. Of the purely biographical studies, Chateaubriand is perhaps the best, though an interesting train of reminiscence is started in Claude Fauriel's Correspondence with Mary Clarke (Mme. Mohl), while in the study of Marie Bashkirtseff a very modern case is analyzed. To all these subjects the author brings a well-stored mind and broad sympathies which never degenerate into sentimentality. It is not a book to read in the train, but attractive to a certain type of reader precisely for its humane gravity.

Since writing his "Cities of Umbria" in 1904, Edward Hutton has dealt successively with Northern and Southern Tuscany, Rome, Venice, and the cities of Lombardy. In "The Cities of Romagna and the Marches" (Mac-

millan), the eighth of the series, he takes a region comparatively little known. We do not always agree with his judgments, which are often almost entirely subjective, and, like the rest of us, he has his likes and dislikes. Thus the splendid bustle and traffic of Ancona only move him to bewail "the appalling noise and vulgarity they call civilization"; he labels the decisive battle of Castelfidardo "a pathetic and miserable affair, which every other people would have been glad to forget"; and, when speaking of the Pineta at Ravenna, though he recalls Dante, Boccaccio, and Byron, he says no word of Garibaldi. Yet "Garibaldi's hut" is still to be seen there, a small museum in the wilderness; and, for some of us at any rate, Garibaldi is well nigh as stimulating a memory as Italy can provide. If, however, Mr. Hutton is strangely unappreciative of United Italy and the splendid, steadfast advance of the modern Italian nation, he loves the Italy of his dreams; he is a master of words, and he has given us a book to be grateful for. More than two score towns and villages are separately dealt with, historically, informatively, and impressionistically, and there is never a dull word in the whole volume. It is, we think, the best of all the series, and our author is to be congratulated on having produced a work which is at once learned and beautiful. No traveller who intends to visit Romagna or the Marches can possibly do without it.

Few men of equal prominence are less well known than the central figure of Vernon Staley's monograph "The Life and Times of Gilbert Sheldon" (Milwaukee: The Young Churchman Co.). Born in 1598 and educated for the church, he was Fellow of All Souls' College, chaplain to Charles I, and rector of Ickford before the outbreak of the Civil War. For his loyalty to king and church he suffered during the Commonwealth and was rewarded after the Restoration. In 1660 he was made Bishop of London, and in 1663 Archbishop of Canterbury. He died in 1677. A man of high character, Sheldon did his duty as he saw it without regard to consequences, whether it were a matter of standing out against the powerful Laud, or following the Stuarts into exile, or dispossessing the Presbyterian clergy, or rebuking Charles II for immorality, or braving death in the plague. His talent took a practical turn; he was a man of affairs whose excellent business and administrative capacity proved useful in reorganizing the church after the Restoration; but he seems to have had neither great intellectual power, nor the gift of speech, nor literary ability, nor any compelling spiritual or emotional fervor. A dull sermon, delivered before Charles II at Whitehall in 1660, is the sum of his published literary remains. He made some enemies and apparently but few devoted friends; and hitherto he has had no biographer. Mr. Staley is the present rector of Ickford, and he has been inspired to write this work apparently because Sheldon was once his predecessor. He has aimed "to clear this great servant of the English Church from obloquy, and to rehabilitate him in his true historical setting." Professor Burrows, in his "Worthies of All Souls," has already vindicated Sheldon, as Mr. Staley admits. To "rehabilitate him in his true historical setting," is a work well worth doing; but it cannot be said that Mr. Staley has done that. It is to be feared that he has neither sufficient knowledge of the seventeenth century, nor the requisite insight into history and character, nor the desired open-mindedness, to accomplish so difficult a task. What we should most wish to have is a careful study of Sheldon's work in reorganizing the church after the return of the Stuarts. The material for such a study is mainly in the Clarendon and Sheldon papers in the Bodleian Library. But there is little evidence that Mr. Staley has made particular use of these sources. In fact, there is little to be learned from the present biography which has not already been presented by Professor Burrows, or in the brief account in the Dictionary of National Biography.

In "Famous Modern Battles" (Small, Maynard & Co.), A. Hilliard Atteridge describes in a popular and readable manner, and with commendable accuracy of detail, fifteen battles of the last sixty years. The author has chosen to arrange them in chronological order, with the idea probably that such an arrangement will best reveal the changes which have occurred in the character of military operations during the last half-century. And in the end this purpose is attained in some respects, although it is a little disconcerting at first to jump from Solferino to Chancellorsville and from Gettysburg to Sadowa. The first Napoleon found it essential to stand where he could see the whole field of battle at a glance; and this was still possible and desirable in the third quarter of the nineteenth century. But one has only to contrast Louis Napoleon, overlooking the Austrian army at Solferino from the bell tower at Castiglione, with Oyama, sitting in a room many miles from the field of Mukden, poring over maps and charts, and directing his forces by telephone and telegraph, to be aware that the modern commander has a more complex problem to solve and solves it in another manner than his predecessors. These external changes, which the author has noted, are, however, less important than certain less obvious changes in training and discipline which have been brought about by new conditions. The commander who directs the operation of 300,000 men dispersed over eighty miles of territory in a battle lasting a week cannot assume responsibility for every important move. And therefore an effective army is one in which the old automatism of the soldier has been replaced by a greater degree of intelligence and initiative on the part of subordinate officers, and even of men in the ranks. "We are all agreed," says Sir Frederick Maurice, "that this absence of control from above must be the normal experience of present-day war. We are seeking to combat it by developing the initiative and resourcefulness of all subordinates, each in his proper sphere, so that each may learn to act intelligently in default of orders from above." This lesson was first learned by the Germans in the wars of 1866 and 1870. Intelligent training combined with an interest in the cause is thus of much greater importance to-day, in comparison with mere "slavish discipline" and the hardened habit of literal obedience to orders, than formerly—a fact which was strongly enforced by the experience of the Russo-Japanese war, and the recent war in the Balkans. Mr. Atteridge's general conclusion that "war, if more terrible, is also far less frequent" now than it used to be, may well be questioned. In some respects it is more terrible, in others much less. During the last sixty years there have been twelve wars, and during the last twenty years there have been six—short wars they were, but frequent enough, and stupid enough, most of them, in all conscience.

When Baron de Pöllnitz died, June 23, 1775, Voltaire wrote to Frederick, "Well, Sire, Baron de Pöllnitz is dead; he also wrote." And Frederick replied: "He did some cheating even the day he died, that it might be said he died as he lived. No one regrets him but his creditors." The best thing the Baron ever did was to write his Memoirs; and these, together with his letters, Mrs. Edith E. Cuthell has made the substance, by means of long quotations strung together by chatty comment, of two thick volumes under the title of "A Vagabond Courtier" (Brentano's). The title is well chosen. Pöllnitz was a clever adventurer, who lived a long time and had a varied experience. He saw some military service in the war of the Spanish Succession, but spent most of his life drifting from court to court seeking favor and money. He never got a great deal of either, but he came into contact, in the endeavor, with many famous persons. He was without convictions or honor; lied freely; never paid his debts if it could be avoided; changed his religion as often as convenient. An anecdote which the author quotes from Thiébault gives the measure of the man and indicates the manner in which he was regarded by people of intelligence generally. Having asked Frederick the Great for some position, the King told him that if he were only a Catholic there might be a canonry for him. That very evening Pöllnitz abjured his faith, and next morning came running to the King. "I am really dreadfully sorry," said Frederick, "but this morning I gave away the canonry which I spoke to you about. This is a cruel contretemps! But how could I guess that you were so willing to change your religion yet again? What can I do? Ah! I remember that I have still a rabbi's post to give away. Have yourself made a Jew, and I will promise it to you." The Memoirs of such a man are not to be relied upon for facts or judgments. But they are lively and interesting, and of some value for the descriptions of famous persons which they contain, and as an illustration of the manners and morals of the century.

"In Byways of Scottish History" (Scribner), by Louis A. Barbé, is a collection of twenty essays, short for the most part, dealing with various aspects of Scottish history and literature, mainly in the sixteenth and seventeenth centuries, which one finds little mention of in ordinary histories. The author has lived long in Scotland, is familiar with its traditions, and knows its people well. He writes with sympathy, but without prejudice, and his scholarship, so far as the reviewer can judge, is thorough. The first six essays deal with Queen Mary, with her manner and personality, and with the four maids of honor—the four Marys of history, who were not quite the same as the ballad has it, "Marie Seaton and Marie Beaton and Marie Carmichael and me." The Song of Mary Stuart, Maister Randolphe's

Fantasie, Edinburgh and her Patron Saint, James VI as Statesman and Poet, The Story of a Ballad—"Kinmont Willie"—are the titles of other studies. The last and longest essay is English rather than Scottish in its interest. It is an historical sketch of the myth, widely believed on the Continent during the Middle Ages, that all Englishmen had tails. Most students of early English will be familiar with the explanation of the legend as it is given in Layamon's "Brut." But the reproach finds constant expression in ballad literature, and there are other explanations of the origin of the belief than that in Layamon, all of which are discussed by Mr. Barbé. Military historians will be interested in the essay on the Old Scottish Army, and the student of towns in the short essay on Riotous Glasgow.

"The Story of Rome" (Stokes), by Mary Macgregor, an English writer, is a beautifully printed and illustrated volume, intended for boys and girls. One dislikes to discourage any sincere effort to maintain an interest in ancient Rome, but in this case we are not convinced that the plan has been very well considered. In expression, there has been a very manifest effort to get down to the level of children, and this has been done at a sacrifice of such qualities as would make the book enjoyable to older readers as well. Again, the story suffers from its unsuccessful handling of legends included for the sake of completeness, but distorted out of regard for the age of the intended reader. Even the most pronounced devotee of Greek and Roman studies may well doubt whether children too young to profit by a more virile handling of such a subject have any real need of a Story of Rome drawn out to the length of more than four hundred pages. A good collection of individual stories from this field, of which there are a number already in existence, seems more likely to accomplish the end desired.

"Deliver us from our friends" is still a useful prayer, not heard as often as it should be. Dr. W. J. Holland, the director of the Carnegie Museum of Pittsburgh, who has just published "To the River Plate and Back" (Putnam), admits in his preface that it "may appear to be a daring act" for him to add another tale to the many that have been told by travellers. "At first I hesitated, but finally yielded to the persuasions of certain of my friends." It is to be hoped that these friends will be satisfied with the product of their enthusiasm. Attractive in appearance, and fully illustrated with excellent pictures, the volume makes a good impression, and the sub-title, "The Narrative of a Scientific Mission to South America, with Observations upon Things Seen and Suggested," promises an unusual book. But the "scientific mission" consisted in taking a cast of the skeleton of that gigantic prehistoric animal, the Diplodocus Carneglei, from Pittsburgh to the La Plata Museum. Similar casts had already been presented by Mr. Carnegie to various European museums, and Dr. Holland deserves great credit for his skill in accomplishing this difficult feat. Naturally, in going to Argentina on this undertaking, the author met the local scientific authorities, and his experiences are particularly interesting from the zoölogist's point of view. Unfortunately, the important scientific observations constitute a relatively small part of a fairly large book. Furthermore, in his observations on Argentina, where the author comes into competition with such keen analysts as Clemenceau and Bryce, and such painstaking writers as Koebel, Hirst, and Winter, he is at too great a disadvantage; especially as he gives no evidence of having fitted himself by reading or study to understand the people he met. If Dr. Holland had cut out two-thirds of the book, including familiar topics already better done elsewhere, and most of the trifling personal details, his book, even though smaller, cheaper, and less striking, would have been far more acceptable.

George Spring Merriam, a son of one of the brothers who founded the company which has long published Webster's Dictionary, died in Springfield, Mass., on Thursday, aged seventy-one. He was born in Springfield, in 1843, graduated from Yale in 1864, and, after studying theology, turned to literary work. For five years, from 1870, he was editor of the *Christian Union*, now the *Outlook*, under Henry Ward Beecher. Since 1875 he had lived in Springfield. Perhaps his best-known book is "Life and Times of Samuel Bowles," in two volumes, published in 1885. He was the author also of "The Negro and the Nation," "The Man of To-day," and several other books.

Science

A Review of the Primates. By Daniel Giraud Elliot. 3 volumes. New York: Published by the American Museum of Natural History.

The wonderful vigor which has always characterized the production of the splendid series of monographs of Dr. Elliot is fully sustained in the present elaborate work, in three quarto volumes, and we can well believe that it represents five years of continuous study. A part of the preface reads:

For over a century the Primates have been a subject of careful study by naturalists of all lands, some most eminent zoologists having devoted their investigations to them almost exclusively, and, consequently, the types of the many species were scattered throughout the various museums of the world. To examine and compare these important examples was a necessity, for, without a thorough knowledge of their characteristics, no satisfactory progress toward the solution of their proper scientific standing could be reached. With representatives of the Primates, either from the Eastern or Western Hemisphere, the museums of the United States were but poorly provided, and a reliance for the material to prosecute the work was therefore to be placed upon the collections contained in European museums and zoölogical gardens, and also in those of Eastern lands. Consequently, the author was obliged to visit all these various institutions and study their collections. Twice were the museums of England and the Continent visited, and many months passed each time examining the collections, and during a journey around the world the museums and gardens of the Far East were also visited and their collections carefully studied. The author has seen and taken a description of nearly all the types of the primates extant in the world to-day, and there is not a collection of these animals of any importance existing at the present time with which he is not familiar.

Dr. Elliot has gathered together all the results of study of past and present workers in this field, thus obviating the first two difficulties, and by means of more than one hundred photographic plates of skulls, giving lateral, frontal, ventral, and dorsal views, the close student of the monkeys has all the world's types, as it were, brought to him. The value of these plates cannot be overestimated, and the work would be a notable one were it merely a portfolio of them. This feature of illustration is all the more fortunate as Dr. Elliot gives little or no attention in the text to osteological or dental characters. The author's presentation of this unexcelled series, each plate significant of new striking facts, together with his complete failure to utilize them, almost parallels the great unconscious contributions which Agassiz made to the theory of evolution, believing all the while in special creation.

The method of treatment of each member of the order is best told in the author's own words:

First, a general review is held of the genus accepted, the type fixed, and description given; then remarks are made on the appearance and general habits of the species the genus contains, followed by a review of the literature and the geographical distribution, and a key by means of which it is possible that all the species of that particular genus may be recognized. Then each species is taken up in regular sequence, its synonymy given, and the type, locality, and geographical distribution recorded; the present location of the type, if existing, is then told, after which the peculiar characters of the species, if it possesses any, are given, followed by such remarks as may be necessary upon the relationship the species under review may have with some other in the genus; then a full description and measurements of the type, if possible, concluding with an account of the habits, so far as they may be unquestionably known.

More than one hundred pages of introduction deal with classification, variation, and geographical distribution, a chronological list of generic names proposed and a synopsis of the classification adopted. The repeating of the distribution first in running text and then linearly seems rather needless. In the 1,351 quarto pages, 2 suborders, 8 families, 55 genera, and 588 species and subspecies are dealt with. The recognition of subgenera is a distinct advance in the classification of these animals. As to nomenclature, Dr. Elliot has the courage of his convictions and binds him-

self uncompromisingly by the law of priority. One of the many most startling results is the removal of the name *Simia* from the orangs or chimpanzees to the Barbary ape. The new shifting of titles has resulted, in the case of the orang and chimpanzee, in the alliterative names *Pongo* and *Pan*, respectively. The curiously illogical working of the mind in modern nomenclatural opinions is shown by Dr. Elliot in his custom of emending all names which do not conform strictly with etymological principles. This arbitrary ruling, resulting in changes such as *Ateles* to *Ateleus*, and *Lepilemur* to *Lepidolemur*, would seem to be foreign to a mind willing to accept priority at any cost. Greater good would have resulted from a more careful editing of the author's own Greek. This strongly emphasized personal attitude characterizes the entire work, thereby both strengthening its value and narrowing its field. The most severe criticism of the routine specific treatment is the paucity of life histories. This phase is one which is becoming constantly more important, and the approaching extinction of many of the primates makes its neglect all the more lamentable.

Dr. Elliot has certainly succeeded in the preparation of an unequalled "Review" of this phylum. But as a monographic treatment, in the widest sense of the word, one finds defects. As the subject deals solely with living forms, without reference to fossil primates or man, it is guided by no evolutionary principles whatever. The extent to which the classification is wholly innocent of phylogenetic guidance is shown throughout the three volumes. The very first species, the aye-aye, is entirely separated from the lemurs, and takes rank with *Tarsius*, whereas it is well known that the former is only a specialized lemur. Owing to the prominence given to superficial characters, the ideas of classification, even of the living forms dealt with, are at times almost Cuvierian. A good example of this is the sentence on page xxi, "It is a moot point with some whether the Lemurs should be considered members of the order, having any rank whatever within it, as about the only claim they have to the position is the possession of the opposable great toe, which, however, is also found in a species of an altogether different order, the Opossum of the Carnivores. But, no matter how slight may be the pretensions of the Lemurs for admission to the ranks of the primates, yet, by the almost general acquiescence of mammalogists, they have of late been accepted as occupying a recognizable place in the order."

As a summary of known facts the "Review" is unsurpassed, though the lack of any adequate account of the wild life of the animals and their ecological relations deprives the lay reader of much pleasure in the work and detracts considerably from its value. On the other hand, the superficial character of the technical descriptions and the omission of phylogenetic treatment leaves the field open for a work of real creative matter, making use of all the carefully collated facts which Dr. Elliot has provided. The colored plates are good, the type and paper of the best, and the American Museum is to be thoroughly congratulated on this work published under its auspices.

Prof. J. Arthur Thomson will soon publish, through Holt, "The Wonder of Life," which contains chapters on such topics as Marvels of Instinctive Behavior and The Persistence of Characters.

McBride, Nast & Company have in their list of spring publications the following science books: "Making a Garden of Small Fruits," by F. F. Rockwell; "The Gardener's Pocket Manual," by the same; "The Book of Perennials," by W. A. Vollmer, and "Making Fences, Walls, and Hedges," by W. H. Butterfield.

Sir David Gill, the great Scottish astronomer, died in London on Saturday. He was born in 1843, in Aberdeen, and was educated in the university of that town. Having constructed a private observatory in Aberdeen, he devoted himself to his studies and had attained to something more than local celebrity when he made the acquaintance of the Earl of Crawford, then Lord Lindsay, who was at that time considering the establishment of an observatory at Dunecht, near by. He offered the charge of this to the young astronomer, who accepted it, and directed it from 1873-76, during which time he organized Lord Lindsay's transit of Venus expedition to Mauritius. He also corrected the longitudes of Berlin, Malta, Alexandria, Suez, Aden, Seychelles, Mauritius, and Rodriguez, and measured the base line of the geodetic survey of Egypt, near Cairo, for which he received from the Khedive the third class of the Medjidie. In 1877 he proposed and carried out an expedition to Ascension Island to determine the solar parallax by observations of Mars, and for this he received the gold medal of the Royal Astronomical Society and the Valz prize of the Institut de France in 1882. He also organized transit of Venus expeditions in South Africa, and he photographed the Great Comet of 1882. It was he who pointed out the desirability of employing photography for complete cataloguing of stars to any required order of magnitude. He proposed in 1880, organized in 1885, and directed and carried to completion in 1896, the geodetic survey of Natal and Cape Colony, and in 1896 he was sent to Berlin to arrange the details of a boundary survey between British Bechuanaland and German Southwest Africa, a work which was completed under his supervision. In 1897 he organized the geodetic survey of Rhodesia, and in 1898 he erected the large telescope presented to the Cape Observatory. He was knighted in 1900. He received the degree of D.Sc. from Oxford, Dublin, and Cambridge, and he was an officer of the Legion of Honor of France, the Watson gold medallist of the National Academy of Science, Washington, in 1900; a knight of the Prussian Order Pour le Mérite, and the author of many works on astronomical subjects.

Drama

The Century Company will publish next month Prof. Charles Mills Gayley's "Beaumont the Dramatist."

"The Continental Drama of To-day," by Barrett H. Clark, and "Nowadays," a play in three acts, by George Middleton, are announced by Holt.

Paul Hervieu's domestic tragedy, "Le Dédale," which was first produced at the Comédie Française, in 1903, has been put into English by Barrett H. Clark and Lander MacClintock—"The Labyrinth" (Huebsch). Mr. Clark furnishes an introductory sketch of the author, together with a brief bibliography. It must be said that separated from the neat turns of French idiom the play seems theatric. Like the great run of French domestic drama this piece makes an *a priori* demand upon the spectator. He must yield to a conception according to which love may be urged as a supreme excuse for what may be termed casual transgression. For the Frenchman there is magic in the time-honored cry, "C'est plus fort que moi," and he is easily swayed to believe that it is prompted by love and not passion. In the present drama Marianne, having left her husband, who has been unfaithful to her and who has married the object of his passion, is now enamoured of Guillaume, whom she desires to wed. Her father is at length won over to the idea, but the mother, believing divorce impious before God, disapproves, though she makes no open objection, and the wedding is consummated. The heroine has had two blissful years when Max, whose second wife has died in the meantime, demands to see more of his young son by Marianne than she has hitherto permitted. The interview leaves her strangely wrought up. She is next seen at the country home of Max and his mother, whither she has been summoned by the news that the boy has diphtheria. It is, of course, natural that while watching over their child they should feel the force of old associations. But an Anglo-Saxon audience would not view with satisfaction the subsequent hounding of Marianne by Max, nor think tremendously significant her yielding to him when he has cornered her in her bedroom virtually exhausted by loss of sleep. One must keep saying to one's self, "C'est plus fort que moi," in order to stifle the impulse to cry out, "Be a man!" Yet the author has contrived a powerful picture, so far, that is, as to show the ineffaceable inner union of two parents. That this, renewed by the presence of their child at the point of death, should make the woman so far forget herself as to offend against her second husband, whom she adores, is not so evident.

There is decided promise in "The Deadlock," by Margaret Turnbull, which the Drama Producing Company has put upon the stage of Maxine Elliott's Theatre. But the piece is weak dramatically in two respects—first, in its excessive use of improb-

able coincidence to bring about a particular situation, and, secondly, in its presentation of a problem which could only arise in very rare circumstances, and to which, clearly, there can be no general solution. Here is the plot: Felix Kildeen, destined by his father, a devout Roman Catholic, for the Church, while studying in Europe falls in love with a singer and marries her. Then he has a desperate illness, during which his father gets possession of him and carries him off to America. While he is still on a sick-bed the father sends word of his death to the deserted wife, and, when he recovers, tells him that he is a widower. Believing the lie, Felix takes Holy Orders, and in course of time becomes a devoted and popular priest. Ten years later he is confronted with his wife, now a famous prima donna, and his little son. Explanations follow, and it appears that the pair, separated by an infamous but barely credible deception, love each other as fondly as ever. Several emotional scenes, of indisputable theatrical value, follow. The father, resolute in his bigotry, maintains that the marriage is void, and the child, whom he offers to adopt, illegitimate. The son is frantic, torn by the struggle between conjugal and parental love on the one side, and his sense of clerical and spiritual obligation on the other. The wife, a free-thinker, boldly asserts her legal rights and ridicules the notion that Church dogma can override the authority of the State. Here is a triple controversy which is conducted by the playwright with a strong grasp of character and a keen sense of dramatic effect. Only the manifest artificiality of the scheme prevents the action from being emotionally impressive. Love of the grandchild, in whom he discovers the heir he had longed for, induces the stubborn old grandfather to yield to his daughter-in-law's demand for full recognition, but the priest, faithful to his vows, declares that his future course must be decided by his ecclesiastical superiors. This is a logical and artistic ending—the only one consistent with the author's design and the prescribed character of Felix—but it is also theatrically futile. Moreover, the supposed "deadlock" is not absolute, inasmuch as its validity depends, in this country at any rate, not upon the operation of law, but the workings of the individual conscience. The representation was made notable by the performance of the part of the heroine by Edith Wynne Matthison, which was eminently artistic in its refinement, sincerity, eloquence, dignity, and absence of cheap theatrical exaggeration.

Ben Greet has been invited by the Edwin Booth Theatre Association to become director of the stage and of the School of Acting, which is to be started at once. The theatre will follow. Mr. Greet hopes to raise up a new school of actors from the American universities where material is abundant now that dramatics are often part of the college curriculum. In England he recruited nearly fifty Oxford and Cambridge men and women in ten years, many of whom now occupy prominent places on the English stage. Mr. Greet's experience should make him very valuable to the Association.

"The Poor Little Rich Girl" had a disastrous experience in London. Her career at the New Theatre lasted barely two weeks.

Israel Zangwill's "The Melting Pot" is to have a hearing in England at last, but not in one of the regular theatres. It is to be produced at a special performance by the Play Actors. This will be the first representation of the piece in English in Great Britain, but a Yiddish version of it was played successfully in the East End of London.

The Scottish Repertory Theatre has made a new start at the Royalty Theatre, Glasgow, the opening attraction being Mr. Arnold Bennett's comedy, "The Honeymoon." Among other plays arranged for are Monckton Hoff's "The Little Damozel," "The Man of Ideas," by Miles Mallison, and "East is East," by P. E. and G. Logan. Later it is hoped that plays by Sir J. M. Barrie and Bernard Shaw may be presented. Lewis Casson will act as stage director and principal producer, a position he has filled with Miss Horniman's Manchester Repertory Company.

The following communication from Mr. G. S. Street, published in the London newspapers, throws a new light upon the processes of theatrical censorship in England, and partly accounts, perhaps, for some of the extraordinary consequences of it:

I have the permission of the Lord Chamberlain to make a brief statement of fact in regard to the office of examiner of plays. Most of the newspaper comments on my recent appointment, kind and flattering to myself as they were, assumed that I had been made a censor of plays. That is not the case. My senior colleague, Mr. Bendall, and I merely examine and report on plays for the information of the Lord Chamberlain; the granting or withholding of a license is a function of the Lord Chamberlain, assisted by an advisory board, of which we are not part.

Music

Richard Wagner. By John F. Runciman. New York: The Macmillan Co. $3.25 net.

According to Rubinstein, the greatest five composers were Bach, Beethoven, Schubert, Chopin, and Glinka. According to John F. Runciman, the greatest personality amongst all the musicians—indeed, the "greatest man who has yet lived"—was Handel. After him come Gluck and Beethoven; and, finally, Wagner, "whose supreme genius and indomitable perseverance made him either an idol or a terror to all who came in contact with him." In writing a new book on this composer Mr. Runciman has, as he avers, avoided both "preposterous eulogy" on the one hand and "vampire work" on the other; but his foolish remarks on the plot of "Parsifal"—evidently an echo of Huneker and some crazy pamphlets printed in Germany—verge on the latter, while some of his praises of the other operas sound very much like gush, especially as coming from the pen of an English critic noted for his caustic wit and slashing style. One would have supposed that one who so worships Handel would have been impressed above all things by the quasi-religious music of "Parsifal," which has often moved even agnostics to tears; but this music has "no charm" for Mr. Runciman, though he finds in the opera "passages of marvellous loveliness."

This last chapter is an unfortunate blot on what is otherwise an excellent book. It will not appeal to those who wish to read the romantic and tragic story of Wagner's life, for while the main incidents are recorded, it is done in a summary way that does not appeal to the imagination; only eight lines, for instance, being used to tell the thrilling episode of King Ludwig's attempt to find Wagner and bring him to Munich. By such condensation Mr. Runciman succeeded in saving most of his 421 pages for analyses of the operas and comments thereon, which are among the very best that have been made, being intelligent and appreciative without ceasing to be critical. The libretto of the "Flying Dutchman," for example, is pronounced "a manufacture, not, like 'Tristan,' a growth"; but on the whole the opera is assuredly "a great work. . . . Had he not lived to write another note, his memory would live by the 'Dutchman.'" Nevertheless, it is in "Tannhäuser" that "we first find the godlike Wagner hurling his thunderbolts." In the analysis of "Lohengrin" the author sanely rejects the theories of those who search for moral ideas in it. To him it is simply a charming fairy opera.

Mr. Runciman's admiration for "Die Meistersinger," both as a poem and a musical masterwork, is unbounded, and equally great is his enthusiasm for the Nibelung operas as a whole, though he fails to appreciate the grandeur of the third act of "Siegfried," which really overtops everything except the last act of "Götterdämmerung." To him "Tristan and Isolde" is "the finest opera in the world. . . . It is impossible to imagine such a feat ever being done again. Those of us who live on for another five hundred years may see something like it. . . . The breath, the spirit, which is eternal life, is in it, and it can only perish when the human race perishes."

Will any one say after this that the English are unemotional in their attitude towards music? Mr. Runciman's enthusiasm includes Wagner's character, as well as his music and his poetry. He "not only was the most stupendous personage born into the nineteenth century: he was also one of the noblest, most generous men that have lived. There is not a mean trait in his character"—a statement which must be taken *con grano*, like some other exaggerations in this volume, such as the sneer at present-day Bayreuth as having "lapsed into the limbo of tenth-rate things." There is less exaggeration in the state-

ment that Wagner not only created the music-drama, but the modern art of conducting as exemplified after him by Bülow, Richter, Levi, Seidl, and others. This being the case, it is surprising to read in this book that Wagner was "well paid" for the work he did in London. It is not stated therein what he got for rehearsing and conducting a whole season of Philharmonic concerts; it was one thousand dollars, or less than some Wagner singers receive for one evening's work. Nor is it correct to say that the one cause of all Wagner's grumbling in London was "the character of the bulk of the music he had to conduct." He had many other causes, one of which our author himself dwells on very briefly: the venomous criticisms of nearly the whole press. In a letter quoted Wagner intimates that he could have received favorable notices if he had paid the critics; upon which Mr. Runciman comments: "When I reflect on the smallness of the critics' official salaries and the splendor in which some of them lived, I cannot but think he was right."

A few weeks ago Victor Herbert conducted in Chicago the thirtieth performance of his "Natoma," the only grand opera composed in America that boasts such a record. Last Saturday the Metropolitan Opera House produced the second venture on grand-opera lines of one whose supremacy in operetta is uncontested so far as this country is concerned. "Madeleine" is its name; it was sung by Alda, Sparkes, Althouse, Pini-Corsi, and De Segurola, who were recalled with the conductor and the composer fourteen times at the close of the curtain. The libretto is an adaptation of "I Dine With My Mother," a dainty little comedy by Decourcelles and Thibaut; as set to music, it lasts a few minutes less than an hour. Madeleine is a prima donna, the idol of the public, who takes it into her head to persuade some one of her admirers to dine with her on New Year's Day, when every Frenchman is supposed to be at home. One after another they decline, all for the same reason, and finally she dines alone, facing the portrait of her mother. There is hardly enough action in this story even for a one-act opera. In setting it to music, Mr. Herbert adopted the conversational style of music cultivated by Strauss and Wolf-Ferrari, and with success; but his admirers would have preferred the more melodious and romantic style of "Natoma" and the operettas which have made him famous. Some use is made of leading motives, and the orchestral score contains many delicate and subtle details.

At least forty-five foreign opera houses produced "Parsifal" within a few days after the expiration of the copyright on the first of this month. In Berlin, Prague, and Budapest two companies performed it simultaneously. In Berlin the house was sold out in advance for twenty-four performances, and the Royal Opera gave it every night in the week, two casts being provided. From everywhere come reports of the deep impression made by Wagner's semi-religious drama.

Gounod's "Faust" had been sung 1,226 times at the Opéra in Paris last September. It led all operas at that institution during the last year, having been given twenty-two times in twelve months. Saint-Saëns's "Samson et Dalila" came next in popularity, with nineteen performances; "Rigoletto" had seventeen; "Aïda," sixteen; "Lohengrin," thirteen; "Meistersinger," twelve.

In Germany, the most popular of French operas, and, in fact, of all operas, is Bizet's "Carmen." This is shown by the figures, not for one year only, but for ten years. During the decade 1901-1910 "Carmen" had 3,956 performances in German opera houses. Then came "Lohengrin" (3,458), "Tannhäuser" (3,243), "Mignon" (2,777), "Freischütz" (2,658), "Il Trovatore" and Offenbach's "Contes d'Hoffmann" tie, with 2,486 each; "Pagliacci" had 2,188, "Zauberflöte" 1,859, "Die Walküre" 1,814, and Gounod's "Faust" 2,077. It is worth noting that, of these eleven favorite operas, four are French, and only two are Italian. It is also worth noting that the five favorite German operas had only 1,536 more performances during the decade than the four favorite French operas.

Debussy has honored the American violinist, Arthur Hartmann, by promising to play at a recital on February 5 the accompaniments to three of his songs which Hartmann has arranged for violin and piano. The three songs, "Minstrels," "La fille aux cheveux de lin," and "Il pleure dans mon cœur," have been printed by Durand.

The most extravagant of the musical eubists, Igor Stravinsky, has, oddly enough, written a fairy opera which is to be produced in Moscow and St. Petersburg. A personal friend of Stravinsky gives the following details about this opera in the *Music Student*. The opera is based on "The Nightingale," by Hans Andersen. He has changed the story but little, the principal addition being that he makes one of the fishermen mentioned therein play a part similar to that of the chorus in a Greek tragedy. The real nightingale has a rôle likely to be very effective, but certainly not easy, and the opportunities afforded for humor in the pompous courtiers' searching for the bird, the mechanical bird (sent with great ceremony by the Japanese Emperor), the Kapellmeister, etc., are not neglected. The third act, in the dying monarch's bedroom, should also not miss its effect. The composer brings out the poetic and philosophic meaning of Hans Andersen's beautiful story very fully.

Speaking of the late François Cellier, who for years conducted the Gilbert and Sullivan operas at the Savoy Theatre, the London *Times* says that, at the time of his death, he was in the midst of writing a book of reminiscences of the Gilbert and Sullivan productions, and also of the D'Oyly Carte Company. Mr. Cellier was held in high esteem by Sir Arthur Sullivan, who left him in his will two original scores, that of "Patience" and that of "The Pirates of Penzance."

From Chicago the death is announced of Emil Liebling, who, though he was born in Germany (Pless, in Silesia, in 1851), came to this country as long ago as 1867, and since 1872 had been one of the leading musicians in Chicago, valued equally as pianist, teacher, editor, and critic. Among his own teachers were Liszt, Erlich, Dorn, and Kullak. As a lecturer he was much in demand in the West. He also composed some pieces for the piano.

Art

Art books in the spring publications of McBride, Nast & Company include: "House Furnishing and Decoration," by Abbott McClure and H. D. Eberlein; "Baroque Architecture," by Martin S. Briggs; "The Colonial House," by Joseph Everett Chandler; "The Craft of Hand-Made Rugs," by Amy Mali Hicks; "Making Built-In Furniture," by Abbott McClure, and "A Court Painter and His Circle, François Boucher (1703-1770)," by Mrs. Bearne.

When Henry Peacham, in his "Compleat Gentleman," expressed his disapproval of the heraldic efforts of "Painters, Glasiers, Carvers, and such," he voiced not only the indignation of the Cavaliers at the armorial abuses of their day, but also the protest of many a modern pursuivant of arms against such works as W. H. St. John Hope's "Heraldry for Craftsmen and Designers" (Macmillan). This protest is not against the book itself, which is well organized and written in a pleasing style. The protest is rather against the author's point of view: his assumption that heraldic emblems exist primarily for the purposes of ornament, and that the artist is at liberty to ignore heraldic law, or to revert to the armorial usage of an earlier day, merely because he finds the present usage inartistic. Mr. Hope notes, for example, that in early heraldry the device of quartering was used but sparingly, and that in later times, as the quarters were multiplied through intermarriage, "the artistic effect of the old simple shield was lost or destroyed." Without stopping to consider why, in the passage of time, this multiplication of quarters was advantageous and inevitable, he cites an instance of "a dreadful confusion of twenty-eight quarters," asserts that, "from the artistic standpoint, there cannot be any doubt" that this is wrong, and concludes his discussion of the use of quarters with the declaration that "there can be no question that in general a shield looks best without any at all. . . . To reduce them to a reasonable few is often a most desirable thing." The custom of combining the arms of an heiress with her husband's by means of an escutcheon of pretence Mr. Hope dismisses likewise as "ugly and most inconvenient." Of the baronet's badge, he says, "Some artists wisely leave it out altogether"; of the use of a lozenge for a lady's arms, there is no cause why the custom should not be set aside "for artistic reasons"; and, again, "From the artistic standpoint, it would certainly be desirable . . . to revert to the freedom of pre-Elizabethan times." In short, a large number of the heraldic usages that have made armorial insignia of greatest value to historians and genealogists, all the fine distinctions of

> 'Scutcheons of honor and pretence,
> Quartered in old armorial sort,

Mr. Hope would wipe out as inartistic.

Moreover, he would effect this reformation not through the action of the Heralds' College, but at the whim of every chance designer. Shall we revert to the alleged simplicity of earlier days? If so, let us at least remember that, in "king Edward the firste his time," it was ordained—if Gerard Leigh speak true—"that no goldsmith, coppersmith, glasier, painter, or marbler should have to do with Armes, without the consent of the king of Armes of that province."

Peter A. Gross, an American landscape painter, who had lived in Paris for the last forty years, died suddenly on Saturday in Chicago, where he was to have opened an exhibition of his art works. He was born in Allentown, Pa. When he first went abroad he lived on the Heights of Montmartre, and later, when many of his compatriots moved across the Seine to the Latin Quarter, he continued to maintain his home near the Place Clichy. Mr. Gross brought with him to this country Fragonard's celebrated painting of Benjamin Franklin, painted in the Louvre when Franklin was Ambassador to France. European collectors had made him offers for the canvas, but it was his hope to establish a museum of art in his native town, and he took the portrait there. Among paintings which he owned were works of Corot, Théodore Rousseau, Delacroix, and other masters of the French school. For many years he was a regular contributor to the great art exhibitions of Paris. He was a chevalier of the Legion of Honor and a member of several other French societies.

Prof. Louise Rogers Jewett, head of the department of art at Mount Holyoke College, died suddenly in South Hadley, Mass., on Wednesday of last week. She was born in Moravia, N. Y., and graduated from the Buffalo Seminary. She studied at the Yale School of Fine Arts, and under Lefebvre and Benjamin Constant at the Académie Julian, Paris. For several years she taught at Dana Hall, Wellesley, and in 1901 came to Mount Holyoke as professor in the art department. In 1912 she was made head of the department. Two of Miss Jewett's publications are "Masterpieces of Painting, Their Qualities and Meanings," 1906, and "History of Italian Painting; Outlines and References," 1908. In 1910, in collaboration with Prof. Mary W. Calkins, of Wellesley College, she edited "The Poems of Sophie Jewett, Memorial Edition."

Finance

THE NEW TURN OF AFFAIRS.

When the stock market suddenly bursts into such activity and strength as that which the past two weeks have witnessed—with the "outside public" unquestionably buying, with prices rising day after day, and with more separate securities dealt in on the rise than in any week in the past four years—the question at once arises, What should have brought about this remarkable situation. It is certainly remarkable in this respect, if in no other, that it follows barely nine weeks after a market in which Stock Exchange business fell on one day to the lowest ebb in twenty-five years, and from which the Stock Exchange was apparently convinced, first, that the "outside public" as a factor in the market was gone, never to return, and, secondly, that the stock market itself, as a field of profitable activity, was played out. What, it may very reasonably be inquired, has happened in this nine weeks' interval, of so portentous a character as to reverse thus completely the action and attitude of Wall Street, Stock Exchange, and "outside public"?

The question might be answered merely by saying that the 57,000-share day of November 24 was a landmark showing that liquidation was complete, all possible evils discounted and overdiscounted by the preceding decline of prices, and the market, therefore, sure to rebound effectively when any one really made up his mind to buy. But as everybody knows, the nine weeks' interval has also included a rather noteworthy series of events. They may not of themselves have changed the position in finance, but they certainly brought into sudden and strong relief some very important changes which had already been gradually occurring, which had already created a new situation, but which Wall Street was still considering from its distorted perspective of the past twelve months.

First, and very soon after the "dull day" of November, came the announcement from the White House of the new policy towards business; the settlement with two great combinations, the enactment of the Currency bill, and its enthusiastic reception by the business community. These events dislodged two factors of misgiving of which much was heard during 1913—the prospect of violent assault on Wall Street and Big Business by the Government, and the prospect that the Democratic party would be incapable of useful or conservative legislation. Up to the middle of this month, other scattered incidents occurred which pointed in the same direction; but a week ago began a most illuminating series of events.

On Friday of week before last, British consols, whose depression during 1913 had reflected the troubled waters of European finance and the utter congestion of the foreign investment market, rose nearly 1 per cent., their price rising subsequently 2 points further, to a higher level than that at which they stood at the outbreak of the Balkan War. At the end of that same week the New York banks, which in December had been talking most doubtfully about the future, reported the largest surplus reserve for this time of year since 1897. On Monday of last week a sharp decline in money rates occurred on Europe's markets, on the heels of the earlier January declines; the Wall Street money market following, and Paris rates giving way for the first time in 1914.

On Tuesday the President's special message reiterated and amplified his policy of peace, with the purpose outlined "not to unsettle business, or anywhere break its established courses," and the assertion that "the antagonism between business and Government is over." On Wednesday came the offering of the $51,000,000 New York State loan for public subscription, the covering of the offer five times over by the bidders; the allotment of the bonds to a banking syndicate, at a higher price than had been deemed possible a month ago, and their instantaneous reallotment to investors, at a further advance in price. Swiftly following this, on Thursday six great central banks of Europe—at London, Berlin, Brussels, Geneva, Stockholm, and Copenhagen—reduced their official discount rates to a lower level than had been fixed by any of them since the Balkan War began; the open market rate at Paris, though the Bank of France made no reduction, falling below the rate which the Bank would have established had its own rate been lowered.

With just this sequence of events a fairly clear explanation of this week's movement on the Stock Exchange is at hand. Summing up all of these numerous successive occurrences, it may be said in a general way that the particular doubts and apprehensions—some of them well warranted, some purely imaginary—which prevailed throughout 1913, have, so to speak, been suddenly exploded. Wall Street need not now apprehend that the party in power is handling the ship without a rudder, or with the black flag at the mast. Misgiving over the New York bank position would be entirely misplaced. The deadlock in the market for new securities is at least temporarily broken. Financial Europe (as yet excepting Paris) has given the plainest intimation that the strain on the foreign money markets is over.

The response of the markets was as emphatic as it was inevitable. The sharp-sighted Stock Exchange is the first to reflect such change, and every one knows how it has reflected it. Speculators and investors have instantly laid in the supplies of investment securities which they had done without, during many months. The turn of general trade comes next. It will come when middlemen and consumers, who have for months been notoriously conducting their affairs on a hand-to-mouth basis, lay in new stocks of merchandise and fill their almost empty shelves and yards. When the Wall Street market halts, after a period of prolonged revival, attention is logically turned to the revival of general business—precisely as every experienced person, after the

long decline on the Stock Exchange had ended in November, watched expectantly for the business reaction, which, in fact, ensued.

SELECTIONS FROM THE FEDERALIST

Edited, with an introduction, by WILLIAM BENNETT MUNRO, Professor of Municipal Government in Harvard University.

12mo. Cloth. 202 pages. $1.00

Designed to meet the needs of college students, this volume presents a carefully edited selection of the most significant papers from The Federalist. In clearness both of thought and expression, these letters of Hamilton, Jay and Madison on the Constitution are unsurpassed in American political literature. The text used is, for the first time, that of the original collected edition, revised by Madison in 1788.

HARVARD UNIVERSITY PRESS
CAMBRIDGE MASSACHUSETTS

CHICAGO HISTORICAL SOCIETY'S COLLECTIONS

THE DIARY OF JAMES K. POLK

DURING HIS PRESIDENCY—1845 to 1849

Edited and annotated by MILO MILTON QUAIFE, Associate Professor in Lewis Institute of Technology; with Introduction by ANDREW C. MCLAUGHLIN, Head of the Department of History, University of Chicago.

Four volumes in box. **Price $20.00 net.**

A. C. McCLURG & CO., Publishers

All serious students of American History owe a debt of gratitude to the Chicago Historical Society for the publication of the *Diary*. . . . The reader who undertakes the perusal of the four volumes will find them more interesting than most novels.—*New York Sun.*

A work of great importance to our generation and especially to the historian.—*William E. Dodd*, in *Louisville Herald.*

Of the historical value of this diary there can be no doubt. . . . Above all, this book is vivid, bitter, living, past politics.—*New York Tribune.*

The publication . . . is a literary event of first-class importance.—*Boston Transcript.*

A notable addition to the source materials for the study of the middle period of United States history . . . perhaps the most important publication in the field of American history.—*Francis W. Shepardson* in *Chicago Tribune.*

I found it indispensable to an accurate knowledge of the period of which it treats. . . . In my judgment the Chicago Historical Society has made good its *raison d'etre* by that work alone, and has earned the gratitude of all future generations of historical students and workers by rescuing from oblivion so important a record of our country's history.— *Horace White* (18 West Sixty-ninth St., New York City).

I should be very greatly pleased to have this important, valuable, and very well edited book, on the publication of which the Society is to be congratulated.—*Dr. J. Franklin Jameson*, Carnegie Institution, Washington, D. C.

JUST PUBLISHED

POEMS OF WORDSWORTH, SHELLEY, AND KEATS

Edited with introductions and notes by W. P. TRENT and JOHN ERSKINE, Professors of English in Columbia University.

ALL the poems of Wordsworth, Shelley, and Keats included in Palgrave's Golden Treasury are presented in this most recent addition to the Standard English Classics Series. The editors seek to make clear the nature and range of lyric poetry, and to present an adequate introduction to the poetry of one of the most brilliant creative periods of English literature.

CHARLES F. McKIM

A Study of his Life and Work

By ALFRED H. GRANGER

"A sympathetic and enthusiastic sketch of the life and work of one of the greatest leaders in the new American architecture. . . . With absolute loyalty and enthusiasm Mr. Granger depicts the man himself, with his passion for simplicity, for truth, for perfect beauty. His modesty, his wit, his bubbling humor, coupled with a certain sensitive restraint and self-repression; his generosity, his kindness to younger men; his fidelity to all high ideals are emphasized. . . . It is a book to be treasured by every lover of architecture."—*Boston Transcript.*

NEW MACMILLAN BOOKS OF SPECIAL IMPORTANCE

You want to know the truth about the Philippine Islands!
The most important of accessions to United States territory!

Now Ready. Prof. Worcester's new book

THE PHILIPPINES PAST AND PRESENT

By **DEAN C. WORCESTER,** Secretary of the Interior, Philippine Insular Government, 1901-1913, author of "The Philippine Islands and Their People," etc.

This timely, valuable, up-to-date and authoritative work is of especial interest just now, as the recently appointed administration has again sharply brought up the whole question of our policy with regard to the Philippines and their future. To impress on the American people the exact truth of the situation, is the primary object of the Hon. Dean C. Worcester's new book, and this work will answer more questions on the subject than any other.

Profusely illustrated with full-page plates. Two volumes. $6.00 *net.*

ON POLITICS AND HISTORY

MEXICO
The Wonderland of the South
By WILLIAM E. CARSON

A new, revised and up-to-date edition of this timely work, giving an accurate picture of the country and the people. "It would be difficult to find a book upon this most interesting land which would be more satisfactory."

Profusely illustrated. $2.25 net

A WOMAN RICE PLANTER
By PATIENCE PENNINGTON

Introduction by Owen Wister.

"Everyone who read 'Uncle Tom's Cabin' should read 'A Woman Rice Planter.' It is a large part of the South under the camera."—*Unity.*

"A book of rare charm . . . as entertaining as fiction."

Profusely illustrated. $2.00 net

The COUNTRYSIDE MANUALS

I. **THE SUBURBAN GARDEN GUIDE**
By Parker Thayer Barnes.

"The best, most compact, and handiest of garden manuals published."

Cloth, 50 cents net

II. **THINGS MOTHER USED TO MAKE**
By Lydia Maria Gurney.

The good, old-fashioned, but ever new recipes for the best products of kitchen cookery. **Cloth, 50 cents net**

MOTHERING ON PERILOUS
By LUCY FURMAN

"A book as limpid, as refreshing, as invigorating as a mountain stream . . . Recalling Myra Kelly . . . her style is graceful and clear and her narrative . . . the diary of a teacher among the mountain whites in Kentucky . . . fascinating."

Illustrated. $1.50 net

THE TREASURE
KATHLEEN NORRIS'S New Novel

By the author of "Mother," etc.

A new novel by this fascinating author, redolent again of the home atmosphere and those intimate touches which make the book seem a part of the reader's life.

Illustrated. $1.35 net

SANDY
S. R. CROCKETT'S New Novel

By the author of "Patsy," "The Stickit Minister," etc.

A hero this time, as captivating as Mr. Crockett's previous attractive heroine, "Patsy." As satisfactory a novel as Mr. Crockett has ever written, full of life, vigor, wit and humor. **Illustrated. $1.35 net**

VAN CLEVE
MRS. WATTS'S New Novel

By the author of "Nathan Burke," etc.

"Nothing but praise for 'Van Cleve' . . . another true, red-white-and-blue American story . . . clean, sweet, wholesome . . . thoroughly American in its good humor, charm and optimism . . . A good story told with skill." **Cloth, $1.35 net**

Leading reviewers unanimously declare that his new novel

THE VALLEY OF THE MOON

is the best story ever written by

JACK LONDON

the versatile author of clever and popular tales, including "THE CALL OF THE WILD," of which book alone over half-a-million copies have been sold.

"'The Valley of the Moon' is as winning, as genuine an idyl as one can desire . . . breathing the atmosphere of the open that heals and brings contentment . . . American to the core . . . picturesque, wholesome, romantic, practical."—*N. Y. Tribune.* "A chant of triumph . . . a rapturous hymn of praise."—*Indianapolis News.* "The most broad-minded and well-balanced story of Jack London's fathering."—*Chicago Inter Ocean.* "The best story that Jack London has written."—*Boston Advertiser.*

Colored frontispiece. $1.35 *net*

The Nation

NEW YORK, THURSDAY, FEBRUARY 5, 1914.

The Week

The Foreign Affairs Committee's approval of the arbitration treaties foreshadows the early consummation of a great purpose which has long been thwarted by persistent opposition, and of which the prospects only a little while ago seemed highly doubtful. The service which the adoption of the treaties will render to the cause of peace can hardly be overestimated, whether viewed as an example and precedent in their general character, or regarded in their more specific bearing. We all remember the way in which awful possibilities of undefinable danger to the nation's honor were put forward in President Taft's time as objections to the ratification of general treaties of arbitration; and later the Panama tolls question and other particular subjects of national solicitude have given motive for opposition. But it now looks as though, by the simple process of close-range common-sense persuasion, President Wilson had succeeded in smoothing out all the rough places that stood between the treaties and their ratification.

If the only qualifications for the post of American Ambassador to Russia were a sense of propriety and the ability to recognize the hard facts of a situation, the *Nation* would be glad to retract all that it has said regarding Henry M. Pindell's unfitness for the St. Petersburg post. His letter of resignation places him in far more amiable light than those ill-advised friends who were instrumental in enticing him into an impossible situation. Even had Mr. Pindell originally possessed the qualifications for the Russian Ambassadorship, his usefulness must have been destroyed by the circumstances attending his appointment; and one of the most important places in the diplomatic service, in view of the questions that are soon bound to come up between this country and Russia, would have remained worse than unoccupied. One can hardly blame Mr. Pindell for not sending in his resignation till he had been "vindicated" by the Senate. His latest act leaves President Wilson under greater obligations than ever to Mr. Pindell.

It is somewhat disconcerting to learn that no one appeared at the first hearing in Washington on the new Trust bills, and that the Committee has notice of but few who desire to be heard. An explanation could doubtless be found, but it would not be very creditable. It may be that some who think of appearing in opposition to certain provisions of the bills believe that the time is not ripe. They may be recalling the currency bill, which was introduced in the House in one form, passed in another, and had a like fate in the Senate, getting its final and crucial shaping in conference. Possibly the opponents of the Trust bills are of the mind to wait till those measures reach a more critical legislative stage. But such an attitude would be mistaken. The conference between the two Houses of Congress does not give public hearings. They are invited now, we do not doubt in good faith, for the purpose of getting criticism early. The bills are confessedly in "tentative" form at present, and anybody who is able to point out serious blunders or dangers in them ought to do so promptly.

The report of the Interstate Commerce Commission, condemning and inferentially prohibiting the granting of rebates or allowances, on through transportation rates, to manufacturing companies whose mills are connected with the railway by a short side track, has occasioned two very different inferences. It is clearly favorable to the railways, in that it strikes off payments made by them to such customers, estimated at not less than $15,000,000 per annum. But it also contains an unpalatable hint. The advance in Eastern railway rates now under consideration, the report proceeds, "has a very definite and immediate relation to this proceeding," because "the very carriers that are augmenting their expense accounts and dissipating their revenues in this manner, to the extent of many million dollars a year for the benefit of a comparatively few shippers, are now complaining that their present earnings are insufficient, and on that ground have asked our permission to make a substantial increase in their general rate schedules." From this the inference was possible that the Commission, on that ground, would reject the application for an advance in rates.

A good part of the outcry made by opponents of the Alaska railway bill over "the dangerous new policy" involved implies forgetfulness of our own history. What have those who bear down so hard on the perils of "socialistic experimentation" in spending public money on a railway to say of the great subsidies to the Pacific railways? Between 1862 and 1872, the Union Pacific and Central Pacific, with connecting lines, got grants of 33,000,000 acres, besides loans of money from the Treasury. Similar grants were made to mid-Western roads. In the twenty years ending 1871, Congress had voted more than 150,000,000 acres to railways engaged in Western development. The question of such governmental assistance was then thought of as one of expediency, not principle.

The Senate is reported to be waiting for a lead from President Wilson on the Burnett-Dillingham Immigration bill. Mr. Wilson is believed to be hostile to the literacy test embodied in the bill, and we hope he will lose no time in making his position clear. In the face of great pressure Mr. Taft vetoed essentially the same bill, because it involved a revolutionary departure from an historic policy underlying the very spirit of our institutions. What Mr. Taft found it possible to do, his successor should find it easier to do. Let it be recalled that Mr. Taft, as a believer in Protection, had to face the charge that he believed in protecting the American manufacturer against foreign competition, without protecting the American workingman against the competition of immigrant labor. The charge cannot be formulated against the man who has gone so far towards destroying tariff privileges. The case reduces itself to this: that the literacy test is not intended as a test, but as an instrument of restriction. Its proponents would be just as well satisfied with a physical test or a supernatural test that would have the desired effect of cutting down the flow of immi-

gration. What Mr. Wilson must decide is whether we have really come to the parting of the ways with our old traditions, whether the "burden" of immigration is greater than we can bear, and whether we must now serve notice on the world that America can no longer mean what through four centuries it has meant to humanity.

That the number of unemployed in New York is greater this winter than usual, there seems every reason to believe. The figures of the New York Department of Labor for the State, cited by Mayor Mitchel at the conference on the subject, confirm the conclusion derived from general impression; and, as the Mayor said, the situation is one that demands attention, irrespective of comparison with previous years. But that it demands care and forethought, as well as earnestness, in its treatment, should be impressed on the public mind by the remarks of Commissioner of Charities Kingsbury. He spoke of the widespread philanthropy in the city, and the ease with which free food and shelter are to be had, as causes contributing to the swelling of the number of the unemployed here; and this consideration makes it plain that any measures of relief which may be taken must be of such character as to guard against any avoidable creation of fresh cases to relieve. On the other hand, to let things drift would be far from satisfying the demand of our time in the matter.

Current notions about the plutocratic income of Western farmers are hardly borne out by the figures of a Government "survey." The average capital invested in the 257 typical Illinois, Iowa, and Indiana farms, in the typical year 1911, is $30,606. The farmer's average receipts for the year were $3,076; his average expenses, $1,138; leaving an average income of $1,938. The world casts an envious eye at this sum, without stopping to figure the $1,530 interest on the average capital, which leaves the owner's labor income a paltry $408! We quote:

> The assertion that farmers are making large profits is erroneous. They are living on the earnings of their investment, not on the real profits of the farm. A farmer having an investment of $20,000, with no mortgage, may receive a minus labor income, yet have nearly $1,000 as interest on which to live.

On official authority, this has value as against popular impressions. But some qualifications are obvious. The labor earnings do not include food products furnished by the farm. The fact that the capital estimate is swollen by the great increase in land values within the decade, and therefore represents unearned increment, is not mentioned. As for the prevailing optimism concerning a new day in agriculture, it is not impaired at all. The majority of the farms earn far more than $1,938 yearly; it is only a minority of holdings, still managed as they were in 1875, that reduces the total. One of many illustrations is a table on "education as it affects farm earnings." The farmer with a common-school training gets from $301 to $742 for his labor; the man with a high-school training, from $651 to $1,268; the college-bred farmer, from $796 to $1,721.

The profit-sharing announcement made a day or two ago by the Farr Alpaca Company, of Holyoke, Mass., derived special interest from its coming so close upon the heels of the Ford Motor Company's announcement, which was a national sensation. It is locally explained, however, that the Holyoke company's plan was maturing long before Mr. Ford startled the industrial world with his project; so that there is here no relation of cause and effect. And it is upon the deliberate launching of such plans, by skilfully and prudently managed concerns making good but not phenomenal profits, that the spread of the profit-sharing idea must depend. The Holyoke company's arrangement is to give to each employee a bonus bearing the same percentage relation to the total of the wages he has received during the year as the annual dividend bears to the capital stock. Accordingly if, as is expected, the shares of stock get this year an 8 per cent. dividend, a worker who has earned ten, fifteen, or twenty dollars a week will have for his share of the profits forty, sixty, or eighty dollars, respectively. This is not a bonanza, but it is a good thing; and if all goes well, it is subject to increase.

The figures of automobile killings in New York city in the first month of 1914 are such as to indicate that the year is to witness a further growth of the dreadfully increasing slaughter. The number is reported as twenty-eight for January. The total of these killings for 1913 was 302, which is more than double the total for 1911—a startling showing. In 1912 the total was 221, as against 142 in 1911, an increase of more than 50 per cent. in a single year. The National Highway Protective Association and the Association for the Prevention of Reckless Driving are exerting themselves to procure such reform in the law and in its administration as will check this outrageous taking of human life. By far the greater part of this automobile slaughter is caused by people driving for pleasure or desiring to save a few minutes of time in getting from one point to another. The enormous passenger traffic of the trolleys caused only 108 deaths, as against the 302 caused by automobiles. Those who ride in automobiles are a small minority, fortunate in the possession of a luxury and a convenience to which nine-tenths of the people have no access. They have the benefit of the use of the public streets in a degree far beyond what is commensurate either to their numbers or to any specific contribution they make towards the cost of the streets. To this nobody objects; but it is intolerable that they should be permitted to put the rest of the people in danger.

We like the idea of General Coxey's proposal to celebrate the twentieth anniversary of the exploit that made him famous by leading another Army to Washington on May 1. This time he is to muster 500,000 unemployed in buckram, "and more if I can assemble them." There ought to be no difficulty about this. General Coxey is now understood to be a comfortably rich man. If tramping to Washington brought him wealth within twenty years, he should be able easily to recruit a large Army, with the sufficient word to the wise unemployed that like causes will be followed by like results. But it is no idle demonstration that General Coxey intends. He has a definite and sure remedy to propose. All that it is necessary for Congress to do to make everybody both employed and happy, is to authorize the issue of a billion or two of "non-interest bearing bonds," upon these bonds as security to base bank circulation, and then compel the banks to "lend money direct to the people." There is a straightforward simplicity about this

which is the mark of genius. Direct primaries, direct legislation, direct election of United States Senators—who shall say that the fitting cap-stone of the arch is not direct loans of money to the people? It is certain that millions will want such loans—and want them directly.

The work of the Northwest Mounted Police in parts of Canada bears a growing analogy to that which would lie before a State Constabulary here. Commissioner Perry, for example, traces the "excess of crime" with which the force has dealt during 1913, among other factors, to the difficulty of assimilating an immigrant population to Canadian standards. The Mounted Police's efficiency in preserving order over vast areas and among a shifting rural population is witnessed by his statistics. A force of 763 officers and men, scattered through Saskatchewan, Manitoba, Alberta, and Yukon Territory, made 15,443 arrests in the year, and procured 12,985 convictions. Most were for slight offences, only 44 murders being recorded; even vagrancy was repressed by 2,135 sentences. A proposal to supplant the Mounted Police by local authorities would be thought preposterous. Its established reputation for vigilance, quickness of action, and length of reach is alone a great moral force in suppressing violence.

Washington testified under cross-examination that he did not think it unpatriotic or disloyal to circulate such matter.—[News Item.

The Washington charged with disloyalty was not George, but Alfred, advertising manager of the Western Newspaper Union, to whom Canada paid $42,000 annually for supplying our rural newspapers with "patent insides" describing Canada as a farmer's paradise. When Mr. Washington said that he did not think it disloyal to induce American farmers to expatriate themselves and become the subjects of a British monarch called George, he was telling the truth. He did not think of abstract matters, in the face of $42,000 worth of advertising space each year. But even if he had thought, a fine moral issue arises. Where does business end and patriotism begin? Is the business of expatriating American citizens more disloyal than the business of selling war munitions to a nation that might use them against us? Is it more unpatriotic to induce American labor to emigrate than it is to make American capital emigrate in the face of labor troubles? Still another George, of the Harvester Trust and the New Nationalism, was once of a mind to remove his mills from New York State to Germany. Mr. Alfred Washington might have argued that, by sending American farmers into Canada, he was far from disloyal; that he was, in fact, the agent of a process of peaceful penetration which at one time had patriotic Canadians seriously worried.

High-handed is a mild term to describe the action of the South African Government in deporting ten of the principal leaders in the recent general strike. The assumed justification is that it was done under warrant of martial law. But that the degree of martial law in force in the Transvaal does not involve the suspension of civil law is plain from the action of the labor leaders in appealing to the Supreme Court of the Union, with the Chief Justice's declaration that if he had been aware of the plans of the authorities he should have promptly enjoined them. Thus neither legality nor expediency—the strike by this time is virtually over—can justify an act whose consequences are bound to be extremely embarrassing for the Imperial Government and the Liberal party. The Labor party in England has been at odds with its Liberal allies. Some of the Liberal defeats in recent bye-elections have been brought about, not at all by the Home Rule issue, as the Opposition has maintained, but by the defection of the Laborites who have named candidates of their own and split the normal Government majority. The South African incident will naturally widen the breach. Protests have already gone up from trade-union quarters and the Radical press.

It would be hard to find a more dramatic tale than that furnished by an Auckland correspondent to the Springfield *Republican* on the recent collapse of syndicalism in New Zealand. Last October's strike was really against the world's first compulsory arbitration act. English and Australian agitators, beginning in 1910, took advantage of a new labor immigration to form a "federation of labor" which slowly induced almost all unions to withdraw their registration under the act. New Zealand being cut off by sea from ready importation of workmen, they reasoned that a general strike would infallibly reduce her to subjection; while the dependence of her 1,100,000 agricultural people on imported manufactures made the ports key positions. Upon the beginning of the strike, every vessel was abandoned, every wharf emptied, the carters quit, the trolleys ceased running, and bricklayers, masons, factory-hands, carpenters, and even shop-girls left work. "It would be hard to imagine a situation," writes the correspondent, "in which the doctrines of the syndicalist could be reduced to practice with greater promise of success." Yet the cities alone handled the troubles. In Auckland, where 10,000 men struck, 1,000 volunteers were called from the youths under compulsory military training, and they cleared the wharves. Two hours later 1,800 farmers, representing a coöperative association embracing thousands near the city, rode in and set to work under arms loading vessels. The same procedure in other cities resulted in the hurried formation of new unions under the arbitration act. In three weeks the strike was crushed, and without violence. "Syndicalism and its methods have been utterly discredited," writes the correspondent, "and those who cling to it have gone back to Australia."

The establishment of Confucianism as the state religion of China expressly disclaims interference with religious liberty, and embodies an ambition to set erring young China back on her ancient and native foundation of ethics, culture, and social principles. The attitude of tolerant missionaries has long been favorable to a system whose conservation is still the land's best bulwark against moral chaos. "There is in Confucianism," wrote Dr. John Ross in *China* of last July, "nothing incompatible with the progress, social, political, or spiritual, of the Chinese people. The missionary should claim Confucius as an ally, not oppose him as a foe." If Confucianism is abandoned, parts of the country will lack a chief inspiration to maintenance of their ancient civilization.

THE "TRADE COMMISSION" BILL.

It has been announced from Washington that the House Committee on Interstate Commerce will soon begin public hearings on the measure for an "Interstate Trade Commission." A thorough and deliberate inquiry is of the highest possible importance, because there are very strong reasons why the bill, in the form in which it was introduced in the House of Representatives, should not be passed. The dispatches report certain modifications already made in committee; but these corrections touch its defects only in part.

Mr. Wilson, in his speech of January 20, laid stress chiefly on the value of "the advice, the definite guidance and information," which such a commission could provide, in the effort "to make definition possible, at any rate up to the limits of what experience has disclosed." This description, framed as it was in general terms, contained much that was suggestive. But it is details, quite as much as general purposes, which determine the character of such legislation, and the Clayton bill goes far beyond such provisions as the President's language would necessarily imply.

It subjects to the direct and intimate supervision of the proposed commission not merely the "great corporations" to which Mr. Wilson somewhat indefinitely referred, but "*all corporations* engaged in commerce among the several States or with foreign nations, except common carriers." It declares that this body of incorporated enterprises, large and small alike, "shall furnish to the Commission" information regarding their business, financial condition, and management "to such degree and extent, and in such form, as may be prescribed by the Commission." It gives the Commission or its agents "complete access to all records, accounts, minutes, books, and papers of such corporations, including the records of any of their executive or other committees." It further provides that "the information so obtained shall be public records, and the Commission shall, from time to time, make public such information, in such form and to such extent as it may deem necessary."

A moment's consideration is enough to show the highly inquisitorial possibilities of such a law. The act which created in 1903 the present Bureau of Corporations, was far more scrupulously guarded. Under that law, the Commissioner had authority, subject to the direction of the Secretary of Commerce and Labor, to investigate "the organization, conduct, and management" of an interstate corporation. But the single avowed purpose of such inquiry was to gather data "which will enable the President of the United States to make recommendations to Congress for legislation"; the information was to be obtained for the President "only as he shall require," and it was to be made public only "as the President may direct."

The modifications now said to be contemplated by the Interstate Commerce Committee of the House would prescribe that the inquisitorial powers shall not cover such matters as trade processes or lists of customers. This is an eminently proper change, but it fails to reach the real evils of the measure as it stands. Even with such amendment, the bill would still compel the filing with the new commission of intimately private information as to the finances of any and every corporation doing business across the border of a State. It would authorize the publication of such data at the Commission's will—even though the company affected had no public importance, and even though such publication might gravely jeopardize its business interests.

Mr. Herbert Knox Smith, an ardent Progressive and former chief of the Bureau of Corporations, in his Jamestown speech last week opposed most of President Wilson's policy towards corporations, but approved of the Interstate Trade Commission. What Mr. Smith's own ideas on the general problem are may be judged from his somewhat naïve restatement of Mr. Roosevelt's fulminations of 1912 against the Sherman law. The attempt to check the big concentration of business would "turn the hands of the clock back to the days of our fathers, to the era of the blacksmith's forge, the grist-mill, the stage coach, and the cobbler's bench." This amusing nonsense is coupled with the familiar tirade against the Standard Oil dissolution for not having been carried far enough; with the remark that "the Democrats are still fumbling blindly with the old notion that all we want is competition"; and with the suggestion that when a really monopolistic corporation is discovered, it be dealt with "by placing a supervisor, for the time, in control of the company, to carry out the orders of the Commission."

Holding these fantastic ideas, Mr. Smith and his fellow-Progressives naturally ridicule all that is cautious and conservative in the Administration programme. But the plan for a Trade Commission gets his endorsement. "That point," Mr. Smith declares, Mr. Wilson "got from the Progressive platform, for it was not in his." The assertion is correct. The Democratic platform of 1912 merely declared for "the prevention of holding companies, of interlocking directorates, of stock-watering, of discrimination in price, and the control by any one corporation of so large a proportion of any industry as to make it a menace to competitive conditions"; and it favored more drastic application of the Anti-Trust law itself, especially in its criminal provisions. The Progressive platform favored a strong commission, with "permanent active supervision over industrial corporations engaged in interstate commerce," and with enforcement of complete publicity. But even the Progressive platform would have applied such supervision of interstate corporations "to such of them as are of public importance," and would have required complete publicity only "of those corporate transactions which are of public interest."

GOVERNMENT AS AN EXACT SCIENCE.

I am much mistaken if the scientific spirit of the age is not doing us a great disservice, working in us a certain great degeneracy. Science has bred in us a spirit of experiment and a contempt for the past. It has made us credulous of quick improvement, hopeful of discovering panaceas, confident of success in every new thing. . . . I should fear utter destruction from a revolution conceived and led in the scientific spirit. . . .

These words are from an address delivered by a Princeton professor fourteen years ago. The fact that he is today the President of the United States does not take away from their significance. He may, in the interim, have changed his mind about some men and some measures, but he cannot have altered his fundamental attitude towards the methods of politics and the processes of government. Indeed, his countrymen now pretty well understand that though Woodrow Wilson is a doctor of philosophy, he is not a doctrinaire. If

anybody should seek to win his countenance for the idea that government can be made an exact science, a refusal if not a rebuff would almost certainly follow.

Elsewhere, however, different notions are held. For example, at the Collège de France, recently, commemoration was made of the work of Claude Bernard. Scientists and philosophers—Bergson inevitably among the latter—paid their tribute to what Bernard had done for the advancement of knowledge. Special reference was made to his "Médecine expérimentale"; and the Minister of Public Instruction, M. Viviani, seized upon this as an argument for introducing the exact methods of science into the work of government. Indeed, he contended, the thing has already been done, to a large extent; and nowhere are the methods of nice observation and careful experiment and painstaking verification more employed than by those who make laws and administer them. So good a Socialist as M. Viviani, though just now under suspicion for having taken office, could not refrain from pointing out that all Socialist legislation is the product of the *méthode expérimentale*.

We greatly doubt if they order these things so much better in France. Even there we seem to have heard of public finances chronically deranged, and of Parliamentary committees consulting expert opinion only to flout it. American governmental practice, at any rate, has been about as far removed from scientific precision as could easily be imagined. It is not necessary to enumerate all the laws that have been passed merely on the chance that they might not do much harm. One example, now prominently before the country, will suffice. We refer to the provision tacked to the Panama Act making the Canal free of tolls to American coastwise vessels. This step was taken without any inquiry, we will not say in the scientific spirit, but in any spirit of reason or prudence at all. Everybody knew that there was at least grave doubt if we were not bound by treaty not to pass any law of the kind. It might mean embroilment, or at all events needless friction, with Great Britain; and would surely give other countries the impression that it was hardly worth while to enter into treaties with the United States, since we were not scrupulous about living up to them. But all this was blithely left on the lap of the gods, and the bill was passed. It was also open to objection on the financial side. Tolls were remitted when there was no certainty—indeed, quite the contrary—that they would not be needed for upkeep of the Canal. The figures laid before Congress by the most competent authorities showed that there would be a deficit in the fixed charges of the Canal for the first ten years, even if tolls were charged upon all the ships that could possibly be expected to use it. But Congress gayly disregarded these considerations, too. Its motto seemed to be: "Hang the treaty and hang the expense." From the consequences of that excess of rashness, the President is now calling upon Congress to retreat. In doing so, it is not necessary to speak of the neglect of any of the refinements of scientific method; all that need be insisted upon is that Congress made a huge practical blunder, which it ought to undo as speedily as possible.

Slap-dash and short-sighted legislation is, of course, everywhere to be condemned; but in the repulsion which it causes, and in the endeavor to supplant it by better methods, it will not be wise to seek to conjure with the word science. To make our lawmakers scientific would be impossible; while to commit the enactment of laws to scientists would be both impossible and undesirable. It is easy to assume that some branches of science are more exact than they really are. Goldwin Smith, whose father died of an obscure brain disease, uttered a cynical word, which was at the same time anguished, on the scientific methods of the physicians who were floundering about in their effort to determine the malady. Per contra, it is also easy to assume that legislation is more hugger-mugger than it is. There has been a great improvement in its quality. Bill-drafting is more carefully done than it used to be. Legislative reference bureaus have not been established in vain. Side by side with statutes, like the income-tax law, which seems like a Serbonian bog in which armies whole of lawyers are lost, we are getting acts like the currency bill, which cut plain paths through the forest. We do not need to despair even though few of our legislators are *savants*. Evils in government come from the lack of a scientific spirit, no doubt; but other evils, of the kind intimated in the words quoted from Woodrow Wilson, would flow from attempting to apply that spirit too rigidly.

TAXATION FACTS AND FANCIES.

Even in Wisconsin, unpatriotic residents are raising the cry of "tax-eating commissions." "Taxes are higher this year," they are saying, "because there has been a riot of extravagance in the State Capitol." So serious has the situation become that *La Follette's Weekly* has had to leap into the arena. It regards the present assault as peculiarly vicious, since it is made just when Wisconsin "has become known as 'the model' for other States seeking freedom from the political boss and the predatory corporation." Will not these other States falter in their crusade for freedom if they are led to believe that it raises the cost of government? *La Follette's* meets the peril by announcing a series of articles on taxes in Wisconsin by a recognized expert.

He, Prof. T. S. Adams, has little trouble in disposing of the charge of "tax-eating commissions." Wisconsin is famous for commissions, but all that they cost the taxpayer is twenty-four cents in every hundred dollars of his tax-bill. At the same time, no concealment is made of the fact that taxes have gone up, that it does cost more to run the government of Wisconsin to-day than ever before. "Local taxes are higher, county taxes are higher, State taxes are higher." We seem to recall something like this from the pen of another Governor. In 1893, Gov. Glynn pointed out not many weeks ago, the State of New York's expenses were $2.39 per capita; in 1913 they were $5.10. And the Governor, like the Wisconsin expert, made an analysis of the expenditures, showing how much of them went for education, how much for highways, how much for sinking fund, and how much for "the rest."

Even colder comfort than columns of figures is offered by Professor Adams. After raising one's hopes by remarking that the increase in taxes "has an exceedingly bright side," he immediately dashes them by explaining that the increase "promises to create a real and lasting interest in the actual administration of government." Perhaps. Lord North could testify as to the real and lasting interest in the actual administration of a certain Government which

resulted from increase of taxation. Gov. Glynn is not so philosophical. Living in New York, he is less sanguine over the prospect of increasing by higher taxes interest in the actual administration of government. "We cannot materially increase our receipts," and so "we must decrease our expenditures." Like other Governors before him, he is not too specific concerning the places where a decrease may be made. To be sure, there is the "general fund," where expenditures increased twice as fast in the past six years as in the preceding six; there is the agricultural division, where expenditures increased three times as fast in the later period as in the earlier; and there is the regulative division, which made the proud record of increasing its expenditures five times as fast in the one period as in the other. But waiving the point of the necessity of these increases, we note simply that, huge as the percentages are, the actual increase amounts to less than $2,500,000. That is, if there had been no increases at all in these departments, our per capita tax, instead of being the tremendous sum of $5.10, would be the comparatively trivial sum of $4.85.

It is easy to make an annual motion that taxes have increased, are increasing, and ought to be diminished, but the question is, Do we really wish to diminish them? That is, do we desire to do without the things they buy for us? Some of these things our fathers went without—the kind of roads we demand, for example. Then it is to be noted that we are spending increasingly in fields that yield returns in the shape of additions to our fundamental resources, as witness Wisconsin's bold undertaking to educate her entire farmer population to a more profitable employment of their land. We have come to desire Government to do many more things than it did less than a generation ago, besides doing all that it then did, only better. Our standard of living has risen, public along with private. Honest and efficient management can prevent waste from making the increase more than it ought to be, but no management, no economies, will enable a State to live on a higher scale as cheaply as on a lower one. They will not, at all events, until the Cubists are permitted to draw up our public balance-sheets. It is not necessary to cry mercy upon extravagance; but it was not our generation that coupled taxes with death as an example of the inevitable.

ATHLETICS AND CHARACTER.

Sharp controversy is bound to be aroused by the severe arraignment of prevalent athletic ideals and athletic methods in the schools and colleges, as presented in the current *Atlantic* by the headmaster of Phillips Andover and a faculty member in one of our Western universities. Drawn up independently, as we believe these separate indictments to have been, they are remarkably alike in their charges and their conclusions. They depict a state of moral deterioration which, as one writer puts it, seems to many college administrators so serious as to justify the abolition of the whole system of intercollegiate competitions. The evil may be summed up in a phrase—the triumph of the win-at-any-cost spirit. Baseball is bad, as Dean Briggs has recently argued. But football is worse. In football the "mucker" ideal has imposed itself on the undergraduate mind. Not what is sportsmanlike, not what is fair, but what will "get by" the umpire, is the demand, and disgrace consists entirely in being found out.

The fault is not primarily with the student body. Both writers in the *Atlantic* recognize how easily malleable is the undergraduate psychology, whether for evil or for good. The college student is astoundingly submissive. He bows before immemorial traditions that may be as much as five years old. He surrenders his individuality to the standards and loyalties that prevail at the time he pays his matriculation fee. If the standards to which he adheres are unworthy, the responsibility is with those who have set them up and those who tolerate them. Thus, both writers insist that the "mucker" spirit in athletics is imposed on the college student by the athletic coach; and there is little or nothing to choose between the professional coach who feels that he must win games to draw his salary, and the loyal alumnus who is called upon to pull a team together for a single season. But in the last resort responsibility rests with the college authorities, who, because they are indifferent or because they approve or because they find it expedient, tolerate practices which are morally debilitating. It is within the power of the college authorities to do away with evil practices, not by a mere show of force, but by educational effort; for, contrary to the general belief, "undergraduates are influenced in their views of right and wrong by the general attitude of the faculty."

The controversy which we foresee will arise, in the first place, of course, over the question of fact. Were the writers in the *Atlantic* not so positive in their assertions, so ready with specific examples and the promise of many more instances than the limits of their articles would allow, one would dismiss their charges at once as being greatly exaggerated. Among the general public the impression is that the morale of athletics is steadily improving; that instances of brutality in football are the exception where they were once the rule; that where such incidents occur they should be ascribed to the passion of the moment rather than to calculated savagery. But, then, the public's impressions are probably based on the game as played in the big universities. Games between teams of the first rank are played in the glare of an enormous publicity where rough tactics are as unsafe as they are probably unnecessary, since the combatants are players of exceptional skill. It may be different, it probably is different, with the small colleges, of which undeniably a large number are either in chronic disrepute or shoot up into evil eminence for a season or two until intercollegiate ostracism brings them to their senses. But once we admit the case against the small college, we are admitting more than half the case.

Yet another explanation is possible. It is one suggested by the comparison which both *Atlantic* writers draw between the "mucker" spirit in athletics and the "mucker" spirit in the world of business and politics, against which we are now in full revolt. The headmaster of Phillips Andover draws the parallel at length: "The underlying weakness which threatens our national life. . . . The rank dishonesty so widely prevalent in our business life. . . . The growing contempt of the law. . . ." It is the increasing sensitiveness of the national conscience towards business and politics which justifies such strong language. Where a tougher generation admired the football hero who ate up and "got" his opponents with impressive regular-

ity, we now refuse to tolerate practices far less reprehensible. This, we admit, is only a possible explanation. It will hardly be accepted by the editor of the *Atlantic*, who, in a prefatory note, declares that "underhand, perverted, and dishonest practices are, with honorable exceptions, still part and parcel of undergraduate athletics."

This very comparison between football and the business of life illustrates the very great difficulties that confront our college administrators. For it shows that the question is one much broader than athletics, much broader than the college, that it runs deep into the basic facts of our national psychology. No man of honor will defend the "win-at-any-cost" ideal in play. But neither are we ripe for the English ideal of play purely for the game's sake. Our own ideal is to play to win, fairly no doubt, but to win nevertheless. Englishmen scoff at the elaborate training processes which our athletes go through. The tremendous seriousness which we put into our play may be overdone; but there is nothing morally reprehensible in it. And there the difficulty arises. We may say that to be beaten is no disgrace, but at heart we feel that to be beaten is something of a disgrace. Is it any wonder that the adolescent undergraduate conscience should at times fail to notice the narrow line which sometimes divides playing passionately to win from playing unfairly to win?

HEREDITY, ENVIRONMENT, AND DUTY.

We no longer agonize over the question of free will or necessity in the abstract. One may read thousands of pages of current discussion of the great questions of life without ever coming across so much as a mention of predestination or original sin. But in the concrete nothing is more constantly the subject of solicitous thought than the question whether those who "go wrong" do so because of their native qualities or because of the circumstances which have surrounded them. To say that this question is the same as that of free will and necessity would be going too far; but it is hardly too much to call it the nearest equivalent that the attitude of the modern mind can furnish towards the problems of the universe. No man of sense imagines that every child born into the world is inherently as likely as any other to turn out well. Neither does any sensible person believe that education and environment may not have a decisive influence on an individual's moral destiny. But how much of the emphasis should be put upon heredity and how much upon environment is a question that is ever in dispute.

In the *Century* for February, there is an article on "The Boy who Goes Wrong" which, while offering no fresh contribution to the subject, brings out vividly some of its familiar aspects. Of the classic case of the Juke family, the writer, Mr. H. Addington Bruce, makes effective use; not, as might be supposed, to show the fatal quality of an evil heredity, but to show how cautious we ought to be in taking the fatalist view of any human being. He recites the well-known tale of the seven generations of descendants of the five Juke sisters, 709 individuals in the aggregate, of whom all but a handful became criminals, prostitutes, or paupers; hut he goes on to tell of one descendant in the eighth generation, a foundling baby boy, who came under the care of the Children's Aid Society, which, interested in the published facts of the appalling story of the Jukes, determined to see what a refined environment and good family care could do for this ill-starred youngster. The result, though not attained without special attention and effort, was that he became "an alert, vigorous, forceful young man, of sterling character." Other instances of children rescued by individuals are cited, to similar effect; and, what is far more conclusive, the carefully reported experience of the Children's Aid Society with the 28,000 children it has looked after in the course of more than half a century is quoted as showing in how very large a percentage of cases children having behind them a bad family history have been enabled to grow into prosperous and useful citizens by placing them in carefully selected homes, or by finding work for them in the country. It is impossible to doubt that there is room for an indefinite increase of this kind of beneficent effort—truly life-saving work in the highest sense.

To circumstance, then, and particularly to the home environment and the home education, must be traced in large measure the failure of an individual to come up to the requirements of a respectable life. But when it comes to laying down broad generalizations, affecting those notions of individual responsibility which are "the long result of time" and which form the chief buttress of morality and decency, we are at once confronted with serious danger from the standpoint not only of practical effect but also of intellectual integrity. One of the cheap short-cut methods of disposing of the matter is to say that, since almost every child could he made to go right if placed in the right surroundings, it is society and not the individual that is responsihle for the individual's criminality. This is as slipshod in thought as it is dangerous in effect. If we are to admit the idea of responsibility at all, the idea of responsihility either in society or in the individual, we have to recognize that in either case it is a relative matter. If it is to be taken for granted that the individual has done the best he could under the circumstances, it is equally to be taken for granted that society—which, after all, is but a collection of individuals—has done the hest it could under the circumstances. And if this is *not* to be taken for granted—as indeed it is not—then the case against the individual is far clearer than that against society. For whereas the pickpocket or the murderer has gone thoroughly wrong in circumstances precisely identical with those of millions who have kept thoroughly right, it is impossible to point to any actual instance of such mastery of the infinitely complex circumstances of civilized society as would be required for the rescue of all its members from their proclivities or temptations to vice, crime, or shiftlessness.

The article to which we have referred is quite free from this sort of hazy and vicious generalization. The writer's chief conclusion is that "the blame for the boy who goes wrong does not rest with the boy himself, or yet with his remote ancestors. It rests squarely with the parents, who, through ignorance or neglect, have failed to mould him aright in the plastic days of childhood." And he goes on to urge the extreme importance of parental care and foresight, and of the parental example. As practical counsel, surely nothing could be more sound. But, after all, we are here placed, in point of doctrine, in a vicious circle not unlike that into which the old-time disputants on free will and ne-

cessity were continually drawn. The parents are what they are; it is true that they should do the best they can for their children, but unless they themselves are made over their best is sure to fall sadly short of that degree of perfection, whether in wisdom or in virtue, that is to be desired. What then? Are the children to wash their hands of the result? Are those who are lazy, or dishonest, or sensual, to fall back on the fact that their parents did not take the measures necessary to cure them of these defects? That way madness lies. By all means, let us impress upon parents the desirability of their being firm and yet patient, self-sacrificing and yet not indulgent, serious and yet sympathetic and companionable. But whenever parents fail to come up to this standard, are the children who go wrong to be held blameless? There is no starting-point at which the obligations of duty begin to be effective; if we unload our own upon our parents, they can do the like upon theirs. After everything has been admitted as to the responsibility either of society in general or of one's parents, it is upon one's own self, and nowhere else, that the real responsibility for right living must rest.

BALLADS IN AMERICA.

No less a body than the United States Bureau of Education has joined in the search for Autolycus and his ballad-mongering progeny. The collections of American ballad survivals already made by Prof. C. A. Smith and others are considerable, as they are summarized in the *South Atlantic Quarterly;* it is now proposed to make the inquiry official. Its prospects are hard to appraise. Variations of 56 of the 305 English and Scottish ballads which Professor Child made canonical have been discovered in America, and the Bureau believes them the fruits of "a search that has hardly begun." This implied prediction, however, should not delude the searchers into supposing that they are not gleaning in a field long ago autumnal. Ballad singing was a lost art almost as long ago as ballad-making. It is a century since even the British collector, in search of a capping couplet, could skilfully choose time and place to intone, like Scott's hero,

Are those the links of Forth, quoth she,
Or are they the sands of Dee?

To have his air at once taken up by peasant girl or shepherd from the hillside,

Or the bonny woods of Warroch Head
That I so fain would see?

And it is doubtful if ballad recitation or oral preservation, in old country or new, is more than vestigial. Professor Child himself tried to stimulate the garnering of such remains as live on the lips of folk in Great Britain and America; the result he pronounced scanty, and Professor Kittredge wrote that his thoroughness had made it "clear that little or nothing of value remains to be collected in this way." At any rate, it is certain that if our versions are not quickly collected, they will shortly be forever obliterated.

Fear that the Bureau can do but little will not lessen the good wishes of every one with a feeling for the past, or taste enough to find, like Sidney, the thrill of a trumpet in a ballad like "Chevy Chase." That mind has a poor background in which the thought that half a hundred folk songs, by force of folk tradition, have been kept alive from the days of Cospatrick and Guy of Gisborne, and through generations removed over three thousand miles of sea and dispersed into a wilderness environment, does not awaken ideas and reverences. It is striking proof of race homogeneity, of the vitality of oral tradition, and of its power to transmit masses of material through centuries. Merely as one of the final chapters in the history of ballad collection, interest will attach to the search. The 300-odd ballads the world owns are but a tithe of the mass that has perished. Since Percy found his manuscript folio of ballads "lying dirty on the floor under a bureau in the parlor" of Humphrey Pitt's country house, serving the maids as kindling for the fires, and saved it by a stroke as lucky as that which preserved the one copy of the "Cid," no story is of more interest to literary scholarship. The zest with which Hurd and Walter Scott, Ramsay and Buchan, followed in Percy's steps and the steps of his predeccssors, Maitland and Bannatyne, Samuel Pepys and the learned Selden, was one of the soundest enthusiasms of the romantic renaissance. Young poets stopped collecting only to write imitations. Scott's anecdote of Leyden, eager to piece out a fragment, is typical of the half-antiquarian, half-poetic rage. "Two days afterward, a sound was heard at a distance like the whistling of a tempest through the torn rigging of a vessel. It increased as it approached more near; and Leyden, to the great astonishment of the guests, burst into the room, chanting the desiderated ballad with the most enthusiastic gestures. . . . He had walked between forty and fifty miles, and back again, for the sole purpose of visiting an old person who possessed this precious remnant of antiquity." But those were the days when ballad-collection held something of the outdoor zest of mountain-climbing or fox-hunting.

Professor Child, in the act of definitively compiling many versions unrecognized before, had to carry discovery into a dozen tongues and thousands of books, rather than into the open air. Once cottages were to be ransacked for the printed broadsides, pasted to the walls, or gathered into bundles; songs to be copied from singers' lips; old libraries searched for MS. collections, and shop shelves fingered. Always there was the chance that antiquary Oldbuck would light on some Elspeth, wildly chanting "a genuine and undoubted fragment of minstrelsy," or a cotter be found with some jewel of a refrain in his head, or a corner of a shed yield up, as it did to emissaries of Ritson or Buchan, some new "Hughie the Graeme" or "Little Musgrave." Professor Child, and all his later generation of Furnivalls and Kittredges and Gummeres, could have no such intoxicating adventures. Child's struggle with Ecton Hall to have the original Percy folio printed; his find among the manuscripts of Abbotsford library; his dozen contributions procured from oral sources by Mr. Newell, of New York—alone lit up the necessary and scholarly toil of amassing, collating, and arranging texts, of comparing ballads of all nations to determine the historical and foreign relations of each of his pieces, of piling up introductions and notes. Scholarship's last cold task of criticism and compilation is a far cry from the day when Scott knew not only singers of the "Douglas Tragedy," but men who credulously and minutely pointed out the exact rockmarked spot, in the exact Yarrow glen in Selkirkshire, where the melancholy event had occurred.

Survivals will inevitably be most sought in the still mediæval-minded Appalachians, so akin in speech, custom,

and superstition to the folk among whom balladry was common three centuries ago. Boswell recorded seeing a dance in Skye, called "America" in honor of the emigration movement, on just such an occasion as a primitive community would use for ballad singing. From many communities the ballad was readily transplanted to remote slow-moving localities. Southern scholars like Belden of Missouri, Lomax of Texas, and Smith of Virginia have made most of their finds in high Tennessee, North Carolina, and Virginia. But the ballad is not localized. Two Professor Child discovered in Maine, ten in Massachusetts, five in New York, and one each in Pennsylvania and Maryland. The present inquiry for variants should serve the ends of more than a select group of scholars. It will give a new excuse for being to local and State folk-lore societies. It ought to lend an impulse to the collection of Servian, Polish, Czech, and a score of other national folk-songs, of which recent immigration must have brought great store. Finally, it should add interest to a new movement, already of strength—that for the collection of American-made ballads, of folk-origin, like the cowboy songs, on American themes.

WILLIAM COBBETT.

Cobbett took measures against oblivion by diffusing himself through more than a hundred volumes, which, as he assured contemporaries, would preserve his celebrity "long and long after Lords Liverpool and Sidmouth and Castlereagh are rotten and forgotten." The very massiveness of the monument makes the man himself, like an Egyptian ruler laid away in the heart of a pyramid, a little hard to come at. Three or four earlier biographers had drawn freely upon his fresh and savory autobiographical writings and had tunnelled into the formidable bulk of his journalistic works without exhausting the subject. It remained for Mr. Melville to make extensive use of manuscript materials, mainly in the possession of the Cobbett family and of the British Museum.* Of these perhaps the most important are a series of above a hundred admirably written letters from Cobbett to William Windham; an astonishing series directed to Queen Caroline at the time of her trial; and a considerable mass of pretty intimate and confidential correspondence between Cobbett and various members of his family and his publisher. The perusal of this fresh material leaves one entertained, instructed, yet tantalized. It seems clear that significant and revelatory passages have been edited out of the family letters, particularly with relation to just those pecuniary transactions which subjected Cobbett in his lifetime to the charges of duplicity and downright dishonesty. Mr. Melville has apparently made no attempt to check up the scores of his hero's assertions which ring rather hollow and "queer." For the most part, he allows Cobbett to speak for himself. Cobbett speaks copiously and brilliantly, but really does nothing to remove the historic doubts which have hovered about his reputation. We are left to draw our own conclusions as to what manner of man he was.

**The Life and Letters of William Cobbett.* By Lewis Melville. New York: John Lane Co. 2 vols. $10 net.

I.

Carlyle, who had some insight into character, saw in Cobbett a man "with singular humanities and genialities shining through his rough skin, a most brave phenomenon"; and Professor Elton, in his recent notable "Survey of English Literature, 1780-1830," strikes the same friendly and approving note, proposing the health of the big Tory farmer of the eighteenth century, with his gift of transparent expression. Cobbett himself has supplied us with the colors for painting him in this character. He sprang about 1762 from the rugged stock that, in the words of Ecclesiasticus, "holdeth the plow, and that glorieth in the goad; that driveth oxen; and is occupied with their labours; and whose talk is of bullocks"—and all his life he was passionately devoted to agriculture. He took a thrifty wife, not above his station, whom he first saw and loved one morning at daybreak, "out on the snow, scrubbing out a washing tub." He never "dangled" after his wife nor "walked out" with her, but he was a model husband and an indulgent father of a large family in the old patriarchal manner; the children, one and all, swear by the "Governor" and twang off the very accents of their sire when they are assuring one another that those "villains"—his creditors—shall "never get one farthing" of father's money. He served for a term as a loyal and exemplary soldier of Farmer George in the province of New Brunswick. During his second sojourn in America, 1792-1800, he is a brawling and picturesque champion of England in Philadelphia; he adores Burke; assaults "system-mongering" Priestly and "atheistical" Paine; and vilifies all Jacobins, French, English, and American.

In 1800 he shakes off the dust of this country in perfect disgust at the "democratical mob," and he congratulates himself that he has never been in a single instance the "sycophant of the Sovereign People," cursed by what he had termed the "abominable system of universal suffrage." Arrived in England, he expresses to Windham, the political offspring of Burke, his "unequivocal hatred of innovations." In 1801 he declares to the same gentleman that the revolutionary temper of the "lower orders" is an "awful consideration." Ten days later he laments that the Ministers "flatter this swinish beast"—the common people. "If there were only a little courage left in the members of Parliament," he continues, "if the whole nation were not become advocates for soup-shops and Sunday-schools, there would be some hope; but now there is none. The cant of humanity will drown the united voice of reason, of justice, and of self-preservation." What need we add but that Cobbett, like Sir Walter, yearned to be a large landholder; that in 1810 he bought up "one-half of the parish of Hursley"; and that he loved the sports and pastimes of Old England, encouraged boxing and single-stick playing, and occasionally hunted the hare with the enthusiasm of the ancient squirearchy of his island? There is the big Tory farmer of the eighteenth century.

But Cobbett, as everybody knows, did not spend his thirty-five years in the nineteenth century as a mere survivor of the preceding age. As one studies him more closely he appears less and less like an heirloom and more and more like a portent. For this peasant Colossus stands most curiously with one stout leg in the "old system" and one stout leg in the new. Four or five years after the opening of the new century he began, as his biographers put it, "to take the popular side in politics." He lifts his loud voice to denounce the infamous "borough-mongers," and swells the clamor for parliamentary reform. He becomes the fined and imprisoned champion of free speech and free press. And as a convert to the financial theories of the once execrated Paine, he carries the great revolutionist's bones to England, and proposes the erection by public subscription of a splendid monument to his memory. He thunders at pauperizing poor laws, and on the floor of the House reminds the Duke of Richmond that his Grace's nobility is derived from a bastard. He clasps hands with Daniel O'Connell and attacks the Protestant Reformation. And through the medium of *Two-Penny Trash* he threatens the overthrow of "vested interests" by the organization of the discontent of cottage and hovel. There is your public-spirited radical reformer and fearless "friend of the people."

II.

Precisely when and why Cobbett straddled is a disputable point upon which the Windham letters throw considerable light. In 1800 the flattered Ajax of American journalism was invited to

dine with Pitt and Windham, who had cast their eyes upon him as a writer likely to be serviceable to the Government. Cobbett, still remembering the plough-tail and the blue smock-frock and the little nailed shoes of his childhood, felt a ruddy glow about his vitals as he sat there "waited upon by men in gaudy liveries," and reflected that he was there solely by virtue of his intrinsic merits. "I was proud," he says. "The distinctions of rank, birth, and wealth all became nothing in my eyes; and from that moment (less than a month after my arrival in England) I resolved never to bend before them." This account of his sentiments, however, he did not offer to the public till 1818. What appears from the correspondence is that he began to court Windham in 1800 assiduously, and that he assured him at frequent intervals that he—Windham—was the one man to "save the country," an assurance coupled in 1802 with a reminder that "he who makes the best use of the press will finally triumph." The statesman, for his part, invited Cobbett to establish the *Political Register*, and provided funds for the project; apparently, also, he sent Mrs. Cobbett a fresh hare from time to time, and received in return fresh salmon from the Cobbett estate. They were on very easy terms. The courtship continued unbroken till 1806, in which year Windham got his chance at helping save the country as Secretary for War and the Colonies in Lord Grenville's Ministry of "All the Talents."

With customary promptness Cobbett indicated to the new Minister the propriety of making certain appointments, and especially of dismissing Freeling, Secretary of the Post Office, who had, according to the journalist, grievously abused his authority to hamper the circulation and prosperity of the *Porcupine*. Upon Windham's refusal to comply with these suggestions, a sharp rupture ensued, and the correspondence of six years was abruptly terminated. Cobbett had declared, in a letter breathing beautiful public spirit, that for himself he wished no office, and would not touch a farthing of the public money, though, as he observed some years later, "every one thought that *my turn* to get rich was come." But from the tenor of the entire correspondence, it is obvious that he had come to think of himself not merely as distinctly "on the inside," but as virtually the creator, through the *Political Register*, of Windham's political fortunes and as his natural and equal colleague in the great task of saving the country. Having confidently expected to be the power behind the throne, he is suddenly made aware that he cannot even dictate the dismissal of a Secretary of the Post Office. The scales fall from his eyes. "When I consider," he says, "what I have done and what I am able to do, . . . when I thus consider and thus compare, conscious superiority beats at my breast, and bids me turn from such treatment with disdain." From this time forth he throws off all reserve, and presently avows his conviction that the one man who can save the country is Cobbett. He continues to remind Windham that he who makes the best use of the press will finally triumph, but his reminders now take another form than that of the confidential letter. Three years after the breach between them, Windham makes this significant entry in his diary: "Nearly the whole time from breakfast till Mr. Legge's coming down, employed in reading Cobbett. More thoroughly wicked and mischievous than almost anything that has appeared yet."

III.

If his public professions of faith before and after 1806 are taken at their face value, the two halves of his life fall apart and grin at each other. But the glaring contrast between the earlier and the later periods does not extend far below the surface; does not reach to the motives and essential character of the man. There is more sound than fury in his contempt for the "lower orders" and his friendship for the governing class previous to 1806; after 1806, there is more rhetoric than passion in his contempt for the Duke of Richmond and his friendship for the working class. Cobbett was never a Tory as Johnson, for instance, was a Tory; he had no deep-seated reverence for constituted authority; he felt nothing necessary or sacred in the hierarchical order of society. He was never a Radical as Fox and Mill were Radicals; he cherished no generous illusions concerning the rank and file of his fellow-men; he was as hard as nails. He was never anything inwardly, honestly, and permanently but a Cobbettite. There is this firm core of consistency in him. His allegiance to other men was notoriously fickle; he sloughed off, in turn, Burke, Pitt, Windham, Fox, Burdett. But Cobbett's allegiance to Cobbett was never shaken.

There is no reason to suppose that the impulses which governed his relations with statesmen were nobler than those which he exhibited in his more private affairs. He threw off his debts, took a peculiar pleasure in cursing his creditors, and flatly informed them that they need expect nothing from him till he had amply provided for himself and his family in a fashion suitable to their position and prospects. He wished to dismiss Howell, the able editor of his "State Trials," apparently for no other reason than that Howell was of the "author" class and a university man. "If you can get rid of H.," he wrote to his factotum Wright, "I shall be very happy. I know what your *college* gentlemen are. They always have, and will have, the *insolence* to think themselves *our betters;* and our superior talents and industry and power and weight only excite their envy. . . . Damn their college insolence." Before the connection was severed, however, Cobbett gave directions that Howell should be thoroughly "pumped" with regard to his plans for the later volumes of the series, and "take care in your conversations with him," enjoined the canny employer of the college expert, "to provide yourself with information as to the *sources* of information." It may be added that Cobbett subsequently broke with the long-trusted Wright, and damned him for a villanous caitiff and a fraud, but that Wright in a suit for libel recovered a thousand pounds damages.

The swift vindictiveness of Cobbett and the ingenuity of his malice are strikingly illustrated by an incident of his third return from America in 1819. On September 14 he sent one of his boys aboard the packet Amity to procure his passage. The captain informed the boy that there were already seven passengers who had all declared that if Cobbett went in the ship, they would not. Cobbett writes at once to the captain demanding the names of the passengers. Apparently, they are not forthcoming, for under date of September 20 Cobbett dispatches the following letter to his son William in London:

My dear William—The yellow fever rages to a great degree. We keep out of town, about 3½ miles. The following notification will be necessary to be put in the *Register* if you have put in the notification about my intended return in the *Amity:*

Mr. Cobbett will not, in all probability, come home in the *Amity* as he had intended. The yellow fever raged in New York on the 20th of September. The danger was such, that it had been proposed to remove the Post Office and the Custom House to without the city. The *Amity* had not her cargo in, and it would be impossible for her to be laden without taking her cargo from the Store-Houses, which were the very seat of contagion. The owner, *Isaac Wright* (a very cunning old Quaker), told Mr. Cobbett, on the 15th of September, that they were *"working it to get a clean Bill."* They had, he said, got the ship round to the *North River;* and they meant to try and get her *cleared out from Amboy* (a small port in New Jersey), in order to *avoid the quarantine* at Liverpool. Whether they would play this trick Mr. Cobbett was not certain; but, as passengers (all except Mr. Cobbett, who lives in the country) and cargo would go from the seat of deadly contagion, it would be a very base and fraudulent act to clear the ship out from Amboy. At any rate, Mr. Cobbett was resolved to come by a *clean ship;* and it was, on the 20th of September, probable that he would sail *before the Amity.*

Now, *be sure* to put in, and to repeat, the above notification. I wish it to be done by all means. If you should have no *Register* to put it in, put it into some other *newspaper.* It is very important that it should be published in England *the moment you get it.*

I shall write by every ship. James and I are very well. Mr. Morgan is here, and he

sends his love to you all. God bless you.

P. S.—Don't omit a *word* of my above notification.

Evidence of this character is abundant to indicate that the controlling passions of Cobbett were an intoxicating egotism, selfishness, jealousy, and revenge. Evidence is lacking to show that he once willingly sacrificed to the welfare of England, which was ever in his mouth, one iota of his personal power, preëminence, or property. It has been urged that he was not a "pecuniary self-seeker"—presumably on the strength of his profuse professions that he would accept nothing from the Government. But why seek to be Chancellor of the Exchequer for Great Britain at a salary of £2,452, when you can be editor and publisher of Cobbett's works, with an annual income of £3,000, and that in the year following your political bankruptcy? It is clear, at any rate, that Cobbett's familiar letters steadily point the children to the earthly paradise in which they shall be "as rich as we ought to be"; and daughter Anne confides to brother James in New York that, "We are all monstrously bitten with a fancy for getting some money together." Furthermore, to what public office could Cobbett have aspired with an influence a hundredth part as great as that which he could exert through the press? He had discovered something greater than the power of office; he had developed an instrument that could intimidate and control the office-holder. Seeking his own from the dawn to the dusk of his political career, he had turned to the Tories before 1806, because he believed that they had the wit and the power to utilize his talents and build up his estate. If he turned to the people after 1806, it was because he had become convinced that the power was to lie with them, and that he had the wit to use it. It may be set down as a guiding principle in Cobbett criticism that when he speaks most egotistically, he speaks most sincerely; and we may take the measure of his disinterestedness and "public spirit" in passages like the following from a letter of 1822 to Dr. Taylor, of New York: "I know that I could rescue the country from its perils, but I also know that not a *suggestion* will I give to be acted upon by any *other man* than myself. It is my duty to do all I can for my country, but not to do it to exalt them and to keep myself in a state of abasement."

IV.

Truly, a most brave phenomenon! Naïve, this passage, in its crude conceit, in its unabashed admission of readiness either to ruin or to rule the state. It is the spirit here revealed in its nakedness that justifies us in calling Cobbett a portent rather than a survivor. Indeed, take him in all his works and ways, he is almost a man of the hour in the new democracy which he helped to create. He is the redoubtable self-made man of the new age. He is our tremendously efficient, unscrupulous, materially-minded, half-educated egotist of talent. He reveres property, and he respects brains, which are the means of acquiring property. He is entirely absorbed in those occupations of which the object is to make us "as rich as we ought to be." Immersed in agriculture, business, journalism, and contemporary politics, he values other activities only in so far as they are contributive to these. He has no conception of the mind that "doth ambition shun, and loves to live i' the sun." He is indifferent to art and literature, too serious for the pleasures of life, too overbearing for society, too busy to eat his meals like a Christian. Yet he has views on religion: the Church is, or might be converted into, an effective political machine; or, again, church tithes are taxation without representation and parsons are meddling magpies. He has views on education, too, and intends to enforce them: all that is essential is to be found on the "five-foot shelf" of Cobbett's own works on politics and agriculture. He holds, furthermore, that it is idle to read the "punning and smutty Shakespeare," and for a boy to be engrossed with Greek and Latin "never, by any possibility, can extend the sphere of his usefulness, or tend to give him the smallest consequence in the eyes of the world." Clean-cut and practical like a modern business man or an up-to-date educator; no frills, no nonsense.

He stands a degree above the worshippers of Mammon; not that he loves riches less, but that he loves power more. Risen from the masses, he understands them, and inwardly despises them as unintelligent rabble. Yet when he has promulgated a half-informed opinion, he is willing to appeal for support to the brute numbers of the totally uninformed. Secretly desiring to hold first place in the seats of the mighty, he despises those who are really his superiors in breeding and culture, and does not understand them. Missing the preëminence that he thinks is due him, and agreeing with Wesley that it is better to rule in hell than serve in heaven, he is ready to seize upon the proletariat as upon the jawbone of an ass, and make havoc of all that thwart him. It is too much to expect that such a prodigy should be an honest man. Sufficient is his praise, if we say that he is a great master of English, and, what is more than that, a superb journalist, and, what is more than that, a versatile politician. In his hands is our salvation, and in the day of his triumph Heaven pity those who are left in the minority.

STUART P. SHERMAN.

NEWS FOR BIBLIOPHILES.

In the second volume of "The Life and Times of Frederick Reynolds: Written by Himself" (London, 1826) appears the following anecdote (pp. 167-8):

Soon after my election into the club [the Marylebone], I attended a grand county match at Moulsey Hurst. Our headquarters being at Kingston, the Duke [of Richmond], who was of our party, asking me, the following morning, whether I would not rather ride to the cricket ground, offered the loan of one of his horses. I accepted the proposal, and cheerfully, without "peril or adventure," till we encountered a party of soldiers; when to my utter alarm, and to the surprise of the red coats, the horse I rode began capering, curvetting, and pirouetting so perfectly *à la Vestris*, that like another John Gilpin, I first lost my hat, then my balance, and then pitched on the ground . . . I need not pause to describe the universal amusement; nor the great gratification that his Grace manifested, during the performance of this whimsical *"pas de deux"*; but I must stop to say a word in explanation. The Duke had lately purchased the horse of Astley, and the military rider who trained it, dressed in full uniform (purposely to excite attention), at length produced so deep an impression on his pupil, that . . . on the appearance of . . . any *redcoat*, the animal . . . thought with *Chrononhotonthologos*, "First, let us have a dance." When this first "practical joke" was concluded, the Duke hoped that I was not offended—I replying . . . *"tout au controire,"* we resumed our ride, and it concluded without further pranks from either Duke or horse.

The first story, "The Ravenswing," in Thackeray's "Men's Wives" has a humorous incident in which Capt. Walker gets the better of one of the suitors for the Ravenswing by making him appear ridiculous. The method used is to persuade the love-lorn swain, Mr. Eglantine, the famous hairdresser of Bond Street, to ride a horse, that, in the words of Mr. Snaffle, was "the celebrated Hemperor" and "the wonder of Hastley's some years back." This horse is only safe to ride on Sundays, when there is no music in the streets, because the animal has been trained to die to the tune of "God preserve the Emperor"—a thrilling episode in the third act of the "Battle of Hoysterlitz." Capt. Walker, in possession of these facts, arranges for a friend to play this identical tune, with the result that Mr. Eglantine falls both from the horse and from the favor of his mistress.

"The Ravenswing" was published in *Fraser's Mogazine* in 1843, and it seems to be clear, either that Thackeray borrowed the incident from Reynolds's memoirs, or that the anecdote of the performing horse and the unwitting rider was passing current in the theatrical tales of the day.

Correspondence

THE CURRENCY ACT AND THE BANKING PRINCIPLE.

TO THE EDITOR OF THE NATION:

SIR: The Banking Principle is a term used in the theory of money in contradistinction to another theory known as the Currency Principle. The battle between these two theories was fiercely waged in the second quarter of the nineteenth century, ending, by the passage of the English Bank act of 1844, in a complete victory in

England for the supporters of the Currency Principle. While these terms are familiar to all students of banking, a concise statement of their meaning will not be out of place to many of your readers.

In brief, the advocates of the Banking Principle maintain that a currency composed of specie and paper, if the paper is easily and readily convertible into coin on demand, will behave in all respects just as if the whole body of money consisted of specie alone. "We are willing," says one of the leading champions of this school, "to consider a metallic currency as the type of that to which a mixed circulation of coin and paper ought to conform. But, further, we contend that it has so conformed, and must so conform, while the paper is strictly convertible." On the contrary, the advocates of the Currency Principle maintain that simple convertibility is not sufficient; that a body of money composed of coin and paper is not subject to the same laws as one composed wholly of coin; that some check on the issue of the paper is necessary; otherwise it is liable to over-issue, with consequent inflation and rise in prices.

In the numerous treatises and discussions which we have read on this subject, no writer seems to lay his finger on the weak spot in the Banking Principle. This lies in the small amount of the specie reserve necessary to meet redemption needs. Nobody would deny that if, for every note issued, a dollar-for-dollar specie reserve were maintained, such a currency would conform in all respects to a specie standard. But, just as in the case of deposits payable on demand, a 5 or 6 per cent. cash reserve is found sufficient to meet current needs, so a 5 per cent. specie reserve is sufficient to meet all redemption requirements. There is a vast gulf between this and a dollar-for-dollar reserve, and it should seem almost certain that the Banking Principle leaves ample opportunity for inflation. This appears to be a simple and conclusive objection to the soundness of the Banking Principle, so simple, in fact, that it seems almost inconceivable that the argument has not been made in this form by the opponents of the theory. It hardly falls short of an axiom to say that a note issue based on a 5 per cent. specie reserve cannot be the same thing as one based on a dollar-for-dollar reserve.

The 40 per cent. gold reserve required by our new Currency Act is one of its most important features, and, together with certain other safeguards against over-issue, ought to prove an ample guaranty against inflation. Among the redemption provisions, none is more to be commended than that which forbids under heavy penalties a bank of issue to pay out any notes except its own; all other notes must be sent to the original bank of issue for redemption. This is the only way to insure a prompt contraction of the currency when growing redundant. Such notes will be merely dead capital to any bank which fails to send them in for redemption, while the original bank of issue is not likely to reissue them unless the requirements of trade will make it profitable. This provision was doubtless suggested by what is known as the Suffolk System, so successfully employed in Massachusetts nearly a century ago. The average life of a Bank of England note is six weeks, that of a Bank of Scotland note thirty days, and as the same notes are never reissued, notes in those countries are always clean and crisp. On the other hand, the average life of a national bank note is two years, a fact which proclaims only too eloquently that the importance of speedy and prompt redemption as a factor in elasticity was totally neglected under the old system.

Another consequence of the new act, and one of far-reaching significance, is the complete divorce of the circulating medium from the bond-issuing and debt-paying power of the Government. These are two entirely different functions, and their connection and mutual dependence could only be justified in a period of stress, as was the case with the National Bank Act. It was a fiscal measure devised during the Civil War by Secretary Chase, primarily to promote the sale of United States bonds, only secondarily to act as the basis of a monetary system.

With the power of note issue on commercial paper, and the facilities for rediscount, all the disastrous effects of stringency and panics seem to be completely forestalled by the new bill, and it will be interesting to wait and see its practical operation at such times.

GLANVILLE TERRELL.

Lexington, Ky., January 28.

THE AMERICAN HISTORICAL ASSOCIATION.

TO THE EDITOR OF THE NATION:

SIR: I have no love for controversy, but as I was chairman of the nominating committee of the American Historical Association in 1913, and am responsible to that extent for the nominations which were presented at the Charleston meeting last December, I owe it to my colleagues of the committee as well as to the Association, to make some reply to the criticisms of Mr. Dunbar Rowland in your issue of the 22d instant. I only regret that, in my unavoidable absence from the Charleston meeting, the unexpected duty of defending the action of the committee had to fall upon Prof. Clarence W. Alvord, who acted as chairman in my absence; but while I do not know what Professor Alvord said on that occasion, I have no reason to think that it was anything with which I should not heartily have agreed.

If Mr. Rowland's statement that the nominating committee "keeps its action a profound secret . . . until the business meeting" is only a rhetorical way of showing the intensity of his feelings, I have no quarrel with it; but if it implies that the committee, either with or without the concurrence of the Council, sedulously hides its "slate" until the last moment in order that no iconoclastic champion of liberty may have a chance to break it, I can only say that such implication corresponds to nothing in the action of the committee of which I have any knowledge. What the procedure of former committees may have been I do not know, but the procedure of the committee in 1913 I feel free to state. The committee comprised, besides myself, Professor Alvord, of the University of Illinois; Professor Bassett, of Smith; Professor Riley, of the University of Mississippi, and Dr. Krehbiel, of Leland Stanford. All the suggestions regarding nominations that were received by me were laid before each member of the committee; and such suggestions as were received by other members, and sent to me, were similarly transmitted. As a matter of fact, we received very few suggestions from any source. If there is, among the members of the Association, any widespread revolt against "arbitrary and unconstitutional methods," the nominating committee were not made aware of it. Even Mr. Rowland himself does not appear in the list of the committee's correspondents, although he had due notice of the appointment and personnel of the committee, and might at any time, for the sum of two cents, have laid before the committee both criticisms and suggestions. We did not suppose at the time, and I do not think now, that the committee were expected to circularize the membership of the Association in the search for candidates, or devise some sort of a primary through which candidatures might be nursed.

Under these circumstances, the committee did what all such committees do; it went over the list of apparently available candidates, considered carefully the few suggestions made to it, and made up the best list of nominations that it could. The committee considered geographical or sectional arguments, as well as the scholarly standing of the man and his record of active interest in the Association. The several members of the committee, widely distributed geographically, were all more or less intimately acquainted with members of the Association in their immediate locality or section; and we were further aided by a memorandum prepared by the committee of 1912, setting forth, so far as that committee understood it, the prevailing opinions in the Association at that time regarding desirable nominations. I am not so vain as to imagine that the nominations finally agreed upon were ideal, or that several lists equally good might not conceivably have been made up; but I know that our decisions were made with a view to what we believed to be the best interest of the Association. To say, as Mr. Rowland does, that "when the rank and file are assembled they are politely but firmly told who are to be the officers for the coming year," is nonsense so far as the committee for 1913 are concerned.

Mr. Rowland characterizes the methods of nomination as "oligarchical." I have been for twenty years a member of the Association, serving for eight or nine years of that time as a member of the Public Archives Commission, and for three years as a member of the Council. I know of no oligarchy in the Association. I know only a group of men, all of them distinguished scholars, who have been willing to spend time and money in building up the Association, and in organizing and advancing historical interest and historical scholarship throughout the United States.

On one point I hope that I may be allowed to reassure Mr. Rowland. At the close of his interesting letter he expresses the conviction that his action at Charleston will prevent him "from accepting an official position in the Association for years to come, if not for all time." This, I feel sure, is not the case. The Association fights its battles in the open, cherishes no

grudges, and marks no man for banishment. If Mr. Rowland continues to render, as director of the Department of Archives and History in the State of Mississippi, the same distinguished service that he has rendered in the past, he may rest assured that the Association will be only too glad to honor him, and that he will be as free as ever to accept any office which the Association can bestow—provided, of course, that he is nominated and elected.

WILLIAM MACDONALD.

Brown University, January 31.

TO THE EDITOR OF THE NATION:

SIR: Dr. Dunbar Rowland is, I know, incapable of intentional misrepresentation; yet I think that his letter respecting the American Historical Association, printed in your issue of January 22, is likely in two particulars to mislead your readers (in so far as they take any interest in the affairs of the American Historical Association); on the one hand, as to the methods which the Association now follows in respect to its elections to office, and on the other hand as to the amount of discontent with those methods that was evinced at Charleston.

The practice of the Association is not noticeably different from that of many other large bodies which hold annual meetings attended by but a small part of their membership. The Committee on Nominations was appointed a year ago by the Council, from among members of the Association who were not members of the Council. Members were urged to write to these five gentlemen respecting their preferences. It appears that the committee, in addition to the letters that they received, took considerable pains by conversation and some letter-writing to elicit the sentiments of others. The nominating committee then made up a slate against which no member, so far as I know, not even Dr. Rowland himself, has expressed the slightest objection. The reader would certainly infer from Dr. Rowland's communication that the list was dictated to this committee by the Council. On the contrary, no member of the Council had any knowledge of what the nominations would be. The nominating committee made its report in the usual manner of nominating committees. Any one who had other nominations to make could have made them. The only trace of illegality that I could discern in the proceedings was that by vote of the Association (to which there was no dissenting voice) the acting secretary was instructed to cast a ballot for the list brought in by the committee. I think that such a vote is objectionable, and I have heard that it is illegal; but such societies usually follow such a practice, because if no other nominations have been made it saves time. At all events, I see nothing oligarchical about it. Perhaps it could be improved upon, but I am surprised to learn that neither the Association nor the Council has authority to appoint a nominating committee. Are all our seventeen committees, through which the Association does so great a variety of interesting work, illegal?

Secondly, one would not learn accurately from Dr. Rowland's communication just what happened at Charleston. He rose and made a vehement speech of protest, and believes that he had the warm approval of those whom he calls the rank and file. I can only say that, of all who spoke after him (and all were free to speak) none expressed dissatisfaction with the existing method of nominating officers, nor approved his suggestion that ballots should be sent out in the autumn to the 2,800-odd members—for this method had been tried three times and proved a failure. Neither does he record that, at the end of the discussion, it was voted that the new nominating committee should take the whole procedure of nominations into consideration, and report at the next meeting.

My own conviction is that, whatever theoretical qualms may have been felt by some, most members of the American Historical Association, as is the case in most similar bodies, perceive that the affairs of the Society will under any system be chiefly administered by those who are most interested. I think they regard the Council as distinctly accessible to new membership and to new ideas, and on the whole approve nearly all that it has done. I think they should do so, for my observation has been that it is an unselfish and right-minded body, making its best endeavors to care for the interests of the whole membership.

J. FRANKLIN JAMESON.

Carnegie Institution of Washington, January 26.

THE TORONTO "GLOBE."

TO THE EDITOR OF THE NATION:

SIR: In one of the editorial paragraphs of your issue of January 22 you refer to the "Conservative Toronto *Globe*." The *Globe* is and always has been the leading Liberal newspaper not only of Toronto but also of all Canada. Moreover, at the present time it is striving to inculcate principles of real, progressive liberalism, when a large section of the party is inclined to temporize and equivocate.

W. K. STEWART.

Hanover, N. H., January 26.

CANADA'S TREATMENT OF THE INDIANS.

TO THE EDITOR OF THE NATION:

SIR: In a recent editorial (*Nation*, January 15), you speak of the Canadian Indians and say, "In their prosperous absorption into civilization is a constant proof of the wisdom of Canada's policy," etc. I am not familiar with the Indians of any other provinces except New Brunswick and Nova Scotia; but I can assure you that there has been no "prosperous absorption," or any absorption at all, into civilization, if this phrase means in any way the amalgamation with European blood, or living with the rest of the inhabitants. And the Indians of these two provinces most certainly do not "compare favorably with the Dominion's other residents." The Micmacs of Nova Scotia have no vote, and are treated quite as a separate people. Their whole treatment, in fact, conduces to keeping them in a state of tutelage. This is the more astonishing, as the problem in Nova Scotia is very old, and one might think that by this time the Indians would have had some encouragement to amalgamate with the rest of the inhabitants. As it is they intermarry somewhat with negroes only. There are many cases where the Indian agents take little or no trouble to see that the children go to the appointed schools. It may be wise to treat the remnant of the race in a way to discourage totally the ambition to become members of the body politic, but I always had a great sympathy with the Micmacs. There is no reason in the world why those of them who wish to enter into the life of the other inhabitants of the province should not have a chance to do so, and eventually to be enfranchised. Whatever the law now is, there is certainly no encouragement in that direction.

EDWARD BRECK.

Boston, January 27.

THE LOGIC OF THE DIRECT PRIMARY.

TO THE EDITOR OF THE NATION:

SIR: If the proverbial visitor from Mars were to look into the current discussions of the direct primary question, it may be guessed that his first impression would be that the participants in the controversy are generally very much obsessed by the existing order of things. He, being a complete alien, completely unprejudiced—being, in fact, not a practical man, but a theorist—would wonder why so few of our political experts have had theory enough to perceive that the direct primary system and the party system are, so far as the conduct of elections is concerned, mutually exclusive.

Having to get the whole matter up in an elementary way, the Martian would first learn the essential thing in the direct primary system to be that the voters have two progressive opportunities for recording their choices, the first establishing some limitation upon the second. A primary system along with the party system, as he presently understands, means that the voters within each party elect their candidates, and then, in the second or regular election, the final choice is made between the candidates of the different parties. But the unavoidable difficulty is obviously with the primary qualifications of the voters. How is it justly determined who is in each party? All the practical schemes for primary elections which our inquirer is able to find seem to make it possible, even if not creditable, for a citizen to vote in the primary of one party and then in the final election vote for the candidate chosen by the other. If he honestly is disappointed in the candidate chosen by the primary of the party in which he first voted, this is defensible. But it is perfectly well known that he may have voted in the primary of one party with the definite purpose of procuring the nomination of a weak candidate, his sympathies being with the other party with which he finally votes.

The trouble with all the existing schemes is that they are based upon the idea of defined party groups in the primary election. Our Martian theorist presently concludes that a logically workable direct primary system must not be based upon the hypothesis of fixed parties at all; and he formulates his simple scheme for the election of candidates as follows:

Let there be two elections, a primary election and a secondary, or final, election. At the first, the voter without the slightest allusion to his party is to have a nameless ballot, with a blank space for each of the offices to be filled. He inserts any name he pleases, whether suggested by his un-

aided fancy or by a convention of himself and his friends, his "party," or his newspaper. With the source of his preference the law would have absolutely nothing to do. Upon the counting of these primary ballots, many of the candidates,, receiving only scattering votes, would be elliminated. Let the two or three or four—the law would prescribe the number—receiving the highest number of votes for each office have their names put upon the ballot for the final election, grouped, of course, under the title of the office according to the Massachusetts ballot system. Neither party organizations nor parties would be mentioned in the ballot law. Everything they do would be from the legal point of view "informal." The results of their activities would be simply a lot of suggestions for the voters, by which every legitimate influence could be exercised.

The problem is evidently not merely of the weakening of party "machines," that easy mark for the denunciations of the choir-leaders of reform. It is of the logical working of the idea that the people should themselves do their own nominating, by means of a primary election. Any attempt to couple this with the legal recognition of fixed parties in the election is bound to be—the Martian thinks—complex and futile. ALLAN BALL.

New York, January 30.

"NATIONAL SUPREMACY."

TO THE EDITOR OF THE NATION:

SIR: Permit me to correct one or two misstatements of fact by your reviewer in his notice of my "National Supremacy" (*Nation*, January 15).

He asserts that "the view which I discard has received the emphatic approval of a writer whom I cite frequently," referring to 'Mr. Butler's "Treaty-Making Power." This is a great mistake. Of the passages cited by your reviewer, in that work, only the two final purport to state Mr. Butler's own conclusions, and these are emphatically in support of my position. I quote one of them (Vol. II, p. 64):

> In fact, it must be conceded that the cases cited in the last chapter in which treaty stipulations have so operated as to practically change, or nullify, State laws of succession and inheritance, and in which they have rendered nugatory anti-Chinese legislation, show beyond all peradventure that State laws are in all respects subordinate to the treaty-making power of the central Government.

Also, the reviewer's statement that I press my view of the treaty-power "much further than Mr. Root does" his similar view is without warrant in fact. Mr. Root upheld the national position in the San Francisco school controversy without qualification, and this is the extreme case. (See Am. J. of Nat'l Law, May, 1907.)

EDWARD S. CORWIN.

Princeton, N. J., January 24.

[Notwithstanding Mr. Corwin's letter of complaint, the reviewer is satisfied that he made no misstatements of fact on either of the points referred to. He is quite content to leave the question of obliquity to any fair-minded person who will undertake the irksome task of reading the book, the review with the authorities cited therein, and the letter.—THE REVIEWER.]

Literature

THE FIRST AMERICAN SEA-GOING YACHT.

The Story of George Crowninshield's Yacht, Cleopatra's Barge, on a Voyage of Pleasure to the Western Islands and the Mediterranean, 1816-1817. Compiled from Journals, Letters, and Log-Book, by Francis B. Crowninshield. Boston: D. B. Updike. $15 net.

To the memory of Cleopatra's Barge a special interest clings, not only because she was the first sea-going yacht to be built in America, but on account of the romance with which tradition has surrounded her maiden voyage. George Crowninshield's father and grandfather had been prosperous merchants of Salem. The opening of trade to China and the West Indies after the Revolution very rapidly increased their wealth. George and his five brothers went through the severe nautical training then held necessary for entry to the Crowninshield counting-house. At ten their education as seamen began; at twelve they were studying navigation; before they were twenty, five of the six (and the sixth had died at sea at the age of fourteen) had served as masters of merchant-ships. They were then qualified to sit at a desk. This is more reasonable than it sounds, since to become ship-masters they had been required to learn not only navigation and the principles of ship design and construction, but "the cargoes to be bought and sold, foreign governments, moneys, weights, measures, and the various products of the different countries to which their vessels might go."

Only one of the brothers rescued from this experience a genuine love for the sea. This was "Captain George," whose fondness for ships and knack with them led to his being detailed, at the time when the firm's business was at its height, to the duty of building and fitting out its vessels. He was a small man, but of notable strength and courage, a man of action. He was a man to be looked to in emergencies, saved three men from drowning, and a number of others from death by fire. His first yacht, the Jefferson—the first American yacht of any sort—he used not only for pleasure, but "after a storm he would sail, taking with him extra men and stores with which to render assistance to vessels which might have been disabled." The Jefferson's own story is of interest: she was one of three privateers sent out by the Crowninshields in 1812. She was too small for the work, and made only one cruise, in the course of which she took three prizes. New York has claimed the honor of the first yacht, in the Diver of John C. Stevens, but it appears that the Jefferson must have been the elder by some years. The Jefferson was of only 22 tons. The America, the fastest and most successful privateer of the war, was a merchant vessel of 600 tons. She was George Crowninshield's favorite ship, and served as model for the yacht Cleopatra's Barge. Privateering was the most profitable use the astute Captain George could have put his vessels to at the time. The Crowninshield firm had dissolved as early as 1809. The embargo had almost put an end to commerce. One of the sons, Jacob Crowninshield, to whom Jefferson had offered the post of Secretary of the Navy, had died at Washington in 1808. Two other brothers now went into business for themselves. The old father and two sons, George and Benjamin, retained what was left of the business. The War of 1812 put an end to that; but the value of the America's prizes was, at actual sale, $1,100,000.

In 1814 Benjamin Crowninshield went to Washington to serve as Secretary of the Navy under Madison; shortly after, old George Crowninshield died, and young George (forty-nine years old) was left rich, unemployed, and free to follow his hobby of ships and the sea. To Mr. Retire Becket, the best shipbuilder of Salem and builder of the America, was given the commission of building a yacht which was to be not only a nine days' wonder in New England, but wherever she touched abroad. Cleopatra's Barge was laid down in the spring of 1816, and launched in October. The name finally given her is fanciful enough. The owner's family had fears of something worse, which were almost realized, as is shown by a letter from his sister-in-law to her husband Benjamin at Washington: "He told me he had received his letter & Passport—but unfortunately the name was Car of Concordia, and would not do. How many times you have said he would get some foolish name that would be laughed at!" Captain George was evidently regarded as the family crank. A certificate had to be obtained attesting the change of name, and Cleopatra's Barge the new yacht became.

She was an hermaphrodite brig, of nearly 200 tons, and looked like a small man-of-war. Her fittings were luxurious beyond all precedent. Captain George intended her for a home as well as for a pleasure craft. He planned to set out for the Mediterranean early in January, but a rigorous winter set in, delay followed delay, and people began to suspect that she would never set out at all. Meanwhile her owner was not unhappy. He lived aboard, and was busy receiving the crowds which flocked to see this "perfect specimen of nauti-

cal architecture and sumptuous accommodation"—a godsend for winter-bound New England. Eighteen hundred ladies visited her in the course of one day. His sailing-master grew restless, but Captain George seems never to have tired of entertaining his guests, and displaying the perfections of his toy. Not till March 30 did Cleopatra's Barge actually weigh anchor and begin to prove her mettle on the seas.

Her captain was a nephew of Captain George's, Benjamin Crowninshield, who had been a captain of merchantmen, and of one of the Crowninshield privateers. His son was taken as passenger, apparently because of his literary ability, and the present record of the voyage is chiefly made up of his "Private Journal." The ship's log is of the most meagre sort; and Captain George was a notoriously cramped letter-writer. Young Benjamin had a very pretty knack with his pen, and an inquiring eye. He also had the moralizing bent of his contemporaries, and is often deliciously ingenuous. The helpless celibacy of the daughters of the French Consul at Fayal well-nigh moves him to tears:

"How inestimably better," he cries, "is the condition in America, where we have an extent of country sufficient for our descendants to the thousandth generation. American ladies are, therefore, ready to display all the charms of female excellence. Ever prompt to appear in public at the ball, at church, in their walks they are always social, always amiable; if not beautiful, they cultivate the mind; if not wealthy, all else that renders them desirable. Every one is full of hope, every one is happy! Alas! This is not true of ladies who inhabit a country of crowded population. They must waste their lives in single blessedness, in a nunnery, or wither! wither! under their parental roof."

Yet he does not lack moments of humor, as in his description of an Annunciation in the cathedral at Malaga: "A lady in the costume of our grandmothers, pinched almost off at the waist, sits reading, and before her kneels the angel in the same costume, with wings sticking on his shoulders, most respectfully acquainting the old lady with some particulars."

Unluckily, "Philosopher Ben," as he was nicknamed, seems to have been, like some other persons of genius, rather hard to live with. He was not taken upon some of the most interesting expeditions ashore, notably to Cività Vecchia and to Rome. The taking aboard of some Frenchmen as passengers, who were not introduced to him and who supplanted him at the head-table, seems to have been the finishing touch. At Gibraltar he abandoned the Cleopatra to her fate.

He afterwards wrote somewhat unkindly of Captain George, but apparently did not suspect a possibility which was later magnified by legend into fact: namely, that Cleopatra's Barge was built with the distinct object of rescuing Napoleon from St. Helena. The compiler of these records does not deny that there were circumstances which might colorably give rise to this belief. It was two years since Napoleon had escaped from Elba. George Crowninshield was a Democrat and a great admirer of the Emperor. He was just the sort of man to attempt such an adventure. Cleopatra's Barge visited Elba, and Crowninshield met certain members of Napoleon's suite, who still lived there. After touching Elba, no letters were written to America from the yacht. Her master bore letters and packages to the Bonapartes at Rome, and brought home a number of souvenirs of Napoleon, a ring, a snuffbox, etc., which were given him by Pauline Bonaparte. The Cleopatra received orders to be ready to sail from Cività Vecchia within fifteen minutes of her master's arrival on board, was closely watched by French men-of-war, and finally brought away with her from Cività Vecchia four French officers, including the captain of the ship in which Napoleon sailed from Elba and a surgeon on his staff. These were the passengers who discomfited Philosopher Ben. They made the voyage to America in Cleopatra's Barge, but the Emperor remained on St. Helena. "Yet in spite of these circumstances," says the compiler, "I am convinced that no such idea ever seriously entered his [Captain George's] head."

The voyage home was dull and uncomfortable. Cleopatra's Barge reached Salem in October, 1817. A month later Captain George died suddenly on board the vessel, which he had actually made his home. After his death she was sold and transformed into a merchantman. Shortly after, she became a packet-boat in American waters. Then she made the passage round Cape Horn to the Sandwich Islands, became the private yacht of King Kamehameha I, and was presently (1821) wrecked on a Pacific reef. So passes this world's glory.

This book, with its beautiful letterpress and many illustrations, is a worthy monument.

CURRENT FICTION.

The Health Master. By Samuel Hopkins Adams. Boston: Houghton Mifflin Co.

From the title-page, with its description of the author not as a writer of this, that, and the other novel, but as an Associate Fellow of the American Medical Association, through the dedication to the health officer of Rochester, N. Y., and on to the end, no reader of this story can be in doubt for a moment that the plot's not the thing. So far is this carried that the one excellent chance for love-making is sternly rejected, and the lovely Miss Ennis, having served her purpose as a subject of the "health master's" skill, drops out of the narrative promptly and finally.

The motive of these pages is enlightenment of the public concerning the important matter of health, and it is to be said with little reservation that they fulfil this purpose in a satisfying way. Now and then there is a touch of exaggeration, and the events of the story are apt to fall out rather too favorably to the interests of the main design. But nothing but good can come from the warnings against patent medicines, quack doctors, and outworn traditions which the "health master" presents to the members of the family of Mr. Thomas Clyde and gradually to a larger community. The value of Mr. Adams's discussion of these things is greatly increased by his fearlessness in naming names. Peruna, Mrs. Winslow's Soothing Syrup, Hall's Catarrah Cure, Duffy's Malt Whiskey, Swamp Root, Jayne's Expectorant, Rexall Cholera Cure, Kohler's One-Night Cough Cure—these and other widely advertised "remedies" receive no mercy from the "health master," who relentlessly analyzes them into their constituents of opium, alcohol, morphine, and so on. Equally beneficial should be his scientific discussion of such troublesome enemies of health as the common coid, and of preventive measures against the various ills that assail the household. The range of the book may be judged from the fact that it includes a consideration of cancer and of venereal diseases.

Idonia. By Arthur F. Wallis. Boston: Little, Brown & Co.

Heroes of romance usually deserve Hazlitt's description of them as insipid, but they are seldom so witless as Denis Cleeve. They are generally lucky, but few of them need such constant help from Fortune as Denis requires. These are the two distinctions of the hero of "Idonia." In sheer muttonheadedness he easily surpasses any hero of our acquaintance, and from the varied scrapes into which this trait naturally leads him he is rescued by what he would call "unremitting" good luck.

Mr. Wallis has affected a style elaborately though not quite consistently Elizabethan. His archaisms, sometimes incorrectly used, constantly distract the reader's attention from the story. The author's own interest, indeed, appears to be more in his style than in his matter. Occasionally he coins a good phrase or telling sentence, and it is fair to quote him at his best. "Such sweet words of a maid," says the hero, referring to Idonia's promises, "are not singular, I think, but rather be common as death; to which for the first time they give the only right meaning, as of a little ford

that lies in a hollow of the highway of love."

A Term of Silence. By Forrest Halsey. New York: Desmond FitzGerald.

Indignation at the abuses of our State prisons seems to have been the inspiration of Mr. Halsey's story. The hero, George Goodwin, is a weak young man, cashier of a bank, who has been led into theft by an older clerk. His wife is socially ambitious. When the theft is detected, the chief offender gets off with a suspended sentence; the hero gets ten years in the penitentiary. Here, in the grip of the contract labor system, and at the mercy of a corrupt warden and his brutal satellites, he is slowly tortured to death. His wife, who feels that she is the cause of his guilt, meanwhile suffers mental agony outside. Of course, there is a child, born soon after Goodwin's imprisonment. The one ray of hope comes from the fearlessness of the prison doctor, who is at sword's points with the warden. The devotion of his wife and the chivalry of the doctor at last nerve the hero up to an act of courage which exposes the warden and defeats his plot to get rid of the doctor. In his assault on the reader's sympathies Mr. Halsey describes all the shocking details in flaring journalistic rhetoric.

THE STORY OF TRISTAN.

Tristan and Isolt: A Study of the Sources of the Romance. By Gertrude Schoepperle. Ottendorfer Memorial Series of Germanic Monographs (New York University). No. 3. Frankfort a-M.: Joseph Baer & Co.; London: David Nutt.

The student of the legend of Tristan and Iseult (to employ the usual English spelling of the name) starts with an advantage that is rare in Arthurian studies—namely, a general agreement on at least one point of fundamental importance, which is, that the principal extant versions of the story are not derived independently from oral tradition, but have a common source in a lost French metrical romance. Nothing is more frequent in the study of stories than the assumption of hypothetical lost versions. For the purpose of proving a theory, such hypothetical versions obviously furnish a far more plastic material than the stubborn texts that have been actually handed down to us in the manuscripts. In the case of the famous legend before us, however, the evidence is too plain, and even the most skeptical must concede that here we have a real instance of a text of the highest importance—the one that first doubtless gave this immortal story its standing in European literature—yielding to the "iniquity of oblivion."

In a study of the sources of the legend obviously the first problem is to reconstruct from the extant versions the narrative of this lost French archetype—the *estoire*, as following Miss Schoepperle's example, we may call it. In his edition of Thomas's "Tristan" Bédier had attempted such a reconstruction, his principle being to assign to the archetype all narrative features that are found in at least two of the extant versions. In Miss Schoepperle's opinion, however, this table of concordances has no value, partly because Bédier has been unconsciously biassed in his interpretation of the various versions and partly because he has neglected to consider that where Thomas's text is lost we cannot tell whether coincidences between Gottfried von Strassburg (whose work is in the main based on Thomas) and Eilhart von Oberge may not be due to direct imitation of the latter by the former. She herself argues at length that Eilhart's "Tristrant" represents with substantial accuracy the lost *estoire*. The main point involved is the different conception as to the duration of the influence of the love-potion. In the Béroul version, so similar in many respects to that of Eilhart, this influence lasts only three years; in Eilhart it endures in full strength for four years (until the end of the forest episode), but then weakens, although it never ceases entirely; in Thomas and the prose "Tristan" there is no abatement of the influence, as long as the lovers live. According to Bédier, the conception of the *estoire* is reproduced by Thomas; according to Miss Schoepperle by Eilhart. The difference of conception, we may remark, affects especially the portion of the narrative in the two versions which follows on the return of the lovers from the forest. In regard to this question, we should ourselves be inclined to side with Bédier. It is difficult to believe that in the primitive form of the story any term was set to the efficacy of the love-potion. Miss Schoepperle, herself, seems to grant this. Now, inasmuch as Thomas sets no such limit, it is likely that in this feature he represents the *estoire* most exactly, for otherwise we should be obliged to suppose that the author of this lost archetype of the extant versions modified the original conception, but that Thomas, who was drawing exclusively from the *estoire*, changed it again in a way that rendered it identical with the primitive conception. This process does not strike us as probable; Eilhart's modification looks rather like an effort to explain the possibility of Tristan's long absence from Iseult of Cornwall, after he had fled to Brittany. There are other evidences of degraded narrative in Eilhart, as in his inadequate motivation of the false statement of Iseult of Brittany concerning the color of the sails which led to Tristan's death. Miss Schoepperle tries to prove that the German poet here does imply the same motive as Thomas—namely, jealousy—but it seems to us without success.

In her discussion of the date of the *estoire* Miss Schoepperle shows on what slender grounds Bédier has referred this lost romance to the early part of the twelfth century. We agree with her that the evidence on which this conclusion was based is too uncertain, and that, on the other hand, the ideas of courtly love with which the poem was strongly marked point rather to the second half of the century. Miss Schoepperle, however, does not seem to note, herself, how important a bearing this question of the date of the *estoire* has on the old debate as to whether there were Arthurian romances before Chrétien de Troyes; for, after all, the existence of an early "Tristan" romance supplied the strongest argument in favor of that theory.

The greater part of the book is devoted to an analysis of the elements of Celtic and general popular tradition, respectively, in the *estoire*. No one before Miss Schoepperle has performed this task with anything like the same thoroughness. She appears to have gone through the whole body of extant Celtic saga material (which is, of course, mainly Irish) in search of parallels for the *motifs* in the Tristan story, and it is safe to say that this part of the work will never have to be done again. The net result is to render it probable that this story of tragic passion owes much more to Celtic tradition than Bédier or Golther has admitted. In some other respects her conclusions do not differ from those of her eminent predecessors. That is to say, she regards the story of Tristan's youth and the story of Iseult of Brittany as of subsequent and non-Celtic origin. It was from such Celtic sagas as that of "Diarmaid and Grainne" that the love-story of Tristan and Iseult, in her judgment, was derived. She might have added that the identity of the Tristan story with the Celtic saga just named was a favorite theory with the late J. F. Campbell. Miss Schoepperle does not attempt to determine in what part of the Celtic territory the legend of Tristan and Iseult had its origin.

This is an excellent book. In thoroughness of research it leaves nothing to be desired, and the reasoning, though close and acute, is always clear. The orderly arrangement of discussion and evidence throughout is one of its conspicuous merits. It is refreshing to come across a work of investigation in the history of stories that exhibits so well-balanced a judgment and so true a sense of proportion.

Public Utilities, Their Cost-New and Depreciation. By Hammond V. Hayes, Ph.D. New York: D. Van Nostrand Co. $2.

The volume of literature on valuation of public-service enterprises grows apace, and it is fair to assume that it will continue to grow while the stupendous task of railway valuation is in process of completion. Mr. Hayes has, according to his preface, attempted to show three things to those whose business it is to assemble facts for the purpose of making a valuation:

> First, that it is the duty of the appraiser, not to ascertain the fair present value—that function belongs to the court or commission—but to ascertain with accuracy such figures as are necessary evidences of value and loss of value; second, that the original cost can be obtained without inordinate difficulty, and is a figure of importance to those who must rule as to what the fair present value should be; and, third, that depreciation is affected only indirectly by inefficiency, and that as a necessary consequence depreciation is dependent wholly upon the relation of the age to the life of the perishable property.

His book contains a readable summary of the main principles recognized in determining "original cost," "cost-new" or "replacement cost," and of the most scientific methods of treating the matter of "depreciation," and it may be recommended (with Whitten on "Valuation of Public Service Corporations") to those who desire such acquaintance with these matters as may become a well-informed layman.

The reviewer has no fault to find with Mr. Hayes's discussion of the purely engineering and accounting questions in connection with valuation. But in his treatment of "increased land values" he makes it clear that there is some confusion in his mind as to the matter of "unearned increment"—so-called—in valuations for rate-making purposes. He admits that the public service company appealing to the courts for relief against confiscatory rates must receive credit for this "increment" in any statement of "present value," but insists that in the regulation of rates by the State "original cost" should be the rule for land. And he goes so far as to say, "It is thus seen that there are two different fair present values (*sic!*) for the same property—one value to be determined and used by the State in the regulation of rates and another to be determined and used by the courts when a question arises as to whether an imposed rate is equivalent to a confiscation of the property of the undertaking" (p. 210). With all respect to Mr. Hayes, this is surely not sense, and it may be wondered that, after writing the words "two different fair present values" above quoted, he did not stop and reconsider the whole matter. There may be such a thing as a "fair present value" for taxation and another "fair present value" for rate-making, but there can only be one "fair present value" for rate-making. Mr. Hayes is not the only writer on this subject to go astray on this matter of land values: Mr. Whitten in his book committed himself to almost as great an absurdity by favoring the theory that increased land values should not be allowed for rate-making, but should (in some way not explainable or susceptible of rational accounting) be prorated over a number of years and considered as "income"!

Apparently, the thing that confuses this question for many people is the uniformity and extent of the increase in land values generally in the past. Mr. Hayes quotes the Minnesota Railroad Commission (1908) as saying, "It must be apparent to all that if the constantly increasing value of railroad properties is to be taken as the basis for computing proper returns, without regard to the original cost of the same, it is only a matter of time when transportation companies will by absorption own a disproportionate share of the wealth of the country" (p. 67). That balderdash of this kind should be uttered by a State Commission and gravely quoted in a serious work shows how much need there is of a clear understanding as to the rights of private capital invested in the public service. Mr. Hayes will help a little to this clear understanding if in future editions of his book he will eliminate such portions of his remarks on land values as constitute a pronouncement on what is and what is not "fair present value."

Aramaic Incantation Texts of Nippur. By J. A. Montgomery. Philadelphia: University of Pennsylvania Museum, Publications of the Babylonian Section, Vol. III.

Professor Montgomery, well known by his authoritative work published some years ago on the Samaritans, has undertaken the very difficult and most unselfish task of publishing the large series of incantation texts on clay bowls which were found in the upper layers of the mound at Nippur, excavated under the auspices of the University of Pennsylvania. The catalogue of the University of Pennsylvania Museum counts more than one hundred and fifty specimens of such bowls, but a large number are in so fragmentary a condition and the writing on them, moreover, so illegible that Professor Montgomery was wise in excluding them entirely from his publication. He has confined himself to forty-two more or less complete specimens, and we wish to commend especially the careful copies of the text embodied in the thirty-eight plates attached to the publication. The bowls vary in shape, but most of them are about the size of a modern porridge bowl, with the writing running round the bowl, generally beginning in the centre.

The question as to the exact date of the bowls, of which large numbers have been found elsewhere in Babylonian mounds, is an exceedingly difficult one. Some guidance is furnished through the stratum in the mound at Nippur. From this and from other indications Professor Montgomery concludes that the texts should be placed not later than the sixth or the beginning of the seventh century. This date will probably turn out to be correct, though, of course, it is possible that some of the bowls may be considerably earlier than others. The interest of the inscriptions on the bowls is twofold: First, the language, and, secondly, the proof furnished through them for the persistence of superstitious beliefs in connection with the dead. The language on most of the bowls is Aramaic and closely allied to the variety of Aramaic found in the great rabinical writings known as the Babylonian Talmud. The inscriptions thus furnish new material for the study of the Semitic dialect that was current among the Jewish and Christian settlers of Babylonia after the old Babylonian language had disappeared.

The inscriptions themselves are full of appeals to angels, demons, and spirits, invoking the protection of the good powers and endeavoring to prevent the evil ones from interfering with the repose of the dead. The inscriptions thus lead us into a world filled with superstitious dread of demons, precisely of the same order that we encounter in the ancient religion of Babylonia and Assyria. Indeed, some of the names of the demons are Babylonian deities who have been degraded in their rank. So we find the Babylonian sun-god Shamash, the moon-god Sin, the goddess Nanâ, and other gods, like Bel and Nergal, invoked. But the main feature of the list of angels, demons, and spirits is their eclectic character. They appear to be gathered from all parts of the world, though Persian influence is predominant. The formulas themselves used in connection with the invoking or the exorcising of spirits and demons are naturally monotonous—the same ideas are emphasized over and over again. The demons are adjured through powerful charms to flee, not to appear, never to come back, "neither in dreaming by night nor in slumber by day."

In the course of these appeals to the demons curious devices are introduced. So, for example, in one case the formula of exorcism imitates the terms of a decree of divorce, some of the terms of which are introduced *verbatim*. There can be no doubt from the contents of the inscriptions that the Jews and Christians, as late as the seventh century and probably considerably later, still

clung to the belief that demons were continually lurking near, and that they were particularly dangerous to the dead unable to protect themselves. The bowls, with their magic inscriptions, were, therefore, placed with the dead as a protection, and frequently, to symbolize the hoped-for release from the demons, two bowls were cemented together with the representations of the demons on the inside, signifying their imprisonment.

The work is thus of interest to a student of the history of popular superstitions, and it is to be particularly commended because of the many valuable notes scattered through it. The glossary attached includes the material derived from earlier publications of similar texts, so that it is a full concordance for the study of such incantation formulæ.

Notes

Messrs. Longmans announce: "The Passing of the Reform Bill," by J. R. M. Butler, and "The Confederacy of Europe," by W. Alison Phillips.

We may expect from Putnams, within the next few weeks, the following volumes: "One Year of Pierrot," by the Mother of Pierrot; "The Marriage of Cecilia," by Maude Leeson; "The Shears of Delilah, Stories of Married Life," by Virginia T. Van de Water; "The Peacock Feather," by Leslie Moore; "Frémont and '49," by Frederick S. Dellenbaugh; "Mountaineering and Exploration in the Selkirks," by Howard Palmer; "The Shadow of Ætna," by Louis V. Ledoux; "The Backward Child," a practical manual by Barbara Spofford Morgan; Jean Finot's "The Science of Happiness," translated from the French by Mary J. Safford, and the two books by Emile Faguet in translations by Sir Home Gordon—"Initiation into Literature" and "Initiation into Philosophy."

Two new volumes by Samuel Butler, entitled "The Humor of Homer" and "The Fair Haven," concluding the complete edition of his works, will be issued at an early date by Mitchell Kennerley.

The same house has in preparation "Monologues," by Richard Middleton, which, according to a statement by his literary executor, is the last collection that can be made from his manuscripts and papers.

The second series of Theodore Hunt's "English Literary Miscellany" is in the press of the Bibliotheca Sacra Company, Oberlin, O.

The Page Company of Boston will bring out this season a new book on Bulgaria and Macedonia by Prof. Will S. Monroe.

"The Indian History of the Modoc War" has been written by Jeff. C. Riddle, son of Wi-ne-ma, called the heroine of the war, who is still living. The book is announced by D. L. Moses, of San Francisco.

"Ein Charakterbild von Deutschland," announced by Heath, is designed for German reading in intermediate classes. It has been put together by Elizabeth Merhaut, the German author, and Prof. M. B. Evans.

Mr. John Spargo is bringing out, through Huebsch, "Socialism and Motherhood."

Among the books on social questions which Mr. Murray, the London publisher, is preparing, are a study of the land system by J. A. R. Marriott, and Mrs. Bosanquet's history of the C. O. S., "Social Work in London, 1869-1912."

"Morocco the Bizarre," by George E. Holt, and "Troubled Mexico," by Hamilton Fyfe, are announced by McBride, Nast & Co.

Forthcoming books of the Oxford University Press include: "The Gods of Northern Buddhism," by Alys Getty; "Pestilence in Literature and Art," by Raymond Crawfurd; "The Law of Associations," by Herbert A. Smith; "Bibliography of the Works of Dr. Johnson," by W. P. Courtney, and, in the Oxford Studies in Social and Legal History, edited by Paul Vinogradoff, Volume IV: "The Early History of Contract," by W. Barbour, and "The Abbey of Saint-Bertin and its Neighborhood, 900-1350," by G. W. Coopland.

The first number of the *Political Quarterly* will be published immediately by the Oxford University Press. It will contain articles on the Home Rule situation, the Dublin labor dispute, the United States Senate, the registration of titles to land, municipal government in Birmingham, the school in relation to civic progress, the state in recent political theory, and reviews of events—the political year in Canada, the Imperial Parliament, etc.—and of books.

It is said that M. Anatole France is busy on a new work, to be entitled "Les Anges," and the question has been asked whether, in view of his recent visit in England, the title in any way reflects Pope Gregory's "non Angli sed angeli."

"La Vie à Paris," the weekly chronicle which the late Jules Claretie wrote for the *Temps*, will be prepared henceforth by M. Abel Hermant, the novelist.

A pension has been given to M. Faguet, who recently retired from a professorship at the Sorbonne, held since 1890.

We are glad to welcome the "Collected Poems" (Putnam) of Grace Denio Litchfield, whose work in scattered form has been known to the public for the last two decades. Brought together in a volume of nearly 350 pages, her verses will impress readers as a substantial achievement whose level is distinctly high. For Miss Litchfield has unmistakably real poetic quality. Having gone to school to Keats and Shelley and Tennyson, she has formed the instinct of seeing life in terms of beauty. Indeed, her fluency in contriving choicest imagery is her chief defect. The reading of such a poem as her "Narcissus" must hold for ordinary mortals much of the confused delights of rushing down a scenic railway past shimmering landscapes ranging from sunlit glaciers to still and fragrant tropical nights. There is no straining for effect, she manifestly writes as she lives, the votary of precious overtones. Individually, line after line arrests one by its happy effect of precise observation heightened by poetic feelings. Of a mountain lake she says,

> Or if no light was, drew the darkness down
> And wore it like a cloak of elder-down.

Æolus, in her fancy,

> Sent his wild brood hallooing up the land.

She makes of Baldur, lying dead, in another poem,

> A fallen star, in his own light enshrouded,
> And coffined in the darkness of the world.

Nor is Miss Litchfield's interest confined to the sensuous; the prick of thought is usually to be felt beneath her velvety surfaces.

Besides three long dramatic poems, which it is not necessary to review here, Miss Litchfield's volume contains a hundred pages of short lyrics. On the whole, these do not seem to the present writer to have quite the merit of the longer work. But the lack appears to be owing less to native ability than to choice of theme. The general tone is forlorn and even a bit melodramatic, as if issuing from a heart too much engrossed with the sharp-practice of love. But in a few instances she has achieved perfection, as in the following stanzas:

> Into my life she came
> One golden day,
> Softly as blossoms come
> Into the May.
> I only knew that she was there
> By the fragrance in the air.
>
> Into my heart she came
> One day of days,
> Stilly, as on night's dark
> God's stars outblaze.
> I only knew that she was there
> By the glory everywhere.

"R. L. S." (Macmillan), by Francis Watt, is not a biography. There is not at this hour a deafening clamor for a new biography of Stevenson. It is not a critical study. To produce that the author would have to probe more deeply for Stevenson's qualities as letter-writer, playwright, rhymer, and stylist, and add another chapter on the romancer; he would have to turn a stronger search-light on his women-characters, his religion, his own character. Perhaps Mr. Watt wishes to satisfy a gossipy interest in "originals." He surely keeps close upon Stevenson's heels among the many scenes and persons that reappear in his books, including even the historical characters that creep into them in various transformations. At any rate, between the carmine covers of the volume are most of the matters that would engage that ever new public which knows not Stevenson but would like to learn from a book that is not too "deep."

From the time of the Veda until to-day the singing quality has never been lost from India's voice. It reached its height about the fifth century of our era—that is a millennium and a half gone by—in the poet Kalidasa, the master genius of Sanskrit literature, and one of the world's greatest dramatists and lyrists. With the present interest in the work of the living Bengali poet, Tagore, it seems particularly opportune now to draw attention to a volume entitled "Kalidasa: Translation of Shakuntala and Other Works," by Arthur W. Ryder, professor in the University of California, published in Dutton's series of Everyman's Library. In this book the play of "Shakuntala," or "Çakuntala," is translated in full. The rendering by Dr. Ryder, as a scholar is thoroughly faithful, even though limited by the wholly justifiable adaptation of a literary style in English to represent what was highly literary in Sanskrit. Abridgments are given of the two

other romantic dramas handed down from Kalidasa, together with outlines of the story of the poet's two literary creations in the art-epic line, interpreted through versified selections in English. Excerpted stanzas, well turned in verse, show the beauty of Kalidasa's poem on "The Seasons"; while his lyric masterpiece, the "Cloud Messenger," is excellently rendered in a five-lined rhyming stanza that conveys an idea of the exquisite poetic feeling which runs through the poem in the original Sanskrit.

Continuing her studies in mysticism, Miss Evelyn Underhill has turned her attention to the beginnings of Christianity and the early history of the Church ("The Mystic Way"; Dutton). She has succeeded in giving to this much studied subject a fresh and suggestive interpretation. In her view the mystic is a separate species as sharply marked off from the rest of mankind as "normal" mankind supposes itself to be marked off from the higher apes. The mystic uses the whole or a relatively large part of man's psychic life, rather than a little patch of consciousness. Under the spur of his vivid faculty of intuition he thrusts forward his whole personality on a new path. This step forward in the life of the race is not fully taken until the appearance of Jesus of Nazareth. For the mystery of the mystic way was only partially solved by the Indian mystics. They attained union with reality, but at the cost of forces which should have been stimulated by such union. And the Hebrew prophets gave only a hint of what was to come. In his effort to reveal the great "secret" Jesus was only partially successful as far as his immediate followers were concerned. But Paul and the writer of the Fourth Gospel developed and diffused this new type of consciousness. The fourth Gospel is described as the product of a mystic seer writing a record of a new kind of life; as an account which tells us more of the writer's experiences than of historical facts in the life of Jesus. After the death of these men the process by which the knowledge of the new way of life is spread is somewhat more obscure.

Psychological conversion gives place more and more during the second, third, and fourth centuries to formal belief. The average Christian changed his religion but not his mind. The promise of the "new life" becomes identified not with psychological change but with eschatological hopes. Yet the "new life" flowed on, expressing itself now here, now there, but above all in monasticism. To St. Macarius the Great, writing in Egypt about the middle of the fourth century, Miss Underhill points as the first scientific Christian mystic. By him were the experiences and intuitions of the New Testament giants first reduced to a clear and orderly system. His account is, moreover, touched with the vivid light of personal experience. Nor was it Dionysius the Neo-Platonist, but rather Macarius, that constituted the vital link between East and West in the chain of the Christian mystics. He was indeed a thoroughfare of the spirit of new life. Monasticism was, then, an essentially mystical movement. It provided a professional training school for the mystic, in spite of the fact that its history, like that of the Church, was characterized by perpetually recurring lapses from the mystical to the mechanical. In monasticism the mystic spirit found a channel on the confines of the Church. But in the Church's very heart, its ritual, the mystic spirit also created for itself a place in which to live and whence to give forth its influence. In the ritual life of the Church, particularly in the mass, the author attempts to trace a reflection of the experiences of the mystic way.

To the American traveller who thinks of Canada as too near to be interesting, or who recalls, after a journey across it, only Quebec and the Rockies, Mr. Joseph K. Goodrich's "The Coming Canada" (Chicago: McClurg) may be commended. The historical chapters, which fill a third of the volume, are of the slightest; and the accounts of commercial and industrial development, railway expansion, agriculture, and sport could hardly be more superficial. For those for whom it obviously is written, however, the book can hardly help proving useful; and we hope it may increase American understanding of a country which not only does most things very well, but which also contrives to manage a number of things—taxation, banking, administration, and justice, for example—appreciably better than we manage them in the United States.

A gratifying evidence of the increasing interest in historical scholarship shown by local societies, organized for purposes of good fellowship and the perpetuation of the memory of ancestors, is seen in the occasional publication under their auspices of works of a serious historical character. Under the title, "Forerunners and Competitors of the Pilgrims and Puritans" (Brooklyn, published for the Society, 1912), the New England Society of Brooklyn has recently issued, in two elaborate volumes edited by Dr. Charles H. Levermore, a collection of narratives of early voyages, designed "to show how many adventurers were visiting, exploring, describing, and even trying to occupy the New England coast during the years immediately preceding the successful settlements at Plymouth, Salem, and Boston." The series includes the text of some twenty-five narratives, beginning with 1601 and extending to 1625, of voyages to the New England coast, meaning thereby the region from Cape Breton to the mouth of the Hudson River. The selections are, in a majority of cases, extracts only, and the longest and most important portions are those taken from the narratives of Champlain, Lescarbot, Biard, and John Smith. Though the title is infelicitous and somewhat obscure, the work is well edited and printed, and brings together for the first time in a continuous series a valuable group of narratives. It bears no marks of either originality or novelty, but it does furnish a convenient collection of the narratives of voyages made by persons other than the Pilgrims or Puritans of the Bay Colony to the shores of New England. The editor's introduction on the development of the trading companies is representative of present-day interest in the part which the companies played in the settlement of America, though it might have been made more timely by including the results of recent investigations upon the subject.

In 1904, a group of Oxford mediævalists planned a calendar of the royal acts of the kings of England from 1066 to 1154, to be issued under the title "Regesta Regum, Anglo-Normannorum," as an "instrument de travail" to assist in their private researches. All but two of the original collaborators fell away from the undertaking, but the work has gone on, and now the first volume has appeared, "Regesta Willelmi Conquestoris et Willelmi Rufi," carrying the subject to 1100 (Oxford University Press). Two more volumes are to follow, one containing the charters of Henry I, a series rich in new documents, and of Stephen, a smaller and less valuable group, and the other the charters issued by the Empress Matilda and by Henry of Anjou in the years 1153 and 1154. The general editor, H. W. C. Davis, has directed the work and coördinated the material, and the other surviving collaborator, R. J. Whitwell, has given regular and continuous assistance in the search for documents and the preparation of a part of the index. Others, too, among whom is Professor Haskins of Harvard, have come to the rescue, either furnishing copies of documents, contributing notices of printed material, making critical observations, or undertaking the thankless task of reading the proof.

The volume now published, which will be the shortest of the three, contains 487 items, chronologically arranged and critically edited, of which 92, hitherto unprinted, are given in full in the appendix. The list covers diplomas, grants, charters, notifications, precepts, confirmations, memoranda, accords, letters, mandates, writs, ordinances, gifts, inquests, and canons, a few of which did not issue from the royal chancery and were not even attested by a sovereign. Some of the documents calendared or printed are pretended, others spurious. The editor's introduction, an elaborate and learned disquisition, discusses the value of the documents for general history, and contains essays on the old English chancery, the chanceries of William I and William II, an itinerary of William I, the household officials of William I and William II, justice and administration of the charters, a list of manuscript sources, a bibliography of printed books, and an index of grantees and beneficiaries. The volume closes with carefully prepared indexes of persons and places. For the general student of English constitutional history, the essay on "Justice and Administration" will be found especially serviceable, as throwing useful sidelights upon the subject, though few of the points noted are strictly new. The portions relating to local administration and local custom are distinctly the most interesting, and the discovery of three cases of itinerant justices holding Iters under William I and William II, such as are afterward found taking place under Henry I and Henry II, is a noteworthy addition to knowledge.

Sébastien Castellion's noble plea for tolerance, the "Traité des Hérétiques a savoir, si on les doit persécuter," hitherto almost "introuvable," has been known through the extracts in Ferdinand Buisson's "Castellion," or in the rare Latin text, "De Haereticis an sint persequendi," published at Basel, 1554. Two Genevan pastors, Olivet and Choisy, have published through Jullien of Geneva an excellently printed three-franc reimpression of the French text of

1554 from the two copies still in existence at Basel and Geneva. Pastor Choisy, who is also professor in the University and author of two volumes on Geneva in Calvin's and Beza's days based on careful research in the archives, stands sponsor for the scholarship of the reprint. In his brief preface he concurs in Buisson's judgment and the testimony of Beza that the "Traité" was a piece of collaboration mainly by Castellion, who edited it and contributed the two prefaces, the selection from the preface to his own translation of the Bible, and the "Refutation" of reasons for persecution, the last under the pseudonym of "Basile Montfort." The "Traité" included selections from Luther's and Calvin's earlier and milder views, from Erasmus, Brentius, Conrad Pellican, Urbanus Regius, Augustine, and earlier church fathers. The full text justifies Buisson's conclusion that it was "not a mere foreshadowing of tolerance, but a rational and methodical defence of full religious liberty"—though it might be added that Castellion's "principal points of the true religion" could not all be accepted by liberals of to-day. The work refutes Littré's thesis, so far at least as theory is concerned, that there is not to be found a spark of tolerance in the sixteenth century. The editors deserve thanks for making available Castellion's cogent treatise with its real insight into the nobler and more essential principles of Protestant thought. One regrets that there is not some statement as to how far the "simplified" spelling of the sixteenth century has been standardized, and wishes that Professor Choisy's modesty had not prevented his giving some estimate of the value of the "Traité" and of its place in the history of tolerance.

Mrs. Marie Robinson Wright, author, who travelled two thousand miles on muleback in Mexico and Bolivia and three times crossed the South American continent, in 1904 making the record trip over the Andes, died on Sunday in Liberty, Sullivan County, N. Y. She was born at Newman, Ga. She was the author of "Picturesque Mexico," "The New Brazil," "The Republic of Chile," "Bolivia," and "The Old and New Peru."

Brig.-Gen. James Grant Wilson died on Sunday in New York city. He was born in Edinburgh in 1832, and was educated in this country, largely by private tutors. He served during the greater part of the Civil War, being active in the Vicksburg campaign, and in 1865 was appointed brigadier-general. He resigned this post the same year, and lived, with the exception of some years of travel abroad, in New York. For his part in raising a memorial to Columbus in this city he was knighted by the Queen Regent of Spain. As an editor he is remembered for his work on the Chicago *Record*, of which he was proprietor before the war. He also edited the poems of Fitz-Greene Halleck and other volumes; and was the author of several books, among them "Sketches of Illustrious Soldiers," "Bryant and his Friends," "Love in Letters," "Life of General Grant," and "Thackeray in the United States."

The death is reported, on January 15, of Baron Hermann von Soden, since 1901 chief pastor of the Jerusalem Church in Berlin. He was born in 1852 at Cincinnati and was educated at Tübingen. His specialty in scholarship was textual criticism and study of the Holy Land, which he had visited many times. Among his books are "Palestine and its History" and a work in four volumes, completed a few months ago, on New Testament texts.

The death is reported from Nice, France, of Paul Déroulède, the French writer and politician. He was born in Paris in 1846. He entered the army, and was captured at Sedan, September 1, 1870. After the capitulation of Paris he took part in the second siege of that city against the Commune. He had reached the rank of lieutenant, and had been decorated with the cross of the Legion of Honor, when, on account of a severe fall from a horse, his health was so much impaired that he was obliged to quit the service. He was at one time a Deputy, president of the League of Patriots, and was an ardent supporter of the late Gen. Boulanger. M. Déroulède was noted throughout his life for his patriotic outbursts in the columns of the newspapers, and his writings led him into many duels. He was banished from France in 1900 for trying to substitute a plebiscitary republic for the parliamentary republic, and remained abroad for five years until he was pardoned. His literary work was very extensive, embracing poetry and romance, and patriotic exhortation of all sorts.

Science

"The Life of the Fly" (Dodd, Mead), by J. Henri Fabre, contains all the essays on Diptera and all the purely autobiographical essays of the "Souvenirs entomologiques." As a whole, the volume is perhaps less impressive than "The Life of the Spider," but any of Fabre's writing is eminently readable; his passionate curiosity, endless patience, and life-long devotion to an ideal, are revealed afresh in this new collection of essays. The translation, by Alexander Teixeira de Mattos, is of more than usual excellence.

More significant even than books dealing with State and county bird-life is J. H. Gurney's "The Gannet" (London: Witherby & Company), which treats of a single species in 567 unpadded pages. Chapter headings give an idea of the range of treatment—Names, Distribution, Colonies, Numbers, Nidification, Habits, Flight, Mortality, Age, Plumage, Osteology, and Anatomy. The work includes an historical preface, bibliography, and five appendices dealing with allied species, tropical boobies, parasites, historic remains, and fossils. The name "gannet" first occurs in "Beowulf." The part it has played in literature and history, from the writings of old explorers and voyages, down to the most recent technical anatomical treatises, has been carefully studied and abstracted, one of the best accounts having been written by one Martin Martin, and published in 1698. There are estimated to be about one hundred and one thousand gannets to-day, living in the northern seas. The book contains many beautiful photographs and is attractively made.

At the back of "Wild Animals at Home" (Doubleday, Page), by Ernest Thompson Seton, is an appendix containing a list of the mammals living in the Yellowstone Park, most of which were observed by the author in 1912. The book deals with bits of the lives of these animals. Their actual habits as observed in the Park are supplemented by tales of earlier days and incidents of other trips, the chapters affording easy and light reading, with about the range of treatment of a popular lecture. A few headings selected at random are The Cute Coyote, The Well-Meaning Skunk, and Sneak-Cats, Big and Small. We could wish that, even in so evidently popular a book, the author had put something of comparative comment, the leaven of a philosophic touch here and there. Even a single page of discussion of the strange instinct which drew the bull back to the bloody milk, time after time and finally to its death, would have been much more worth while than the mere narration of the episode. We are glad to read the five "nots" of the beaver, that it neither uses its tail as a trowel nor uses big logs for its dam; neither drives stakes nor throws trees any given way, and does not finish its lodge outside with mud. But we fear the author is gullible in believing the story of the crippled buffalo bird which wintered with a bull, searching for seeds during the day and roosting at night for warmth deep buried in the woolly fur between the horns of the great animal. Is not the cowbird the buffalo-bird of olden times, and not the normal nesting blackbird? The comical thumb-nail sketches are good, the photographs fair. It is an ideal book for the Pullman car en route for the West. The most important thing which can be said about a book of this type is that the light and frivolous pattern of its diction is woven on a framework of real scientific truth.

Prof. George Poe, cousin of the poet, Edgar Allan Poe, and a noted scientist and inventor, died in Norfolk, Va., on Monday, aged sixty-eight. He had been mentioned for the Nobel prize for scientific attainment. In 1875 Professor Poe liquefied nitrous oxide for the first time, which was hailed as a great scientific discovery. He was a native of Virginia and a veteran of the Civil War.

Drama

Our Irish Theatre. By Lady Gregory. New York: G. P. Putnam's Sons. $1.50 net.

In this book, which she describes as a chapter of autobiography, Lady Gregory sketches the origin and early career of the Abbey Theatre. For the most part it is a rehearsal of facts already well known, but her lively relation of them, for the future information of her little grandson, is likely to find many other interested readers. The story of the humble beginnings of the Irish National Theatre and of the astonishing results achieved, in the face of most disheartening difficulties, by the courage, ability, and zeal of a few enthusiasts, has a significance that makes it well worth the retelling. And Lady Gregory, a vigorous and attractive writer, fresh-

ens it by intimate reminiscence of her associates in the enterprise of which she was always a mainstay. She devotes a particularly interesting chapter to J. M. Synge, his slow and laborious development as a dramatist, the inspiration that he found in his prolonged sojourns among the peasantry of Western Ireland, his wit and geniality, when once his natural shyness had been overcome, and his brave but hopeless fight against mortal disease. It was a pity that he could not live to give his finishing touches to his "Deirdre of the Sorrows." His tongue was very sharp sometimes. He said of one actress whom he disliked that she turned the Deirdre of W. B. Yeats into the Second Mrs. Conchubar, and he spoke of a vehement Englishwoman as an example of civilization in its most violent form.

Naturally, the point of view of Lady Gregory is characteristically and often delightfully Irish. Nothing in her records is more amusing than her account of the duel between the Abbey Theatre management and the Dublin Castle authorities over the production of "The Shewing Up of Blanco Posnet." In this encounter she had the artful aid and encouragement of that adroit and specious councillor, the author, Bernard Shaw. The play had been banned by the English censor, whose authority does not extend to Ireland; but subordinate Castle officials, not wishing to run the risk of offending the powers in London, asked the Abbey directors to withdraw the play and thus avoid possible trouble, at the same time pointing out that it could not be considered Irish and scarcely came within the limits of the theatre's charter. Into the merits of the question it is not at all necessary to go. What is tolerably plain is that Lady Gregory and her associates quickly discerned that the veiled threats from the Castle to annul their patent were in the nature of bluff, and they promptly availed themselves of the opportunity to put the Lord Lieutenant "in a hole." Unquestionably they out-manœuvred their opponents from first to last, and conducted their campaign with admirable tact and unflinching resolution. Declaring that the very existence of the Irish Theatre was at stake, and that they could never accept the principle of subserviency to a British censor, they defied consequences, and gave their performance without any interference, gaining a big moral victory and reaping all the advantages of a tremendous advertisement. It was a master stroke in its way, and the Castle, by its own blundering, was made to look superlatively foolish; but Lady Gregory's hearty subscription to Mr. Shaw's assertion that the piece is one of deep religious intent and purport will provoke a smile.

About one-third of the book is occupied with the adventures of "The Playboy of the Western World" in the old world and the new. That play has been the subject of as much discussion as it deserves. Lady Gregory, of course, pays it the tribute of unalloyed admiration. It is, however, worthy of note that, as she remarks, the original manuscript was so full of bad language and objectionable sentences that both she and Yeats insisted upon liberal expurgation, which was effected. With a little stricter editing, possibly, much needless offence might have been avoided. She ridicules the stupidity of those who failed to appreciate the spirit of Synge's fantasy. No one is likely to dispute the assertion that much of the characterization and incident in it is purely fantastic, but it was not in the guise of whimsical or satirical fantasy that the piece was presented, but as a comparatively realistic picture of Irish life and character. There may have been no excuse for the rioting indulged in by the objectors—however much it contributed to the financial success of the production—but no one should be surprised that, among imperfectly educated Irishmen, a somewhat illusive symbolism should have been mistaken for deliberate misrepresentation.

Paul Elder & Co. have in press "The Foot of the Rainbow," a drama by Myrtle Glenn Roberts.

English translations of Volumes III and IV of Hauptmann's Dramatic Works, now in the press of Huebsch, will be ready this season. The first of the two volumes contains "The Reconciliation" and "Colleague Crampton," translated by Roy Temple House; "Lonely Lives," translated by Mary Morison, and "Michael Kramer," translated by the editor, Prof. Ludwig Lewisohn. The other volume has "Hannele" and "The Sunken Bell," translated by Charles Henry Meltzer, and "Henry of Auë," translated by Mr. Lewisohn.

Maurice Bourgeois has been authorized to translate into French "The Playboy" and "The Well of the Saints," and has provisionally reserved the rights of the other works. "The Playboy" is to appear in the *Grande Revue* and to be produced by the Théâtre Subventionné de l'Oeuvre. We should say that he was exceptionally well qualified to serve as Synge's official interpreter in Paris. He relishes his author without losing his head over him; he has digested the history of the dramatic movement in Ireland, and his analysis of the European, the Irish, and the personal elements in Synge's work is sounder and fuller than anything else we have seen. To other students of the subject, his bibliographical appendices, amounting with the index to more than eighty pages, will be invaluable.

There will be a remarkable cast for the coming revival of "The Tyranny of Tears" in London. It will include Robert Loraine, Fred. Kerr, Alfred Bishop, Ethel Irving, and Evelyn D'Alroy.

Oscar Asche and Lily Brayton, who have just returned to England, played for sixteen weeks in South Africa. Their itinerary covered the four large towns—Durban, Johannesburg, Pretoria, and Cape Town—and their repertory included "Kismet," "Othello," "Antony and Cleopatra," and "The Taming of the Shrew." Mr. Asche has taken the Globe Theatre for a season of several months, and "Kismet" will be his opening production. He has in reserve a new play which is the result of a meeting between Sir H. Rider Haggard and himself in South Africa. It is an adaptation, for which the actor is responsible, of Rider Haggard's story of Zulu life, "A Child of Storm." Of this piece Mr. Asche said in a recent interview: "The only white man in the story is Allan Quatermaine. All the rest are Zulus, and one of the reasons of our visit to South Africa was to see the kraals and get the necessary local color."

The annual Grasmere folk-play has just been performed. It is called "A Woman of Property." Here is an outline of the plot: A Miss Postlethwaite, a woman of middle age, has suddenly come into possession of a rather important fell-farm and an omnibus business. She needs the help of a certain William Braithwaite, a retired farmer who lives near by, to look after her sheep, and she employs Isaac Forrest, a village joiner, to see to her char-à-banc. These men become rivals for her hand and heart, but she is indifferent to both of them. A neighbor, Mrs. Dobson, is taken into her confidence, and Miss Postlethwaite tells her that the only man she thinks would suit her is Mrs. Dobson's brother, John Holmes. Mrs. Dobson goes off determined to bring the match about. But John, as he tells his sister, is "nea hand at coortin," being really in love elsewhere, and Miss Postlethwaite realizes that she had better make up with William Braithwaite after all. William, who knows how the land lies, and that John is determined to leave Millbeck Farm, determines to help him to marriage, and offers him the post of hind at his farm at Scandale. Then Miss Postlethwaite herself proposes marriage to William Braithwaite in the following words: "How wad it be thinks ta, ef thou was to—to gi thy hoose up i' t' village, and come and bide at Millbeck and give an eye to t' sheep, ay, and t' stock and a'?" To which William replies. "As shepherd does ta mean?" "Nay," she rejoins, "I was meanin—like—as t' maister. Will ta come, William?" "Why, Matilda," says the old suitor, "thou knas weel eneuf its whor I've been wantin to be at for years."

Many well-known Englishmen are supporting the scheme for the establishment of a national festival theatre at Glastonbury for religious and choral drama. Preparations are so far advanced that it may be possible to stage the first production in August. The building will be in the form of an amphitheatre, and will seat about 1,200 people. There will be a suitable stage, with modern appliances, and a hidden orchestra. Prominent performers will be entrusted with the leading parts, and the chorus will be recruited from local choral societies. The proposed theatre is for "the expression of the national spirit in music, drama, and the allied arts." The term "allied arts" includes folk-lore, folk-songs, and dancing. The festival this year will last for one week, during which there will be three performances of "The Birth of Ar-

thur," a music drama, by Reginald R. Buckley and Rutland Boughton.

A London critic, writing of the performance of Miss Christopher St. John's English version of the old Latin play, "Paphnutius," by the Abbess Hroswitha, says:

The play is one to be seen, and we can hardly imagine that the last of it will have been heard in these two presentments. In spite of a production necessarily hampered a little by a transference at short notice from the King's Hall to the Savoy, and of a performance of the title-part rather sadly lacking in the elementary quality of a correct memorization, the presentment was followed with deep interest by a large audience.

Music

MUSIC IN PARIS AND NEW YORK.

A wail about musical conditions comes from Paris. Gabriel Astruc, who gave the city a third opera house—the ill-fated Théâtre des Champs Elysées, which had to be closed four months after it was opened—has been telling his woes and expressing his opinions, in an article entitled "A Fallen Temple." It was as a temple of music that he built that theatre. He did it in spite of the skepticism of his friends, among them Camille Chevillard, who asked him: "Are you sure that music is loved in Paris?" This eminent orchestra conductor understood the situation, knew that there are in that city only ten thousand persons who are willing to spend from 20 cents to $2.40 for a musical entertainment.

A Beethoven festival, says M. Astruc, cannot be given in Paris unless some Wagner numbers are interpolated. He thought the Parisians had developed an interest in Russian music, but found that what they really loved was "the Russians"—their costumes, their scenery, their dances and fairy-tales; and even this fad was ephemeral. The modern Parisian, it seems, has no time to go to the opera. He goes to his "tango" (as one goes to his club), where professional and business men of every age and size congregate. At eight he goes home, takes his bath, dines, and when all this is done it is ten o'clock—too late for the opera or the theatre; so he takes a peep at a moving-picture show and goes to bed. Sports, tennis, football, polo, golf, bicycling, automobiling, and aviation—all these are hurting music; "it may even die from them."

While M. Astruc's pessimism is naturally deepened by personal losses, there is nevertheless a considerable amount of truth in his indictment. Paris has fallen wofully from its former musical preeminence, the days when Chopin, Liszt, Meyerbeer, and a host of other foreign musicians joined the French celebrities to make it the musical centre of the world; the days when there were at the Opéra galaxies of bright stars whose names make most of the present-day singers there seem like tiny planets or satellites. But that there is still a love of the best is shown, to name only one instance, by the extraordinary popularity of Fritz Kreisler, who can give as many recitals in Paris as he pleases, always to crowded and enthusiastic audiences. Nor must we forget the Conservatoire and its influence.

The brilliant operatic stars that used to shine in Paris have been visible for some decades at our Metropolitan Opera House. We have performances of Italian operas such as the Parisians used to enjoy, but which now are a mere memory. We have performances of German operas far better than the French can hear at home, or even in Berlin, Dresden, or Munich. In French opera alone are the Parisians ahead of us. We could wrest even that supremacy from them if we would; *teste* Oscar Hammerstein at his Manhattan Opera House.

A comparison of conditions in the French metropolis with those among us cannot but dispel gloomy forebodings about the latter. It is not only the great singers of the operatic and concert stage who come here. The violinists, pianists, and other virtuosos cross the Atlantic in bewildering numbers, and what is significant is that they usually find our concert halls more profitable than those of foreign countries.

One of the leading American composers, Rubin Goldmark, whose orchestral works have won admiration in Boston as well as in New York, has been engaged by the New York Philharmonic to deliver two lectures, on February 28 and March 7, at the Hotel Astor. The subjects are: "The Orchestra, Its Instruments, and How They Are Used," and "The Development of Symphonic Music from Its Earliest Beginnings to the Present Day."

On March 25, at the Waldorf-Astoria, there will be an "Evening of Light Music" by the Philharmonic Orchestra, under Mr. Stransky's leadership, for members only, with one guest each. On the "Evening of Light Music" selections from operettas and dance music by such master composers as Johann Strauss, Offenbach, Suppé, Sullivan, and others ("Fledermaus," "Orpheus in Hades," "Beautiful Galatea," "Mikado," waltzes, etc.) will be rendered, giving the rare opportunity of hearing tuneful and light music performed by an organization of the first rank.

Lilli Lehmann, an English version of whose memoirs is in preparation, is the vocal wonder of the age. Born as long ago as 1848, she still sings in opera as well as at song recitals. She will appear in "Don Giovanni" at the Salzburg Mozart Festival next summer, together with Gadski, Geraldine Farrar, and other members of the Metropolitan Opera Company. A few weeks ago she gave a recital in Berlin, concerning which the leading critic, Leopold Schmidt, wrote that her voice had all the power and beauty of former days. The audience was disposed to ask for a repetition of every number, and she had to add a number of extras.

Liza Lehmann, widely known as the composer of song cycles, has been appointed one of the teachers of singing at the Guildhall Music School. The London *Daily Telegraph* calls attention to the fact that she used to be well known as a concert singer, and that she has written an excellent book on the art of singing. Moreover, "she had the rare privilege of receiving hints from no less a celebrity than Jenny Lind, and also acquired from Clara Schumann the traditions of the Lieder that her husband bequeathed to the world."

From England come rumors of a decline in violin playing. Increasing devotion to sports is given as one reason. Another is that people have come to realize that the violin is a difficult instrument. At a recent conference W. W. Cobbett declared that when "bridge" came on the scene after-dinner music was almost knocked on the head. Moreover, the fallacy that music—the art of Bach and Beethoven and such-like virile men—is effeminate was not yet exploded. What he called pleasure-drunkenness was becoming more and more prevalent, and young people were shrinking from hard work, such as was needed for the achievement of efficiency in the playing of stringed instruments.

Carl Goldmark, the composer of the "Queen of Sheba," will be eighty-four next May, but he denies he is an old man, because he still can compose. He is at work now on a composition—whether an opera or a symphony he refuses to divulge.

Italo Montemezzi, whose "Love of Three Kings" has proved a decided success at the Metropolitan, thanks largely to a good libretto and the delightful art of Lucrezia Bori, has chosen Rostand's "The Distant Princess" as the subject of his next opera.

Nikisch has taken up Schönberg. At a recent concert in Leipzig he conducted his "Kammersinfonie." "At the end," we read in the *Allgemeine Musik-Zeitung*, "there were lively expressions of displeasure, but the applause of the composer's adherents was louder."

Art

AN "ART COMMISSION MOVEMENT."

Our readers may remember that a sort of Congress of municipal art commissions was held in New York last May. Delegates from seven cities met in conference, accepting the invitation of the New York Commission; and together they discussed the many questions relating to public art, in cities and States. As a means of giving form to the general conclusions reached, the conference appointed a committee to work out a scheme for the further organization and extension of art commissions in this country. The report of this committee has just been published; and on account both of its subject and of its scope it deserves more than passing comment. We will say at once that any

one desiring copies of this report may obtain them by applying to the Art Commission, City Hall.

It is not necessary to dwell upon the larger aspects of this movement. Their significance is universally perceived. We are turning our back upon the happy-go-lucky period of our public art. It was for a long time possible for anybody to give anything to a city, call it a work of art, and be sure of having it accepted with thanks. But nowadays we have nearly all gone over to the view that it is necessary to look even a gift-statue in the mouth; to get expert judgment about fountains and arches; to prevent court-houses from being made at once robberies and frights. The very conference of last year was a clear sign that the idea of exercising some form of control over municipal art has not only come, and come to stay, but has spread rapidly and widely. What New York has tried to do has also been attempted in Baltimore and Milwaukee and Los Angeles, to mention only a few of the scattered places. The huggermugger era has closed, and we have come out into a new point of view. All that is left to do now is to agree upon the lines of progress hereafter to be followed; and to standardize, as it were, the whole process of so organizing commissions, with power to supervise and veto, that our public art will be less often an affliction and more frequently a delight. This is the work which the committee undertakes in its report.

It presents, indeed, only what it calls "suggestions," but these have been maturely considered, and are embodied in the concrete form of draft bills to establish art commissions and define their functions. These proposed acts are in three forms—a bill for an art commission in cities of the first class, one for cities of the second class, and a bill for a State art commission. We cannot go into the details, but it is obvious that they have been studied in the sensible desire to adapt control of public art to differing and local conditions. Any municipality or State contemplating legislation of this sort would be sure to find in these draft bills the results of experience and of special skill to guide it.

Discussions in the conference last May touched upon a number of points, but the most important of them had to do with the make-up of art commissions and the range of their powers. There is, for example, the question whether an art commission should be composed wholly of professional men—painters, sculptors, architects. The general agreement was that the lay element should be represented. It comes in, perforce, in the person of the Mayor, or Governor, who should always be, in the committee's judgment, a member *ex officio*. But the report thinks it also desirable that other laymen should be appointed. So far is it from the intention to set up artistic exclusiveness. Yet it is felt that no commission should be made so large as to be clumsy, the recommendation being that the membership should not go above nine, or, as a rule, below five.

Should art commissions be empowered with an absolute veto? Or should their power be made advisory only? These are vexed questions. The report holds that a municipal art commission should have the final right to say what plans for public buildings should or should not be accepted, what designs for statues or monuments should be permitted execution. But in the case of a State commission, the opinion is that the full veto power could not be wisely conferred. It is pretty certain, however, that the advice of a State commission, properly constituted, would be taken with little demur. One recommendation made in the report is obviously of great moment. It is that an art commission should have a continuing right of supervision over buildings or works of art the plans or designs for which it has approved. As everybody knows, slack or faulty execution may easily lead to what amounts to another work than the one originally accepted. The report urges a form of contract by which final payment shall not be made until the art commission shall have passed upon the completed structure or monument. This is but one indication of the thoroughness with which the committee has considered all features of the art commission movement. As the American city bids fair soon to come to its own in better government, it is important that it come to its own, too, in matters of public art; and we know of nothing more hopeful in that line than this report on art commissions.

"Le Dictionnaire critique et documentaire des peintres, sculpteurs, dessinateurs, et graveurs," two volumes of which have already appeared, is nearing completion, according to an announcement of the publishers, Roger & Chernoviz. The general editor of the work is M. E. Bénézit.

The third *Lieferung*, plates 41 to 80, of *Archiv für Kunstgeschichte* (Leipzig: Seemann), brings the usual interesting array of novelties in excellent collotypes, mostly from originals in private possession. Perhaps the most remarkable works are very fine portrait drawings by Dürer and Cranach and a fantastic landscape by Goya, in the Havemeyer collection. A fragment by Crivelli, a series of Legends of St. Bonaventura by Francisco Herrera, an Annunciation by Paolo Veronese, a Honthorst, and a Joos van Cleve portrait illustrate the catholicity with which the editors make their selections. Their enterprise is suggested by two publications from the City of Mexico, a Pedro Campaña and a Bouts schoolpiece. Of almost topical interest is a most pacific bust of a bishop, sixteenth century, from the town of Zabern of recent military notoriety.

An elementary and thoroughly feminine little book is "First Steps in Collecting" (Lippincott), by Grace M. Vallois, an Englishwoman. It abounds in epistolary sentences like this one concerning John Dwight, gentleman potter of Fulham: "He must have been a singular man, one does not believe all the strange stories told of him, but allowing for exaggeration, he must have been what we call a 'crank.'" The work is essentially a compilation, showing no especially important results of research, though the author is herself a collector and descendant of collectors. Frequent citations prove her familiarity with the standard works on furniture, pottery, glass, and tableware. She also quotes from books, ancient and modern, which illustrate social or commercial conditions amidst which the objects described were produced and used. She is especially indebted to the "Verney Memoirs." This sentence from the preface truthfully describes the readable and entertaining pages that follow:

> My books are not learned—there are plenty of those—but I aim at interesting my readers, and so enticing them towards more robust efforts, when the more technical and advanced books will, I hope, be sought for with ardor.

Old English china, in the collector's sense, means porcelain made in England between the middle of the eighteenth century, when the factories at Bow and Chelsea were established, and 1820, the beginning of the great decadence of the arts of design. This is the period of ceramic history covered by "The China Collector, a Guide to the Porcelain of the English Factories" (Dodd, Mead), by H. William Lewer. While the book is not intended primarily for experts, it presupposes a certain apprenticeship in collecting. The works described and illustrated are not usually the great state pieces, but those of a more modest sort, such as a middle-class collector may now and then acquire. Each pottery has a separate chapter in which under appropriate headings are given the main facts about its history, glazes, decoration, production, characteristics, chronology, and marks. These chapters are admirably condensed, as one notes in the summing up of the Lowestoft controversy. Marks are extensively reproduced and emphasized, but the author sagely urges that they "must not always be regarded as the sole test of origin or excellence." The illustrations, made from color sensitive plates, are remarkably good, for an inexpensive book. This work, in a general way, may be recommended to collectors who are without access to larger and more costly works. It is to be noted, nevertheless, that what is called china collecting in this country is not concerned with many of the wares discussed by Mr. Lewer.

Charles Edmund Dana, well known as an art critic, died Friday at his home in Philadelphia. He was born at Wilkes-Barre, Pa., in 1843, and studied in Paris, Dresden, and Munich. From 1893 to 1904 he was professor of art at the University of Pennsylvania, and since then had been a lecturer at this institution. Among his writings is a four-volume work on "Glimpses of English History."

George William Sheldon died on Wednesday week at his residence in Summit, N. J., at the age of seventy-one years. He was born at Summerville, S. C., and graduated from

Princeton in 1863. After being a tutor at Princeton and an instructor of Oriental languages in the Union Theological Seminary, of New York, he took up literature as an occupation. For several years he was art editor of the New York *Evening Post*, and subsequently, from 1890-1900, literary adviser at London of the publishing firm of D. Appleton & Co. Among the books published by him are: "American Painters," "Story of the Volunteer Fire Department of New York City," "Hours with Art and Artists," "Artistic Homes," "Artistic Country Seats," "Recent Ideals of American Art," "Ideals of Life in France." He received the degree of L. H. D. from Princeton in 1896.

Augustus Koopman, American painter and etcher, died on Saturday in Etaples, France. He had held a number of exhibitions in New York in recent years, and a collection of his etchings has a place in the permanent collection in the public library. Mr. Koopman was born at Charlotte, N. C., in 1869. He studied at the Pennsylvania Academy of Fine Arts, in Philadelphia; under Bouguereau and Fleury, and at the Ecole Nationale des Beaux Arts, in Paris. From 1896 to 1899, he taught painting in Paris, and later lived in London, 1902-6, specializing in portraiture. He had since made his home in France, passing a portion of each year at Etaples, on the northeastern coast of France, where there is a large colony of French and American artists. Mr. Koopman was the winner of the first William Clarke prize, American Art Association, Paris, 1899, and among other awards which he received were the second Wanamaker prize in 1908; bronze and silver medals at the Universal exhibition in Paris, in 1900, and medals at the Buffalo and St. Louis expositions in 1901 and 1904, respectively. Besides the collection of his works in the New York Public Library, Mr. Koopman was represented in the Brooklyn Institute of Arts and Sciences, the Congressional Library, in Washington; the Philadelphia Art Club, and the St. Louis, St. Paul, and Detroit Art Museums.

Finance

FINANCIAL EUROPE'S SUDDEN RECOVERY.

Last month's remarkable rise on the New York Stock Exchange, having continued to the extent of turning the whole community to prediction of better times, was checked two weeks ago. The period of lower prices and diminished activity, usual on such occasions, followed; but at precisely that moment, a series of equally remarkable events occurred on the foreign markets. Two weeks ago to-day, the official discount rates of seven great European central banks came down. Last Thursday the Bank of England, which had already twice reduced its rate this month, cut it down a full 1 per cent. The Bank of France, which up to that time had kept its rate at the 4 per cent. level fixed in October, 1912, at the crisis of the Balkan War, announced a reduction to 3½.

These reductions were of high significance, in their bearing upon the world-wide money situation. The London bank rate has now been lowered three times within three weeks, from 5 per cent. on January 8 to 3 last Thursday, and the present rate is actually lower than any fixed at the end of January in a decade, except for 1909 and 1905. The action of the Bank of France, last Thursday, was of even larger interest, because the maintenance of the "Balkan panic bank rate" had been widely accepted as proof that the French situation was still grave. Simultaneously with these changes in the money market, British consols, long the focus of depression in high-grade investment securities, rose with great violence—touching a price 5 points above that of January 6, and higher than any reached in 1913. French Government rentes advanced 2 points, and the general London stock market burst into an enthusiastic rise.

There has been much conjecture, of a somewhat bewildered sort, over this sudden and complete change in Europe. The truth is, such a change was long overdue. For six months, financial Europe had been a victim of imaginary terrors; a time was bound to come when it would recognize the facts, and that time was likely to be the hour when the accumulated capital of the European investor was rushing back into the "January market."

But why did those apprehensions disappear so suddenly, in face of financial Europe's own obstinate prediction, throughout December, that the reasons for them were sure to continue? Why did the European stringency not turn to ease in July, when it became evident that the Powers would not come to blows; or in September, when any one could see that the Continental markets and the Continental banks had surmounted whatever crisis had been ahead of them? That is the really singular problem. It adds to the atmosphere of unreality which pervaded the whole of 1913.

In the perspective of later history, it will probably be accepted that there were four separate influences at work in shaping the strange situation which began in European finance in October, 1912, and which has ended only with this present year. The Balkan War, with the heavy burden which it imposed on capital, was one. The breakdown of an over-extended credit position, especially at Paris and Vienna, was another. The crisis in Europe's high diplomacy, over the partition of Turkey, was a third. The last was the extent to which, despite the financial embarrassment brought about by the other causes, European capital was still committed to new foreign loans, rashly undertaken in a prodigious aggregate by financiers of every sort, when engagement in "underwritings" was the fashion. This final source of apprehension survived, long after the others had been removed.

We seem to be hearing less from Europe, since last month's important change in the foreign money markets, of the "impending new flotations" which grew so wearisome from perpetual iteration, but which Lombard Street, only a month ago, was confident would stand in the way of return to normal markets during 1914. What has become of them? A not unreasonable theory would be, that there are just as many impending now as there were in December or September; that European capital was as well able to absorb them then as it is now; but that not until the test of the New Year money markets had proved how abundant the supply of capital really was, did financial Europe come to understand its own condition.

FRANCISCO GOYA

By HUGH STOKES

With 48 full-page illustrations.

$3.75 net

A study of the work and personality of the Eighteenth Century Spanish painter and satirist. Goya's life was as full of incident as that of Benvenuto Cellini. His satire as sharp and telling as Hogarth's. A superb etcher. A famous court painter—and a rabid republican. This eventful life is supplemented with excellent reproductions of the artist's work.

At all booksellers.

SOME BOOKS FOR LIBRARIES

Published by Little, Brown & Co., 34 Beacon St., Boston, Mass.

ASCHAFFENBURG, GUSTAV. Crime and Its Repression. (In the Modern Criminal Science Series.) 331 pages. $4.00 net.

A serious statistical study of a high order, marked by Teutonic thoroughness of psychological analysis, lack of sentimental social ideals and disbeliefs in broad generalizations. . . . This work must rank as one of the classics of European criminological literature.—*American Law Review.*

BARROWS, ISABEL C. A Sunny Life: The Biography of Samuel June Barrows. Illustrated from photographs. 322 pages. $1.50 net.

This story of his rarely beautiful and inspiring life is told by his wife with much literary charm and with the sympathetic appreciation which came from an active interest and participation of his work.—*A. L. A. Booklist, October,* 1913.

CHAMBERLIN, FREDERICK. The Philippine Problem. With 16 illustrations. 240 pages. $1.50 net.

A brief, informing résumé of what has been accomplished under American rule, ending with a discussion of Philippine independence.—*A. L. A. Booklist, December,* 1913.

CRAWFORD, MARY CAROLINE. The Romance of the American Theatre. With 64 half-tone illustrations. 408 pages. $2.50 net.

Miss Crawford has succeeded in adding some flesh to the dry bones of the history of a really notable phase of our national life.—*Review of Reviews.*

FILON, AUGUSTIN. The Prince Imperial. With numerous portraits and illustrations. 248 pages. $4.00 net.

His tutor, in this richly illustrated biography, gives us a vivid account of his (Napoleon III's son) charming personality and brilliant mind.—*Literary Digest, New York.*

FULLER, J. BAMPFYLDE. The Empire of India. (In "All Red" British Empire Series.) With 24 illustrations and map. 393 pages. $3.00 net.

A complete survey of modern India, this volume is perhaps the best in this series, as well as one of the best which have recently been written on Indian problems.—*A. L. A. Booklist, June,* 1913.

GRIBBLE, FRANCIS. Romance of the Men of Devon. Fully illustrated. 282 pages. $1.75 net.

A chatty and entertaining book abounding in curious information and anecdote not likely to be already familiar to the reader.—*Dial, Chicago.*

HOPKINS, TIGHE. Wards of the State. 340 pages. $3.00 net.

"An unofficial view of prison and prisoner."—*Subtitle.* Gives examples from all over the world, has short, simple descriptions of finger-print identification, care of criminal insane, the book in the cell, and such topics. An excellent general, non-technical work, with less personal bias than most books on the subject, though not as authoritative as Wine's *Punishment and Reformation.*—*A. L. A. Booklist, November,* 1913.

JACKSON, HELEN HUNT. Ramona. (Tourists' Edition.) With 24 illustrations of actual scenes. 308 pages. $2.00.

Attractive edition, well printed on good paper, and illustrated by twenty-four full-page halftones taken from photographs, to aid the traveller searching for the historical sites of the story.—*A. L. A. Booklist, December,* 1913.

MACOMBER, WILLIAM. Engineers' Handbook on Patents. Illustrated. 288 pages. $2.50 net.

The best book of its type. It shows what an invention is, how to patent, what may be patented, and when there is need of a lawyer. Cannot be taken as infallible as its scope is limited by its size, but it gives a great deal of useful information with brevity and clearness.—*A. L. A. Booklist, November,* 1913.

JAMES, GEORGE WHARTON. The old Franciscan Missions of California. Illustrated. 287 pages. $1.50 net.

A guide-book in the best sense of the term. . . . Mr. James possesses an abundance of knowledge about the early history of California and the founders of the missions.—*Boston Transcript.*

MAHAN, ADMIRAL A. T. The Major Operations of the Navies in the War of American Independence. With maps and diagrams. 280 pages. $3.00 net.

It offers the opportunity of obtaining a valuable contribution on the first war with England in one attractive volume.—*Providence Journal.*

PAUL, HERBERT. Famous Speeches. (2nd Series.) 382 pages. $3.00 net.

Contains the speeches of such famous men as Lord Macaulay, Abraham Lincoln, Lord Derby, Lord Beaconsfield, Charles Stewart Parnell, Mr. Gladstone, the Duke of Argyll, James Russell Lowell, and others, with introduction and notes.

PIER, ARTHUR STANWOOD. The Story of Harvard. With 16 illustrations from drawings by Vernon Howe Bailey. 256 pages. $2.00 net.

Story of the founding of Harvard College, its later development and history, its ancient customs and traditions, and its present undergraduate life, with interesting anecdotes and sketches about the men who have presided over it and about graduates who have become famous men. Good illustrations from pencil drawings.—*A. L. A. Booklist, December,* 1913.

POLEY, ARTHUR P. Federal Systems of the United States and the British Empire. 453 pages. $3.50 net.

A comprehensive account of the history, nature, and development of the four Constitutions of the United States, Canada, Australia, and South Africa.

SAVAGE-LANDOR, A. HENRY. Across Unknown South America. With nearly 300 illustrations, 8 in color, and map. 2 vols. 816 pages. $10. net.

Account of the daring and adventurous journey undertaken for the purpose of acquiring a first-hand knowledge of the unexplored interior of Brazil, of studying the native tribes and resources, and of reporting upon its possibilities for commercial development. The expedition covered also some little-known parts of Peru, Bolivia, Chile, and Argentina. The book is therefore a scientific record of value as well as a thrilling book of travel.—*A. L. A. Booklist, January,* 1914.

SHELLEY, HENRY C. Shakespeare and Stratford. With 16 illustrations from photographs. 207 pages. $1.25 net.

An excellent historical and topographical handbook. The photographs are excellent. The author sticks to facts so far as possible, so that this little volume will be a valuable companion to those who intend to visit Stratford.—*New York Sun.*

———The Tragedy of Mary Stuart. Fully illustrated. 294 pages. $3.00 net.

Concentrates attention on the swiftly-moving fifteen months—on the murder of Darnley, the Bothwell marriage, the imprisonment in Lochleven Castle, and the battle of Langside—passing over in the prologue and epilogue the less eventful twenty-four years. A readable, fairly unbiased chronicle based on original and contemporary documents, many utilized for the first time, but not cited. Well illustrated.—*A. L. A. Booklist, November,* 1913.

WHITING, LILIAN. Athens, the Violet-Crowned. With 32 pages of illustrations. 361 pages. $2.50 net.

But let no reader mistake the worth of the book. It will tell him a great deal about Greek art and life as shown in the architectural and sculptural remains at Athens, and it will tell him also a great deal about the present aspects and resources of that city.—*Outlook, New York.*

The Truth About the Philippines

JUST PUBLISHED

The Hon. DEAN C. WORCESTER'S New Book

THE PHILIPPINES PAST AND PRESENT

By DEAN C. WORCESTER

Secretary of the Interior, Philippine Insular Government, 1901-1913. Author of "The Philippine Islands and Their People," etc.

This new book may be justly described as the only really valuable, up-to-date and authoritative work on the Philippine Islands.

It is a work that everyone interested in our insular possessions and in the future of our Nation should read, especially as the new administration just appointed has once more brought up sharply the whole question of our policy with regard to the Philippines.

To bring home to the American people the truth as to the situation in the Philippines, is the primary object of the Hon. Dean C. Worcester's new book on our South Pacific Archipelago, and this work will answer more questions on the subject than any other.

The New York *Evening Post* says:

> "Timeliness in a double sense adheres to Dean C. Worcester's 'The Philippines.' The question of the Philippines is undoubtedly one which the Wilson Administration will be concerned with when the more pressing problems of domestic legislation and foreign policy are disposed of. About the person of Dean C. Worcester, who is now on the lecture platform in this country, lively controversy has arisen, Mr. Worcester being at the present moment a most active advocate of the retention of the *status quo* in the Philippines. His knowledge of the Philippines goes back more than twenty-five years, to 1887, when he was a member of a scientific expedition to the islands. He made a second visit in 1890. From 1899 to 1901 he was a member of the Philippine Commission, and from 1901 to 1913 was Secretary of the Interior to the Insular Government. In 1899 he published 'The Philippine Islands and Their People.'"

This, a record of personal observation and experience, with a short summary of the more important facts in the history of the archipelago, has ever since been the acknowledged standard work of information concerning the Islands.

In Mr. Worcester's valuable new work, past and present conditions are minutely reviewed with regard for strict accuracy of statement. The author's position giving him free access to all the government records, much of the information thus made available has never been before made public. With practically unlimited material on which to draw in the way of illustrations, very fine and rare photographs intimately related with the text emphasize the lessons which they are respectively intended to teach.

The result is a work of the greatest importance as well as of the greatest interest to all concerned as to the future possibilities of the Philippines and as to the course the United States Government should pursue in the interest of the several peoples of the Islands.

COMPLEX HYPERBOLIC AND CIRCULAR FUNCTIONS

VOL. II, CHART ATLAS.

By ARTHUR EDWIN KENNELLY, S.D., A.M., Professor of Electrical Engineering in Harvard University.

20x20 in. Cloth. 52 pages. $4.00 net

(Vol. I, Tables, will be published in March. 8vo. Cloth. 200 pages. $3.00)

Extended tables of complex hyperbolic functions have been greatly needed for immediate application to alternating current conducting lines, as employed in electrical engineering. Slight and well-known transformations will make them also available for mathematicians and physicists evaluating complex circular functions.

HARVARD UNIVERSITY PRESS
CAMBRIDGE MASSACHUSETTS

NOW READY

GREAT JURISTS OF THE WORLD

From PAPINIAN to VON IHERING

BY VARIOUS AUTHORS

With 20 portraits. Edited by EDWARD MANSON, Co-editor of the Journal of the Society of Comparative Legislation, and with Introductions by SIR JOHN MACDONNELL, Professor of Comparative Law in University College, London, and by VAN VECHTEN VEEDER, Judge of the United States District Court, New York. 8vo. *Cloth*, $5.00 *net*.

The aim of this volume in the Continental Legal History Series is to set forth the life, work, methods, and influence of the great jurists who have had more than a merely national importance in the development of European Law. This work is a sort of Plutarch's Lives for the History of Continental Law. Papinian, Alciat, Bartolus, Vico, Bacon, Leibnitz, Selden, Montesquieu, Cujas, Vattel, Savigny Bentham, Beccaria, Von Ihering, Mittermaier,—these and a few other names stand out as landmarks for all European Law.

Trans-Atlantic Historical Solidarity

Four Lectures delivered before the University of Oxford in Easter and Trinity Terms, 1913, by CHARLES FRANCIS ADAMS. Cloth, 8vo, $1.75

"It is a fascinating story as Mr. Adams treats it. . . . His analysis of the conditions which finally determined the sway of State sovereignty in the South and of national sovereignty in the North is keen, candid and convincing. . . . His examination of Lee's achievements and defects as a commander is acute and of intense interest."—*New York Times.*

As a weekly review of Literature, Science, Art and Politics, it reaches the scholar, the student, the thinker and the professional man, as well as the homes of people of intelligence; all book readers and book buyers.

Unpopular Government in the United States

By ALBERT M. KALES

This volume by a prominent member of the Chicago bar is an especially timely book, presenting with great clearness and cogency some of the political needs of the country, particularly the necessity of the short ballot. The author points out that the establishment in the United States of state and municipal governments, according to the plan of splitting up the power of government among many separate offices and requiring the widest and most frequent use of the elective principle, has cast so great a burden upon the electorate that an intelligent citizen is reduced to a state of political ignorance inconsistent with self-government. This situation has made it possible for a well-organized hierarchy to acquire the real power of government and to retain it, in the face of popular disapproval, for selfish ends. He discusses various expedients for restoring the American ideal of democracy and considers constructive proposals like the commission form of government for smaller cities, and the application of the principles underlying this form to larger cities and the state, and to the selection of judges.

REISSUES OF IMPORTANT NOVELS

THE WAY OF ALL FLESH
By SAMUEL BUTLER
A novel which such men as Arnold Bennett and George Bernard Shaw rate as "one of the great novels of the world." It is interesting too for what it reveals of the character of the famous author of "Erewhon."
Cloth, net $1.50.

THE GREEN GRAVES OF BALGOWRIE
By JANE H. FINDLATER
Cloth, net $1.35.

OVER THE HILLS
By MARY W. FINDLATER
Cloth, net $1.35.
Intensely vivid pictures of Scotch life and character, with an undercurrent of keen Scotch wit, and that singular charm of spirit which distinguishes the work of the authors of "Crossriggs," etc.

A NEW NOVEL BY **TICKNER EDWARDES**
HONEY-STAR
An interesting story set against the fragrant background of an English bee-keeping countryside. By the author of "The Lore of the Honey-Bee."
Cloth, net $1.35.

NEW VOLUMES OF THE WISDOM OF THE EAST

BUDDHIST SCRIPTURES
A selection from the Pali.
By E. J. THOMAS *Net 70c.*

THE DIWAN OF ZEB-UN-NISSA
From the Persian. *Net 70c.*

ABU'L-ALA THE SYRIAN
By HENRY BAERLEIN

Carriage extra, by mail, 5 cents per volume.

A HISTORY OF RUSSIA By V. O. Kluchevsky
Professor in the University of Moscow. Vol. III. Just ready, net $2.50
The Set of Three Volumes. Now complete, net $7.50
The final volume of the only History of Russia which gives any complete and rounded view of each period surveyed. Fearless in his criticisms, as well as independent in his methods, the author discusses the economic, legal, and religious institutions of ancient and modern Russia as well as its political history.

THE RECONSTRUCTION OF THE NEW COLONIES UNDER LORD MILNER, 1902-1905 By W. Basil Worsfold
In two volumes, with a map. Demy 8vo, net $7.50
An adequate account of the exceedingly important administrative work done in political and economic reconstruction of the former Boer Republics. It is based on much unpublished material, and is a record of the solving of problems common to all colonies in which any work of reconstruction is necessary.

THE PRESS GANG AFLOAT AND ASHORE By J. R. Hutchinson
Illustrated from rare prints, etc. Cloth, 8vo, net $3.00
Interesting from very different aspects. It is a lively history of a system of obtaining men for the navy which was certainly the grossest imposition to which a free people ever submitted. It was a large factor in bringing about the War of 1812. From another point of view it is the story of a running fight between the growing power of Trade, claiming exemptions, and the Admiralty seeking men. A vivid and racy book.

A PEPYS OF MOGUL INDIA, 1653-1708
A popular abridged edition of the "Storia do Mogor," by Niccolao Manucci. Translated by William Irvine. Edited by Margaret Irvine. With frontispiece. Demy 8vo, net $3.50
A naïve and entertaining narrative of what the great Venetian adventurer saw and said and did, and his intimate observations of the life of the Moguls such as few Europeans were able to make.

THE ROMANCE OF NAMES By Ernest Weekley
Author of "The Romance of Words." Cloth, 12mo, net $1.25
Full of bits of the curious and often romantic history to be discovered by searching into the origin of surnames.

RELIGIOUS ART IN FRANCE, XIII CENTURY By Emile Male
Translated by Dora Nussey, with 189 illustrations. Royal 4to, net $6.00
The aim of this book—which was crowned by the Académie des Inscriptions et Belles-Lettres—is to read the riddle of mediæval art through mediæval literature. It is full of interest and significance, both for the student and for the traveller—especially the traveller in northern and central France.

EAT AND GROW THIN By Vance Thompson
An account of the famous "Mahdah Diet." Cloth, 12mo, net $1.00
A collection of menus and recipes specially designed for people who are trying to reduce their weight and their fat. It includes the famous "Mahdah Menus," hitherto unpublished, for which Americans are paying fifty-guinea fees to leading London and European fashionable dieticians, York Davis, Doyen, and others.

THE TRAGEDY OF EDUCATION By Edmond Holmes
Author of "What Is and What Might Be." Cr. 8vo, Cloth, net $1.00
An essay upon present methods, suggestions for remedying their defects, and an interesting study of the methods and ideals of the Montessori System of Education.

The Nation

NEW YORK, THURSDAY, FEBRUARY 12, 1914.

The Week

The maximum strength developed by the supporters of the Burnett-Dillingham Immigration bill, which was passed by the House last week, fell short of the two-thirds necessary to pass the bill over a Presidential veto. The bill was passed by 241 votes to 126, but Representative Goldfogle's motion to recommit the bill and strike out the literacy test rallied 140 votes against 239. Assuming that this latter vote represents the temper of the House on the specific issue of a literacy test, it is plain that a veto by Mr. Wilson could not be overriden in the House. A transfer of five votes from the minority to the majority last February would have put the bill on the statute-book in spite of Mr. Taft. It would need a change of fourteen votes from the present showing to pass the bill over Mr. Wilson's head—not a very wide margin, but wide enough, if one considers how bitterly fought the issue and tightly drawn the lines. Hence it is more than ever the duty of the President to make his opposition to the bill effective.

"No merger" is the answer of the Maine Progressives to the suggestion that they join with the Republicans. No other answer was possible in the presence of the eminent anti-mergerist, Mr. Perkins, whose record in such matters is part of his country's proudest history. The temptation to unite with their former associates was rejected the more easily because of the assurance that the National Committee would send both money and men into the State to assist in the fight. Party loyalty and the natural human inclination not to allow anything to go to waste unnecessarily thus combined to insure the continuance of Democratic success in the State of Reed and Dingley. A stranger to our politics might suppose that it was the Democratic National Committee that was promising sinews of war to one wing of a divided foe, but this would be to apply logic to politics too thoroughly. Think of the glory of the Maine Progressives in defeating, not one party merely, but two; and if worst comes to worst, there is always the certainty of a moral victory.

It is difficult to believe that William Allen White and the Emporia *Gazette* take Armageddon as seriously as they ought. Just because that newspaper, long the only Republican paper in its county, by turning Progressive has left "hundreds of sincere and worthy men and women without a party organ," it will, during the coming campaign, "print, without charge, as news, the Republican ticket two or three times a week." Republican announcements will be accepted at the usual rates, but Democratic announcements, as heretofore, will not be accepted at any rates, "as the Democrats have their own paper." More:

> Mr. Mason, who contributes a column in the paper, is free to support the Republican ticket and the Republican candidates, if he chooses to, and during the months of September and October the Republican State and county committees may have a column in the *Gazette*, without price, to edit as they please.

Speaking for an Absent One, we desire to know why a Progressive newspaper should give any space to Republican lies when from the very beginning of the Progressive movement the columns of all of the important newspapers have been closed to it, under orders from Wall Street.

A short-ballot measure for New York State elections has been introduced in the Senate by Mr. Murtaugh and in the Assembly by Mr. Stoddard. It proposes an amendment of the Constitution providing that the Secretary of State, the Attorney-General, the Treasurer, the Controller, and the State Engineer shall be appointed by the Governor, these appointments not to be subject to confirmation by the Senate. They are to be removable at the pleasure of the Governor without limitation, except that in the case of the Controller a statement of the reasons for the removal must be given to the incumbent. If this amendment should be adopted, the only offices appearing on the general State ballot would be those of Governor, Lieutenant-Governor, and judges. The sentiment in favor of the short ballot is strong and general, and we believe that opposition to it is very slight among the members of any party, exclusive of those who are "in politics." It is difficult to point to any public end that is served by the election of the heads of the State departments that would not be better served, or at least equally served, by their appointment by the Governor. The further shortening of the State ballot by the elimination of the judgeships—either through making them appointive or through holding judicial elections at a different time—would add greatly to the benefit sought by this proposal.

Necessity is the mother of scientific financing. Of this fact, New Jersey is the latest exemplar. With expenditures outrunning receipts, her legislators are now forced to consider the problem of the State's finances from the point of view not of political advantage merely, but rather of financial sanity. If a direct tax were not so fearsome a thing, nothing, apparently, would stand in the way of voting money without reference to revenue. But elections may turn on the imposition or the increase of a direct tax, and so there is nothing for it but to resort to downright study of the balance sheet. This is very dull compared with the careless acceptance of whatever estimates the State departments happen to submit, but it is a necessity in more States than New Jersey. What a well-regulated Government might be expected to do instinctively we are thus forced to do by the woful condition of our State finances. Some savings will doubtless be made in New Jersey as a result of close examination of the existing budget, but they will almost certainly go only a small part of the way towards turning a deficit into a surplus. The Legislature will have to face the hard alternative of not attempting so much or finding the money to pay for whatever is attempted.

Secretary Rex has compiled a table showing the expenditures by American cities of 30,000 or more population for municipal market facilities. Of the 193 cities of this size, 14 reported expenditures of more than $10,000 each in 1911; 50 spent between $1,000 and $10,000; 45 expended less than $1,000 each.

This has to do with Chicago's municipal-markets commission. A represen-

tative of South Water Street itself testified that the business done there, of $250,000,000 a year, is "wasteful, uneconomic, and unsanitary." Small disbursements for retail markets are in general profitless unless preceded by a building-up of wholesale terminal markets. The Chicago commission believes that the first step is the establishment of such a central wholesale market. The City Club committee of New York, which studied the local problem in 1912, similarly reported that the retail markets were conducted at a loss, and that "the institution of properly located wholesale markets . . . would seem to be the policy for the future." No American city has yet organized markets that compare with the better ones of Europe. The Halles Centrales of Paris cost about $10,000,000, and the Berlin system $7,000,000.

The political outlook in Pennsylvania is more interesting than any that has been presented in that State for several decades. The announcement that Representative A. Mitchell Palmer is a candidate for the Democratic nomination for the Senatorship, with the backing of President Wilson, at once gives the situation national importance. It is half a century since the country has thought of the possibility of any such representation of Pennsylvania in the United States Senate. Not only has the State been sure to send to that body hidebound protectionists, but the Senatorships have been regarded almost absolutely at the disposal of the Republican machine built up and controlled by the Camerons and Quay. Mr. Palmer represents the opposite of all this; and the significance of his candidacy is accentuated by the statement, which he makes in announcing it, that, as he understands, "Vance C. McCormick, of Harrisburg, who from the beginning has been a leader in our movement in Pennsylvania, will be a candidate for Governor." With the Progressives in the field to divide the Republican vote, and with Gifford Pinchot as their probable candidate for Senator, the prospect of Palmer's succeeding Penrose is distinctly encouraging. This result would be justly acclaimed as a big showing for the direct election of United States Senators at one of its first important tests since the adoption of the Seventeenth Amendment.

Southern Senators who have always been loud in asserting their interest in wedding the negro to the soil now neatly contradict themselves in connection with the Lever bill. Its purpose is to further agricultural education by granting $480,000 immediately, $3,000,000 ultimately, for "coöperative extension work" between the State agricultural colleges and the Department of Agriculture. One would think that Senators Smith and Vardaman would leap at an opportunity to train the negro for farm work, and thus keep him out of other occupations. Instead, they are fighting tooth and nail for a provision that appropriations made to each State "shall be administered by such college or colleges as such State may direct"; with the avowed object of permitting Southern Legislatures to cut off every cent from institutions for negroes. To the amendment of Senator Jones, guaranteeing to colleges for the colored their share, the Senators retort with their threadbare argument that the negro can never amount to anything except by white guidance, and must therefore receive all his money through the whites. What has become of all their protestations that the negro's place is on the farm?

That "there are 2,273,603 illiterate males of twenty-one years of age and over in the United States" is a statistical fact, and it is a fact of importance. What ought to be done about it is a question worthy of attention. But the additional statement, made in the report of the House Committee on Education, that this number is "enough to determine any national election at any period of our history" is childish nonsense. It would perhaps not be worth commenting on were it not an example of a vicious custom, extremely common among reformers of all sorts in our time, of blowing great bubbles of imaginary evil out of the figures relating to whatever thing the particular reformer is interested in. The evil of illiteracy is what it is; why try to make of it what it is not?

As to the figures themselves, however, it is to be noted, in the first place, that of the 2,273,000 illiterate adult males, only 617,000 are native whites—including both those of native parentage and those of foreign or mixed parentage. The negro illiterates, 819,000 in number, are, of course, almost entirely included among the inhabitants of the Southern States in which the negro vote is powerless to affect the result; and, what is a more cheerful thing to point to, that number for 1910 stands against 976,000 for 1900—a *decrease* of 157,000 in the number of *illiterates* among the negro male adult population, while the *total* of that population shows an *increase* of 398,000. The process of improvement is not as rapid as it should be, but it is going on. As for the foreign-born adult males, the total number of illiterates among them is 788,000; and in view of the fact that about this amount of net immigration takes place every year, that it takes five years for an immigrant to be naturalized, and that many never get naturalized at all, it is safe to say that only a small fraction of this 788,000 are voters. But a most interesting point remains, concerning the natives of foreign or mixed parentage. These (we are speaking of the adult males all along) number in all 4,500,000; and among this great multitude only 60,000 are illiterate. The proportion of illiteracy in the second generation of our immigrants was thus, according to the Census of 1910, only 1.3 per cent., as against 4.2 per cent. among native whites of native parentage; and as against 2.0 per cent. shown for that same second generation in the Census of 1900.

We confess to being deeply disappointed with Mr. Henry Ford, of Detroit. In response to a telegraphed invitation from a member of the State Executive Committee of the Progressive party asking him to accept the party's nomination for Governor, he has said no—it being obviously proper for a party so emphatically devoted to the rights of the people to offer the Governorship by telegraph through a member of the State Executive Committee. We are disappointed with Mr. Ford, because in so refusing he has written himself down as inconsistent. Initiator of the most far-reaching scheme of profit-sharing on record, Mr. Ford has refused to join hands with the greatest profit-sharing political party on record. Right from the start the Progressive party has shown its readiness to embrace every popular individual in the vicinity, and to share the profits of his popularity with him. To be prominently in the public eye, to evince the promise of great strength at the polls, has been accepted as proof

that a man was born to be a Bull Moose. For Mr. Ford to refuse to share the profits of the huge advertising he has recently enjoyed is, as we have said, inconsistent.

Could the flabbiest of mollycoddles have spoken out so sharply against the excesses of athleticism in the colleges as Mr. Courtney, of Cornell, did the other day? In speeches before Cornell alumni associations in the West, the greatest of American rowing experts, the field-marshal of countless victories, has explicitly declared that the legitimate work of the university is suffering from too much athletics. Too many men on probation are on the football team, the track team, and even the crew. The strain of too many games and races is bad for the men. The extraordinary development of athletic finance and politics is bad for the morale of the university. The plea that the good athletes are the men who succeed in life will no longer hold. Business men were formerly glad to procure the services of college graduates who had distinguished themselves in athletics, but this is no longer the case. The heads of great manufacturing concerns would rather have men who attended to their class work. The reason, indicated by Mr. Courtney, but not put in so many words, is that probably the athlete of former days was an all-round man, whereas to-day he is an expert—and little else.

It is proposed to alter the name of the Ohio State University to the University of Ohio. The matter is highly complicated. In the first place, the name Ohio State University was chosen to distinguish the new institution from the older Ohio University at Athens. To change the name to the University of Ohio, it is objected, would obscure the distinction between the two universities in the public mind, and thus be a breach of courtesy towards the Athens institution. That is, there is a greater difference between the names Ohio University and Ohio State University than between Ohio University and the University of Ohio. Apparently, the authorities of Ohio Northern University and Ohio Wesleyan University are not particularly concerned with the proposal. The Legislature, or somebody, should do something to keep these various Ohio Universities from being confused with one another. The case is similar to that of the American Boy Scouts and the Boy Scouts of America.

Those who watch developments in journalism with something of a professional interest will keep their eyes on the experiment which the Philadelphia *Public Ledger* is making. At a time when there is so much hasty talk about the need of making newspapers cheaper and commoner, the *Ledger*, under its new management, has boldly struck out in the opposite direction. It began by abandoning its Sunday "comic"—that feature of American journalism which is so utterly incomprehensible to intelligent foreigners. The *Ledger* also raised its price to two cents, and set about giving the money's worth. It prints more news than any one-cent paper can, and looks carefully after its quality. Its advertising rules have been revised with a view to correct standards invariably maintained. In a word, the *Ledger*, instead of flinging itself upon the love of sensation and vulgarity, has made its appeal to intelligent readers.

We claim that the repressive method has been tried and tried unsuccessfully for over a dozen centuries, and has succeeded only in making this subject [sex] —a subject full of deepest beauty and truth—a matter of shame, secrecy, uncleanness, and dirty jokes.

Thus one ardent defender of the new sociology. It is a confession of faith which invites much speculation, but for the moment one point will suffice. Where do the new sociologists get the anthropologico-statistico-historical information which they bring forward so easily for our confounding? Just how did the writer in question determine that it was a dozen centuries ago that the suppression of sex discussion began? How is it to be reconciled with the other equally authoritative and familiar statement that the suppression of sex and sex-frankness began about ten thousand years ago when the "matriarchate" went to pieces, and male dominance took its place? Did Puritanism begin twelve centuries ago? Was Fielding suppressed in the eighteenth century? Amazing! Here are the Frazers, the Leckys, the Havelock Ellises, who spend a lifetime in formulating the merest timid approximations to the history of human institutions, and along comes Vassar, '08, or Columbia, '11, and has no difficulty in asserting that in 776 A. D. the sex taboo fell upon Europe, and in 1649 the pall of Puritanism settled over England. Where do they get it all?

Mr. Balfour has been performing an extraordinary intellectual feat. It consisted in giving the Gifford Lectures at Glasgow University, in which he dealt with the most abstruse subjects of philosophy, metaphysics, and theology, without a manuscript. All that he had before him was some notes on the back of an envelope. Few men in the world could be so sure of thinking on their feet, or finding the right word, when treating of topics which demand the closest application of the mind. And it must also be remembered that Mr. Balfour was addressing a highly cultivated and critical audience. Its composition was humorously defined by a university poet, at the time when Max Müller delivered the first Gifford Lectures, thirty years ago, as follows:

. . . There were bookworms, lank and bilious,
There were sons of the Bill and the Brief and the Till,
All sleek and supercilious; . . .
Theologians wise, in such glossy ties,
That they shone like the face of Moses;
And elderly dames, of Progressive aims,
With spectacled Roman noses;
And Queen Margaret girls, their teeth like pearls,
And their cheeks as red as roses.

Now it is Sweden which suffers with a rush of militarism to the head. The reason—there is always a pressing reason for armaments—is found in Russia's military preparations in Finland. An amazing Power, this Russia. Eight years ago the world was sneering at the Colossus of the North with the feet of clay. To-day Russia is the trump card for the jingoes of almost half a dozen nations. Sweden is warned against Russia. Austria-Hungary has just been told that Russia has sworn never to rest until her flag floats over the Carpathians. Germany's great war-loan was largely conditioned by the supposed revival of Russia's military strength. Rumania will be urged to defend her recently acquired gains from Bulgaria against Russian resentment. In the Far East, China is arming against the Czar, and Japan naturally watches Russia with mistrust. In the meanwhile the Russian General Staff must be wishing that things within the Empire were only half as well as the jingoes across the border insist they are.

WILSON AND CONGRESS.

The President is about to make a new and severe test of his influence with Congress. He has let it be known that he is against the clause in the Panama Act exempting American coastwise vessels from Canal tolls, and will urge Congress to repeal it. But instead of addressing himself directly to Congress, he has given out a letter which he has written to Mr. Marbury, of Baltimore. It states his position unmistakably, and with a courage and moral elevation which command admiration. Not for him, he declares, is it to indulge in a haggling debate when the national honor is involved. If there is even a doubt that we are keeping our solemn promises, if our adherence to our pledged word is so much as debatable, then the case has already gone against us in the high court of honor. Having blundered, or been betrayed, into a false position, there is nothing to do but to retreat from it without quibbling, evasion, or delay. Let Secretary Knox, if he will, set up a pettifogging defence to Great Britain's charge that we were proceeding in violation of a treaty; let him call Sir Edward Grey's attention to the fact that no "actual injury" has yet been done, insist that the whole question is as yet "contingent," and gravely remind the English Secretary for Foreign Affairs of a forgotten maxim of "municipal law"; President Wilson will have none of these tricking facilities. He goes straight to the moral core of the whole matter.

Undoubtedly, there are difficulties to be met in Congress. A first obstacle to be got over is the Baltimore platform. It roundly declared: "We favor the exemption from tolls of American ships engaged in coastwise trade passing through the Panama Canal." A large and rational view of this declaration would be that it was inserted into the platform by three or four men, that it was never discussed by the Convention, probably not one delegate in fifty having even heard of it, and that it is absurd to suppose any such chance utterance to be binding on the party. We admit, however, that it will be difficult for Mr. Wilson, after some things he has said about the platform, to dispose of the matter in this way. In addition, he has to face the fact that a decisive majority in both Houses voted for the exemption clause. To induce Congress to reverse itself is harder than to persuade it to venture upon new legislation. Nevertheless, it is already evident that Mr. Wilson's direct and forcible appeal to the honor of the country is having its effect, and that without any prolonged fight Congress will repeal the clause granting exemption to American vessels.

It is obvious that this Panama tolls matter does not stand by itself. In the President's mind, it must be linked with the whole aspect of our foreign relations, at present, and particularly with the trouble and peril which threaten us in connection with Mexico. We do not know what Mr. Wilson said to the Congressmen on the foreign affairs committees whom he summoned to the White House a fortnight ago, but what he might well have said would be something like this: "Gentlemen, we are facing a delicate and even critical situation. To refrain from going into Mexico with arms in our hands, and at the same time to satisfy European Powers and Japan that their interests there are safe, is immensely difficult. We have to call upon all those nations to exercise great forbearance. Their patience and their good will we court and we need. Now, I put it to you whether, in these circumstances, we ought not to do everything in our power to display our good will to them. If any one of them says that we are not living up to a treaty with it, ought we not to look earnestly into the rights of the matter? If several of them say that we are pigeon-holing arbitration treaties which we asked them to negotiate, ought we not to brush the dust off those treaties and ratify them as soon as possible? If Japan is sensitive about any action in Congress against her citizens in this country, pending a new diplomatic arrangement covering the question of Japanese immigration, ought we not to refrain most carefully from any such action? The plain truth is that we are asking the Powers to act in concert with us about Mexico, and that it would be the height of folly not to remove every possible cause of friction with nations whose help we are seeking. As we cannot think of going ahead with a policy of isolation, the only thing for us is to show the greatest friendliness and fairness when we turn to acting in unison."

If the President makes his plea to Congress and the country in some such manner as this, there can be little doubt of the result. The Chicago *Inter Ocean*, not friendly to President Wilson, recently spoke of his "visible control over Congress," which it frankly said was "greater than that of any other President within living memory." It proceeded to give several reasons in explanation, such as the disappearance of once-powerful Democratic leaders in Congress, the number of new men there who feel that their political lives depend upon doing what Wilson desires, and so on. Some force must be conceded to this, but the true account must not omit to reckon with President Wilson's unusual qualities and with the directness and effectiveness of his methods. He is not afraid, on occasion, to go against powerful party leaders. Both Mr. Underwood and Senator O'Gorman are strongly for the Panama-tolls exemption, for instance. On some features of the currency bill, the President asserted himself in opposition to several Democratic "war-horses." He has succeeded, thus far, by going at the business in the most straightforward way, by quietly assuming that Congressmen are his "colleagues," and by bringing his powers of reason and persuasion to bear at the points, not of least resistance, but of greatest. It is because he has been thus inventive, while perfectly simple, as a President anxious to compass certain legislation, that he has been so fascinating a study to those who like to see how old government institutions can be made to start into fresh life and vigor in new hands.

FEDERAL POWER AND CHILD LABOR.

Congress has gone so far as to provide that no work for the United States Government, even on private contracts, shall require full-grown men to work more than eight hours a day. Unless some Constitutional question is involved, which we have not been able to discover, we do not see how Congress can refuse to provide at least as much protection for little children.

These remarks of the Secretary of the National Child Labor Committee refer to the bill, introduced at the instance of that committee last week, prohibiting the shipment in interstate commerce of goods produced by any establishment in which child labor—as defined in the bill—is employed. With the object aimed at in that bill, the elimination of child

labor, it is needless to say that the *Nation* is in hearty sympatby. But to hasten its accomplishment by such a straining of the Constitution as would be involved in this bill—in essence identical with the Beveridge bill of six or seven years ago—would be dangerous.

Mr. Lovejoy may be quite right in the opinion, indicated in the foregoing quotation, that such a law would not be declared unconstitutional by the Supreme Court. The power conferred on Congress by the Constitution "to regulate commerce with foreign nations and among the several States" is not limited by any words of that instrument. What limit, if any, the Supreme Court would regard as set by the whole spirit not only of the Constitution but of our entire polity as it has existed in fact from the foundation of the Union, we cannot pretend to predict. But the burden of maintaining the spirit of the Constitution, the spirit of our whole life as a nation, cannot justly, and cannot safely, be placed exclusively on the shoulders of the Supreme Court. In tbe largest way, this duty rests primarily on Congress and tbe President. And the issue brought up by this bill is one that concerns the largest way imaginable. Nobody pretends that the measure proposed has for its real object the regulation of interstate commerce; its real object is the regulation of the ways of life of the people of tbe several States. And the question before Congress is whether its power over the commerce among the States shall be used as a club to compel any reform of conditions within the States which a majority of Congress may deem desirable. The passage of tbis bill would be a precedent of almost boundless potency for the assertion, as occasion may present itself, of Federal authority over one department after another of the life of the people of the several States.

If experience showed that the end could he attained in no other way, it might be urged that the importance of tbe specific object outweighed the gravity of tbese general considerations, serious as they are. But no such plea can be maintained. It is true that in a number of States progress in the abolition of child labor has been slow. But in many of the States it has been very rapid; and in those which have remained backward as to legislation or administration or both, puhlic sentiment is evidently gaining force at such a rate as to insure the achievement of the purpose in a fairly near future. Nor are we required to rest on experience relating to this matter only. The closely related subject of workmen's compensation has had a history of the most significant character. State after State is adopting advanced measures for lifting from the working people the burden of distress due to industrial accidents. And the comprehensive body of laws adopted hy the State of New York for the general improvement of factory conditions, after only a year or two of agitation of tbe subject, bears eloquent witness to the possibilities of separate State action on this whole class of questions. The old cry that no State will act upon them because of the fear that other States may not do the same has lost almost all the force that once was ascribed to it.

The means necessary to the effective enforcement of a national child-labor law give added emphasis to the objection that lies against it. Its advocates complain of the inadequate enforcement of existing child-labor laws in some of the States, quite as much as the slowness of others in adopting such laws. In order to insure the enforcement of a national law, therefore, it would ohviously be necessary for Federal authorities to interfere, on an extensive scale, with a matter touching in an intimate way both the lives of individuals and the conduct of private business. Any one can see how far this would go towards breaking down our traditional ideas of the limitation of Federal power; how easy it would be to justify by the precedent any new invasion of the domain of local self-government. The figures of the national census show a rapid diminution in the percentage of child labor engaged in the country's industries. The Childen's Bureau was instituted by Congress less than two years ago, and its publicity work is sure powerfully to stimulate this movement throughout the nation. To rush into a measure of national compulsion in these circumstances would be, in our judgment, a deplorable error.

AMERICAN JUDGES AND THE AMERICAN TEMPER.

In this city two judges wero this week pronouncing sentence in two cases of unusual interest. In both cases, the guilt of the accused had heen established, to the full satisfaction of the court. Judge Thomas sentenced the brothers Littauer to six months' imprisonment for smuggling and conspiracy to defraud the Government; but he suspended the sentence, so that it becomes inoperative except as a personal humiliation. Justice Jaycox sentenced Cassidy, the boss of Queens, to eighteen months' imprisonment for the attempted sale of a judgeship, and declared that no lighter punishment could meet tbe requirements of justice. That the judge who did not flinch from the imposition of the penalty was right, and that the other judge's clemency was misplaced and regrettahle, is doubtless the general opinion, and it is emphatically ours. But tbe remarks addressed to the guilty men hy the judges in passing sentence have something in common which throws an instructive light on the general course of criminal justice in this country.

Judge Thomas castigated the Littauers severely, but felt that their public humiliation was sufficient punishment; Judge Jaycox sternly performed his duty as to the sentence, but felt that it was no more than fair to give Cassidy credit for courage in his career as a politician. And in all prohability it *was* no more than fair. It gave the judge a certain feeling of acting "on the square" with Cassidy; there was about it a human quality to which every American instinctively responds. We cannot find it in our heart to blame the judge for it. And yet in their own way these friendly and sympathetic words addressed to Cassidy hetray, as does in a different way tbe leniency shown to the Littauers, a weakness which, in one form or another, is continually manifested by American judges. It goes against their grain to maintain, in a case of which the "human side" has been in any way brought sharply home to them, that cold, inflexible, and impersonal attitude which is an essential element in the effective operation of the criminal law. Paradoxical as it may seem, it is largely owing to our very democracy that our courts are open, so much more frequently than those of less democratic countries, to the charge of heing respecters of persons. Inflexibly to set aside one's own impulse to be humane and considerate, when that impulse is inconsistent with the stern requirements of the judicial office, requires a constant and paramount sense of tbe elevation and isolation of that office; and this runs counter to our democratic habits of thought—indeed, it

runs counter to the national good nature which is closely related to our democratic habits of thought.

But in actual operation all this works out results the reverse of democratic. For it is quite out of the question to carry on the ordinary business of the criminal courts in any such spirit. In grinding out their daily grist of commonplace convictions and sentences, they act mechanically enough. It is only when there is some special appeal to the feelings that there is a chance to get the human sympathy of the man interposed between the criminal and the sternness of the judge. And this can be done a hundred times for the man of wealth, the man of good standing in society, the man with powerful or respectable friends, to once that it can be done for the poor and friendless violator of the law. The feeling that has grown up, with only too much basis, that there is one law for the rich and another for the poor, owes its origin in the main not to corruption, not to legal chicanery, not even to any class partiality, but to the accessibility of our judges to the effective human appeal of any individual case. This being impossible in the common run of cases, we have the spectacle of the noteless and humble ruthlessly condemned to suffer the full penalty of the law, while those who in one way or another stand out above the crowd have a chance for some form or other of mitigation in their punishment.

Unfavorable comparison of our criminal justice with that of other nations is no more familiar than is the like comparison in regard to our elementary and secondary education. It is constantly pointed out that our young people take a year or two longer than those of European countries to be prepared for university studies, and that when they do take up those studies their preparation is found to be less thorough. Now, whatever other causes may contribute to this, we feel sure that there is almost complete unanimity among competent authorities that the predominant cause is the lack of rigid discipline. And this is no accident. The severity of an exacting discipline at school, a discipline based on the idea that the claims of scholarship are paramount and that the business of the teacher is to assert them as an undeviating rule, is not congenial to the American temper. If teachers or school authorities were to attempt to enforce it, they would have not the support but the opposition of the typical American parent. When we really wish to have it, wish it from our hearts, we shall get it. And so, too, we shall get a firm and unsentimental administration of justice when we desire it from our hearts; we shall not get it so long as, in our hearts, we care more for the claims that the individual culprit may have on our forbearance or sympathy than for the stern demands of a justice that is really and truly no respecter of persons.

THE STORY OF A LEGISLATURE.

From San Francisco comes a volume giving an account of the California Legislature of last year, the session made nationally notable by the visit of Secretary Bryan in connection with the Asiatic exclusion legislation. The story as told is a long one, but readable and apparently fair. It is written by Mr. Franklin Hichborn, the correspondent of the Sacramento *Bee*, and is the third such publication he has put out. His previous volumes are credited with having been read by every newspaper editor and every candidate for the Legislature, and with having had much to do with recent political developments in California. The session of last year attracted wide attention. It was the first Legislature in regular session under the initiative, referendum, and recall, under the legislative recess arrangement, and chosen at an election in which women participated. No act could become a law until ninety days after the Legislature had adjourned, and not then if the referendum was invoked against it; in that case, it had to await the verdict of a popular vote.

The Legislature was overwhelmingly Progressive. This fact, coupled with the fact that the preceding Legislature had been Progressive, too, and had thrown off the railway domination which had long prevailed, put the session of 1913 in a peculiarly favorable position for constructive work. The old engine had been relegated to the scrap-heap, and The People—Mr. Hichborn always capitalizes the words—had only to open the throttle of the new one. But difficulties confronted the majority at the very beginning. A proposal was made for a non-partisan caucus to decide upon the officers of each house. Objection was made, however, that such a joint caucus was unprecedented; it was almost equally hard to arrange a caucus in which party Progressives and progressive Republicans could all participate. But why, with a large Progressive majority, bother about Republicans of any sort? Well the "logical candidate" for President pro tem. of the Senate was a hold-over Republican who could not see his way clear to entering a purely Progressive caucus. In the end, however, good officers were chosen, including the "logical candidate" for President pro tem. But the distribution of patronage was not affected by the new political ideals. It "was conducted upon the same vicious system of division among members as had ruled during the days of 'machine' domination."

Nor can a favorable verdict be passed upon the subsequent proceedings of the Legislature. As Mr. Hichborn confesses: "For the first time in the political history of California, the Legislature was put to the test of constructive work. It was found unequal to the task." The most conspicuous cause of this failure, we are told, was the lobby. What! one exclaims, a lobby in California? What was the recess for if not to give The People opportunity to say what they liked and what they did not like among the bills that had been introduced? This was the idea; moreover, "the Legislature had acted in accordance with the spirit of the new provision" by not passing many bills before the recess. It also provided for distribution of the bills throughout the State, each member being permitted to send full sets to as many as ten constituents. Thus "the Legislature had done its part. It remained for The People of California to do theirs." But consider what this meant. There were 5,738 bills and 149 constitutional amendments pending. One newspaper divided these into 227 sections, and published a synopsis of each bill and a complete index. Another devoted two columns a day to them, but managed by this method to deal with less than one-seventh of the total number. The upshot was that one or two measures especially brought to the public attention were aided by the recess. On the other hand, even the weapon of the recess was seized upon by favor-seeking persons to advance their interests, and The People were either puzzled or deluded by some of them! Yet Gov. Johnson and the Pro-

gressives were in absolute control. One thing is evident: there is no short and easy path to political perfection, and it is time that root-and-branch reformers ceased to cajole The People into thinking that there is.

PARLIAMENTARY BORES.

A member of the House of Commons was one of the speakers the other evening at a dinner of the Authors' Club in London. For years, he said, he had watched with fascinated interest a group in the House that provided a goodly quantity of material for sketch-writers; he meant the Parliamentary bores. They consisted, he explained, of three classes. There was the unconscious bore, a pathetic type of man, who thought that he was giving pleasure, and so went on in order to give more. Then there was the semi-conscious bore, almost but not quite pathetic, a man with lucid intervals during which it occurred to him that he was not altogether a success; he went on in order to achieve that only half-won success. Finally, there was the open, avowed, brutal bore, who knew what he was doing and gloried in it. He always "went on." Besides these out-and-out bores was the expert, not necessarily a bore, but often falling into that class. For instance, the educational expert. How numerous this group of bores has sometimes been thought to be was illustrated by a remark made to the speaker when he first went into the press gallery. Finding there a veteran of forty years' service in reporting what took place on the floor below, the newcomer spoke of what a bore it was when men made such long speeches. The philosophical reply was: "My dear fellow, what does it matter? If one fool is not talking, another one will be."

Would it be treason to wonder whether, along with more important things, we have inherited from the mother of Parliaments the tendency to have statesmen

> Who think too little, and who talk too much?

One recalls the immortal figure of the Representative from Buncombe County, who frankly confessed that his flow of words served no public end. Arizona was the proud sponsor of another such orator not many days ago, when Senator Ashurst was under the painful necessity of actually preventing a vote upon a measure which he is desirous of bringing to a vote, owing to the fact that he had a three hours' speech in his system which he had to get out. The Senate rules are careful to provide that, in a contingency of this sort, the vote must not be taken until the speech has been delivered, since it is better that ninety-nine measures should be talked about than that one should come to a vote. It was all very well for Byron to write:

> His speech was a fine sample, on the whole,
> Of rhetoric, which the learn'd call "rigmarole."

But where has freedom flourished without a vast deal of rigmarole?

Indeed, if mere survival is anything, the Parliamentary bore is justified. Every legislative body has tried to suppress him. And it has done this by more than formal resolution. Formal resolution may be adequate for such matters as declaring war and making peace, but no one knows better than a Congressman that, for the really disturbing things of life, more drastic action is required. This drastic action has been taken. The rising of the bore to address the chair has been made the signal for general withdrawal on the part of his audience. Has this affected the man with a speech tearing at his vitals? Quite the contrary? Deprived of the ears of his contemporaries, he addresses those of posterity, and as a consequence probably lengthens out his remarks further than was his original intention. It is occurrences like this that show how completely we are under the control of convention. Otherwise, would not every Parliament have a rule that A might speak whenever and as long as he pleased, but that B could have the floor for only five minutes every other Monday? There is a slight approach to this ideal in the practice of our House of Representatives in extending the time of a member who is pleasing it, but how often this means merely amusing it! One result of this custom is to drive the bores to seek election to the Senate.

We should not let our prejudice against Parliamentary bores carry us too far, however. The peril in the situation is seen when it is asked who shall be the judge of the facts in the case. A man who shakes his fist at the backs of his retreating colleagues and thunders after them that their seats may be vacant permanently because they refuse to heed his words, is likely to be the biggest bore of all, yet he may turn out to know what he is talking about. In this instance, the country decided that La Follette's enemies were the bores, or at all events the greater bores. Then it must be recognized that one man's bore is another man's delight. There are people who are actually thrilled when a man in a frock coat extends a long arm into the air and gives vent to his convictions on the subject of what William Sulzer is and is to be. The discouraging thing is that the method we are told to follow with reference to other ills is inapplicable to this one. What can't be cured, we are admonished, must be endured. But endurance is the very thing that the Parliamentary bore craves and, alas, usually gets.

THE TILDEN CENTENARY.

Commemoration of the hundredth anniversary of the birth of Samuel J. Tilden is not due to any fond cherishing of his personal qualities. He was not a man of fascinating gifts. It was not within his power to bind great numbers of men to him in warm and devoted friendship. His was a cold nature. Nor can it be said that a fame which has mounted since his death, or the discovery of unsuspected virtues in him through the publication of letters and other documents, has heightened admiration for the man himself and led to the celebration of his centenary. Tilden was in no way ennobled or made to seem an ideal figure by what was put in print about him after he was gone by even so sworn and loyal a friend as John Bigelow. In his "Recollections" Mr. Bigelow does not attempt to conceal the somewhat disappointing impression that Tilden made upon him after the loss of the Presidency. There are, indeed, many discounts to be made in the total estimate of Tilden's title to long remembrance. But frank mention of them does not, after all, alter the fact that he played a great and worthy part in our history, and that he deserves to be recalled and praised for what he wrought.

It was his rare good fortune to associate his name as leader with a period of political re-birth. To-day it is hard for any one whose memory does not go back vividly to the years 1872-1874 to realize the atmosphere then enveloping American politics. It was a sordid time. Public life had seemed to go not only

stale but corrupt. What befell the Republican party, drunk with power, one needs only to turn back to the famous speech in the House of that good Republican, George F. Hoar, to understand. His arraignment of his own party for corrupt tendencies is good historical evidence, on Voltaire's theory that we are safe in believing the evil which public men assert, not of their opponents but of their associates. It is certain, at all events, that a great many Americans were depressed and almost despairing in the face of political conditions in those years. Lowell's poem on Agassiz dates from 1874, and he wrote in Florence of the "festering news" which came from the United States

> —public scandal, private fraud,
> Crime flaunting scot-free while the mob applaud,
> Office made vile to bribe unworthiness.

Now it was at such a time that Samuel Tilden gave promise of a better day. By his great services in the uncovering of Tweed's rascalities, by his determined and successful fight upon the Canal Ring—made up, as it was, of thieves of both parties—he made himself a national protagonist of reform. In his attitude and in his ability, people saw a new hope. And the rising to him was remarkable. It was, to many puzzled Republicans, like the breaking up of the fountains of the great deep. They saw their sons turning eager glances towards Tilden. In the colleges there was a great stir. The hearts of young men burned within them as they read the speeches and the powerfully written messages of the reforming Governor of New York, saw him attack one abuse and fraud after another, and make himself the inevitable leader of his party in the nation. A new spirit was abroad in the land. It was, as we have said, a time of political renaissance; and for the energy which he, more than any other, imparted to it, for the impetus which he gave to others, for the high hopes which he roused and, in part at least, fulfilled, Samuel J. Tilden is rightly held in undying remembrance.

This was his chief title to fame. He was able, however, to impress himself in many other ways upon his generation. It is needless to dwell upon these now. His skill in the law, his consummate ability as a political organizer, the literary power, combined with political courage, which he exhibited, for example, in his letter of acceptance—all these things are of record. But the main reason why we pause at the hundredth year since Tilden was born is that it was given to him to energize the reforming spirit in American politics, and to do it at a period when conditions were at their worst and the outlook seemed peculiarly gloomy. Out of him went a virtue which in the lapsing years gave us other men to take bosses by the throat—a Cleveland, a Hughes, a Wilson. Reason enough, then, for marking with a white stone the Tilden centenary.

FRANCO-AMERICANA.

PARIS, January 31.

The first volume of a fifth edition, completely revised and copiously annotated, of the "Histoire du Canada" (Alcan; 665 pages, large 8vo, 10 francs), by François Xavier Garneau, is virtually a new book; and it keeps its peculiar interest as a French-Canadian classic amid the clash of French and American historians. The author's grandson, Prof. Hector Garneau, of Montreal, has supplied the work with an Introduction, giving a needed account of its writing seventy years ago; constant notes and bracketed additions to the text, bringing it up to the present state of research; and 212 Appendices, forming a storehouse of documentary, bibliographical, and controversial information. For the history of Canada was matter of controversy even in the making, an inevitable consequence of the colonization from the start. This is recognized in the preface to the present volume by M. Hanotaux, of the French Academy: "A double ideal drew to unknown North America explorers and missionaries."

Colonial functionaries and traders on the one hand bore uneasily the restraint of the persisting missionary ideal on the other. In New England, the religious ideal held sway as completely and longer; but the missionary element was wanting. In his first edition, Garneau remarked: "The United States owe their greatness, in part, to the Bible's privilege of fanaticising, so to speak, the spirit of the nation for the things of the earth, even more than for those of heaven"; and he cites the example of the Jews (p. 192). More significant still in the varying evolution of the French and English colonies was the fact that New England virtually governed itself from the beginning, whereas Canada, to the end of French domination, was regulated in each detail of its civil life from the King's Court across the seas. "When I wish to judge the spirit of the administration of Louis XIV and its vices, I have to go to Canada," said Tocqueville ("L'Ancien Régime et la Révolution").

It is meet and also just that the new and influential Comité France-Amérique should choose this work of Garneau for its first publication. Parkman, in spite of many inherited prejudices and natural ignorance of foreigners of the past, has written a real history of the French in North America; but native French writers of to-day seem unable to understand the nature or merit or consequences of the work of Old France in Canada. In the chapter on French colonization written for Seignobos's "Histoire Moderne" by Prof. Albert Métin (Minister of Labor in the present French Government), a single short paragraph is given to "Catholic missionaries who came in behind traders and *seigneurs*"; by whose means "the Church became and remained the greatest seigniorial landowner of Canada"; who are responsible for "Catholics only being allowed to settle in Canada" (in M. H. Garneau's Appendix, page 574, Cromwell orders that no Catholics be allowed in Acadie, already settled by the French); who "worked for the Church, kept lay Europeans from their villages of converted Indians, and so entered into conflict with the Governor, who wished his authority to extend over all the establishments of French missionaries." Of the French missionaries in Canada as explorers, pioneers, martyrs, even of Marquette's share in the discovery of the Mississippi—of that least amount of the history of France in North America which, in the United States, every public-school boy is expected to know and to which Protestant Parkman has given volumes and Congress statues—French University students are told nothing. M. Hanotaux has reason to say: "The French will never study the history of Canada enough."

This history of Canada by Garneau, even with the new enlightening notes, will not satisfy all parties, though he was "faithful to the end to his Catholic faith and Liberal ideas." "He does not see men and things at the religious angle only [in fact, scarcely at all, but the new notes and appendices furnish material to allay much controversy]. . . . His history is properly the political and lay history of Canada. . . . He prefers to give his attention to the improvement and progress of the colony." With a single chapter for those missionary explorations to which Parkman gave his volumes, Garneau keeps closely to the permanent French settlements. There was a lack of original documents when he began his life-work. Before his death in 1866, many gaps had been filled, and he profited by this in this third edition. After twenty-five years of patient labor he had brought his book down to 1840. Thus he

came to his work when the French traditions of Canada were still living and strong.

The book holds a place which has not been filled by other historians; and it reaches further than mere colonial annals. In it, as in reality, world history and local story commingle. The present volume reaches to 1744, when the French colony of fewer than 50,000 souls was strong interiorly, but little supported by the mother country. The competent outsider, Munro, says: "The Canadian habitant was much better off than his prototype, the French censitaire"; moreover, under early English rule: "If anything, the habitant was worse off than he had been before the conquest" ("Seigniorial System in Canada").

"L'Amérique et le Rêve exotique dans la Littérature française au XVIIe et au XVIIIe siècle" (Hachette; 456 pages, 12mo, 3.50 francs) continues the interesting work which Prof. Gilbert Chinard, of the University of California, began with a previous volume on American "exotism" in French literature of the sixteenth century. A further volume on America in Chateaubriand's writings is promised. This is a new and it is a sensible point of view from which to estimate the influence of America in European thought. The book is a brilliant example of the method of historical inquiry, so favored by the French University of to-day. The author has had to seek out all that was written about America in the various centuries, and then, card-cataloguing endless *fiches*, to bring into rational order the ideas they suggest. The result depends on the assimilative and judicial power of the historian, as it did in the older methods, which could scarcely have been applied to the present matter. Professor Chinard has done his work well. It was worth doing, and it is an important acquisition both to American and French history:

In a former volume I tried to show how the first travel stories, with their naïve enthusiasm for the savages, their admiration for the simple free life of these New World tribes who lived without priest or law or king and, most of all, knew no difference between *meum* and *tuum*, seemed to foretell the most daring theories of Rousseau. It seemed to me worth while inquiring whether some of these ideas which, in the sixteenth century, had caused a veritable moral revolution and been summed up by Montaigne in his chapters "Cannibales" and "Coches," had disappeared during a long interval, only to show themselves once more with the *philosophes*. Even if they are not to be found in the great literature of the eighteenth century, it is still possible, thanks to the narrations of travellers and missionaries, to follow their development for more than a century, and reconstitute the links of the chain which binds Jean-Jacques Rousseau to Montaigne. . . . As a whole, this Americanist literature is very definitely anti-social. It could not be otherwise.

After a clear introduction, the first part of the book takes up the Isles and South America, particularly in the romance-writing of the seventeenth century. The second part follows New France from Jesuits and their adversaries to Fénelon. The third takes the eighteenth century to the coming of Rousseau; and the fourth reaches from that prophet of the new age to Bernardin de Saint-Pierre. There is an excellent chronological table of books published in this matter between 1598 and 1788. The author says far too modestly: "In the present state of science, this book could be neither complete nor final." It is competent for its object, and its value is permanent. S. D.

NEWS FOR BIBLIOPHILES.

In the *Athenæum* of July 29, 1876, appeared the second instalment of a series of "Notes on Shakespeare's names" by C. Elliott Browne. Among these was one on Lamound ("Hamlet," IV, vii, 93), the Norman whose horsemanship so impressed King Claudius. It reads:

Lamound, the name of the Parisian friend of Laertes, was thought by Malone to have been formed from La Mode, but it is not impossible that it may be an allusion to Pietro Monte (in a Gallicized form), the famous cavalier and swordsman, who is mentioned by Castiglione ("Il Cortegiano," b. I) as the instructor of Louis the Seventh's Master of Horse. In the English translation he is called "Peter Mount."

Now, one does not need to refer to the text of the "Cortegiano" or to the note on Pietro Monte in Cian's edition (Bk. I, sect. v, l. 20) to discover the blunder perpetrated here. Louis the Seventh reigned—most of us have to consult some book of reference to find out when. The Louis of Castiglione's day, the only Louis of the sixteenth century, as we know when we stop to think, was Louis the Twelfth. And the origin of the blunder seems to be equally clear. Mr. Browne probably sent in the name as "Louis XII"; the typesetter mistook the X for a V (X and V are easily confused in hasty manuscript); and the name appeared spelled out at length as "Louis the Seventh." Had the numeral been printed "VII," the slip would certainly have been discovered before long, for every careful worker is on his guard against misprints in numerals; but "Seventh" does not look as if it could be a mistake for any other number.

At this time Dr. Furness was seeing his Variorum "Hamlet" through the press. In the note on IV, vii, 93, he quotes the bulk of Browne's paragraph (including "Louis the Seventh") with the remark: "I regret that these valuable *Notes* on *Shakespeare's Names* reached me too late to be inserted in due place in the commentary under the first appearance of each character." Lamound, however, did arrive in time; for his first and only appearance in the play is towards the close. The haste with which he was thrust into the commentary is the cause, let us hope, of Dr. Furness's accepting "Louis the Seventh."

Once admitted to the respectable company of the Variorum, the blunder began to make its way. Nobody questioned its antecedents; because, for one thing, the reputation of Dr. Furness obviated suspicion; because, for another, nobody took very seriously the allusion to Pietro Monte. The name of the Norman cavalier ("Lamound" in the folio, "Lamord" in the quartos) was too uncertain for any one to spend time in considering a possible connection with "Peter Mount." So the note became a mere curiosity, to be used by successive editors when there was room for it; and "Louis the Seventh" escaped exposure.

To attempt a complete list of those who have helped to keep him in good society would be to break a butterfly upon a wheel. With the help of a friend, however, I have looked into all but two of the editions set down in the "Cambridge History of English Literature," and a few others of credit, such as the Tudor Shakespeare. Several of the editors omit all reference to Browne's idea, but the majority think it worth recording, always with the accompaniment of "Louis the Seventh." The majority are:

1878—W. J. Rolfe.
1890—Arthur Symons, Henry Irving Shakespeare.
1895—Israel Gollancz, Temple Shakespeare.
1895—E. K. Chambers, Arden Shakespeare (D. C. Heath).
1899—Edward Dowden, Arden Shakespeare (Methuen).
1899—C. H. Herford, Eversley Edition.
1903—Charlotte Porter, Helen A. Clarke, First Folio Edition.
1904—A. W. Verity, Student's Shakespeare (Cambridge Press). (Repeated in Pitt Press Shakespeare, 1911.)

Most of us, as boys, played the old game of follow-my-leader. Those of us who have edited classics will have had occasion more than once to join in a variety of it known to commentators. But it is surely not often that so many distinguished littérateurs and scholars may be observed careering along, one after another, into so obvious a mistake, on the heels of a misguided typesetter.

Correspondence

SOCIALIST POLITICS.

To the Editor of The Nation:

Sir: Recently protests from members of the Socialist party have appeared in the Socialist press against the order of the Central Committee of Local New York (Manhattan) Socialist party, forbidding the branches of the local from selling or distributing the *New Review* at public or propagandist meetings. The *New Review* is the most scholarly and perhaps the ablest Socialist magazine in the United States; among its contributors are some of the foremost Socialists in America and Europe. The reason why this publication was thus summarily blacklisted and boycotted was because its

editor, Mr. Herman Simpson (himself a member of the Socialist party) took occasion in a recent issue to publish an editorial over his signature calling attention to the extraordinarily large falling off in the dues-paying membership of the Socialist party throughout the United States.

After quoting from the *Party Builder* (published by the national office of the Socialist party, and, therefore, its official organ) that on June 28 last there were nearly 50,000 less members than a year previously, the *New Review* editorial went on:

> The statement struck us with amazement. We could not believe our own eyes. At last we concluded that the number given must be due to a printer's error. To be sure, no candid observer could have failed to perceive numerous sinister signs that there was something rotten in the State of Denmark. But a loss of 50,000 members, two-fifths of the entire number of organized Socialists at the end of March, 1912, seemed impossible, inconceivable. But our incredulity soon had to give way to indubitable certainty. The financial report of the national office for the month of June, 1913, shows receipts from dues amounting to $4,084.45, which is the exact equivalent, on the five cents per capita basis, of 80,961 members. The average membership for the first quarter of 1912 was given as 125,826, so that there was a loss of nearly 45 000 members in fifteen months. The printer made no error.
>
> The loss is appalling, but in actual fact it is even larger than is indicated by these figures. We know that from March to midsummer in 1912 the membership of the party kept on growing, although we do not have the figures on hand. An intensely fought Presidential campaign . . . must have brought tens of thousands of new members into the party organization. The actual loss of members during the past eight months is, therefore, not 50,000, but very probably 75,000, and possibly more. A loss of three-fifths of the membership of the Socialist party organization in so short a period is well calculated to rouse even the most indolent and lethargic among us to serious thought.

The *New Review* editorial then proceeded to discuss what seemed to be the reasons why so large a number of Socialists had left the Socialist party. It is not the purpose here to enter into any discussion of these impelling reasons, but simply to point out the action following the publication of that editorial. The politicians controlling the party were infuriated that a Socialist magazine should publish the facts of the tremendous loss of membership under their leadership; evidently what they especially feared was the dissemination of those facts broadcast, both in and out of the Socialist party. Local New York, controlled by the most powerful of those leaders, soon retaliated by the formal order of prohibition already referred to.

Thereupon the Board of Directors of the *New Review* Publishing Association formally protested against that order. "This board," the protest read in part, "regards the action of the Central Committee as a usurpation of authority, which, if permitted to stand, threatens to destroy within the party all freedom of speech and press and to suppress all honest and free discussion."

The boycotting and blacklisting order, however, is still in force; and any member violating it would soon find a series of charges, entailing suspension or expulsion, preferred against him.

I have here related the indisputable facts. One more fact is essential. The pretext upon which the Central Committee of Local New York passed this order was that if the facts were known, converts to Socialism would be discouraged from joining the party!

A Former Member.

WEST POINT AND ANNAPOLIS IN CIVIL SERVICE.

To the Editor of The Nation:

Sir: The United States Military Academy at West Point and the United States Naval Academy at Annapolis were established for the express purpose of preparing intelligent and industrious American lads for the military and naval services of our country. They have been successful in their mission, as has been shown by the wonderful achievements of their sons in both governmental and civic activities. They both give promise of a greater future. As the education and training acquired in these academies is exceedingly thorough and of extraordinarily high grade, there are scores of cadets in both academies who should in the future add to the honor and glory of both their country and their alma mater.

Notwithstanding all this honor and glory due to our Government academies, every thoughtful American ought to consider their real condition. Although, as stated above, they both give promise of bright futures in many ways, it cannot be denied that they also give promise of serious deficiency of service. This may sound paradoxical, but it is all too true. They not only give promise of such deficiency, but they are now, and for several years past have been, unable to render sufficient service to the nation. It is not the academies that are responsible for this, however—it is the fault of the appointing powers. There are but very few competent candidates appointed to the academies, and consequently there are not nearly enough cadets graduating from the academies to supply the constant needs of the army and navy. Statistics show us that admission is refused to about two-thirds of all the candidates for these academies because they are absolutely unfit mentally, or physically, or both. Most of those to whom admission is refused are rejected because they are so hopelessly unprepared mentally. It is true that the entrance examinations have been noted for their rigidity, but upon careful investigation we may find that they are no harder than an ordinary student who is preparing for a technical education should expect, and, to quote Col. H. L. Scott, ex-superintendent of West Point, "it has always been a source of regret to the West Point authorities that their entrance requirements have been kept so low, but it is recognized that they cannot well be otherwise. The class of candidates sent here, as to physical and moral characteristics, is in the hands of the appointing powers alone."

These "appointing powers" are the President of the United States and the Senators and the Representatives in Congress. We find that many of their appointees show a serious lack of education in the very elementary subjects. At a recent examination several candidates even showed unpardonable ignorance of the correct use of their own language. Some of their answers were written in such English as would be almost a deplorable disgrace to a fifth-grade grammar-school pupil. There are, nevertheless, as Gen. Barry, the former superintendent of West Point, states, "thousands of young men in the country well prepared in the required subjects, who would welcome an appointment to enter West Point." In consideration of this fact, Gen. Barry has earnestly urged that some efficient method might be employed that should cause the competent candidates to be separated from the incompetent before they are examined finally at West Point.

We may admit that strong evidence tends to show that the majority of the candidates who enter the academies come to their positions honestly, and that some of our Congressmen are successful in judging their appointees. It is also plainly evident that since about 66 per cent. of the candidates recommended fail to pass the examinations, there must be something radically wrong somewhere with the appointing powers. It is true that many Senators and Congressmen apparently select their candidates by competitive examinations. When there is a vacancy in his district, the Congressman notifies the public through the newspapers that any young man in the district within the proper age limits may present himself for examination at a designated time and place. The examinations are conducted by examiners authorized by the Congressman. The apparent system is to appoint the competitor who attains the highest rank. But since these examiners are selected by the Congressman himself, what is there to hinder the examiners from ranking the Congressman's favorite and most influential candidate in such a way as to insure him the appointment? There is abundant evidence that such schemes have been practiced again and again, the supposedly "competitive" examination serving to hoodwink the public.

Other Congressmen appoint their favorite candidates outright, without an examination of any kind. It may be that the Congressman has never seen his appointee, and perhaps he has never even heard of him, save through the would-be cadet's rich uncle, or some political demagogue with whom the young man's cousin's brother-in-law has a "pull." Again it should be stated that it would require a very unreasonably radical person to believe that such methods are successfully employed by all Congressmen, but is it not readily possible? An instance in a New Jersey district may be offered as a typical example. A certain young man, the son of an influential citizen, wished to procure an appointment to the Naval Academy at Annapolis. Unfortunately, however, his Congressman was of a different political faction from that of his father. After the lad had spent about three years in preparation for Annapolis, and after having virtually given up all hope of pro-

curing the appointment because of the lack of political "pull," the father was interviewed by one of the Congressman's faction workers. The latter informed the father that the Congressman's faction wanted his political influence, and promised him that his son would be appointed to Annapolis if he would but turn to the opposite faction. The father refused to accept the bribe, and thus disgrace himself. Consequently, his son did not receive the appointment, and there is absolutely no hope of his ever receiving it from that district while such political demagogues reign there.

In place of the present unsatisfactory method of selecting candidates for West Point, Col. Clarence P. Townsley, the present superintendent of West Point, urged in his recent report to the War Department the adoption of an open competitive system as follows:

These cadetships belong to the people of the district, State, Territory, etc., and should be open competitively to all the youths eligible to compete, and it is my recommendation that *a law be enacted requiring competitive examinations to be held for each vacancy;* that youth to be appointed who passes successfully the best mental examination and who is physically and morally qualified. The examination questions should be prepared by the Academic Board, and a successful passing of the competitive examination should qualify a youth to enter, so that no other mental examination need be required. The details of conducting such examinations should, I think, be left to the Secretary of War. By announcing in the local papers some ten months or a year in advance that such a competitive examination will be held, stating its scope, it is believed that there will be a large number of eligible youths who will present themselves for examination in each district from which a vacancy is to be filled.

A system quite similar to that proposed by Col. Townsley is now used in selecting men from civil life to be second lieutenants in the regular army and in the Marine Corps, and it has long since proved a success. Should this method be adopted for the selection of cadets for both West Point and Annapolis, all vacancies at the academies would be filled, and the academies would then be able to supply the demands for more trained officers in the army and navy.

JAMES MILTON CONOVER.

St. Matthew's School, Burlingame, Cal., January 31.

THE BEGINNING OF JOHN BROWN'S CAREER.

TO THE EDITOR OF THE NATION:

SIR: I desire to call attention to a source of information in regard to John Brown of Osawatomie, which has been overlooked by his biographers. I refer to a series of Pioneer Reminiscences of the Western Reserve by his cousin, Rev. Edward Brown, published in 1892 in the *Northwestern Congregationalist*, Minneapolis. In one of these articles the writer narrates an incident which furnishes the answer to a question raised by Mr. Oswald Garrison Villard in his excellent biography: "When was it that John Brown . . . first conceived what he calls in his autobiography 'his greatest or principal object' in life—the forcible overthrow of slavery in his native land?" According to the testimony of John Brown's cousin, as will be seen, this determination to wage war against slavery had its definite beginning in November, 1837.

The following quotation is taken from Edward Brown's article, printed in the journal referred to, October 21, 1892:

Among the earliest of the pioneers at Hudson, O., was Owen Brown, my father's brother, in after years a trustee of Oberlin College. His eldest son, John, a very bright and energetic young man, making a religious profession at sixteen years of age, was desirous of studying for the ministry, incited thereto chiefly by that ardent founder of the American Board, Samuel J. Mills, a kinsman. Unable to furnish him money, his father gave him two horses, which he took, riding one and leading the other, to Connecticut and sold. Then he went to Plainfield, Mass., where, at an academy and under the private instruction of one Moses Hallock, he was fitted to enter the junior class of Yale College, which he was prevented from doing by a chronic disease of the eyes. . . .

With his father he was among the earliest of Abolitionists. He had been a surveyor in the mountains near Harper's Ferry, Va., and had often remarked that, with a good leader, the slaves, escaping to those fastnesses and fortifying themselves, could compel emancipation.

Prof. Laurens P. Hickok (since president of Union College and a distinguished preacher and writer of philosophical works) became, in 1836, professor of theology in Western Reserve College. He was regarded as conservative on the question of emancipation. One afternoon in November, 1837, we heard a rapid tramping through the college halls, and every room entered. Soon we saw it was Professor Hickok, who entered greatly excited. He said, "I want you all to come down to the old chapel-room immediately on the ringing of the four o'clock bell. I have some very important news to tell you." Promptly on time the room was filled with both faculty and students. Professor Hickok had brought an account of the murder of the Rev. Elijah P. Lovejoy and the destruction of his press at Alton, Ill. (where he was publishing a religious paper of decided anti-slavery views), by a Missouri mob from St. Louis. They had before destroyed his presses, both at St. Louis and at Alton. After reading it, he proposed to us to call a meeting at the Congregational church in the village two days later.

The next day he mounted his horse and rode all over the township, calling at every house and inviting the people to the meeting. At the meeting he made a most eloquent speech, burning with indignation, in which he said, "The crisis has come. The question now before the American citizens is no longer alone, 'Can the slaves be made free?' but, 'Are we free, or are we slaves under Southern mob law?' I propose that we take measures to procure another press and another editor. If a like fate attends them, send another, till the whole country is aroused; and if you can find no fitter man for the first victim, send me." During the afternoon many speeches were made and strong resolutions passed.

Just before the close of the meeting, John Brown, who had sat silent in the back part of the room, rose, lifting up his right hand, saying, "Here, before God, in the presence of these witnesses, from this time, I consecrate my life to the destruction of slavery!" His aged father then rose, and, with stammering speech (for he was a great stammerer), said, "When John the Baptist was beheaded, the disciples took up his body and laid it in a tomb and went and told Jesus. Let us now go to Jesus and tell him." Then, in a very fervent prayer, weeping (but not stammering, for he scarcely ever stammered in prayer), he closed the meeting. . . .

It will be noted that this account explains two other points mentioned by Mr. Villard: the oath which John Brown obtained from several members of his family to do all in their power to abolish slavery, and the reference which he made to Lovejoy in his "Words of Advice" to the "Gileadites." J. NEWTON BROWN.

Ardmore, Pa., February 5.

TO THE EDITOR OF THE NATION:

SIR: I thank you for having shown me Mr. J. Newton Brown's interesting letter. Stories like this one about John Brown are afloat without number. It is true, however, that the Harper's Ferry raider was at Hudson at the time of Elijah Lovejoy's murder, and doubtless attended the meeting. But undocumented recollections are a trap a wary historian must usually shun, particularly if recorded by one well on in years.

OSWALD GARRISON VILLARD.

New York, February 7.

"TRAGIC POSSIBILITIES."

TO THE EDITOR OF THE NATION:

SIR: There is a curious and suggestive similarity of language in Hardy between a description of Egdon Heath and of Sue Bridehead. In "The Return of the Native," Egdon is introduced to us with: "It had a lonely face, suggesting tragical possibilities." And it seems to me more than a mere coincidence to come in "Jude the Obscure" upon this same phrase in reference to Sue Bridehead: "How permanently it was imprinted upon his vision—a face suggesting tragic possibilities."

In both books there is a play of light and shadow in which no single figure holds the stage. The interdependence of plot and setting is perfectly plain in "The Return of the Native." All through the book the Heath is the principal character, an ever-active protagonist; they who are in harmony with its "suggestiveness" succeed in their ambitions and are happy. In like fashion, the fates of all the chief characters in "Jude the Obscure" are directly circumstanced by the actions of Sue Bridehead; so long as these people live in accord with her nature, prosperity and fortune follow them.

In the terrestrial scheme developed by the novels of Hardy's maturity is not the influence of woman synonymous with that of nature? LLOYD ADAMS NOBLE.

Cambridge, Mass., February 8.

O. HENRY.

TO THE EDITOR OF THE NATION:

SIR: The chronology of O. Henry's life has not yet been satisfactorily given—for various reasons. There is, however, no reason for the conflicting statements in regard to his birth-year. "Who's Who" persistently gave the year as 1867, a date that is also given in numerous magazine articles, in Mr. Frederick Taber Cooper's "Some American Story Tellers," and in Nelson's Encyclopædia (1913); Payne's "Southern Literary Readings" (1913) declares that Porter was born in 1864; while the New International Webster's mystifies the searcher with a question-mark instead of a date. The New Standard Dictionary, on the other hand,

states that O. Henry was born on September 11, 1862. This statement is correct. Such is the date given in the Porter family Bible. In the volume of O. Henry's stories called "Rolling Stones" one may find a list of births and deaths that is copied from this Bible; and it is worth noting that both O. Henry and his father preferably spelled their given name as Sidney, not Sydney.

HYDER E. ROLLINS.

University of Texas, February 3.

Literature

ORIENTAL AND MEDIÆVAL CHESS.

A History of Chess. By H. J. R. Murray. New York: Oxford University Press. $12.

Mr. Murray, son of Sir James A. H. Murray, of Oxford Dictionary fame, has done a notable piece of scholarly work in this book, although it scarcely answers to its title. What one would have expected under that rubric would have been an account of the development of the game we know, the evolution of the gambits, the change in strategy produced by match play, biographies and anecdotes of the chief masters and champions, with examples of the most brilliant games and problems. Mr. Murray gives something of all this, it is true, in the last hundred of his pages, but he himself, with his instinct for thoroughness, would be the last person to call this a history of modern chess, and even this sketch is cut short with the era of chess magazines and journals sixty years ago.

What he has given us is something more difficult and, in a measure, more valuable. He has written the fullest and most accurate account of Oriental and mediæval chess—of the Indian Chaturanga, of the Persian and Arabic Shatranj, and of the Ludus Scacorum of the Middle Ages; in other words, he has taken up again the chief problems dealt with by Van der Linde in that curious amalgam of bibliography, anecdotage, scholarly research, and egotism which he called "Geschichte und Litteratur des Schachspiels." And it may be said at once that he has beaten the Dutch scholar on his own ground, not alone in extent of research—he gives double the number of Oriental and mediæval end-games—but also in thoroughness of treatment and soundness of judgment. One can never say that a piece of work is final, but it is difficult to see how Mr. Murray's work can be bettered for a long time to come. He appears to have consulted all the accessible manuscript sources relating to mediæval chess, many of which he has edited or abstracted for the present work, and until further material of this kind turns up it would scarcely seem worth while doing over again what Mr. Murray has done so well.

The conclusions which he reaches as to the origin and development of the game and its transition from the Orient to mediæval Europe do not differ widely from those of his predecessors. He naturally rejects Forbes's claim of a five-thousand-year antiquity for the game, since, even in India, it cannot be traced further back than the seventh century of our era. Mr. Murray believes that it originated as a two-handed war game played with dice on an Ashtapada board of 8 by 8 lines. The Chaturanga or "four-limbed" game represented the four elements—chariots, cavalry, elephants, infantry—of the Indian armies (with the addition of the king and his vizier), and these elements are still extant as rooks, knights, bishops, and pawns. Mr. Murray throws out the suggestion that chess may have been invented by a Buddhist desirous of replacing real war by a game, but the only basis for the suggestion is that the earliest mentions of the game in India are connected with Buddhists.

Nor has Mr. Murray been able to solve the intricate problem of the transition from India to Persia, which was the decisive stage in the development of the game, as indeed is indicated by its name. The Arabic annalists connected this transition with the introduction of "Indian numerals" which we, in our turn, call Arabic figures; and Firdausi thought so much of the incident that he made it part of the national epic, the far-famed "Shah-namah." Almost the only clue is afforded by the tradition that the game was brought to Persia at the same time as the book of Indian fables known as "Kalila-wa-Dimna," which is always associated with the name of Chosroes I (531-578 A. D.). The only difficulty about accepting this comparatively early date is that there is no reference to chess either in Indian or Persian literature till the next century. Yet a fairly trustworthy Muslim tradition connects the game with the Caliph Omar, in whose caliphate Persia was conquered by the Arabs.

Mr. Murray is at his best in dealing with Arabic chess. He has consulted the whole manuscript literature with great diligence and gives not alone 553 end-games, but an analysis of the main middle positions in Arabic chess derived from an unpublished treatise by Al-Lajlaj, who died in 970 A. D. Owing to the restricted moves of vizier and elephant (our queen and bishop) the opposing forces did not come to close grips enough in the first ten or a dozen moves to allow of anything like our modern openings or gambits.

As regards the introduction of chess into Europe, Mr. Murray, by an interesting application of phonetic laws, proves that it took place at the beginning of the tenth century, though the earliest literary references are about a hundred years later. The Low Latin *scacus*, derived ultimately from the Persian *shah* (but meaning "chessman," and not "king") could have taken that form only, he contends, in the tenth century. It may here be remarked that, like a true son of his father, he pays the greatest attention to the names of chessmen in their different forms, and is often guided by phonetic evidence where actual historic reference is inaccessible. It would have been interesting in this connection, if he had thrown some light on the newest etymology of checkmate, "the Shah is hopeless" from the Persian instead of "the sheikh is dead" from the Arabic.

Mr. Murray is equally thorough in his treatment of the mediæval game, of which he gives something like 750 examples, with solutions where these are possible; for it is characteristic of the mediæval problem that it was frequently unsound, and Mr. Murray, following Van der Linde, suggests that such problems were made the subject of bets. In this part of his work he edits a considerable number of problems in Old French and Middle English. It would have been as well if he had attached solutions in modern notation, as he does in other cases. Not everybody interested in chess is fully acquainted with the mediæval forms of French and English.

Mediæval chess is almost the same as Muslim chess, and suffers from the same want of strength due to the limited range of the queen and the bishop. When their moves were extended to the end of the board in the last decades of the fifteenth century, modern chess, as we nowadays know it, came into existence. The increased powers of these two pieces enabled the players to bring a strong attack against their adversaries in the first four or five moves, rendering, indeed, a "fool's mate" possible within the first four. So, too, the pawn, since it could become a queen on the eighth row, gained so much in significance by this increased range that pawn-play became more important in corresponding measure. Mr. Murray gives, from as-Suli, a comparison of the relative values of bishop and queen in the Muslim game, and contrasts them with those given by the authorities for modern chessmen, taking the rook's pawn as the unit of value in both games. Whereas the Arabic "fil," or bishop, was worth twice this value, the modern bishop is reckoned as equal to 5.3 times. Still greater is the disparity between the "firzan" of Muslim chess, reckoned by as-Suli at three times the value of the rook's pawn, with the modern queen estimated at 15.5. These two changes at once alter the character of the whole game, as was recognized by

the Italians, who probably introduced them, but called the new form of the game "scacchi alla rabiosa," or "mad chess," which, from French translations, Mr. Murray shows referred to the "mad moves" of the queen in the new game. The first printed work on chess, by the Spaniard Lucena about 1497, gives problems both of the old and of the new chess. But it is characteristic that he, for the first time in chess literature, analyzes the openings, including the King's, Bishop's, the Philidor, the Petroff, the Giuoco Piano, and the Ruy Lopez gambits.

With Lucena's work modern chess begins, and Mr. Murray's detailed history virtually ends. He gives, indeed, a few chapters containing a sketch of the development of the modern game; but these contrast markedly with the thoroughness of his earlier treatment, and leave room for a history of chess as applied to the modern game. He is thoroughly justified in thus restricting his task to that portion of the field in which his wide linguistic powers find their fullest play.

It should be remarked that Mr. Murray devotes as much attention to the archæology and the *Culturgeschichte* of his subject as he does to its literature. He reproduces chessboards and chessmen from all parts of the world, and often deduces interesting points from their shapes. He treats at less length, but quite adequately, some of the variant forms of the game, though he leaves aside the more modern chess eccentricities. He even takes into account other board-games, like backgammon, fox and geese, and "merels." He gives in full the Muslim legends about the origin of chess and the mediæval moral literature leading up to Caxton's work, thought by Scott's Antiquary to be the earliest English printed book. The whole subject has wider bearings than might appear at first sight. Thus Mr. Murray takes occasion to point out that the dominance of Persian players of chess in Islam is only another example of the immense influence of Persia upon Mohammedanism. He expresses the opinion that the Muslim players show more subtlety than their European confrères in the Middle Ages, but, at the same time, points out that it was only in Europe that the game received its full development by the changed powers of the queen, which has in turn reacted in modern times upon Oriental chess. Anecdotes, witticisms, and locutions relating to chess are given in profusion from Oriental manuscripts and mediæval romances. He has, however, put so much into his book that it is by no means easy reading, however much the author helps by convenient summaries.

When a scholar of such ability and equipment devotes sixteen years to a restricted field of research like the history of chess, it seems both ungrateful and impertinent to point to a few solar spots in his treatment of the subject. But, if only to evidence a certain care in the perusal of his book, one might notice a few cases where Mr. Murray's skill and knowledge have failed him for the moment. Thus it is incorrect to state that the Arabic version of "Kalila-wa-Dimna" is the immediate source of the mediæval European version (note on page 155); the Latin translation of John of Capua, entitled "Directorium Humanæ Vitæ," was the real source. Mr. Murray calls the Western versions of this literature "Fables of Pilpay," showing that his knowledge of this literature is rather scanty or antiquated. This is especially unfortunate, as the transition of chess and of the fables from India to Persia was probably simultaneous. So, too, he neglects the references to chess in the "Thousand and One Nights," on the plea that they can only be placed in the Mamluk period in Egypt. Recent research is beginning to trace back portions at least to a much earlier period. Reference might have been made to the celebrated game of chaupur of Rajah Rasalu in Indian legend, and de Goeje's name should not have been misspelled Goege, as on page 163. Mr. Murray seems to be unaware that the Arabic sections in Van der Linde's work were contributed by M. Steinschneider without acknowledgment on Van der Linde's part. In referring to modern "champions," the name of Zukertort is omitted, who had a right to the title after beating Steinitz in a championship series. The index is not quite so full as it might be; one would have been glad to recover again the reference to Montaigne, who is quoted in the text but whose name is omitted in the index; and there is an earlier quotation from Piacenza than that given in the index. But one is almost ashamed to point out such minute blemishes in one of the most thorough pieces of research that English scholarship has produced in recent years.

CURRENT FICTION.

The Witness for the Defence. By A. E. W. Mason. New York: Charles Scribner's Sons.

The Story of Louie. By Oliver Onions. New York: George H. Doran Co.

Murder, as Mr. Mason's heroine and Mr. Onions's hero commit it, is hardly what you would call a crime. Looked at rightly, *i. e.*, with a ready willingness to be guided by the author's intention, it is scarcely more than an undeserved misfortune. To understand all is to forgive all. The question then is—as we imagine an up-to-date author putting it to himself—What degree of murder can the reader be made to understand? Just how heavy a homicidal handicap is it safe to impose upon a favorite character? What delicious fooling can be extracted from the absurdities of such a proposition has been dramatically demonstrated by the whimsically audacious Mr. Barrie. But Mr. Mason and Mr. Onions, not having envisaged their self-imposed task shrewdly enough to realize its intrinsic thanklessness, have addressed themselves in all seriousness to the devising of murders that shall answer to the definition and still attach as little odium as possible to their perpetrators. Both of them have hit upon the expedient of making the villain the victim of the violent taking off, and thereby greatly simplified the problem.

Mr. Mason's heroine shoots a hard-drinking and peculiarly malevolent husband who "keeps all his drunkenness for her." Having thus peremptorily ended her seven years of domestic purgatory in India, she is acquitted upon jury trial and returns to her girlhood home in England. The exact degree of her guilt remains her secret until almost the end of the story, when inquiry into the evidence is privately revived by the perturbed relatives of a young man who wishes to marry her, and she is unexpectedly confronted with the witness whose testimony at the trial had cleared her. This personage, a barrister of considerable reputation and an M.P., had dined with her and the husband of detestable memory on the very evening of the murder, and so had been in a position to have his evidence believed, though by no means to believe it himself. Furthermore—and here we get back to the original root of bitterness—this same perjured witness for the defence is the very man who years ago had deliberately preferred his ambition to her love. Her confession as finally made to him—and us—just fails to bring the shooting within the plea of self-defence, but succeeds fairly well in shifting the responsibility for her ill-advised marriage and the consequent tragedy to his shoulders. Under conviction of sin he is more than willing that they should expiate their errors together; but a punishment better fitted to his crime is meted out to him, and Stella Ballantyne's welfare is given into the safekeeping of a younger champion.

The crime upon which "The Story of Louie" centres is justified—quite in the current mode—solely as a prophylactic measure. The hero saves the girl he loves from worse than death by strangling a noxious little beast whom she is about to marry. Two volumes have already been devoted to this affair from the executioner's point of view. Their readers will remember that the confidante of his crime was not the commonplace Evie in whose interest it was undertaken and whom he after-

wards married, but another woman, whose gratuitous offering of understanding and protection was always inexplicable to him. We have now a volume explaining Louie and her divinations—a whole life history. She is accounted for as the daughter of a lady and a pugilist, inheriting something of hauteur from the Honorable Emily, and physical perfection, loyalty, and endurance from the manly "Buck." Arrived at womanhood and realizing herself barred from her mother's class, she propounds to herself the problem of self-support, and in one way and another, as cashier, model, or typist, manages to solve it for herself and the illegitimate son whom she acquires early in the game. Mr. Onions has that rare patience which we are so often encouraged to confound with genius; his design is elaborated down to the very last detail. If his inspiration has not quite sufficed to build a wonderful spiritual drama around this framework of repellent fact, at any rate the attempt comes near enough to success to compel rather respectful admiration. What he appreciates is the man of Napoleon-of-commerce type and his disconcerting appearance in the midst of the English social order. Of the simplicity of heart which such a man can retain in his personal relations we have heard a great deal in American fiction, and Mr. Onions insists upon it strongly. But we recall with some misgiving that he has used this, and at least one other of his best ideas, before in "The Exception." The world being so full of a number of things, this is somewhat disappointing. And as for a murder, an apoplectic stroke, and two suicides—we hope he will not again tax our capacity for tragic appreciation so far.

The Tale of Lady Daventry. New York: Brentano's.

An adventuress with a brain and will "equal, if different to" Napoleon's and Luther's, is the heroine of this anonymous tale. She is a country girl, as we see her in the beginning, of scant accomplishments, great beauty, greater ambition, and "with ice, not blood, in her veins." She frankly marries the witty, wicked old lord for his wealth and position; she promptly intrigues with his grown son, whom she hates, to bring about the birth of an heir to the title; and she then fabricates a story of outrage in order to accomplish the ruin of the man whom she has played false. The old lord dies, after some years, in a frenzy of rage at the woman who has thus betrayed him, disfiguring her with a dagger as he gasps his last; and when her son, on attaining his majority and coming into the estate, learns by chance of his paternity and his mother's villany, he promptly commits suicide. She is thus left in the ruins of the structure she has built.

As a foil to all this thunder and melodrama, the reader follows the fortunes of Margaret Lester, daughter of a tenant of the Daventry estate, who is as good as the Lady Daventry is bad. She goes to London and makes her way there as an author, marrying in happiness and triumph at the very moment of Lady Daventry's final misfortunes. The contrast between the two threads reeks of poetic justice, though a student of narrative technique will object to the crudeness with which they are interwoven. People of unquiet nerves might be warned against the book, were not the protagonist too unreal to carry alarming conviction.

The White Sapphire. By Lee Foster Hartman. New York: Harper & Bros.

The subtitle, "A Mystery Romance," indicates the dual interest of this story. Half is romantic and half detective. The story has the merit of an unexpected climax, with still another climax for the final page. The action takes place in a country house in the Berkshires, and has to do with the theft of a precious ruby which has been abstracted from a safe, evidently by a burglar expert in the use of a steel drill. But that he should have taken twenty dollars and the ruby and left behind fifteen diamonds lying next to the ruby constitutes the mystery. This is finally solved, to the confusion of an old-time villain, by a guest at the house, a young cosmopolitan American, who, though an amateur at sleuthing, has once confuted Scotland Yard. That he is aided by a knowledge of radioactivity indicates the utter timeliness of the story.

MAXWELL'S LORD CLARENDON.

The Life and Letters of George William Frederick, Fourth Earl of Clarendon. By the Right Hon. Sir Herbert Maxwell, Bart. New York: Longmans, Green & Co. Two vols. $8.50 net.

For about twenty-five years, from 1845 to 1870, the name of Lord Clarendon stood next to those of Lord John Russell and Palmerston among British Foreign Secretaries. On the European Continent it had, deservedly, a great prestige: how great, is illustrated in this story told by his biographer. In 1871 Lord Clarendon's daughter, Lady Odo Russell, sat next to Bismarck at dinner, and was astonished at his saying: "Never in my life was I more glad to hear of anything than of your father's death." At Lady Russell's amazement, Bismarck patted her hand and added: "*Ach*, dear lady, you must not take it like that. What I mean is that, if your father had lived, he would have prevented the war." Whether Clarendon could have prevented France from rushing into the net which Bismarck spread for her is debatable; but that Bismarck thought he could is a sufficient tribute to Clarendon's ability.

George Villiers, born in 1800, was descended from the great Earl of Clarendon, and on his mother's side from Cromwell. His people belonged to the powerful Whig oligarchy, and although they had comparatively small means (until, through the death of his uncle, Clarendon succeeded to the earldom in 1839), their habits and associations were wholly aristocratic. Young Villiers matriculated at St. John's College, Cambridge, in 1816, took his M.A. four years later, and was attaché at St. Petersburg until 1823, when he became a commissioner of customs.

Out of that post, which often threw a damper on young men of promise, he was fortunately lifted and sent on a special mission to France in 1831. The next year Palmerston appointed him Minister at Madrid, where he served until 1839. On his return to England, he declined in quick succession the Governor-Generalship of Canada and the Mastership of the Mint, but accepted office in Melbourne's Cabinet as Lord Privy Seal. Thenceforward, whether he was in office or in opposition, Clarendon stood high in the esteem of both parties; and, indeed, although bred a Whig, he did not hesitate to join Lord Aberdeen's coalition Ministry as Foreign Secretary. Previous to this, he served as Lord-Lieutenant of Ireland during the terrible famine years.

As head of the Foreign Office from 1852 to 1858, Clarendon shared with the Premier, Lord Aberdeen, the responsibility for "drifting" into the Crimean War, and, with Lord Palmerston, he determined the British attitude at the Congress of Paris. In 1864 he resumed his seat in the Cabinet; was Foreign Secretary after Palmerston's death, and again in Gladstone's first Ministry. He died June 27, 1870, less than four weeks before the outbreak of the Franco-Prussian War.

This list of Lord Clarendon's chief public services by no means represents the range of his political influence at home, much less of his importance as a statesman of international fame during the first half of Queen Victoria's reign. He possessed two qualifications for dealing with great public affairs: he saw very clearly what he desired to do, and he did it promptly and decisively when left to his own initiative. He had also the discretion and the tact, coupled with rare personal impressiveness, which counted for much in that period when diplomats still had the manners of *grands seigneurs*.

Sir Herbert Maxwell's biography is personal rather than political, a fact which adds greatly to its interest for the general reader. It shows us Clarendon far more intimately than Evelyn Ashley showed Palmerston, or than Spencer

Walpole showed Lord John Russell. Take him for all in all, Clarendon stands out as the embodiment of the highest type of Whig peer. He is as evidently representative of that remarkable species, now extinct, as the late Lord Salisbury was of the antipodal type of Tory peer. One wonders at first, why it was that Clarendon, in spite of his known efficiency as an administrator, in spite of his recognized eminence in his party, never rose to actual leadership. He was thought of for Premier, and Queen Victoria, at least, would gladly have had him in that office rather than Palmerston or Lord John, but he could not succeed in forming a Ministry. His biographer suggests that the lateness at which he entered Parliament—he became a peer only in his fortieth year—deprived him of early acquaintance with the personnel and with the ways of that body. Although he was a vigorous writer—his dispatches being among the best of that period—he lacked both eloquence as an orator and readiness as a debater. He lacked also that quality of imposing himself on his party which was the common possession of politicians as different as Disraeli and Parnell. Had he been really masterful, he would not have remained at the Foreign Office when, contrary to his purpose, England "drifted" into the war with Russia. He would have done what Lord John and Palmerston did whenever they were opposed: either persist regardless of consequences, or resign.

Although this memoir is not primarily political, it throws many sidelights on British and international politics. Beginning with the civil war in Spain, where Clarendon labored to secure Queen Christina against the Carlists, it touches on most of the political events and personages of Western Europe during the next forty years. Louis Philippe and the Spanish marriages, the Irish famine, the rise and progress of Louis Napoleon, English action during the American Civil War, the emergence of Prussia—these are some of the topics in which Clarendon's correspondence is abundant and fresh.

His own letters to his intimates are written without reserve. Nothing could be more entertaining than his remarks on men and things. His rich vein of sarcasm spares neither the Queen nor the Prince Consort—whom he refers to under the aliases "Eliza" and "Joseph"—neither Dizzy, nor Pam, nor lesser personages. One gets from his letters a sense of the banality of much of the court life. We infer from them Queen Victoria's lack of regard for public business—she would often stay at Osborne, which involved at least a twelve-hour journey on the part of her Ministers, at a critical moment when her presence at Buckingham Palace was most desired. Clarendon also recalls how the Queen herself sent to the *Times* a letter in her own handwriting, protesting against being criticised for remaining secluded in her widowhood, and how the *Times* printed it with the signature "Anonyma" (April 6, 1864). Clarendon, however, always writes sympathetically of her bereavement, and for several years she sought his private advice on public matters. Then, perhaps for the reason that one of his earlier satirical remarks had reached her, she turned against him; and when Gladstone proposed him for the Foreign Secretaryship in 1868, the Queen declared that she would not consent to his occupying any position whatsoever. Why she gave way, after a fortnight's stubbornness, does not appear.

The biographer prints many extracts from the diary of Lady Clarendon and makes us wish that all the important passages in the diary, which covers thirty years, may be edited. As she shared her husband's political confidences, she often supplies information on matters which are not mentioned in his correspondence. The letters of Emily Eden, caustic and entertaining, bring Victorian high-life vividly before us, and those of Mrs. Villiers paint society at its revels under that "blackguard," the Prince Regent. Charles Greville, Cornewall Lewis, Granville, and many others lay bare the state of public opinion at a given moment, or add to our knowledge of its shapers.

Sir Herbert Maxwell has achieved a well-rounded biography, in which we draw close not merely to Clarendon the statesman and diplomat and the Whig grandee, but to the very man himself. Sir Herbert, though a Tory, writes with perfect fairness. He has arranged his material clearly and has been happy in choosing what is vital.

The Spiritual Drama in the Life of Thackeray. By Nathaniel Wright Stephenson. New York: George H. Doran Co. $1.25 net.

With a tardy indignation, Professor Stephenson is fired by Charles Whibley's "Thackeray," which appeared a decade ago. In that study Mr. Whibley said little of Thackeray, the man, speaking almost exclusively of Thackeray, the writer, drawing sometimes unflattering comparisons with his contemporaries and applying French ideals of art in fiction with rather less than the proverbial love of the biographer. He produced indeed a critical commentary on Thackeray's achievement.

With this attitude Professor Stephenson has no patience. It represents an author, he asserts, "as a trinity of pen, ink-pot, and sheet of paper." When the critic declares that what Thackeray "was at the beginning he was at the end—a man of letters to whom time and experience gave not a new style, but merely better control of his material," he waxes warm: "Mr. Whibley ignores entirely the inward drama of Thackeray's great life. . . . He is blind to that long, slow, but at length victorious, warfare of Thackeray's religion against his weakness."

This essential struggle is divided into three acts. "Pendennis" ends the first, where a malign fate presides over the destinies of men, and Sorrow sits empress. "We see goodness linked always with futility; evil, splendid and triumphant." The year 1851 is the crisis; the writing of the lectures on "The English Humorists" the turning-point. Thackeray now awakes to the falsity of his earlier view of life. There seems to be no "curtain" for this act, but it closes with "The Newcomes," where "all the vices of Thackeray's earlier thinking have disappeared." The third act is short but serene, containing "Philip" and "Denis Duval," and presenting a conviction that whatever is is right, a genuine faith that "all's right with the world."

What shall one say of this novel view of the Victorian master? What proof is brought forward? The evidence found is in the novels themselves, whose characters are cunningly dissected, whose meaning or structure is explained by means of picturesque imagery. But the tone of the third period was apparently suggested to the author by some felicitously phrased but conventional ideas in a letter of condolence written by Thackeray to a cousin on the death of an aunt. These words are echoed and reëchoed in the descriptions of his final works in a way that is almost amusing.

Though Professor Stephenson displays on nearly every page a love passing that of the biographer, his handling of evidence reveals two fundamental misconceptions. The first regards Thackeray, the man. Mr. Whibley did glance too seldom at the writer's personality, but in proving him wrong, Professor Stphenson commits a more disquieting error. The dividing of a man's life into periods, always a difficult and questionable procedure, is in Thackeray's case particularly dubious. His whole work expresses a personality of rare charm, but with an art that is instinctive rather than conscious. His characters dictated their conduct to him. To the end he was governed by his material instead of moulding it by clearly seen principles towards preconceived effects. One cannot by taking thought add a cubit to one's stature; much less can a novelist who writes from the heart rather than from the head alter his personality. That this amiable, elegant, but disillusioned soul should be the scene of a lifelong conflict between religion and disappointment is not only a novel but a refreshing assertion.

The second misconception regards

Thackeray, the writer. To Professor Stephenson, maintaining his view of the master's final optimism, "Vanity Fair" becomes unmanly and pernicious. Addison becomes the central figure of "Esmond" because he is the most hopeful and successful character. "Philip," which every one regards as little more than an echo of earlier productions, becomes "a ripe apple beautiful without and sound within," while "'Pendennis,' for all its external brilliancy, is worm-eaten at the core." "Denis Duval," a fragment too short for almost any generalization, and particularly for conclusions with regard to the author's view of life, becomes "a pinnacle whence we view the entire field of Life and behold all the parts of it related in a single design, the meaning of which is that His will is done on earth as it is in heaven." So much does a figure of speech distort one's sense of values.

For even if the tone of robust optimism that Professor Stephenson discovers did exist in Thackeray's later work, it would detract from rather than augment that classic novelist's vogue. No one goes to him to learn that

> God's in his heaven,
> All's right with the world.

He stands for a mood of realism, an ironic presentation of life, an attitude of brave sadness in the face of the manifold disappointments of this world, a purpose, as Trollope puts it, always to encounter "melancholy with buffoonery and meanness with satire." To find in him the apostle of an all-conquering optimism would rob the English language of one of its greatest satirists of life and manners. Though Professor Stephenson has written an interesting book, it is with Mr. Whibley's conclusions that the student and the lover of Thackeray can the more easily agree.

The Ottoman Empire, 1801-1913. By William Miller. Cambridge University Press; New York: G. P. Putnam's Sons. $2.50 net.

The policy of the Cambridge Historical Series, and not Mr. Miller, has no doubt caused this book to belong, not in the class of those that interpret and enlighten, but of those that set forth in classified chronological order a large number of selected facts. The facts, moreover, are not taken from the social, economic, religious, and cultural fields except incidentally. The course of political events, wars, treaties, and policies make up the substance of the narrative, and the reader must for the most part establish causal connections for himself. Yet the author himself must be charged with a failure to develop adequately an important element of his story. It would be unfair to expect Mr. Miller to feel sympathy with the Ottoman Turks, but he ought to give their story a more distinct place in a book entitled "The Ottoman Empire." Their proposals in the direction of reform should not be dismissed sneeringly (pages 151, 361); their actual reforms should not be omitted entirely; their Constitution should receive at least as full exposition as that of any Balkan state (pages 174, 371, 414); their name should find a place in the index. The fact is that in writing of the Ottoman Empire Mr. Miller has looked mainly at the empty part of the cup. His book would more accurately have been entitled "The Near Eastern Question, 1801-1913 (with Special Reference to the Development of the Balkan States)."

Actually, the Turks have had much history in the past one hundred and twelve years. Each of their Sultans has possessed individuality, from Selim III, martyr to reforming zeal, and Mahmud II, destroyer of the reactionary Janissaries, to Abdul Hamid II, restorer of ruthless despotism, and Mohammed V, friend of liberty and progress. The Turks have made great changes in their lives and institutions, and no century but the nineteenth could have regarded the Turks of that century as unprogressive. When a nation has striven to make within a hundred and twenty-five years such an advance from mediæval to modern times as England made between Henry II and George V, and has arrived only at the time of the first George, has not that nation done very well? Mr. Miller devotes to the really great constitutional progress of Turkey not more than a half-dozen pages, scattered here and there. He gives as much space (pages 348 to 353) to the "drama of Oropós," an episode of murderous brigandage, which in the year 1870 embroiled Greece with England. Such is the outcome when the friend of the sheep writes the history of the dying wolf.

For Mr. Miller is a Philhellene. Fully one-fourth of his book is given to the story of modern Greece. Her sins are not covered, but neither are her achievements suppressed. Her rapid progress is indicated well, as is that of the other states which fill up the territory held in 1801 by the Ottoman Empire. Especially valuable is the development of the history of the past thirty-five years. The Italo-Turkish War perhaps receives too scant attention. The Balkan wars could not be brought beyond the failure of the London Conference in February, 1913.

It was hardly to be expected that an Englishman would overlook, as Mr. Miller has done, the brilliant beginning of the career of him who became Lord Stratford de Redcliffe, when in 1812 he expedited the conclusion of the Treaty of Bucharest, which not only released the Russian armies for resistance to Napoleon I, but saved Rumania, to become, not another Finland, but an effective buffer state between Russia and Turkey. Mr. Miller, however, has throughout made little attempt to develop the vast diplomatic background to the Eastern question in the chancelleries of the great Powers of the world.

The book has hardly any faults besides those of omission and disproportion. It is clear, sober, accurate, and nearly always fair. The maps are directly adapted to the text. The good bibliography shows the use of books in seven languages, which yet do not include Turkish or the Slavic group, Servian, Bulgarian, and Russian. The volume constitutes a welcome and timely contribution to the study of the complex situation in Southeastern Europe.

The Vanishing Race. By Dr. Joseph K. Dixon. Illustrated. New York: Doubleday, Page & Co. $3.50.

Further than to say that, as its title implies, it is about Indians, this book is not easy to classify. In the broader sense it is not history, and in the narrower it is not ethnology. With the sociological problem presented by the condition of the aboriginal race it makes no pretension to deal. The chapter with which it opens, on the habits, dress, religion, and other characteristics of the Indians, makes no new contribution to our knowledge of these subjects. In its "record of the last Great Indian Council, participated in by eminent chiefs from nearly every Indian reservation in the United States"—we quote from the title-page—the performance scarcely bears out the promise. From such an announcement the uninitiated reader might infer that the multitude of tribes still surviving here had been in the habit of holding an associated council from time to time, that arranged by Dr. Dixon concluding the series. As a matter of fact, a convention of that sort was as much a novelty to the Indians concerned as it will be to the public who are invited to read about it.

Moreover, the statement that it was attended by representatives of "nearly every reservation in the United States" is not supported by the evidence of the text, which shows most of the Indian worthies in the assemblage to have come from a handful of Northern groups, and not from "nearly all," or even from a considerable number, of the one hundred and fifty and more reservations under the jurisdiction of the Federal Government, to say nothing of those controlled by individual States. For example, the reader will search in vain for any spokesman from a great body like the Navajo, equally famous in war and in peace, and numerically one of the largest, if not actually the largest, of our native tribes. Neither do we find in the gathering any of the pueblo or mission Indians from the territory ceded by Mexico, or any members of the

so-called five civilized tribes of the old Indian Territory. The nearest we come to the latter is through a Kiowa, an Apache, and a Southern Cheyenne.

By far the largest number of the chiefs who talked to the interpreters for Dr. Dixon's benefit belonged to the Crow tribe or to one of the several branches of the great Sioux nation. It is for this reason, doubtless, that so much of the book is written around the story of the destruction of Gen. Custer's command, narrated from the point of view of the few living Indians of prominence who took part, directly or indirectly, in the battle. This is by far the most important feature of the volume, and the speeches reported bear a stamp of genuineness which give them real value as exponents of Indian character and thought, whether or not we are ready to accept their testimony as absolutely accurate after so long an interval.

The illustrations, which number eighty, are photogravures, some being portraits of notable Indians and others depicting various phases of Indian life amid a wild environment. Artistically, they follow the trail first marked by Mr. Edward S. Curtis. They are, as a rule, fine examples of posing, and in their mechanical execution leave nothing to be desired. Especially noteworthy among the scenes are A Glimpse Backward, War Memories, and The Sunset of a Dying Race, which have an atmosphere quite independent of artifice in composition. Of the portraits, those of Two-Moons, Bear-Ghost, Pretty-Voice-Eagle, and Running-Bird stand easily first in quality. Well printed and handsomely bound, "The Vanishing Race" will fill a conspicuous place on the library table, irrespective of the part it may play among the soberer contents of the shelves.

Notes

Included in the March publications of Frederick A. Stokes Company are the following: "Bat Wing Bowls," by Dane Coolidge; "The Woman's Law," by Maravene Thompson; "Every Man's Money and How the Bankers Use It," by Louis D. Brandeis; "Montessori's Own Handbook," by Maria Montessori, and "America Through Oriental Spectacles," by Wu Ting-Fang.

"The Reconnaissance," a novel by Gordon Gardiner, is about to be published by Macmillan.

Mr. William J. Locke's new novel, "The Fortunate Youth," is promised by John Lane Company for the end of March.

Forthcoming books in the list of the Century Company include: "Dodo's Daughter," by E. F. Benson; "Barnabetta," by Helen R. Martin; "The Things He Wrote to Her," by Richard Wightman; "Little Essays in Literature and Life," by Richard Burton; "Idle Wives," by James Oppenheim, and "Bedesman 4," by Mary J. H. Skrine.

Baron von Wolzogen's musical novel, "Kraft-Mayr," which has proved a great success in Germany, is soon to be published by Huebsch in an English translation with the title, "Florian Mayr."

Paul Elder & Co. announce a handsome limited edition of "Out of Bondage," a volume of poems by Fanny Hodges Newman.

A volume dealing with an almost unknown Alaskan race is announced by the Fleming H. Revell Co., under the title "A Study of the Thlinglets of Alaska." The author, Livingston F. Jones, has labored among this people as a missionary for twenty-one years.

Other books announced by Revell are "Asia at the Door," by Kiyoshi K. Kawakami, and "The Crisis of Morals," by Harold Begbie.

Houghton Mifflin Co. will have ready at an early date the following volumes: "Thomas Wentworth Higginson, the Story of his Life," by Mary Thacher Higginson; "The Precipice," a novel, by Elia W. Peattie; "Burbury Stoke," a novel, by William J. Hopkins; "The Satchel Guide to Europe, 1914," by W. J. Rolfe, edited by H. W. Dunning; "In Freedom's Birthplace," an account of the Boston negro of to-day, by John Daniels; "In the Old Paths," a book of essays, by Arthur Grant; "The Passing of Empire," a book on British rule in India, by H. Fielding-Hall; "Ægean Days and Other Sojourns," by J. Irving Manatt; "Poems," by Walter C. Arensberg, and "The Americans in the Philippines," by James A. Le Roy, with an introduction by William H. Taft.

Among the books announced for spring publication by the Yale University Press are: "The History of the Department of State," by Gaillard Hunt; "Memorials of Eminent Yale Men: A Biographical Study of Student Life During the Eighteenth and Nineteenth Centuries," by Anson Phelps Stokes; "University Sermons," by Henry Sloane Coffin, D.D.; "Christianity Old and New: Proposed Reconstructions Viewed in the Light of Historic Development," by Benjamin Wisner Bacon, D.D.; "Trade Morals, Their Origin, Growth and Province," by Edward D. Page (Page Lectures); "Writings on American History, 1912," compiled by Grace Gardner Griffin; "Studies in Taxation Under John and Henry III," by Sydney K. Mitchell, Ph.D., Yale Historical Publications; "The Colonizing Activities of the English Puritans," by Arthur Percival Newton, Yale Historical Publications; "The Diary of a Voyage to the United States, 1793-1798," by Moreau de Saint-Méry, edited with an introduction by Stewart L. Mims, Yale Historical Publications; "Influences of Isocrates on Cicero, Dionysius and Aristides," by Harry M. Hubbell; "Poems," by Brian Hooker, and "Selections of Latin Verse," by the Latin Faculty of Williams College.

The spring list of E. P. Dutton & Co. includes, in fiction: "The World Set Free, a Story of Mankind," by H. G. Wells; "The Story of Helga," by Rudolph Herzog, authorized translation by Adele Lewisohn; "Liliecrona's Home," by Selma Lagerlöf, translated by Anna Barnwell; "The Green Graves of Balgowrie," by Jane H. Findlater; "Over the Hills," by Mary W. Findlater; "The Governor of England," by Marjorie Bowen; "The Honey-Star," by Tickner Edwardes; "A Wayfaring Soul," by Walter Raymond; "Drum's House," by Ida Wild; "The Passing of Oul-I-But," by Alan Sullivan; "Buddhist Stories," by Paul Dahlke, and "Korean Folk Tales," translated from the Korean of Im Bang and Yi Ryuk by James S. Gale.—Biography, history, and politics: "Christina of Denmark (1522-'90)," by Julia Cartwright (Mrs. Ady); "Wagner, as Man and Artist," by Ernest Newman; "The Philosophy of Ruskin," by André Chevrillon; "A History of Russia," in three volumes, by V. O. Kluchevsky; "The Reconstruction of the New Colonies Under Lord Milner (1902-'05)," in two volumes, by W. Basil Worsfold; "The Press Gang Afloat and Ashore," by J. R. Hutchinson, and "The China Year-Book for 1914," edited by H. T. Montague Bell.—Travel and adventure: "A Pepys of Mogul India (1653-1708)," an abridged edition of the "Storia do Mogor," by Niccolao Manucci, translated by William Irvine, edited by Margaret Irvine; "Things Seen in Oxford," by Norman J. Davidson; "The Life and Thought of Japan," by Okakura-Yoshisaburo, and "Tiger Land, Reminiscences of Forty Years' Sport and Adventure in Bengal," by C. E. Gouldsbury.—Religion and philosophy: Buddhist China," by R. F. Johnston; "Mechanism, Life, and Personality," by J. S. Haldane; "The Theology of the Roman Church," by the Rev. Father Herbert Thurston, S. J., and "The Message of Zoroaster," by Ardaser Sorabjee N. Wadia.—Miscellaneous: "The Romance of Names," by Ernest Weekley; "English Dramatic Poetry," by Felix E. Schelling; "English Historians and Schools of History," by R. Lodge; "English Elegiac, Didactic, and Religious Poetry," by the Rev. H. C. Beeching, D.D., and the Rev. Ronald Bayne; "The Tragedy of Education," by Edmond Holmes; "Higher Nationality," by Viscount Haldane of Cloan; "English Domestic Clocks," by Herbert Cescinsky; "Public Library Administration," by W. S. C. Rae, and "A Pilgrimage of British Farming (1910-12)," by A. D. Hall.

We have received a copy of the third edition, revised and enlarged, of "The Immigration Problem" (Funk & Wagnalls), by Jeremiah W. Jenks and W. Jett Lauck. The plan and scope of the work have not been materially altered. Yet the changes show a marked shift of attitude in the book. Several passages which tended to minimize the social aspects of the immigration problem and to maintain the ease of assimilation have been modified, and two critical sections (pages 211-213 and 369-370) have been added, dealing with the dangers of the present situation. Thus the argument is more definitely on the side of restriction than in the first edition. The chapter on Recent Immigrants in Agriculture has been quite rewritten, with the use of the data of the Thirteenth Census. The statistical tables have been corrected where necessary, and a large

number of new tables have been added. The appendices also include the text of the most important of the recent acts and proposed bills dealing with immigration. This book will continue to hold its position as the authoritative digest of the reports of the Immigration Commission, and as such will serve a widely useful purpose.

Scribners have been well advised to issue a new edition of "The Voyage of the Discovery," Capt. Robert F. Scott's record, in two volumes, of the National Antarctic Expedition, which he commanded during the years 1901 to 1904. In the list of "ship's company" we note the name of Shackleton, who was later to try again for the "farthest South," and that of Dr. Wilson, whom we take to be the Wilson of the last, fatal expedition. The book has absorbing interest, and though it cannot add nobility to the Capt. Scott revealed in the diary of his final dash for the Pole, it does at least enlarge and sweeten the portrait.

Appropriately dedicated to Ernest Thompson Seton, "On Nature's Trail: A Wonder-Book of the Wild" (Doran), by F. St. Mars, is a book of tales in which the author sentimentalizes nature without a single token of a troubled conscience. Most of his animals are bloodthirsty villains, who do wild deeds with abandon, and who are characterized, if anything, more definitely than the villains of melodrama. All of the tales are sure to "thrill" satisfactorily; one of the most agreeably thrilling is "The Master of the Situation," which tells of the astonishing adventures of Krar, a hoodie crow whose beak "suggested the business end of a pickaxe" and who was "a winged disaster and a servant of the Evil One." Another typical story deals with a quick-hatch, "whose name the trappers of the Rocky Mountains use when they want to call one by a worse name than devil." Mr. St. Mars's wild heroes dwell in sundry parts of the world—in Scotland, in Tibet, and elsewhere.

The small volume of "Indian Historical Studies" (Longmans, Green), by H. G. Rawlinson, professor of English literature at the Deccan College, Poona, contains a number of papers in part already published in India. The author's purpose has been to present to a general public portions of India's past for the benefit especially of the modern Hindu. The Western student of Oriental history will find in this book excellent though brief sketches of the lives of Buddha and Asoka, a good account of the Greek dynasties of the Punjab, an entertaining résumé of the travels of Chinese pilgrims in India, and a judicious estimate of the political importance of Akbar and Shivaji. The adventures of Robert Knox, an involuntary pilgrim in Ceylon, and those of the lively Ibn Batuta are related in an interesting manner, and the foreground is well filled with the history of the Sikhs in the last century. The final chapter is devoted to the question of foreign influences in the civilization of ancient India, where Mr. Rawlinson leaves the firmer path of history for the slippery track of speculation. The author remarks that the study of Indian history might "also check, in England and America, the spread of rubbishy ideas, propagated under the title Oriental philosophy by charlatans who often cannot read a line of Sanskrit." On p. 5, the turning-point of Buddha's life should be the twenty-ninth year, not the twenty-first.

W. A. Graham's "Siam, a Handbook of Practical, Commercial, and Political Information" (Chicago: F. G. Brown & Co.), is a stout little book of six hundred odd pages, which fulfils thoroughly the promise of its title. Under the head of Practical the reader will find chapters on the flora and fauna, a very readable short history of Siam, and nearly a hundred small but good photographs. Under which head Mr. Graham would set the chapters on religion and language may be questioned. They appear to be due to an afterthought, as they come at the end; but they make excellent reading. A whole chapter is devoted to art, architecture, music, dancing, and the drama, and there are appendices containing lists of animals, plants, minerals, trade statistics, etc. Among the religious ceremonies that of the swing-festival will appeal to students of comparative religion, as it evidently reflects an Indian prototype, but with remarkable variations. The modest author claims only "passable accuracy" for his innumerable data, but so far as the reviewer has been able to control the mass of statements, the work is as accurate as it is replete with useful and interesting information. A very clear map and full index complete the satisfaction with which one peruses this admirable volume.

"William of Germany" (Macmillan), by Stanley Shaw, contains a fair amount of new and interesting material for some future historian of the German Emperor. Dr. Shaw has not wholly relied on the standard sources of information concerning his subject—such as the Bismarck recollections, the Hohenlohe memoirs, and Dr. Paul Liman's character sketch of the Emperor—but has gathered in useful items about his court, the building up of the German navy, and various other matters, not easily accessible elsewhere. There is nothing very novel in his own view of his hero's character, which, after much detailed analysis, seems to him quite baffling. He sees in the Emperor a "Cromwellian trait," which inclines him to take "a religious, a patriarchal, one might say an Hebraic, view of government," in spite of his indomitable warrior spirit, and a recently developed "American Rockefeller element." Still another side of the Emperor's nature is dwelt upon in a curious chapter on the Emperor and the Arts, which goes deeply into the subject, down to the Sanskrit root of the word art and beyond the Secessionists (for whom William II, alas! has no liking) into the future of Cubism. Dr. Shaw is convinced that, if the Emperor were not "a first-rate monarch, he would probably be a first-rate artist." But, the author finally says, "in what rôle would he not have done well?" In spite of such doubtful conjectures, the book, on the whole, is quite readable, and may be recommended for its general accuracy and its fairness. It has, however, more than its share of the careless proof-reading which seems to be inseparable from the process of hurrying through the press book after book about Germany and her Emperor. "Odo Russell" for John Russell, "Emmanuel II" for Victor Emanuel, "Grossler" for Gossler, "Gari Melchior" for Gari Melchers, "Admiral Nogi" for Gen. Nogi, and such hybrids as "Frederick Karl" and "Burghertum" are among the minor blemishes with which the book teems.

The Transactions of the Royal Historical Society of Great Britain for 1912 (London: Offices of the Society) opens with two presidential addresses—the first, that of Archdeacon Cunningham, continuing his inquiry into points of contrast between English and Scottish history by an examination of the guildry and trade incorporations in Scottish towns; the other, that of Professor Firth, on the development of the study of seventeenth-century history, constituting a noteworthy bibliographical and critical contribution to English history. One of Dr. Cunningham's remarks, which is particularly suggestive as coming from the author of "The Origin and Development of English Industry and Commerce," is worth quoting:

> The economic expert who turns his attention to history is tempted to lay stress on the sordid side of life; he has formed the habit of dwelling upon motives that are susceptible of money measurement, and when he sees evidence that a familiar motive is at work, he seems to think that everything is explained. If we are content merely to look on the surface when examining the condition of industrial and commercial life in the past, we are likely to find in them a reflection of human nature as we know it in our own century. But if we penetrate deeper, through these economic phenomena, we may get to know something of the springs of national progress and the sources of national character.

As a comment on the so-called materialistic interpretation of history, this remark deserves careful consideration.

The remaining articles in the volume are interesting, but with two exceptions are designed for the specialist rather than the general reader. The essay by Mr. Webster on the Polish-Saxon question at the Congress of Vienna is an illuminating study of a much-vexed problem, and throws new light on the purpose and policy of Castlereagh. A further examination of the work of the same statesman is seen in the paper by J. E. S. Green, who likewise defends the acts of the British Minister and endeavors to throw some of the responsibility for the customary misinterpretation of Castlereagh's failure at Verona in 1822 upon the shoulders of Canning, his former rival, who, Mr. Green thinks, designedly deceived Parliament and the country. The other articles in the volume are more technical in character, as indicated by their titles: "The Pedigree of Earl Godwin," with a table; "Some Mercenaries of Henry of Lancaster, 1327-1330," "Sidelights upon the Assessment and Collection of Mediæval Subsidies," by Professor Willard, of the University of Colorado, and "The Order of the Holy Cross (Crutched Friars) in England," a study of an order whose memory is kept alive

to this day by the name of a street in the city of London near the Tower.

New material concerning Hawthorne is collected in Caroline Ticknor's "Hawthorne and his Publisher" (Houghton Mifflin). Thirteen years of his life—from 1851, when he published "The House of the Seven Gables," to his death in 1864—are with the help of excerpts from his miscellaneous writings pretty well covered in these letters to his publisher, William D. Ticknor. In the early part of the narrative Ticknor is prominent, and all the way he is a revealing figure. Hawthorne somewhere says that he thinks no other author ever was blessed with such a publisher. He appears to have been right. The shy, seclusive genius relied on Ticknor in all practical matters—in arrangements for his portrait, in purchasing gloves on a journey, in paying the bills of his tailor. Ticknor was his banker and business manager, accompanying him to Washington to conclude for him the negotiations concerning the Liverpool consulate, and later even sailing across the ocean to start him in the duties of the office. In short, he was unwearied in his attentions. His death directly resulted from his care for Hawthorne, about whom he wrapped his own overcoat on an unexpectedly chilly drive in Philadelphia and from whom he three days later took his eternal farewell.

Several chapters have an intimate literary interest. After some letters from Miss Margaret de Quincey, Ticknor journeyed to "Mavis Bush," at Lasswade, where, despite her warning that the "cottage is too small to offer you beds," he spent the night very pleasantly, finding De Quincey "a noble old man and eloquent," who "wins hearts in personal intercourse." Delia Bacon also reappears. Hawthorne was of opinion that women "are only to be distinguished from male authors by greater feebleness and folly," and he once exclaimed to Ticknor that he considered "all ink-stained women detestable." But his generous assistance of the author of the "Philosophy of the Plays of Shakespeare Unfolded" is well known. What is added here is the vigor with which he lent this assistance. Without consulting his publisher, he had half the edition that was printed in London at his expense sent to Boston with "Ticknor, Fields & Co." on the title-page. He wrote that, "having tried to help this poor woman, I do not like to desert her without doing my utmost. . . . By the by, Miss Bacon herself does not know of my pecuniary responsibility; so say nothing of it to anybody." The letters add something even to Theodore Bacon's bulky "Sketch" of his aunt's life. Hawthorne's interest was maintained to the end, when he confided: "The 1,000 copies, as they come from the printer's (exclusive of binding), have cost £238 7s. 9d. However, I do not repent me of what I have done; nor will I, even if I lose by it." And he did in fact lose nearly all of this sum. Many of the remaining letters deal with "The Marble Faun," its writing and revision, and his uncertainties and difficulties concerning the title, as Smith and Elder were "determined to take a title out of their own heads." He was not so diffident as usual about the book: "If I have written anything well, it should be this romance; for I have never thought or felt more deeply, or taken more pains." But up to the last moment he was willing to change the title he had clung to, if Whipple so advised.

Naturally the chief interest of the book is in Hawthorne himself. His elusive personality is made in these pages to show more of its human side than we find in previous collections of his writings. He does not reveal all in these intimate letters. Though he lived in a stirring period, he seldom touches on politics, except to express his humorous dislike of the British and his intermittent love of England as a place of residence. He is equally sparing of literary criticism, discovering little more than that he could not abide poetry and did not eagerly follow the work of contemporary writers. What he does tell us in these passages, what is scarcely hinted in "Our Old Home" or indeed in "Notes of Travel," is his preoccupations as head of a family, especially during the Liverpool consulship. The intangible and somewhat puzzling image of the man that floats before most of us becomes a solid and easily recognizable earth-born companion and fellow-mortal. At close range and in commonplace details he seems much as other men are. His pathetic longing for means and leisure, his impatience with the routine of official duty, his reluctance to submit his writings to the criticism of the public, his kindliness of heart struggling with common sense whenever an appeal for aid came to his ears—these and a score of other features in his daily life come to light in the letters which Caroline Ticknor has at length rescued from oblivion. This substantial and comely volume will accordingly be welcomed by every lover of our great American romancer.

Dr. James Douglas, in his "New England and New France" (Putnam), essays the task, as persistently difficult as it is perennially fascinating, of drawing historical parallels. In this instance, of course, the contrasts are more than the resemblances; and the chapters in which Dr. Douglas sets over against each other the history of the New England colonies and of New France tell, for the most part, independent stories, and thereby bring out, in striking fashion, the fundamental difference between the two regions in almost everything that relates to political theory, economic establishment, and governmental control. One suspects that the author either knows his New France better than he knows New England, or else that he likes it better; at least, the accounts of French colonial development show a range of incident and thoroughness of treatment less observable in the sketches of New England experience. The long chapters on the establishment of Plymouth and Massachusetts, for example—one notes, in passing, that for most purposes New England, with Dr. Douglas, comprises only Massachusetts—consist mainly of extracts from Bradford's "History" and Winthrop's journal. Much more interesting and original are the chapters on the status and careers of women in New France and New England, the contrasted state of education and religion in the two regions, and the successes and failures of Catholic and Protestant missions. Here the author's really wide acquaintance with his subject shows itself at its best, and the material is effectively handled. The agreeable sketch of *habitant* life in the Chaudière valley, originally written for the *Nation* in 1902, fares well with time. The illustrations reproduce some forty-five contemporary pictures and maps.

The Rev. Albert Whitcomb Snyder, a retired Episcopal clergyman, who died last week in New York, aged seventy-one, was at one time chaplain of Lehigh University, and had been rector of various churches in Illinois and New York. He was the author of "The Living Church," "The Chief Things," "Confirmation," "Church Doctrine for the People," and was also an editorial writer in religious and secular journals.

Science

Sport and Folk-Lore in the Himalaya. By Capt. H. L. Haughton. New York: Longmans, Green & Co. $3.50 net.

The author of this book, like so many Anglo-Indians, kept a journal while on duty, and after long hesitation has been persuaded to come into print. Unlike many of his fellow-countrymen of correspondingly weak wills, however, he has observed a good deal which is well worth the reading. The book is a Kashmiri potpourri, jumbled together beyond all hope of selection, and one's last hope of making it a work of reference vanishes when the miserable index is examined. The author is a keen observer, and has made many notes of really novel interest. But all this is as completely lost in the volume as if still hidden in Kashmir. Under the title Gilgit we read, pages 41, 44, 97, 98, and so on, to forty-seven meaningless references. An exhaustive index would have made this book thoroughly worth while.

By far the weakest portion is the so-called folklore, which hardly deserves this name, so local and circumscribed are most of the tales. It seems probable that the shikaris who narrated certain of the legends drew as freely upon their own imagination as upon any widespread lore of their people. Much better are the accounts of hunting experiences with bears, markhor, mountain sheep, and ibex. The habits, amounting almost to life histories of the animals, are very cleverly and unobtrusively woven into the account of the hunt itself. The versatility of the author is shown in chapter v, Some Pages from the Life Story of a Bear, where the account is from the bear's point of view, and well done. The picture of the

mother bear in the hollow tree at the end of winter, first driving out her two yearling cubs to shift for themselves, then giving birth to two helpless things with slits for eyes and gaping toothless mouths, is absorbingly written, and the subsequent development and adventures of this trio is worthy of a high place among nature stories founded on fact.

But the best of the work is that descriptive of the people themselves, chiefly natives of Gilgit and Kashmir, and seldom has a writer given more vivid or accurate sketches of these picturesque natives. The chapter on A Gilgit Jalsa is especially good. A passage from the long account of the spectators at the afternoon's games deserves to be quoted:

> First come some smart little Gurkhas of the Kashmir Infantry and a party of long-limbed Punjabi Mohammedans belonging to the Mountain Battery. Close upon their heels follow several mounted officers, headed by the general commanding the Kashmir troops, a courtly old Dogra gentleman with over forty years' service, but active and upright though he has seen generations come and go during his many tours of duty in Gilgit. We have no time to talk to him now, or he might tell us of the hardships, the victories, and reverses of the Kashmir armies in these regions, before a handful of Sahibs came to organize and see that the troops got their rations and *occasionally* some of the pay that was due to them. . . . Other chieftains and men of rank quickly follow; the Mehtarjao of Yasin, in whom we may at once recognize the Chitrali strain by his round, almost child-like eyes. He looks the picture of jovial kindheartedness, bubbling over with boyish good spirits, and so he is—at times! For the rest, let us remember that he is a Chitrali, and then we shall not be surprised if on some future occasion we hear of him involved in some cruel intrigue, or see his now smiling face glowering with anger and hatred of some rival. But to-day he is riding and talking with the Governor of Punial, though "they that know" say there is but little love between them.

This reads more like a mediæval account of the attendance at lists, than of people living in the present year. It is this faculty of making these interesting natives individually alive that forms the chief charm of Capt. Haughton's book.

The Yale University Press will publish this spring "Mental Health of School Children, the Psycho-Educational Clinic in Relation to Child Welfare," by Dr. John Edward Wallace Wallin, director of the Psychological Clinic and professor of clinical psychology, University of Pittsburgh, and "The Fundamental Bases of Nutrition," by Graham Lusk, M.D.

The distinguishing feature of *Bird-Lore* for January-February is the census taken last Christmas of the bird-life of our country. The number of returns was greater than on any of the previous thirteen years. Two observers on Staten Island saw 1,008 birds of 30 different species. The artist, Louis Agassiz Fuertes, contributes a pleasant appreciation of the songs of the birds in the tropics and a colored plate of the wood thrush to illustrate the "educational leaflet," No. 72.

Petermann's Mitteilungen for January contains an account by Dr. W. Bachmann of his journey from Mosul to Van in central Kurdistan, with numerous illustrations and three colored charts showing heights, cultivated districts, forests, and roads. The remarkable promontory of Monte Argentario in Tuscany is described by Prof. G. Braun. The new boundaries of the Balkan states are treated in the military department from the geographic and ethnographic point of view, as well as the strategic value of inland ship canals.

Drama

Three Plays: The Stronger, Like Falling Leaves, Sacred Ground. By Giuseppe Giacosa. Translated from the Italian by Edith and Allan Updegraff. (The Modern Drama Series, edited by Edwin Björkman.) New York: Mitchell Kennerley. $1.50 net.

There is a rich undercurrent of idealism in Italian literature of the nineteenth century. The liberalism of the revolution and the wars of independence fed on it. Free Thinkers, Catholics, and Reactionaries are alike inspired by it. The most corrupt Governments and the most violent reformers have advanced their programmes in its name. It has been deeply colored by scholastic philosophy and by Catholic insistence on free will and individual responsibility. It has been less social than individualistic, more ingenuous than effective, more utopian than practical. Going back to early Restoration days, we find this idealism in conflict with despotism; with the succession of middle-class Ministries and the growing consciousness of industrial problems, we find it in conflict with the spirit of greed and bourgeois materialism.

It is this latter struggle that Giacosa understands and that he studies most successfully. He had, to be sure, a certain sympathy with romantic sentimentalism. But when we think of Giacosa's creations it is neither Iolanda nor Diana that comes before us. "The Game of Chess" and the "Triumph of Love" are too lightly worked. Giacosa's lyric emotion was never clearly analyzed by himself, and the delicate humor that plays over that background, while it never lacks charm, has nothing particularly suggestive or profound. One feels accordingly that in making these selections from Giacosa's rich offering, Mrs. Updegraff has gathered together the most typical illustrations of his genius in a work that will give to the American public all of Giacosa it needs or will care to know. Her translations also are among the best that have appeared in the Italian field. Of all the recent output, they are the only ones to be compared with the high standards set by Mrs. Wharton in the versions of Sudermann and D'Annunzio. We have had translations of Giacosa coming from the professorial ranks. A glance at Mrs. Updegraff's work is enough to convince one that it was worth while to do the work over again, whether we consider accuracy of translation or efficacy of form. It is not that these latest translations are exact interpretations of Giacosa's thought. In a number of cases the subtleties of Italian idiom have surpassed the translator's linguistic competence. But even in such cases her dramatic sense has preserved both the coherence and the movement of text, so that the versions create quite the impression of original works.

The unpretentious introduction reviews sympathetically Giacosa's life and work. It might have been more useful had it taken its point of departure from research on Giacosa's visit and reception in America in 1892, rather than from a comparison of him with D'Annunzio. The comparison rightly concludes that there is no comparison possible. It wrongly credits Giacosa with superiority "as a student of real life"; and it wrongly gives these two men "recognized preëminence in modern Italian dramatic literature." Surely, a dozen names occur to one instantly as more essentially "dramatic," more responsive to Italian life, more enduring in vogue on the contemporary stage, and the statement that "Giacosa may safely be cited as the only modern Italian playwright who ever mastered" the "art of writing a play," needs no comment.

These slight, and often gratuitous, errors are such as to be easily remedied in future volumes from the Italian drama which are planned for the series.

"John Millington Synge and the Irish Theatre" (Macmillan), by Maurice Bourgeois, impresses one as a new invention. Here is a subject on the literary "firing-line," written up as for a Sunday magazine, yet soberly and judicially handled, and supplied with the elaborate critical apparatus of a doctor's dissertation. As a matter of fact, it was received with "mention très honorable" for the Diplôme d'Etudes Supérieurs at the University of Paris. The author has apparently read everything written anywhere on Synge up to September 1, 1913. In an effort to add fresh touches to his biographical portrait, he has also interviewed Lady Gregory, Yeats, George Moore, G. B. Shaw, Masefield, relatives of Synge, and, one is tempted to say, every one else in Ireland whose path the poet crossed. The aftermath of biographical facts is not heavy. We learn that Synge did not ape the green-faced decadents in Paris; but was "always very plainly dressed, wearing a celluloid collar and heavy boots, and generally muffled up in a white neckerchief and long black cape."

His language was at times "almost incredibly gross, and he indulged in magnificent swear-words which had something of the Elizabethan or Rabelaisian licentiousness," yet, adds the historian, he "always remained as chaste and pure as ever man was." He was fond of Borrow, Pater, Loti, Anatole France, prided himself on his relationship to Lafcadio Hearn, and was in general far more intimately acquainted with contemporary literature and art than Mr. Yeats has allowed. He had no conversation, was reserved and silent and of a "peculiar tenebrosity of mind." Towards the end of his life he was occupied with an unpublished play dealing with the slums. The day before his death he desired to be moved into a room where he could see the Dublin mountains. "But he could not see them, and wept. The next day, at five in the morning, he said to the nurse, 'It is no use fighting death any longer,' and, turning over, passed away."

The spectacular revival of "Othello," which William Faversham has made at the Lyric Theatre, is a respectable but not remarkable achievement. To the scenery, admirable alike in design and color, almost unstinted praise may be awarded. It is the work of Joseph Harker, of London. But, as usual, the text suffered on account of the inevitable waits. R. D. MacLean, the Othello, was trained in the robust school of John McCullough, but has acquired a welcome moderation. His view of the Moor is that of a rough, simple soldier, and he played the first and second acts most effectively, with fine restraint and unaffected virility. In the later acts his acting was uneven. At times he sounded notes of genuine tragic emotion, but he could not sustain himself on the heights. Of some of the most exquisitely pathetic passages, he made little or nothing. But his performance was dignified and meritorious. Mr. Faversham, as the manager, chose Iago and kept him in the centre of the stage as much as possible. His interpretation was clever in its elaborate technique, but superficial, failing to indicate the power of an intellect and will necessary to provoke a catastrophe of such proportions. In striving to make Iago natural, colloquial, and plausible—as he often ought to be—he made him trivial. He failed to give any of those flashes of self-revelation in the soliloquies which imparted such vividness to the impersonation of Edwin Booth. He was interesting, but not terrible. Pedro de Cordoba was an excellent Cassius, but Constance Collier was a second-rate Emilia and Cecilia Loftus an exceedingly feeble Desdemona. It should be noted that the performance was received with favor by a crowded house.

The hundredth performance of G. K. Chesterton's "Magic" has just been given in the Little Theatre, London. A week or two ago the piece was doing so badly that its last performances were announced. Then there was a rush to see it, and the house has been full ever since. The probability is that all Mr. Chesterton's friends and admirers intended to see it at some time or other, but thought that there was no occasion for haste. The notice of withdrawal sent them all scurrying to the theatre at once. It is somewhat curious that the piece was so coolly received in the first instance, as it has many attributes which might be expected to be popular. Most of the critics treated it very unjustly. As a matter of fact, it is far more interesting than most persons would suppose after reading the published reports.

Oscar Asche and Lily Brayton will reopen the London Globe Theatre, which has been redecorated, on the 9th of March, with "Kismet." They expect to remain in London, or England, for a long time to come.

Laurence Irving and Mabel Hackney have left England for Montreal, where they start their Canadian tour on February 9. They have with them four plays, "Typhoon," "The Unwritten Law," "The Lily," and, by arrangement with Sir George Alexander, "The Importance of Being Earnest." On his return to England Mr. Irving will complete preparations, already well advanced, for the production of Herman Bahr's comedy, "Bonaparte," which depicts the love story of Napoleon and Josephine.

Mr. Keblo Howard has completed arrangements for a second season of "repertory" at the Grand Theatre, Croydon, near London, starting on March 9. On this occasion he will act as sole director and producer. Not only has he in hand all the requisite plays, but he has also engaged the full company. The keynote of the season will be comedy, and English comedy at that, as he is of the opinion that last year's programme was somewhat too heavy.

The Incorporated Stage Society of London has in preparation two plays by Anatole France—the first, a light one-act comedy, "Au Petit Bonheur"; the second, the "Comedy of the Man Who Married a Dumb Wife." Both have been translated by Ashley Dukes.

Edward Compton, who for thirty years has been acting old English comedy in the English provinces, starts his spring tour next week. His repertory includes Lord Lytton's "Richelieu," "Money," and "The Lady of Lyons," together with "Davy Garrick," to be given in conjunction with the screen scene from "The School for Scandal."

"La Danse devant le miroir" is the name of a new play by François de Curel which has just been produced at the Paris Ambigu. The title is explained in a speech by one of the characters: "When two lovers are perfectly in love, each sees himself or herself in a mirror, thinks that the image is that of the other lover, and gazes raptly at himself or herself without noticing really that he or she is alone." The conclusion is that love always is "dancing before a looking-glass." Régine is rich, and loves Paul. Paul loves Régine, but is ruined. In fact, he has already tried to commit suicide. He will not be supported by a wife, even though it were a love match. "But would you not take me if I were in trouble and dishonored?" Of course he would—and he imagines that she has been betrayed. She had never thought of such an interpretation, but uses it to find out whether Paul is as distressed as a real lover should be. Paul finds that the whole story is an invention, and rejoices. He is assured again by Régine herself that it is all too true. A fortnight before the wedding he finds out finally that it is all false. On the wedding day all is explained. She is pure and he is a gentleman. If her tale had been true he would have married her out of devotion and shot himself afterwards. She holds him in her arms. He is her real hero—and he takes a pistol out of his pocket and does shoot himself. The picture she had formed of him was so noble that he was afraid he could not live up to it.

Music

MASSENET'S "DON QUICHOTTE."

The Philadelphia-Chicago Opera Company (known in Chicago as the Chicago-Philadelphia Opera Company) has inherited Mary Garden and several other popular artists of the Parisian school from Oscar Hammerstein, which explains why French opera remains its mainstay, especially when it visits the Metropolitan Opera House, where French operas are not in favor with the management. This year four of these invasions are planned. The first of them, last week, gave New York music-lovers their first opportunity to hear Massenet's romantic opera, "Don Quichotte," which was produced under the direction of Cleofonte Campanini, with a cast including Mary Garden, Hector Dufranne, and Vanni Marcoux (at present a member of the Boston Opera Company), whom Massenet himself called a "superbe artiste," and who has sung the part of Don Quichotte in Paris 150 times.

At least a score of musical works have been based on the great novel of Cervantes, the first of them dating back to 1690. Massenet's opera can be classed with them only so far as the Knight and Sancho Panza and the episode of the windmills are concerned. For the rest, the plot is based on a play produced in Paris in 1904, its author, Jacques Le Lorrain, being a provincial cobbler who, like Hans Sachs, was "a poet, too." He died shortly after the production of his play, which was entitled "Le Chevalier de la longue figure," and Henri Cain converted it into a libretto.

In this opera book Dulcinea is a courtesan, whom it amuses to be adored by Don Quichotte as a model of virtue. When, after a duel with one of her admirers, he proposes marriage, she mockingly consents on condition that he shall restore to her a costly necklace stolen by the terrible Ténébrun. He promptly starts with his Rosinante and Sancho in quest of the robber band. Seeing a windmill, he takes it for a menac-

ing giant, charges, and is knocked off his steed, without being seriously injured. In the next act he comes across the robbers, and again charges, but is soon disarmed and condemned to death. As they are preparing the halter, he makes them an address, telling of his mission in life to succor the poor and the oppressed. Ténébrun is moved to tears, and not only allows the knight to depart, but gives him the stolen necklace. With it he returns to find Dulcinea in the midst of festivities. She is delighted to recover her jewels, and so touched by his devotion that, after a fit of hilarity over his renewed offer of marriage, she tells him what sort of a woman she is; whereupon he retires, broken-hearted, with his faithful Sancho, to the depths of the forest, where he dies leaning against a tree, after once more seeing and hearing Dulcinea in his delirium.

As presented on the stage and intensified by Massenet's music, there is real pathos in this portrayal of the adventures of that grotesque mixture of fanaticism, blind impulsiveness, true chivalry, and kindliness known as Don Quijote de la Mancha. By way of contrast we have Sancho Panza, who seasons his devotion with a humor which reaches its climax in a tirade against all womankind, with which he tries to persuade his master that Dulcinea is merely having fun at his expense. The music is most impressive in the final scene, and in the festivities of the opening scene, where Spanish rhythms lend piquancy to the merry strains. The Don's serenade is commonplace, nor has Massenet provided Dulcinea with even one of those original and impassioned melodies which occur in those of his operas that have become famous. His "Don Quichotte" was not produced till 1910; when he wrote it he was beyond the age when composers seem to be able to create such melodies. In all other respects, however, the score reveals the practiced hand of a master of his craft. There are exquisite bits of orchestral coloring here and there, and Dulcinea's song to the accompaniment of her guitar in the fourth act has the true Spanish atmosphere and sprightliness. One of the finest effects occurs during the attack on the windmills, where the vigorous accents of the music are as exciting as the scene presented to the eyes. But it is in the introduction to the last act (which had to be repeated) and the subdued melancholy music accompanying the Don's last words to Sancho—on whom he bestows all he owns, the "Isle of Dreams"—that Massenet most nearly approaches the art which enabled him to place "Werther," "Manon," and especially the "Jongleur de Notre Dame" among the masterpieces of the French operatic stage.

We may expect shortly from the Putnams' press "Latin Songs, Ancient, Mediæval, and Modern, with Music," by Calvin S. Brown.

Lilli Lehmann has contributed 200,000 crowns (about $40,000), to the Mozarteum to be opened with a festival on August 12 at Salzburg. One feature of this festival will be the conducting by Dr. Muck and Arthur Nikisch, at the head of the Vienna Philharmonic Orchestra, of a series of pieces illustrating the evolution of symphonic music on Austrian soil.

The New York Philharmonic Orchestra has already engaged as one of next season's soloists Fritz Kreisler, who returns under the management of Charles E. Ellis.

Puccini was in Vienna not long ago, where he attended the one hundredth performance of his "Madama Butterfly" and the 172d of his "Bohême."

Cincinnati will have another May festival this year. These festivals have been held every other year, with a few exceptions, since 1874. The May Festival Association has never had to call upon its guarantee fund, and has accumulated a sinking fund of about $100,000.

According to the French composer, Ravel, who has lately taken to writing criticisms, modern composers owe their defects as well as their merits to Liszt, whom he admires greatly. It is to Liszt's defects, he writes, that "Wagner owes his turgescence; Strauss, his churlish enthusiasms; Franck, the ponderousness of his ideality; the Russians, their, at times, tinsel picturesqueness; the modern French, the simperings of their grace. But," he adds, "it is to him that all those dissimilar composers owe the best of their qualities."

Art

THE REVIVAL OF INDIAN ART.

LONDON, January 30.

The creation of Delhi as the seat of Government of British India, necessitating, as it does, the building of a new metropolis adjacent to the present city, at a cost of $20,000,000, as the officials compute it, or twice that sum, as some authorities assert, is quite naturally regarded as a potential event in the annals of Indian architecture—and for that matter, of Indian art. It has led to a heated discussion over the point as to whether the projected capital is to be erected by native master-builders in harmony with its surroundings, embodying the best features of Moghul, Buddhist, and Hindu architecture, or is to be constructed by Occidental architects in the classical, Renaissance, or purely modern style. Questions pertaining to the ideals and forms of art at present occupy the centre of the stage in the land of Ind, and are attracting the attention of the rulers as well as of the ruled, both of which communities, but a short time back, were justly accused of being apathetic towards such problems.

But whatever the Government may decide to do in the matter of dispensing its patronage to architects, there is no mistaking the fact that this wrangling has exerted a strong influence upon the natives, impelling them to appreciate indigenous art, and patronize Indian artists. This is really not a new impulse generated by the controversy. For some years past the cultured classes of Hindustan have realized that it would be most unfortunate if the process of modernization should kill the native artistic genius and reduce the Indians to mere imitators of Occidental artists.

This sentiment found dramatic expression when Dr. Ananda K. Coomaraswamy, who was in charge of the art section of the Allahabad Exhibition of 1910-11, barred the paintings of Ravi Varma, whose work, done in the style of the British Royal Academicians, had been rendered familiar to millions of natives, educated and ignorant, by cheap oleographs and collotypes, and many of whose masterpieces, bought at fancy prices, were hanging on the walls of the Laxmi Vilas palace—the favorite residence of the Gaekwar of Baroda, reputed to be one of the most discriminating Indians of his generation. The man who issued this mandate was a doctor of science of the University of London, steeped in the philosophy of William Morris, and recognized in Europe as an art critic of considerable discernment. He was only partly an Indian, the son of a Ceylonese knight who had married an Englishwoman, and had spent most of his years out of Hindustan. His decision to exclude Ravi Varma's paintings from the Allahabad Exhibition raised a commotion throughout India. But the cultured Indians gave him their influential support.

Several years prior to this a similar stir had been created when the gallery attached to the Calcutta School of Art was purged of all portraits done in the modern style, by Mr. E. B. Havell, in his capacity of principal of that institution. Mr. Havell's action, proceeding, as it did, from an English artist many generations of whose family had followed the same profession, gave deep umbrage to his countrymen; they accused him of resorting to such tactics to curry favor with Indians. Strange to say, it also offended many natives, who took the view that the alien artist was seeking to prevent the brown man from mastering the principles and technique of Western art. But the Briton refused to be daunted by opposition, and not only declined to undo his work, but repudiated the methods then prevalent in the Calcutta School of Art and introduced in their stead a curriculum of traditional ideals. He furthermore called attention to the fact that the useful arts of India were dying out: (1) because the Moghul Court which

patronized the artists had passed away and the British administration gave them no support; (2) because Western-educated Indians were too materialistic to possess love or taste for art; (3) because the wealthy Indians gave encouragement to foreign and pseudo-foreign *objets d'art;* and (4) because the tourists and export traders compelled the Indians to produce articles that vulgarized their genius. Over and above this, he asserted, the handicrafts of the country were suffering from the alien imports—a competition which could be overcome if the native workers were to employ improved hand-looms and other modern tools, and if the cultured classes were to patronize their wares. This agitation was unpopular, especially with the British, who deemed it a thrust at their civilization and a direct incitement to native insolence. To this probably is due the fact that, though still in the prime of life, Mr. Havell had to retire from his Government position on the plea of ill health.

As the result of Mr. Havell's endeavors, the Calcutta School of Art has fostered a cult of imaginative and idealistic art. Those who belong to it do not seek to reproduce minute details, but, with a sweep of the brush, produce the broad, general outlines of the subject. The general impression that these paintings leave on the mind of the critic is that they are intended more to depict abstract thought than concrete form. The artists are Hindus steeped in the philosophy and mythology of their race, and the subjects they choose are generally of a sacerdotal and allegorical character, suggested by the lore of the Vedic and Pauranic periods.

Yet the campaign of revival lacked life and force until about the middle of the last decade. Then the Japanese victories on the Manchurian battlefields and in the Tshushima Straits stirred Hindustan out of its torpor. The spectacle of an Eastern Power defeating a Western foe came almost simultaneously with the partitioning of Bengal by Lord Curzon—an act which the educated Indians, rightly or wrongly, construed to be an unforgivable affront offered by the alien Administration to native public opinion. The two incidents combined to increase faith in the destiny of the Eastern races. The Indians stampeded back to the ideals of Vedas and indigenous æstheticism; and began to crave for spirituality instead of materialism, hand-manufactured goods instead of machine-made merchandise, and articles of purely native design and workmanship.

When this intellectual reaction came, native art was in a most depressed and degraded condition. The majority of Indians educated in the West, not having any conception of æstheticism or any love for it, made little attempt to adorn their homes and beautify their surroundings: the few who did selected foreign art products for this purpose. Oftentimes the native penchant for Occidental trumpery led to bizarre effects. In more than one drawing-room in India the writer has seen common hat-stands strewn about to decorate the parlors. In a Maharaja's palace, the walls were lined with plate-rails on which were placed cheap vases of every description, tall and short, slender and thick, glass, china, and pottery-ware, standing as close together as they could be crowded, while tables, cabinets, and what-nots groaned under a similar tawdry load. The desire to patronize foreign wares was especially strong in the half-educated, and even more so among the barely literate, who thought they should be able to make up for their lack of Western culture by surrounding themselves with articles of Occidental manufacture. Since the leisured classes largely consisted of poorly educated persons, it came to pass that the men whose progenitors took the keenest delight in encouraging the native artists now transferred their favor to *Vilayat*—Europe. The insensate length to which this was carried can be inferred from the fact that one wealthy Indian sent his soiled linen over-seas to Paris to be laundered. Whenever these people who were rich in resources and poor in culture patronized Indian artists, they did so only on condition that the craftsmen would consent to copy European rubbish. For instance, the generality of landlords employed builders whom they kept busy erecting houses, mostly patterned after barracks. Indian painters began to produce weird pictures in which Hindu gods were portrayed dressed in European costumes, and in a Western environment. Krishna was shown seated in a phaeton along with a number of devotees, while Siva was seen sitting in a chamber lighted with candles with glass shades. The women of India also evidenced the desire to possess the flimsy mulls and silks woven by machine in Manchester and Paris, compelled the native gold and silversmiths to copy patterns of *bijouterie* from catalogues of British firms, and forced the makers of kitchen and dining utensils, the embroiderer, and the weaver, to imitate Westerners.

The political convulsion, in addition to turning the sympathies of the Indians towards the encouragement of native artists and traditional methods, provided a direct impetus to the revival of Indian handicrafts, and especially to hand-loom weaving. This impulse proceeded from the boycott that the Bengalis instituted against British goods in 1905. Since the output of power-driven Indian mills was pitifully small compared with the requirements of the country, the boycotters found that they must patronize the hand-looms. Consequently the native weaver began to receive support such as he had not enjoyed for decades. Hand-loom weaving, at that time, had become a moribund industry. The weavers virtually confined themselves to producing coarse cotton cloth (which they often wove from machine-spun yarn), which held its own in the market only because it was stronger than that produced by machinery, and which, for that reason, was largely consumed by illiterate Indian villagers. Yet the weavers earned such miserable pittances that yearly hundreds of thousands were forsaking the hand-looms for factories and mills. Those whose forefathers had been engaged in weaving muslins of gossamer fineness, and patterns of intricate and artistic designs, were in a still more depressed condition, their number having decreased almost to the point of extinction. The boycott came to these people as a saviour. In the ebullition of feeling, coarse cloth was used in preference to the thin, machine product, by men and women who, a few years before, would not have deigned to look at it. Those who wove fabrics of a better grade were patronized even though the hand-made cloth cost more than did the products of the Manchester mills. Improved hand-looms were invented or imported so that the weaver could do more and better work with less expenditure of time and labor. Societies sprang up everywhere to help advance the cause of *Swadeshi*—India-made goods. Shops were established exclusively for the sale of country manufactures. The boycott did not last long, nor did it materially hurt the British trade; but it exercised a revivifying influence upon hand-loom weaving and other handicrafts. The Nationalist movement (of which the boycott was a transitory phase), however, appears to have come to stay in Hindustan, and is giving an impetus to Indian art, religion, philosophy, and culture in general.

With the calming of Hindostan's political temper, the insane repugnance for Western institutions, exhibited by many natives immediately after the Japanese victories and the partition of Bengal, has disappeared. Therefore, the tendency to belittle and reject all Western civilization has vanished. Indians to-day are not resisting all modernizing influences, nor do they refuse to recognize and admire the beauties of Occidental art and life. But the crisis of the past decade has given them discernment which safeguards the artistic heritage of ages, and which insures the indigenous traditions of art.

SAINT NIHAL SINGH.

E. P. Dutton & Co. have in their list of spring announcements: "Gothic Architecture in Spain," by George Edmund Street; "Religious Art in France, XIII Century," by Emile Male, translated by

Dora Nussey, with 189 illustrations, and "The Great Art Treasures," edited by C. H. Collins-Baker.

The middle of March the Arnold Otto Meyer-Hamburg collection of drawings of the old masters will be sold at auction at the shop of C. G. Boerner, Leipzig. The collection contains many treasures of the fifteenth, sixteenth, and seventeenth centuries, among them being original drawings by Rembrandt, Avercamp, Bega, Breugel, Cuyp, Everdingen, Goyen, Hobbema, Leyden, Ostade, Ruysdael, Terborch, and others, besides a large portrait of the Emperor Maximilian on horseback, by Burgkmair. A catalogue of the collection may be obtained from the firm of Boerner for three marks.

Mr. John V. Van Pelt's "The Essentials of Composition as Applied to Art" labors under the disadvantage of a too ambitious title. It is a second edition, revised and enlarged, of an earlier book which, under the more modest title of "A Discussion of Composition," has during the past ten or twelve years found considerable favor among both teachers and students of architecture. Based primarily, it should seem, on "La Composition decorative" of Mayeux, with amplifications showing the results of a varied though somewhat limited reading, it embodies the substance of lectures delivered to the students of architecture at Cornell University, and has the advantages and defects common to such books. It must of necessity be elementary in character to fit the stage of mental and æsthetic training of the students to whom it was addressed; and the casual and offhand allusions and *obiter dicta*, as well as the familiar style of the language in which they are expressed, seem at times somewhat beneath the dignity of a serious treatise. Moreover, it includes a number of topics which, proper enough in a manual for students of architectural design, are hardly appropriate material for a treatise on the essential principles of composition in art—such topics, for instance, as the programme for a riding-school, the proper arrangement of stables, or the right way to indicate "mosaic" in a plan. It would have been better to acknowledge frankly the evident field of usefulness for such a book by a title such as "A Manual of Suggestions for Students of Architecture"; for its scope is not that suggested by the title, and it nowhere handles æsthetic theory with broad philosophic grasp. On the other hand, it shows an alert mind, broad in its outlook and sympathies, and in its specific maxims and propositions and counsels it is generally sound. Its style is familiar, but readable, and it may be safely commended to students of architecture and of the arts most nearly allied to it. (The Macmillan Co.)

Charles Volkmar, one of the best-known art ceramists in America, died Friday at his home near Metuchen, N. J., aged seventy-two. He was the son of the late Charles Volkmar, of Baltimore, a portrait painter, and studied painting himself in the studio of the French landscapist, Harpignies. He was said to be the first artist in America to paint underglaze upon tiles, and his vases, jugs, and bowls in soft-toned glazes, manufactured in the pottery at Metuchen, brought him fame and were featured in all the exhibitions of arts and crafts in the country.

Finance

THE QUESTION OF BUSINESS REVIVAL.

Since the remarkable recovery on the New York Stock Exchange in January, followed by a similar revival in London (which the conservative London *Economist* describes as "the most important recovery that has taken place since the Boer War"), a general reaction in prices has ensued. It has resulted, at New York, in loss of a considerable part of the January gain in prices. At London, it has caused the loss of nearly 1½ point in British consols, following the extraordinary 6-point rise of the three preceding weeks.

It is true that evidences of a world-wide return to sound conditions in the money market have not ceased. On the contrary, in the face of the Stock Exchange reaction, two of the great European banks last week made further reduction in their rates, while the open market price of money reached still lower figures, both at London and at New York. There have also been signs of reviving activity in our steel trade, where prices, last week, advanced sharply for the first time since 1912, with orders on hand 10 per cent. above the January average and 20 per cent. above December. But even this left the mills working at only 65 per cent. of full capacity, and there have as yet been few distinct indications of revival in other industries.

Absence of such fulfilment of the recent inferences of Wall Street from the "bull market" then prevailing, and the fact that the market itself was moving down again, have caused the occasional remark that the action of Stock Exchange prices, during January, must have been illusory. But this suggests the inquiry, whether a stock-market movement like last month's may be safely taken as a forecast of general business prospects, and if so, why trade is making no response.

Those questions are best determined in the light of precedent. One is reminded, to begin with, of the markets of 1897, when the movement really began under which American finance and business were swept from the most extreme depression into what grew to be unparalleled prosperity. People familiar with that period, either through experience or through tradition, know that a great rise on the Stock Exchange occurred. But under what circumstances, in relation to the general position, and to what extent simultaneously with trade revival? The year before 1897 had been one of great hardship, in both finance and trade. Sales on the Stock Exchange in 1896 had been, with one exception, the smallest in sixteen years. It was in May, 1897, that the stock market began to rise; it went up 6 or 9 points in June, 10 points in July, and 8 or 10 in August—sales on the Exchange in the last-named month being the largest of any month in a decade.

But trade, during that vigorous three months' rise in stocks, did not revive at all; on the contrary, iron production, even in July, was 10 per cent. smaller than the year before; steel prices were lower than in January; unsold supplies had increased month by month, and business failures were more numerous. In September of 1897 the rise of stocks was replaced by a violent reaction. Prices fell 8 or 10 points that month, and the break continued. But at just that moment the trade recovery, which was to have so remarkable a later history, but of which there had previously been few signs, began. In the three autumn months of 1897, during which the decline on the Stock Exchange continued, iron production increased 20 per cent., to a higher weekly total than had ever before been reached. With the suddenly enlarged activity of trade, the country's bank clearings in September rose 50 per cent. above 1896.

The obviously interesting point of this retrospect is that trade revival did not really begin until three months after the rise in Wall Street started, nor until Wall Street prices were moving down again. The story of 1904, when recovery set in from the financial and industrial depression of the gloomy year which came before it, is equally interesting. From a condition of apathy in the first half of 1904, the stock market in July began to rise. In August the leading shares advanced 8 or 10 points; in September the rise was equally great; the market of October and November assumed the proportions of a boom.

But as late in that period as September, prices were demoralized in the steel trade and business at large was halting. It was only towards the close of that month—nearly three months after the stock market rise had got under way—that an upward turn came in the steel trade, and it was December, when Stock Exchange prices were indulging in a "perpendicular decline," which witnessed the first revival in the field of general business. So also reads the testimony of the first trade revival after the panic of 1907. On both Stock Exchange and business markets, the early recoveries of 1908 were the brief and abortive 'Sunshine movements." It was November of that year when the financial public took the bit in its teeth and ran away with stock-market prices; but it

was April of the following year before the decline in price of steel was checked, and a recovery began which rapidly spread to the whole business field.

In due course, we shall see to what extent, if at all, such a sequence of events is to be observed in the various markets of 1914. Precedent at least seems to prove this—that when real recovery is under way, the Stock Exchange not only indicates it first, but completes its forecasting process some considerable time before the industrial recovery which it prophesied has itself begun. If one asked the reason for this relatively slow response of the business world, the answer of experienced people probably would be that the plans of trade and industry can be changed and reversed only with slow deliberation, even when favorable underlying conditions are unanimously recognized; whereas the Stock Exchange, if it discovers such conditions overnight, can begin to "reflect" them energetically next morning.

Continuity

The Presidential Address to the British Association

By Sir OLIVER LODGE

Author of "Life and Matter," etc.

12*mo.* $1.00 *net*

A marked feature of the present scientific era is the discovery of, and interest in, various kinds of Atomism; so that Continuity seems in danger of being lost sight of.

Another tendency is toward comprehensive negative generalizations from a limited point of view.

Another is to take refuge in rather vague forms of statement and to shrink from closer examination of the puzzling and the obscure.

Another is to deny the existence of anything which makes no appeal to organs of sense, and no ready response to laboratory experiment.

The author, in this illuminating little volume, urges against these tendencies.

EARLY SPRING NEW PUBLICATIONS
DODD, MEAD & COMPANY
Fourth Ave. and 30th St., New York

The Making of an Englishman
By W. L. GEORGE

Author of "A Bed of Roses," "Until the Day Break," etc.

More clearly and cleverly than most books which attempt to do nothing else, Mr. George draws in this novel the contrasted characteristics of English and French. But this is in passing and a frame, as it were, to a story of people who are undeniably and indelibly real. Among the crowd of ephemeral novels of the season it stands out by reason of that quality which is as rare in novels as in people—a strongly marked individuality.

$1.35 *net.* *Postage* 13 *cents extra.*

A Pillar of Sand
By WILLIAM R. CASTLE, Jr.

Author of "The Green Vase."

A novel which in a very clever way not only concerns itself with the doings of a gronp of people who are part of Boston society, bnt which delineates and holds up for the inspection of all Boston society. What *is* Boston society; what kind of people is it composed of; what are its characteristics; what does it amount to in this busy age?

$1.30 *net.* *Postage,* 12 *cents extra.*

Initiation
By ROBERT HUGH BENSON

Author of "Lord of the World," &c.

Father Benson has given us a remarkably powerful story of the regeneration of a man, born to the good things of this world, but selfishly trying to avoid the common responsibilities of humanity. The author's character work is at its best, his keen analysis of life, his knowledge of man's spiritual as well as physical environment—and his story will live.

$1.35 *net.* *Postage,* 13 *cents extra.*

The Youngest World
By ROBERT DUNN

Dr. Frederic Taber Cooper, the well-known reviewer for *The Bookman,* who read the advance sheets of Mr. Dunn's remarkable story of Alaska, "The Youngest World," says: "It is years since I have read a first novel by an American that gave me such a thrill of unalloyed delight: it is so genuine, so sincere, so unmistakably honest, so vital. Plenty of authors have given us the physical suffering of the far north: the dropping away of the outer veneer of civilized man and the reappearance of the human animal, the brutishness and degradation brought about by cold and darkness and hunger. Mr. Dunn's book stands in a different class: there is no mistaking its absolute first-hand reflection of life,—the life of strange, motley hordes of drifting outcasts and adventurers. But unlike the Jack London school, he never forgets that man is a little lower than the angels, as well as a little higher than the beasts; he never loses sight of the innate greatness of humanity, the greater spiritual as well as physical heights to which man may aspire. . . . The book is good, big, significant. coming as it does in a season when the absolute dearth of vital fiction is painfully apparent."

$1.40 net. Postage 13 cents extra.

The Empress Frederick
A Memoir

An intimate biography of an Empress whose influence upon modern Europe has been very great, but of whom little has been written and little is known. Her son, the present Emperor of Germany, has been called "much more the son of his mother than of his father." *$2.50 net. Postage 18 cents extra.*

The Workingman's Christ
By CRAIG S. THOMS

A book that most accurately harmonizes the spiritual aspects of Christianity with the social movements of the day and is thoroughly in accord with the most advanced vision of our time. *$1.25 net. Postage 12 cents extra.*

Everyman's Garden Every Week
By CHARLES A. SELDEN

City Editor of the *New York Evening Post.*

Tells you what to do in the flower garden and the kitchen garden, why to do it and how to do it, during every week in the year. *$1.25 net. Postage 11 cents extra.*

Japan's Inheritance
By E. BRUCE MITFORD, F.R.G.S.

"Wanted—the truth about Japan," says the author. And in this book he gives the truth about Japan and the Japanese. *Illustrated, $3.50 net. Postage, 20 cents extra.*

Trans-Atlantic Historical Solidarity

Four Lectures delivered before the University of Oxford in Easter and Trinity Terms, 1913, by CHARLES FRANCIS ADAMS. Cloth,8vo, $1.75

"It is a fascinating story as Mr. Adams treats it. . . . His analysis of the conditions which finally determined the sway of State sovereignty in the South and of national sovereignty in the North is keen, candid and convincing. . . . His examination of Lee's achievements and defects as a commander is acute and of intense interest."—*New York Times.*

JUST PUBLISHED

The Mill on the Floss

Edited by J. MILNOR DOREY, Head of English Department, High School, Trenton, N. J.

Semiflexible cloth, 554 pages, illustrated
50 cents.

A new edition of George Eliot's great autobiographical novel.

The editor has traveled through the scenes depicted in the book, and has prepared his introduction so as to bring out the background, as well as the art and moral purpose of the author.

There is an ample bibliography and collection of critical comment. The notes furnish clear explanations of all references calling for treatment, and the numerous questions on the text will stimulate thought and interest.

THE FRENCH VERB

ITS FORMS AND TENSE USES

By WILLIAM ALBERT NITZE and ERNEST HATCH WILKINS
of the University of Chicago

Price 25 cents; postpaid 28 cents.

This little book is designed for use in both elementary and advanced French courses. Most American students visualize their French verbs to some extent, that is, give a local arrangement in memory to the several tenses and forms. The paradigm used is designed with specific reference to the student's visualization, and is so planned that the student will inevitably associate in memory those tenses which are actually related in form. Other innovations are the grouping together of the regular and irregular verbs of each conjugation, and the order in which the conjugations are presented. The practical result of the arrangement chosen is to advance the most important verbs to an early point in the program of study, and to introduce the irregular verbs in such a way that the various difficulties are met one at a time, and in logical order.

THE FRAGMENTS OF EMPEDOCLES

Translated into English verse by WILLIAM ELLERY LEONARD, Ph.D., Author of *Sonnets and Poems*, and *Byronism in America*. Printed on feather-weight paper, from large type. Gilt top, pages 100. Price $1 net.

The lover of genuine verse will rejoice in a work of this kind. Mr. Leonard has rendered a fine transintion which is scholarly, musical and poetic. It is not alone these qualities which commend the book to an appreciative reader, it is rather the stroug pulse of truth made clear in every thought of the old Mediterranean Greek who lived a contemporary of the great Athenians about Pericles. He was not only a statesman and philosopher, but a poet, a wonderful personality, an egotistic, melancholy, eloquent soul. A conscientious attempt on the part of a lover of literature and philosophy to present the fragments of Empedocles in English blank verse that shall bring out their poetry no less than their meaning; accompanied by the Greek text of Diels, notes interpreting the ideas of each fragment, and an essay on the author as man, philosopher and poet.

The Nation

NEW YORK, THURSDAY, FEBRUARY 19, 1914.

The Week

Are we perchance in the middle of a national political campaign without knowing it? Has the date of the Congressional elections of 1914 been set back from November to May? These questions are prompted by a little shower of pamphlets just issued by the Democratic National Committee. They have every appearance of the "campaign document." "A Record of Achievement," in black-faced type over the portrait of President Wilson. "Democratic Promise and Democratic Performance." Description of the banking and currency law as "our most important legislative achievement in half a century"—all this is so redolent of the approach of election day that one looks out of the window half expecting to see paraders. But it is merely a case of unwonted Democratic forehandedness. The sight of these documents scattered over the country should spur the Republicans to activity. They might give an emergency order for a new edition of that famous Roosevelt publication, "The Republican Party Fit to Rule."

Every new age finds new vices as well as new virtues. This must be the explanation of the good roads bill that went through the House on greased rails last week. River and harbor bills of the old type are felt to belong to the Old Guard era; perhaps even a public buildings bill of the traditional sort would smack too much of the pork barrel of the prehistoric days of the early nineteen-hundreds. But good roads—in what better work could the Government engage? Especially when the appropriation of $25,000,000 is so nicely divided as to give every Congressman's district a fair share. It is true that there are rumors of river and harbor bills, too, but if one passes it will be in spite of its tarnished name. "Good roads," on the contrary, has a fine sound, just the kind of sound that one would want a bill to have in a new day of things political. As for asking whether the spirit behind the new bill is not a very old spirit, such a question would be entirely too rude for the great mass of our Representatives to dream of putting it.

The confusion attending the recent choice of a Senator in Maryland, and the attempted choice of one in Alabama, was largely traceable to uninformed criticism of Gov. Goldsborough in the one instance and to the stubbornness of Gov. O'Neal in the other. Possible repetition of it has been forestalled by the bill providing a temporary method of election in States that have not yet legislated to carry out the Seventeenth Amendment. In any State that delays setting up its own direct-election machinery, the system that has been used for nominating and electing State officers is simply extended to Senators. The captious objection that the Constitution does not permit Congress to prescribe method and manner of the nomination, but only of the election, of its members, was rightly adjudged a wrongheaded extreme of States' rights doctrine. It is hard to show that the Constitution-makers, in the word "election," did not include the process of choosing candidates; and it was admitted even by Senators Shields and Bacon that the mere extension of nomination methods adopted by the States in their own affairs to nominations for the upper House "withdrew very little power from the States." There is now no reason for hitches in the direct election of Senators, and tardy States dissatisfied with the results of the Congressional action may make haste to arrange their own scheme of popular choice.

In his brief statement deploring the death of Senator Bacon, President Wilson rightly placed emphasis upon Mr. Bacon's services in the matter of foreign relations. The specific reference was, no doubt, to the late Senator's activity since he became Chairman of the Senate Committee on Foreign Affairs. As such, and particularly in dealing with the Mexican trouble, Senator Bacon showed himself a consistent friend of peace. In statements given to the press, as also in utterances made on the floor of the Senate, he did all in his power to rebuke and repress the hot-heads all whose thoughts were of war, and to reinforce the President's pleas for patience and forbearance. But all this was only in keeping with Senator Bacon's high-minded and useful stand at the time when the treaty with Spain, after the war of 1898, was before the Senate for ratification. In the discussions of those days, the Senator from Georgia took the lead in seeking in every way possible to disclaim any purpose by this nation to retain possession of the Philippines permanently; and to safeguard the rights of the Filipinos. He made a record then which it must now be a satisfaction to all his friends to recall. Not a statesman of the highest gifts, never a compelling orator, nor yet an aggressive and powerful debater, Senator Bacon's long and honorable service in the Senate makes his death take on the aspect of a national loss.

Those who sit at the receipt of customs have felt a sustained effort at reorganization, since the Sundry Civil Appropriations Act of August, 1912, through Secretary McAdoo's abolition of 113 superfluous collectorships, and also the approval last week of new economies following a conference of collectors at Washington. Yet this last action speaks eloquently of the power of the customs system to adjust itself to important changes at the very time the new tariff and heavier imports laid upon it increased burdens. Secretary McAdoo, following President Taft's order, reduced the collectorships from 152 to 49, abandoned, or made sub-ports of, scores of old ports, placed salaries on a fixed basis, put the whole on a stricter merit system, and cut down the annual cost to $10,150,000! The newer changes are to bring the expenses down $150,000 more, and to put still others of the small ports under a central administration. A main merit of all these reforms is that, while saving in administrative complexities, they have readjusted the work of collectors to recent shifts in the points of commerce. The cancelling of many interior points of entry, in particular, meant the abolition of useless and clogging sinecures, long maintained as political posts in cities without appreciable customs receipts. These changes are now to be supplemented with a slashing of much of the red tape of old régimes.

Burlingame Public Library

Gov. Glynn is now fairly launched upon the great work of reorganizing the Democratic party in New York State. His conference with the President and Chairman McCombs was followed by a careful and earnest statement of his position. In this he commits himself squarely to the task of "putting the party on a proper basis." To this end no single step could be more conducive than the election of William Church Osborn as Chairman of the State Committee. The Governor states that he has prevailed upon Mr. Osborn to accept the position if elected, and says, "I believe that we have the votes to make him State Chairman." It is a long time since the post was filled by a man of anything like the William Church Osborn type; but the Tilden centenary is a reminder of the fact that the time has been when it was filled by a political leader of the first order. The enemy is demoralized. The people are awake not only to the need, but to the evident possibility, of destroying the evil system that has prevailed. The city government is completely in the hands of men who are opposed to machine politics, heart and soul. All the prestige of a President who wields a personal influence almost unparalleled is with the reformers.

The suicide of Treasurer Kennedy is just the kind of incident that is sure to mark the progress of such an unearthing of evil practices as has been going on in New York State under the auspices of District Attorney Whitman. A memorable exhibition of such working of the vengeance of time upon long-tolerated iniquities was given in this community within the past decade, when the life-insurance scandals were dragged to light by the masterly work of the Hughes investigation. Reputations supposed to be secure were blasted, lives of apparently assured success and prosperity were shattered. With this incidental work of fate, however, the public cannot be satisfied. It is not necessarily the most guilty that are struck down by it; in the case of Kennedy himself it is to-day an open question whether his self-destruction was prompted by dread of disclosures of direct crime on his own part or of such knowledge of the crimes of others as it was intolerable for him to confess.

But in the midst of these general considerations, the specific nature of Kennedy's career should not be lost sight of. It was typical of that kind of politics which is the disgrace, and has sometimes seemed the despair, of our democratic institutions. If we could not get rid of it, we should have to admit that, whatever its merits in other respects, democracy in America, as tried by one of the most vital of tests, was a demonstrated failure. Did Kennedy rise to the office of Treasurer of the wealthiest and most populous State in the Union as the result of a record of service and ability pointing towards his selection for such a trust? Quite the contrary. He had been an Alderman in Buffalo, and that post itself he had attained through the familiar methods of the ward politician and saloonkeeper. As Alderman he had distinguished himself not by civic virtue, not by good service to the community, but by his exceptional power among the worse elements of the Board, power used for the effecting of purposes desired by favored contractors and opposed by honest and public-spirited citizens in and out of office. It is safe to say that in no modern country with which Americans would care to have their own compared could such a career have been the stepping-stone to an office like that of State Treasurer of New York.

One would have to look far to find a better example of patchwork legislation than the so-called compulsory education law of Maryland. In the first place, the law is not compulsory, but permissive. Then it specifically excludes six of the twenty-three counties of the State from its provisions, so that these six counties may not compel the education of the children within their limits even if they wish to do so. One of the counties exempted contains the capital of the State. It is not surprising, under the circumstances, to learn that the law is regarded seriously in only a few places. Some counties take nominal advantage of the statute, making half-hearted efforts to enforce it. It is not necessary to take a stand against all local legislation on the part of a State law-making body to feel that a compulsory education law is peculiarly unsuited to such treatment. What can be the local conditions that make it advisable for Baltimore to educate all of her children, but for Annapolis to let hers do as they please?

The decisive defeat last week of Detroit's proposed new charter, by a vote of 25,245 to 15,962, is admitted even by the reformers who advocated it to be a lesson to revision that proceeds not wisely but too well. The pot-pourri of changes included not merely such meritorious proposals as the non-partisan ballot, the extension of elective terms from two to four years, the establishment of a Department of Labor Welfare and a Recreation Commission, with the separation of municipal from State and national elections, but a number that Mayor Marx qualified as jokers or worse. For all that, the new charter might have passed had not the newspapers insisted on the very clear alternative of piecemeal amendment of the old. Even the labor unions, counted on by the Charter Commission, went against it, as did wards that would have profited locally by a new political division of the city. Before the first returns had come in a supporting Alderman confessed that ambition had o'erleaped itself, by introducing a resolution singling out the more important and unquestioned proposals for gradual action.

The bill to set up a leasing and royalty system for Alaska coal lands is the natural and expected sequel to the bill for the construction of an Alaska railway by the national Government. This method of dealing with the Alaska land has been strongly urged, from time to time, during the past eight years or more, both President Roosevelt and President Taft having brought it prominently to the attention of Congress. The wretched mess of the Ballinger-Cunningham-Guggenheim affair was due primarily to the utter unsuitableness of the laws providing for entry of these lands to the conditions obtaining in the development of a mining region of this character. Those laws were based essentially on the homestead idea, which has been sadly out of place in regard to some of our older territories and which was grotesquely unadapted to the Alaska situation. The result was a choice between leaving the lands unused and resorting to fraudulent devices to beat the law. Under a proper leasing system, enterprise will have a chance, and at the same time the interest of the people in the mineral wealth of the region will be protected. Now that the development of Alaska seems in a fair

way of being put upon a good working basis, it is not out of place to recall that the policy embodied in the two bills is precisely that urged with the hearty approval of President Taft, by Secretary Fisher, who, on succeeding Mr. Ballinger, made it his first business to visit Alaska and thoroughly to study the problem on the spot.

The situation in Alaska in respect to the illegal trafficking in liquor among the Indians in the Yukon Valley is a sorry story of the neglect of the nation's wards in that far country. The exploitation of the native, it is a notorious fact, is an almost wholly unchecked evil, save for the efforts of the missionaries and their helpers; and these private agencies for betterment are sadly in need of a helping arm to strengthen them. The depopulation of Indian villages, due to the ravages of drink and disease brought upon them by the white men's vice and avarice, is an undisputed fact, and the Government's officers in the distant districts, such as that of Fort Yukon, make almost no pretence of controlling the law-breakers. Against such odds Dr. Stuck, Dr. Grafton Burke, and their faithful women helpers have worked nobly; and they do not despair, even though they have lost the present cases against the men indicted by their efforts. It is significant that it is the universal belief of the missionaries in Alaska that the best solution of the problem is the creation of an efficient constabulary force, similar to the Canadian force which has accomplished so much in the Northwest Territory under similar conditions.

Whatever the final outcome in Mexico, it is evident that very large claims for damages in consequence of the insurrection will be made by American and other foreign residents and property-owners. Some of these will doubtless be grossly inflated, after the good old rule, exemplified in the Cuban claims, of multiplying the actual losses by a hundred. But the perfectly legitimate demands will obviously involve great sums. The claims which the railways will file, on the basis of proved damage, will alone amount to several millions, it is safe to say. When the time comes, it is probable that special conventions will be negotiated with whatever government is finally set up in the country, for the purpose of creating tribunals to adjudge all claims against Mexico, and of providing means of payment.

In addition to the usual liability under international law, Mexico has a peculiar obligation, inasmuch as many of the aliens now suffering damage were specially invited to that country by the Mexican Government. This point was clearly made by Secretary Bayard in 1888, when protesting against certain cases of ill treatment of Americans. He said:

> Mexico, in pursuance of a policy of wise development of her material interests, has, by numerous legislative acts and executive decrees, invited foreign capitalists, engineers, miners, and business men of skill and enterprise to unite in bringing into the market the great wealth, mineral as well as agricultural, which remains as yet unutilized in her territory. . . .
>
> It is evidently a matter of the utmost importance to Mexico that the immigrants to be attracted within her borders shall be industrious, thrifty, and law-abiding citizens, and it is no less evident that such persons will not risk their persons or their property where they cannot feel assured that at least some reasonable effort will be made by the authorites to extend to them the protection of the law.

Announcement last week of the Canadian Government's programme for the decennial redistribution of Parliamentary seats is of particular interest for the plan initiated of equalizing the population of the various constituencies. The increase in the House of Commons from 218 to 235 members was long ago estimated, as were the specific reductions in the representation of Ontario, Nova Scotia, and New Brunswick, and the specific gains of the Western Provinces. But whereas the last Liberal apportionment in the several Provinces largely followed municipal boundaries, Premier Borden has recommended that balance of population be now the guiding principle. Some of the discrepancies shown by the 1911 census are glaring. A member from Maisonneuve, Quebec, for example, represented 179,778 people, and one from Stanstead but 9,400; one from West Toronto, Ontario, 105,191, and a fellow-member from North Middlesex but 13,737. The old rule that a greater unit of population should be required for urban than for rural districts, however, will not be utterly disregarded. Since the increase in urban population is so marked it will help keep representation geographical; and it alone is likely to save Prince Edward Island its members.

The parcel-post system just instituted in Canada is based on American experience, yet has elements of proper caution. Rates show an increase above ours. For the first three months packages above six pounds in weight will not be accepted, and special charge is made for delivery by city carrier. The principle is laid down that the system must pay its own way, and the Toronto *Mail and Empire* remarks that, "until the service has been in operation six months, it will be impossible to gauge" its financial status. Only 20,000,000 to 25,000,000 parcels are expected, as against our 700,000,000 the first year. But the significant fact is that Canada, after fifteen years of indifference to a subject often urged upon the Laurier Government, virtually duplicates our system. It may be expected that, after adjustments which only time can bring, postal coöperation between the two countries will cover the parcel post, too, and its rates.

The election of Henri Bergson to the French Academy was inevitable after the extraordinary impression his philosophy and his personality have produced on academic and public opinion outside of France these past three or four years. Every one of the forty chairs in the Academy has its own distinguished lineage; but it is an odd circumstance that a newly elected member is not supposed to have anything necessarily in common with his predecessor. Thus M. Bergson is elected to the chair vacated by the death of Emile Ollivier, Napoleon III's Prime Minister and the historian of the "Liberal Empire." Inasmuch as a new member invariably makes his salutatory by pronouncing a eulogy on his predecessor's life and works, it frequently means a good deal of "boning up" on the part of the orator. For M. Bergson it will not be presumably very difficult to frame an estimate of M. Ollivier. But how about M. Alfred Capus, the author of light and genial comedies of contemporary Parisian life, who has been just elected to the chair of Henri Poincaré, one of the most profound and subtle of mathematicians? One can sympathize with M. Capus in his attempt to do justice to M. Poincaré's labors in celestial mechanics; but being a Frenchman, M. Capus will do it well.

WHAT THE PROGRESSIVES ARE DOING.

Despite serious losses in nearly every election since 1912 in which they have put their fortunes to the test, the Progressives are displaying a bold front. They are officially scorning reunion with the Republicans. The rank and file may be deserting in squads, as in Indiana and Iowa last week, but the leaders still insist that they will go on ploughing their lonely furrow. In Nebraska and Kansas they reject all overtures from the Republican enemy, and propose to fight it out on this line if it takes several summers. In Ohio they are planning to nominate a full State and Congressional ticket. At their recent meeting in this city, the sentiment was unanimous for nominating candidates for every office in the State, from top to bottom, as also in each Congressional district, besides having a Progressive put up for the United States Senate. All round the horizon, in fact, Progressive thunderings and lightnings of this kind are to be noted.

As a matter of abstract political right, no one will question the privilege of the Progressives to continue to flock by themselves. Any two Americans, any three tailors of Tooley Street, can form a party of their own if they choose. This is not named among Jefferson's inalienable rights, but it cannot be denied. As it used to be said that each citizen of Boston had his separate system of theology, so every citizen of the United States may have his private political party, if he finds none of those existing to his taste. But, after all, when presumably reasonable men stand together in a given course of action, they must have some motive, some purpose, some goal, which they can state, on demand, whether in their own defence or as an incentive to their followers. It is only fair, then, to ask the Progressive leaders what they hope to accomplish by persisting in separate party nominations everywhere. Those of them who, like Boss Flinn, say that they are simply modern Luthers, doing a sacred religious duty, and can *nicht anders* no matter what the consequences may be, need not be questioned further. An imperative moral obligation is reason enough, when it really exists. But the Progressives are not without their thoroughly practical men, who are not in politics merely for the health of their souls, and who have some definite plan of campaign looking to ultimate success and offices. What is it?

Plainly, their first objective is further to defeat and thwart the Republican party. If its prospects can be made to appear hopeless, the Progressives will soon annex the great bulk of the Republican vote and sweep the field. But sensible Progressives should look at the facts open-eyed. If they do, they will see that the actual annexing is by the Republican party at the expense of the Progressive. As Senator Borah took pains to point out with much detail in his Lincoln day speech, the voting strength of the Progressives has been everywhere waning during the past year, while that of the Republicans has been waxing. Wherever you make the test, Michigan or New Jersey, Chicago or St. Louis, the tale is the same. Consequently, the cool reckoners among the Progressives must be asking themselves what chance there is of forcing the Republican party to surrender to opponents growing demonstrably weaker. Will not the shoe of surrender be put upon the other foot? Does not the plan of the Progressives to go it alone in every State and Congressional district involve putting everything to the touch with the probability strongly in favor of everything being lost?

These questions it is not for us to answer. But there is one consideration which the Progressives never seem to think of, though it is more and more pressed upon the attention of thoughtful students of our affairs, and this we would urge upon the more serious-minded of them. It is that by their course in seeking to establish a separate party, they are doing much to destroy a part of the usefulness of all parties, and are distinctly breaking in our hands one of the historic weapons of government. They are doing this by making the Democratic party virtually immune to punishment for misbehavior. So long as the Republican-Progressive split continues, the Democrats are assured of power. No matter what they do, the division of their opponents will surely enable them to score enough easy pluralities to guarantee their retaining control of Congress and of the State governments which are now in their hands. In a word, the country is deprived, for the time being, of the check on the party in power by the party in opposition.

This is bad for the Democratic party. It is also bad for the nation. At Washington the tendency in Congress just now is to be recklessly extravagant. Special appropriations are piling up in a way which threatens not only to produce a deficit but to make this Congress the most spendthrift on record. Now, under ordinary party circumstances, the Democratic leaders who are alarmed at this log-rolling of money out of the Treasury would have a convincing argument to use with the lavish spenders of the public funds. They could say: "See here, you must go slow. You are surely making the next Congress Republican. The people will be so disgusted with our extravagance that they will turn us out." But to-day this appeal is futile. Democrats in Congress snap their fingers at it. They are confident that the determination of the Progressives to put up separate candidates everywhere will assure them of their seats, even if they act like wastrels. It will be said that the Progressives do not intend this—do not, in the name of party, seek to hamstring government by party. But a man, or a party, is responsible for the indirect as well as the direct results of a policy deliberately chosen. The Progressive rifleman may say that he meant to shoot a bear, but if his bullet actually kills a horse, it is cold comfort for the owner to be assured that it was not aimed at.

IFS ABOUT LINCOLN.

Two years ago the country had more than a surfeit of assertions that Abraham Lincoln would have been or have done this, that, or the other, if he had then been alive. He would have been a Progressive, surely, but also just as certainly would have remained a Republican, though inclined to join the Democratic party under Wilson; he would have been a Single-Taxer and a Suffragist; he would have been an eager supporter of Assemblyman Jones's bill to abolish poverty and of Congressman Smith's little plan to bring in the millennium to-morrow. All this was so overdone, with so obvious a vote-catching intent, that people soon began to laugh at it, and it was largely given up. If Lincoln *had* come back in 1912, it is pretty certain that he would have disposed of these various hypotheses with some kindly-shrewd epigram or story.

He might have adopted the remark of Samuel J. Tilden, reported by Mr. Stetson: "You cannot state the consequences of what never happened."

In all these imaginary resurrections of the great men of the past, there is always one singular assumption. It is not only that they would be in fullest sympathy with the best movements of the present, but that they would have discarded all the errors and defects which clung to them during their actual lives. Washington was a slave-owner, but those who passionately wish him back again in the war against human oppression always conveniently forget his slaves. Lincoln followed the spoils system. Civil-service reform had not dawned upon the political life of his day. For this he is not to be blamed. No public man can be held guilty of sins that were not accounted sins in his lifetime. But it is plain that if the actual Lincoln were to come back after fifty years, he would have many things to learn, and some things to abandon, before he could become the ideal and infallible leader whose endorsement everybody was so anxious to get a little time since. We allude to this aspect of the matter only to show that it is not so simple and at the same time so powerful an argument as some suppose, merely to exclaim: "If only Lincoln were here, he would agree with me in every particular!"

It is plainly not a subject on which to be dogmatic; yet there is a sense in which we may profitably ask what would be the spirit of Abraham Lincoln in facing present-day questions. The particular decisions he would come to, no man can say; but how he would attack our problems we may be pretty confident, for we know what his methods were. He was patient and he was thorough. His first business he made it to ascertain all the facts in all their bearings. Improvised remedies and patent cure-alls were never to his mind. In the presence of men who professed to have skeleton-keys wherewith to unlock every political difficulty, his attitude was one of amused distrust. When asked to pass upon the dreams of enthusiasts and the nostrums of half-baked theorists, he always acted upon that wise injunction of the Greek philosopher, "Remember to disbelieve."

We may, therefore, be very sure that if Abraham Lincoln were with us to-day he would not be found in the ranks of the hurricane reformers. He would not expect to make this tough old world all over in a day. His advice would be, rather, to look every matter carefully over; to consider the remote consequences of any proposed action before jumping at its supposed immediate benefits; to try out thoroughly the laws we have before rushing to the enactment of new ones; and to remind us that substantial progress is more apt to be achieved by painful inches than by great leaps.

But on one point all may agree. If Lincoln were here again, he would exhibit that wonderful sympathy with all sorts and conditions of men, and that marvellous understanding of their several interests and points of view, which steadily marked his public career. This was among his highest gifts as a statesman, and it is one which every striver in our public life might well covet. The clash of classes in the United States has become more intense and formidable than it was fifty years ago. How to arrive at a just reconciliation of conflicting interests, how to attain a broad national policy out of all the demands of localities and separate interests—that is our great task. And to it we should be thrice fortunate if our political leaders could bring even a small portion of Lincoln's spirit. There is nothing hypothetical about that. His entire sanity, his instinctive and never-failing humaneness, his ability to look before and after with large reason, and his willingness to wait for the full ripening of opportunity—these qualities of the statesman are not abundant at the present day. He was sympathetic, but he did not take it out in mere sentiment. Feeling in him always led to action; and in any large measure of progress he knew that some of the people, some sections, would have to make sacrifice of their special interests. He would have been ready to take as his motto, and so should those who are in the thick of work for progress to-day, the saying of George Bancroft: "The fears of one class are not a just measure of the rights of another."

NOBEL AND HIS PRIZES.

Mr. Leonard Hwass, one of the two witnesses of Nobel's will, has contributed an article to *Die Woche* of Berlin, in which he raises a question of great interest. Mr. Hwass's story chiefly concerns the wishes of Nobel himself, with whom he had been in frequent intercourse preceding the signing of the testament; and its main purport is that the actual administration of the fund has not been in conformity with those wishes. The Nobel award, he declares, "should never be bestowed as an *honorary* prize, but as a *promotive* prize for the encouragement of new and beneficent work." It was not—such is the substance of Mr. Hwass's contention—as a decoration for those who had succeeded in attaining the pinnacle either of fame or of fortune, not as a superfluous distinction for men whose working days were over, but as a help and encouragement to persons whose life-work was still in the main before them, that Nobel made his remarkable dedication of his fortune; his eye was on genius, indeed, but his purpose was not to bestow upon it the lustre of an honorary award, but to free it from the trammels of economic need.

In support of this contention, Mr. Hwass adduces various circumstances related to Nobel's life, and some utterances of a general nature tending to show that his inclinations lay altogether in the direction of such use of the prizes. One bit of internal evidence taken from the will itself is added to these outside considerations. Mr. Hwass draws attention to the direction in the will that the prizes shall be awarded annually to those persons who, in the various fields, have contributed most materially to the benefit of mankind *during the preceding year*. This would seem quite clearly to imply that the award was expected to go, as a general rule, to persons still in the full exercise of their highest powers, and thus lends support to the idea that it was to be a help to future work rather than a testimonial of past excellence. We will concede that literal adherence to this rule is not practicable, upon any theory of the purpose of the award; but that an effort is made to conform to it as nearly as is reasonably possible may be inferred from the fact that for the year 1912 the peace prize was not awarded, because the committee was unable to discover a person who "within the year has worked most or best for the fraternization of nations, the abolition or reduction of standing armies, or the calling or propagating of peace congresses."

Apart altogether from any question of

the desires or expectations of the founder, the problem of what it is possible to accomplish for the encouragement of genius, or the promotion of great work for humanity, by means of valuable prizes is a puzzling one. To keep in view both the consideration of pre-eminent merit and that of pecuniary need is in the highest degree difficult, in any field. In physics, chemistry, and medicine, it must be a comparatively rare thing that a man whose actual achievement has been sufficient to mark him out as deserving of an award so extraordinary as the forty-thousand-dollar Nobel prize is not already in a position of assured comfort; though it must be said that in these fields the addition of such a sum to his resources may often make a vital difference in regard to the command of leisure, or of appliances, for work along just such lines as the recipient may wish to pursue. But as soon as the consideration of a candidate's pecuniary circumstances is taken into account, there must inevitably be danger of a lowering of the standard of excellence which it is so desirable that the prize should represent. If, on the other hand, the promise of future achievement, rather than accomplished results, is to guide the choice, the risk of erroneous judgment enters, of course, in a degree that has been wholly absent from the actual history of the awards that have been made. And if one glances at the list of the awards thus far recorded in these fields, one finds that, while some have gone to men whose life-work has been all but concluded, a considerable proportion of them have been won by men in the prime of their powers, to whom the pecuniary aid may reasonably be supposed to be of real consequence.

It is the prize for literature, however, that gives occasion for the most perplexing questions. Mr. Hwass makes a very good point when he draws the distinction between "a dramatist or novelist enjoying a large income" and "a noble-minded lyric poet, who lifts us to ideal heights, and who rarely possesses much of this world's goods." The lyric poet certainly has small chance of making his gift productive of the wherewithal of comfortable living; and on the other hand to give a small fortune, such as the Nobel prize, to a brilliant novelist or dramatist is very likely to be a case of carrying coals to Newcastle. And yet he would be a bold man who should assert with confidence that the golden allurement of a Nobel prize would operate, on the whole, to increase the output of the most precious poetry. No one would willingly condemn a Burns to the dire poverty with which he struggled; but it is impossible to imagine him as writing "To a Mouse," or "Highland Mary," or "Of a' the airts," or "Tam o' Shanter," with a princely money prize either in his mind's eye or in his pocket.

TAKING RAILWAY MANAGERS FROM AMERICA.

There are several points of view from which one might consider the commotion in the English business world, over the selection of an American railway expert as general manager of the Great Eastern Railway of England. Taken by itself, the appointment would scarcely have caused or justified the outburst of indignation in the newspaper and professional comment of London. Our own transportation enterprises have on recent occasions borrowed the services of English engineers, without causing a ripple of professional excitement.

The real basis for the indignant reception of the news in England was not the fact of the recourse to America, but the explanation of his action by the head of the English railway company, who coupled with his announcement the remark that he had been "compelled to go to America to find a man competent to fill the position," because of the "dearth of young and capable railway men in the English railway world." The retort of the London newspapers, that such a statement was a reflection on the methods of the English railway directorates, rather than on the quality of their working staffs, expressed a sentiment very natural, and not wholly illogical. The truth of the matter doubtless lies somewhere between this newspaper statement of the case and the cynical comment of Lord Claud Hamilton himself.

It is no secret that the English railway lines have lagged far behind the American industry in applying the newest principles of economy in operation. But the reason for this slower grappling with the problem lay in the urgent necessity which spurred the American lines to such lowering of the expense ratio, rather than in any necessary incapacity on the part of English managers. When Mr. James J. Hill, followed by the younger railway operators, first introduced, some fifteen or sixteen years ago, such new expedients as the heavier "train-load," the larger freight car, the longer freight train, the heavier rail, and the more powerful locomotives—all with the purpose of reducing the so-called "ton-mile cost"—our greatest railway systems were emerging from bankruptcy. With most of them, there was at the moment so little encouragement, in the outlook for largely expanded gross receipts, that reduced working expenses were a paramount necessity to get back into the field of dividends.

The English railways have at no time had that particular incentive. None of them has had the problem of serving new territory where traffic was yet to be developed. Dividends came with sufficient regularity, year after year; it is not, therefore, as surprising as it might seem, without allowing for this difference in English and American conditions, that the English railway managements should have been far slower than our own in introducing such methods and in creating trained staffs who were competent to apply them. The old methods seemed to the English managements to be justified in their results, throughout the period when the younger generation of American railway men were going through a practical school of education in the new problems of operation.

More recently, however, the question of rising fixed expenses, especially for labor, has become a serious consideration for the English companies. When, therefore, the Great Eastern Railway—which, we believe, has been the first of the great English systems to attempt the general introduction of these particular economies in operation—began thoroughly to canvass the field, it naturally discovered, first, that its own operating staff had been trained in the methods which were prevalent in American railway management two decades ago, and, secondly, that to obtain trained experts for the purpose, recourse to the American railway staffs would be judicious.

The outcome of such a process, if continued, cannot fail to be beneficial to the railway administration of both countries. As for the outcry against an

"American invasion" of the English railway field—on the ground that it indicates British national decadence or American intrusiveness—that sort of inference has been made too familiar, through the first hysterical response on other occasions of the sort, to be taken very seriously. People will not yet have forgotten the London clamor over Great Britain's disappearing "empire of the seas," when our Shipping Trust was buying up the White Star and Leyland Lines at fancy prices, during 1891. But the British mercantile navy still dominates the ocean, and the Shipping Trust has not much to remember of the operation except a highly expensive and unlucky bargain.

There will also be recalled, as a phase of that same period, the sudden discovery by our industrial investors and promoters that thereafter nobody more than forty years of age would do as the manager of a great corporation. Yet we still have our Hills and Garys; we have had opportunity, since 1901, to observe the capacities of men past middle life, in the person of our Morgans and Harrimans, and we have also been compelled, by force of circumstances, to acknowledge that the younger school of managers will on occasion make mistakes which another decade or so of experience might have spared them.

Perhaps the nearest analogy to the present controversy in the English railway field occurred when our own Eastern railways very generally made up their minds that their working forces, if not their operating leadership, would have to be helped out by "new blood" from the West. The reason for that conclusion, which was applied with excellent results, was precisely the reason which underlay last week's English incident. It was chiefly on our Western railways, at that time, that the problem of economical operation had been worked out through force of circumstances.

THE MAN WITH THE NOTE-BOOK.

President Huerta's recent tribute to the power of the press, in the form of an invitation to ten newspaper correspondents to come and tell the truth about Mexico at his expense, ought to be telegraphed over to England. A compliment to the power of the press is, by implication, a compliment to that humble but necessary cog in the great machine, the reporter. Now, in England the reporter, even though he is called a pressman, is not in good repute. And, oddly enough, it is at the hands of his elder brother, the literary worker, that the pressman suffers most. In spite of the fact that for a consideration the well-known playwright or novelist can be induced to write for the *Daily Mail* and so take the bread out of the reporter's mouth; in spite of the fact that a great many ultimate consumers of royalties began life in the grind of Fleet Street, the reporter, as represented in current British fiction or on the stage, cuts a very poor figure. The general conception of him is of a rather disgusting and illiterate little beast with frayed cuffs and a note-book. Mr. Shaw, who ought to know better, has thus depicted him in "The Doctor's Dilemma"; Mr. Arnold Bennett, with a kindlier but equally patronizing touch, has drawn him in "The Great Adventure." Mr. Chesterton, in his new play, says, "He's worse than a guttersnipe; he's a Fleet Street journalist."

The reporter, though a worm, is a cynical worm, and rarely puts himself to the trouble of turning. He is accustomed to see life from the inside and the underside, and it neither surprises him nor hurts him to be pilloried by the playwright who depends upon him for the half-column puff that makes the box-office happy; or the author who entrusts to his imperfectly manicured hands a typewritten outline of his forthcoming novel, with a photograph, taken when the author's hair was not so thin on top; or the society leader who furnishes a list of the guests at her exclusive function; or the clergyman whom he frequently misrepresents by making the clergyman say exactly what he did say; or the scientist whom he frequently misunderstands, though more honestly, one dares say, than the scientist is misunderstood by his scientific colleagues. Only now and then will the bitterness of the man conquer the cynicism of the reporter; and he will protest as one of the profession has recently protested in the columns of an English publication. He will say that it is not true that, as a rule, reporters come in through the transom or the coal chute; that they flourish big note-books; that they misspell common words. It is true that they do not always wear gloves, as Mr. Shaw accuses them of not doing. Yet why protest? Playwrights and authors will go on portraying the reporter as doing all these things, because the type has become fixed in common thought. It is said that Thackeray began this business of traducing the pressman. Dickens had his fling at him. Since then the type has become as definite as that of the stage Irishman.

If the reporter is inclined to be meek under such criticism, it is not altogether because he is a cynic. He takes it largely as a tribute to his power for good and evil. He recalls that from time immemorial satire has had its fling at every human institution, the church, the army, the doctors, the lawyers, the writers, the poets. Society has appointed agents to help it in the business of being born and dying, in making war, in fighting its legal battles, in curing itself of its diseases, in writing fables for its amusement; and, like every master to his hired man, society cannot refrain from now and then turning upon its hirelings and denouncing them for a pack of inefficient, pretentious knaves. How much more should the master's stick rattle about the ears of the particular hireling who has arrogated to himself the functions of the church, the law, medicine, science, literature, art? The reporter recognizes that a beating is all in the day's work. He is all the more exposed to satire because, by comparison with the power he wields, he is, indeed, a somewhat insignificant person. He is without the borrowed dignity of magnificent ecclesiastical vestments, without soldier's epaulets, the prestige of the lawyer's robe, the doctor's parchment and mystic language. He is just a chiel—except that he is more often Irish than Scotch—takin' notes. When he prents 'em there is an awful how-de-do. Society knows it and resents it.

Outside of England the reporter is much better treated by his prosperous elder brother, the novelist and playwright. In French literature the journalist, as they call him, is very frequently a malignant figure, but rarely a guttersnipe. To the Parisian imagination the reporter is the man who makes and unmakes Ministries, drives financiers to suicide, cements or disrupts international alliances, beats open the doors of the Théâtre Français for ambitious vaudeville artists, and has writers and painters cating out of his hand. Here at home we do not concede him

so magnificent a rôle. We have kept some of the ridiculous outward trappings of the stage type—the note-book, the slangy, incisive speech, the all-wisdom. But the favorite hero of newspaper romance and the theatre is the Titan city editor, manipulating half a dozen telephones and half a hundred men, issuing his orders in crisp, Napoleonic phrases, or shouting down the tube to the pressroom like Richard III at Bosworth Field—a magnificent apparition who is quite as unreal as the shabby little pencil-pusher of British imaginings, but infinitely flattering to the profession.

THE PHILOSOPHY OF BERTRAND RUSSELL.

Some years ago one of the undergraduate magazines printed a cartoon representing the corner of a philosophical lecture-room during a lecture on philosophy. Of the eight or ten students shown in the picture two or three were reading magazines, two or three were yawning dreadfully, while the others were fast asleep. Beneath appeared the words, "Is there an external world?" The student who designed this cartoon is probably entitled to rank as the original "new realist." For two centuries or more philosophers have been turning over the question, how an idea (assumed to be circumscribed) can know an object which lies beyond its circumference; and those who have been brought up upon this discussion should be ready to appreciate, or at least to forgive, the philosophical movement which has been advertising itself in America for several years past as "the new realism" (see the *Nation* of October 17, 1912), and which is represented in England by Bertrand Russell and George E. Moore. Of the philosophers of this school, Mr. Russell, who is about to give a half-year of lectures at Harvard, is easily the most commanding figure, and his philosophy has been neatly summarized in his little book on "The Problems of Philosophy" in the Home University Library.

Recently I have given this book to two classes in philosophy, with very interesting results. First, it was shown that a man who writes with distinction and with personal authority will capture the undergraduate where the textbook-maker fails. Mr. Russell's style is wonderfully clean-limbed; or, as his mathematical colleagues would say, "elegant." His skill in putting Kant or Plato into a page or two would be hard to surpass. Being quite assured of his position, he writes with an easy and confident frankness both charming and a trifle irritating. For between the lines may be read that if you fail to agree Mr. Russell will be pleasantly amused. The more so since he must surely be aware of the pitfalls that await the unwary. On its face the book is a series of astounding dogmatisms which have all the appearance of artlessness, but which for the most part have (elsewhere) been carefully predigested. For example:

If we already know that two and two always make four, and we know that Brown and Jones are two, and so are Robinson and Smith, we can deduce that Brown and Jones and Robinson and Smith are four. This is new knowledge, not contained in our premises, because the general proposition, "two and two are four," never told us there were such people as Brown and Jones and Robinson and Smith, and the particular premises did not tell us that there were four of them, whereas the particular proposition deduced does tell us both of these things.

This would be set down as rank nonsense by one who did not know that in an earlier work Mr. Russell had agreed to assume that "Brown and Jones are two" shall mean that Brown and Jones exist.

The other result appeared when my pupils endeavored to give Mr. Russell his place among the schools of philosophy. Then it turned out that (as one pupil wrote) no one "ism" had been provided for Mr. Russell. For he achieves the remarkable result of standing for a naïve empirical realism and, with the same uncompromising firmness, for a high and dry Platonic idealism; or, since, in his philosophy, both are forms of realism, for realism in the modern sense and for realism in the mediæval sense. His world consists, in other words, of two kinds of reals: the particular reals of common experience, such as the sun, which, as an independent real, is not less real when unperceived, or such as our thoughts and feelings; and the universal reals, such as those expressed in the formulæ of mathematics, the most remote and apparently irrelevant of which stands for an "entity" not less self-subsistent and independent of the mind by which it is known than the sun itself. The only difference between these two kinds of "entities" is that the particular reals "exist," while the universals "subsist" or "have being." But the latter are superior to the former as perfection is superior to life. How being and existence are combined, we are not clearly told. In the new realism it seems that doctrines have no need of being combined to be held by the same person. Yet there is a certain unity in Mr. Russell's philosophy, not quite covered by his general admission of "tough-mindedness," and his peculiar combination of matter-of-fact with Platonic realism becomes more intelligible when we remember that he is a Cambridge mathematician and the heir-presumptive of an earl. The last point seems to me not quite fair as philosophical criticism, yet not insignificant.

Mr. Russell's most impressive achievement began as "The Principles of Mathematics," of which the first and only volume appeared in 1903. The plan of this work was abandoned, and in 1910 Mr. A. N. Whitehead and Mr. Russell published the first of four volumes (of which three have now been issued) of a new work, entitled "Principia Mathematica." The first book was written in English, the second is written largely in the sign-language of the symbolic logic. In this language the work is a nearly closed volume and a standing menace to all students of philosophy who object to doing two thousand or so large octavo pages of symbolism without a more certain hope of reward. For enough may be gathered from the more intelligible portions to learn that under these signs Messieurs Whitehead and Russell have hidden the secrets of the universe. The *principia mathematica*, in a word, are nothing less than the *principia* of logic and metaphysics. Formerly, indeed, mathematics was supposed to confine its attention to number and space. The newer mathematics of groups and series claims to have devised a calculus of relations which will cover all "entities" whatsoever; not only volumes and numbers, but persons, ideas, sensations, emotions, prices, moral values, commercial transactions—anything you please. From this point of view truth of any kind is a question of mathematical relations; and what cannot be expressed in symbols is not true. Nor beautiful; in his essay on "The Study of Mathematics" Mr. Russell betrays an enthusiasm which recalls Plato's identification of mathematical truth with divine love. Mr. Russell's philosophy may thus be described as a symbolic philosophy, and the description may be extended to the new realism generally. In the division of labor Mr. Russell supplies the symbolic logic, Mr. George E. Moore the symbolic ethics (see his "Ethics" in the Home University Library), and the American new realists the symbolic psychology.

One need not go far to appreciate the fascinations of this symbolic calculus. Professor Royce, himself an idealist, conceives it to be the embodiment of rational and divine order. To my own imperfect view quite as much may be said for the calculus of chess, which seems to me to be a symbolism of the same kind, with equally fascinating problems. In other words, I should say that the symbolic reals are about as truly representative of life and experience as a bishop whose activities were confined to diagonal squares would be representative of the Archbishop of Canterbury. I may even intensify the vulgarity of this judgment by suggesting that the chess symbols are too human and per-

sonal. The realistic world may be better conceived as a mosaic of counters, *i. e.*, poker-chips. Does Desdemona love Cassio? Write "Desdemona" and "loving" and "Cassio" upon so many poker-chips, and then in their possible arrangements you may see the possibilities of love "between" Desdemona and Cassio. One is reminded of Mr. Kallen's remark, that the new realists are the philosophical cubists.

Among the new realists the point of most undoubted unanimity is a contempt for modern idealism. And for purposes of unrestrained emphasis they prefer to identify idealism with the blindest expression of the theory in Berkeley's "Principles," and thus to make the whole issue rest upon the question of the existence or non-existence of an external world. This interpretation not only leaves idealism unaccounted for, but fails to reveal the true inwardness of realistic antipathy. If, following a fashion condemned by realism, we judge idealism by its motives, it should seem fairly clear that one motive underlying all forms and degrees of idealism is what Kant called "critical." The "critical" motive takes account of the fact that any object that is known is known by a person and may be expected to have a character which reflects the point of view of the person who knows it. Such a point of view will be embodied in any vehicle of description, not excepting the signs of symbolic logic. The critical philosophy takes the world as we have it (for example, in natural science), and then asks how far this world is the expression of human nature. According to Kant, human nature explains why things are known in an order of space and time; and the pragmatists have discerned in the world an expression of our needs. In Berkeleyan idealism the critical motive fairly swallows up the world. But to identify idealism with the philosophy of Berkeley is simply a quiet way of ignoring what nine-tenths of the idealists have stood for, and, in particular, of passing over their contributions to logic.

Now, the new realism is not merely opposed to the incredibilities of Berkeleyan idealism, it is hostile to every attempt to take our world critically. For the new realists it is not enough to deny that the world is created out of nothing in the process of knowing; going to the opposite extreme, they insist, as a sort of axiom, that the fact that our world is known makes no difference whatever in what it is known to be. The new realism is thus a return to pre-critical dogmatism, a deliberate and conscious, even highly self-conscious, assertion, if one may put it so, of naïveté. For the school is not wanting in scholarship, though it appears to have lost the historical sense; and Mr. Russell's scholarship is extraordinarily extensive. In his "Foundations of Geometry," published at twenty-five (he is now forty-one), he owns an indebtedness to such prominent idealists as Bradley, Bosanquet, and Sigwart, while the book is dedicated to McTaggart. But they must have cancelled the debt, for there is clearly no evidence of it now. Mr. Russell writes as if the philosophers of this school had never lived. Nay, more. The American new realism would be what it is if nothing had happened since Mill. Mr. Russell's realism is a sort of delighted mediævalism.

The American new realists forego the function of criticism out of respect for modern science. Their favorite argument is the *argumentum baculinum*. Mr. Russell uses the walking-stick, but his distinguishing prepossessions are mathematical. Now, one of the prepossessions of mathematicians is that they have a special monopoly of reasoning; and, again, that they are peculiarly, if not exclusively, successful in arriving at absolute truth. And it is true that mathematical results have the appearance of being uniquely impersonal and absolute. This fact furnished the ground for the mystical number-metaphysics of the Pythagoreans. Since Kant, however, the absolute significance of mathematical truth has been at least open to dispute. And it is a question whether the tendency of mathematical theory itself has not been to confirm, while enlarging, Kant's position. The late M. Poincaré, at any rate, was a fairly good Kantian. Mr. Russell's mathematical theory is a return to pre-critical absolutism. Not only does he hold, against Kant, that space and time are independently real—that is, irrelevant to any human point of view—but, against most modern views, he stands for absolute movement and position and for the theory that space is an assemblage of points. The climax is reached when he tells us (in "The Problems of Philosophy") that "two and two are four" "must apply to things equally whether we think of them or not." How this realistic situation is to be described is beyond my power to conceive; and it seems relevant to ask whether the two's of the real world are yards or metres, and also whether they are "two's" or, say, "zwei's." One is reminded here of a realistic little maid, who, after learning that "Adam gave names to all cattle, and to the fowls of the air, and to every beast of the field," asked, "But how did Adam know their names?" This is the realistic problem.

One of the peculiarities of the mathematical mind is the equal delight of mathematicians in what can be clearly defined and in what cannot be defined at all. The mathematician affirms his theorems because they can be proved from his axioms; he then with equal emphasis affirms the axioms because they are incapable of proof. Thus the love of the transparent is united with the love of the opaque. The new realism, as I have remarked elsewhere, is a typical philosophy of the opaque; and Mr. Russell is no exception. He believes in the reality of the material world because of an "instinct," in to-morrow's sun because it is "probable," in the veracity of memory and in the truth of the simple propositions of arithmetic because they are "self-evident"—although he admits, in seeming contradiction to the assumptions of symbolic logic, that propositions may be more or less self-evident. It would be difficult to find better examples of what Shakespeare calls "a woman's reason" or a more masculine courage of affirmation.

One of the foundation stones of Mr. Russell's logic is the proposition, *p* implies *q*. The analysis of implication is dismissed in the "Principles" with the statement that "implies" is indefinable. In the "Principia" *p* implies *q* is defined to mean that "if *p* is true, *q* must also be true"—which leaves the nature of the relation still open to discussion. For example, there is a dollar in my purse, and my purse is in my pocket. Do these two propositions, merely as such, imply that there is a dollar in my pocket? I, for one, should say not. There is nothing implied, for example, if Peter knows only that there is a dollar in my purse, while Paul knows only that my purse is in my pocket. Let the facts be what they may, nothing is *implied*—there is no logic in the situation—until the two propositions are thought by the same person; just as twelve words thought separately by twelve persons fail to constitute a sentence. The symbolic logic claims to dispense with this necessity for a personal thinker. The symbolic logic is definitely, in fact, a method of arriving at truth through the investigation of the possible "aggregations" of propositions. What an aggregation of propositions may be must be left to the reader to say. The symbolists seem to regard any two propositions as an aggregate when they are asserted simultaneously, irrespectively of whether they are asserted by the same or by different persons or by different persons in communication. To me the word "aggregation" suggests something more like potatoes, each of which remains within its own skin; and where propositions remain each within its own skin I am unable to see any "logical" connection whatever. I am thus led to suspect that the symbolic logic has confused logical implication with spatial inclusion and displacement. When more potatoes are forced into a full basket, others are forced out. But this is not a process of implication except as one term signifies the other in the point of view of a knowing mind. This must be my excuse for suggesting

the poker-chip interpretation of Mr. Russell's logic. To me it seems that the symbolic logic (along with much of our symbolic psychology) writes our thoughts upon counters and then studies the various arrangements and displacements of the counters.

The world of independent reals is sublimely beautiful, but it is not expected to prove either familiar or tractable. The realism of this new school presents, in fact, an interesting parallel to the realism of Flaubert or Zola or Thomas Hardy, in whose presentations of life the characters are borne along on the stream of unconscious forces, foreseeing their destiny apparently (the reader can usually foresee), but mysteriously incapable of altering it; and nothing has a happy ending. Both in philosophy and in literature realism stands for the doctrine that consciousness makes no difference. The realism of the American school takes a rather work-a-day attitude towards its world and apparently assumes that philosophy, if it cannot reconstruct, can at least make the world more comfortable. Mr. Russell holds that philosophy has no "practical" use whatever:

> Philosophy is to be studied, not for the sake of any definite answers to its questions, since no definite answers can, as a rule, be known to be true, but rather for the sake of the questions themselves; because these questions enlarge our conception of what is [theoretically] possible, enrich our intellectual imagination, and diminish the dogmatic assurance which closes the mind against speculation; but, above all, because, through the greatness of the universe which philosophy contemplates, the mind also is rendered great, and becomes capable of that union with the universe which constitutes its highest good.

Greatness of mind! Does this mean that life is great only so far as it is lived in the light of a clear self-consciousness? For a generation given over to the pragmatisms of unillumined energism this should be a wholesome doctrine. But in Mr. Russell's view, knowledge and life are mutually irrelevant—as they are bound to be. Following the example of Aristotle, he separates the "speculative" virtues from the "practical." Philosophy, it seems, then, is a noble pursuit for those who are economically free; nobler than hunting or golf; yet equally unproductive from the standpoint of practical life. Philosophy, in other words, is appropriate only to a leisure class.

Mr. Russell's ideas about religion are embodied in a fine essay entitled "A Free Man's Worship," in which he preaches the ancient Stoic doctrine of lofty submission to Fate. I quote the closing paragraph:

> Brief and powerless is Man's life; on him and all his race the slow, sure doom falls pitiless and dark. Blind to good and evil, reckless of destruction, omnipotent matter rolls on its relentless way; for Man, condemned to-day to lose his dearest, to-morrow himself to pass through the gate of darkness, it remains only to cherish, ere yet the blow falls, the lofty thoughts that ennoble his little day; disdaining the coward terrors of the slave of Fate, to worship at the shrine that his own hands have built; undismayed by the empire of chance, to preserve a mind free from the wanton tyranny that rules his outward life; proudly defiant of the irresistible forces that tolerate, for a moment, his knowledge and his condemnation, to sustain alone, a weary but unyielding Atlas, the world that his own ideals have fashioned despite the trampling march of unconscious power.

Shameful to relate, throughout this really noble passage, I find myself obsessed by the vision of a Platonic realist shaking his fist at a cigar-shop Indian. I can grasp what is meant by a rational attitude towards a benevolent or an accommodating universe, or towards a malevolent universe. But what would be a rational attitude towards a universe that is simply bloodless and inscrutable strikes me as a most perplexing problem, and a problem which realism has yet to solve. Meanwhile we may ask whether a point of view so truly high-minded does not deserve, whether, in fact, its existence does not imply, a more significant universe.

WARNER FITE.

NEWS FOR BIBLIOPHILES.

There is preserved in the John Carter Brown Library at Providence an excessively rare "Plan of the Town and Harbour of Boston," published in London in 1775 by I. De Costa. Only one other impression of the original is known to me, although diligent inquiry has been made in the hope of discovering further copies of what is probably the first plan of Boston made after the opening of the Revolution, for it most quaintly sets forth the engagements at Lexington and Concord. The copy now in the John Carter Brown Library was formerly owned by Henry Stevens, Son & Stiles, the well-known firm of London booksellers, who thought it of sufficient value to warrant the reproduction (1911), in excellent facsimile, of an edition of fifty copies, carefully colored by hand after the manner of the original. The unusual interest and rarity of this print make desirable the transcription of the title in full:

> A Plan of the / Town and Harbour of / Boston. / and the Country adjacent with the Road / from Boston to Concord / Shewing the Place of the late Engagement, / between the King's Troops & the Provincials, / together with the several Encampments of / both Armies in & about Boston. / Taken from an Actual Survey / Humbly Inscribed to Richd. Whitworth / Esqr. Member of Parliament for Stafford. / By his most Obedient Servant / I: De Costa.

The title is followed by nineteen numbered references to the position of troops, batteries, men-of-war, etc.; and at the bottom of the plan, which measures 19x14½ inches, the imprint reads: "London Publish'd as the Act directs July 29th 1775. by I. De Costa Red Cross Street Southwark." The engraver's imprint is: "C. Hall sc." To the facsimile published by Messrs. Stevens the following is added: "Reproduced from the original Print preserved in the John Carter Brown Library, Providence, R. I. London: Republished by Henry Stevens, Son & Stiles, Map & Print Sellers, 39, Great Russell Street, W. C., over against the South West Corner of the British Museum."

The plan is drawn in elevation, Lexington and Concord being shown by groups of houses. The British troops and "Minute Men" are shown, together with three interesting groups representing the "Bridge where the attack began," "Col. Smith's return from Concord," and "Lord Percy's return from Lexington." The position of troops on Boston Common is given, and numerous men-of-war in Boston harbor are also drawn in elevation.

Before publishing the facsimile, Mr. Henry N. Stevens sought in vain to obtain information respecting De Costa, the first publisher of this plan; and, unfortunately, nothing as yet concerning him has been forthcoming. The dedication seems to indicate that De Costa was the designer as well as publisher; but within the past few months light has been shed on the authorship of the plan. Strangely enough, it appears to have been wholly or in part the work of Capt. Jonathan Carver, the early Western traveller, about whom a lively controversy has been waging for some years past. In a letter dated August 8, 1775, one Isaac Foster, in writing to Major Robert Rogers, the famous ranger, says: "Carver and Dacosta have finished a new plan of Boston at the request of Whitworth." Whitworth, it will be remembered, was the gentleman who became interested in Carver's original project of crossing the continent to the Pacific, and who proposed heading an expedition for that purpose. There can, therefore, be no doubt that the Carver here referred to was the traveller. Foster further says in the same letter that Carver expected to be appointed Superintendent of Indian Affairs, a position for which we know the traveller made application in the form of a memorial (February 25, 1773) to the Earl of Dartmouth, "his Majesty's principal Secretary of State for the American department."

Nor was Capt. Carver new at the business of map-making. The evidence is clear that he was a surveyor and draughtsman before making his Western journey; and he was concerned, during his residence in England, in the making of at least three maps (besides those later included in the "Travels"), and the plan of Boston. There are in the British Museum four copies of the earliest map (1769) extant bearing Carver's name—two in manuscript and two engraved. One of the maps appearing in the first, second, and third (London, 1778, 1779, and 1781) editions of the "Travels" was taken from that of 1769. The scale is slightly reduced, and the latitude and longitude corrected somewhat, but the maps are substantially the same. In the second issue of Thomas Jefferys's "American Atlas" (London, 1776) there appeared a finely executed map entitled: "A

New Map of the Province of Quebec, according to the Royal Proclamation of the 7th of October, 1763, from the French Surveys connected with those made after the War, by Captain Carver, and other Officers in His Majesty's Service." It is suggestive that the name of Carver has prominence, while the "other officers" who assisted are not mentioned by name. In the first edition of the "American Atlas" (London, 1775) the eighth plate is "A Map of the British Empire in North America; by Samuel Dunn, Mathematician." In succeeding issues the map reappears with the addition to the title of the words, "improved from the surveys of Capt. Carver." And Carver lent more than his name to this map, for careful comparison of the first with later issues of the "American Atlas" will show that his contribution was material. The shore line of the Great Lakes is considerably altered, and the region between the Mississippi and the lakes is changed in the water courses and names set down.

All this, coupled with much other information which careful investigation has brought to light since the appearance of the late Prof. Edward Gaylord Bourne's famous article in the *American Historical Review* (XI, pp. 287-302) ought to go a long way towards dissipating the charge frequently made that Carver was an ignorant shoemaker and soldier, utterly incapable of writing the book which bears his name—a book the marvellous popularity of which is attested by the fact that it appeared in nearly forty known editions in English, French, German, and Dutch, during the century following its publication in 1778.

JOHN THOMAS LEE.

Correspondence

THE CONSTITUTION AND THE SUPREME COURT.

TO THE EDITOR OF THE NATION:

SIR: Chief Justice Clark, of the Supreme Court of North Carolina, is quoted by the daily press as having said in a recent address in New York city: "The overwhelming preponderance of the judiciary was unexpectedly created in 1803 by a decision of the Supreme Court of the United States, without a line in the Constitution to authorize it, when that body assumed the right to veto any act of Congress it chose to hold unconstitutional."

This statement coming from an eminent jurist has been accepted as definitive by a great many people and has been used as the basis for a very "progressive" editorial in at least one important daily paper (the *North American*, Philadelphia, January 30).

Referring to the belief so widely cherished that the Constitution of the United States gave to the Supreme Court the power to declare acts of Congress unconstitutional, the editorial in question ventures: "Never was there an emptier myth; never was an easy-going people summoned to worship a fetich so palpably fashioned of wood."

The undersigned begs leave to recall in this connection "a line of the Constitution" and a few historical facts well known to many people, but apparently forgotten by some:

The Constitution, and the Laws of the United States which shall be made in pursuance thereof; and all treaties made . . . shall be the supreme Law of the Land. [Article VI.]

The judicial Power shall extend to all Cases, in Law and Equity, arising under this Constitution, the Laws of the United States, and Treaties made. [Art. III, sec. 2.]

These are lines of the Constitution that surely have some bearing upon the point at issue, and they become the more significant in the light of certain historical facts.

When the Constitution was drawn up in 1787 the framers were already familiar with State Constitutions that were "supreme law." In pursuance of such Constitutions, the State courts had already set aside the acts of Legislatures in several States, South as well as North.

That a similar power was conferred upon Federal courts by the above-quoted sections of the Constitution was moreover taken for granted at an early period. While the Constitution was still before the States for ratification, this function of the Federal judiciary was clearly pointed out in the *Federalist*. In one of Alexander Hamilton's contributions appeared the following statement:

A Constitution is, in fact, and must be regarded by the judges, as fundamental law. . . . Nor does this conclusion by any means suppose a superiority of the judicial to the legislative power. It only supposes that the power of the people is superior to both; and that where the will of the Legislature, declared in its statutes, stands in opposition to that of the people, declared in the Constitution, the judges ought to be governed by the latter rather than the former. They ought to regulate their decisions by the fundamental laws rather than by those which are not fundamental.

A few years later, during the controversy over the Alien and Sedition laws, the Legislature of Rhode Island resolved (February, 1799) that the Constitution of the United States "vests in the Federal courts exclusively, and in the Supreme Court of the United States ultimately, the authority of deciding on the constitutionality of any act or law of the Congress of the United States." Similar declarations were made by other States at the same time.

There followed, in 1803, the opinion of the Supreme Court in the case of Marbury vs. Madison, delivered by Chief Justice John Marshall and lately dissented from by Chief Justice Clark, of North Carolina, as being "without a line in the Constitution to authorize it." The opinion of 1803 has been upheld, however, in constitutional practice for something more than a century.

Webster asserted the same principle explicitly in his famous reply to Hayne in 1830, and the question lay very close to the heart of the difficulty between North and South that brought on the war between the States. The supremacy of the Union meant the continued supremacy of the "supreme Law of the Land," with the national Supreme Court (not the individual State) as the final interpreter.

Most of us still venture to believe that the above-quoted lines of the Constitution confer upon the Supreme Court the power to declare acts of Congress unconstitutional. We have some rather eminent opinion and some century-old precedent as foundation for our belief. We may be wrong, but we feel that our opinion may perhaps be dignified by more respectful terms than "empty myth" or "wood-fashioned fetich."

RAYNER W. KELSEY.

Haverford College, Pa., February 12.

"THE SOCIAL EMERGENCY."

TO THE EDITOR OF THE NATION:

SIR: Are we in the United States confronted by a "social emergency" of grave character which must be firmly met, as alleged by Mr. Foster in the *Nation* of January 22, and would teaching sex hygiene in the public schools, as often asserted, conduce to purity of morals and better physical health?

The vast majority of teachers in the public schools are women, unmarried women ranging from young misses just out of their teens to seasoned veterans of uncertain age who have long since left the frivolities of youth behind them. Their teachings, obviously theoretical, would lack convincing force with inquisitive Young America. On the other hand, physicians capable of setting forth the scientific facts of sex matters would probably fail in pedagogic ability, knowledge of a subject and ability to teach being quite distinct things. But, to tell the truth, more than a mere mastery of the subject is required; more than pedagogic ability is required. The one thing above all that is needed is a fatherly or motherly instinct in dealing with young people when discussing so delicate a subject. Outside of the actual father or mother, not one person in ten thousand has that faculty.

The underlying idea of such sex hygiene societies as Mr. Foster speaks of is that young people will be sexually more moral if taught systematically matters connected with human sex. This theory seems to run counter to the teachings of experience of those who have most to do with young people. Take, for instance, a school-room full of children and explain with diagrams and illustration what would be the horrible results of swallowing a match, and the result is bound to be that a number of them—pupils who never thought of swallowing a match—will yield to the counter suggestion and do the very thing sought to be avoided. The child eternally warned not to play cards experiences a horrible fascination to do the forbidden thing. The sale of cigarettes in a given locality is increased by the active propaganda of boys' clubs pledged not to smoke cigarettes. Take a mixed school of say 1,000 pupils, boys and girls, instruct them in sex matters, with all the care and all the scientific apparatus possible, and the results—well, no man intimately acquainted with child nature can have the least doubt what the results would be.

Whether we Americans are growing erotic and sex-mad, as is frequently suggested, may be doubted, but it is un-

doubtedly true that certain newspapers are following orders said to have been given them by their owners: "Play up sex matters strong." It should seem as if we had about reached a stage of civilization where public opinion might insist by legal enactments that such public debauchery must stop.

But perhaps the greatest source of sex immorality comes from the unsupervised dance hall and unregulated amusements for young people of both sexes. Behind that stands that preëminently American practice of lax parental control which permits young girls to go without chaperon and alone or in company of a young man whose antecedents are but slightly known. The results are often disastrous to the girl.

Obviously the remedy is not in teaching the child, but in an awakened conscience and sense of responsibility on the part of the child's parents—less instruction in school as to how venereal diseases are contracted and more instruction at home as to suitable hours and companions for young girls at night. An experience of twenty-five years in school, social, and charitable work has convinced the writer that the reason why many girls go wrong lies in laxity of parental control and of public supervision of amusements open to the youth of both sexes.

Another prolific source of corruption of youth reaching the age of adolescence is the lascivious style of dress affected by women of good social standing. It is silly to argue that these women are unconscious of the effect they are producing on the opposite sex; they know to the fraction of a millimetre exactly how much display they are making. Working girls copy the "style." The results are not far to seek; the sexual appeal to the male is understood and answered.

It is firmly, humbly, and respectfully suggested that our social purists and sex hygienists who are concerned about the welfare of the youth of this country might well begin at home by creating a public sentiment that would drive off the street and out of public places all indecently dressed women of whatever station of life, and thus remove temptation from the feet of our young men and women. The ostensibly decent woman indecently dressed has ruined thousands of susceptible young men and women. *Voilà l'ennemie!*

Formerly President of the Calumet Branch of the Juvenile Protective Association of Chicago.

Chicago, February 12.

NEWFOUNDLAND BALLADS.

To the Editor of The Nation:

Sir: Your editorial on the subject of "Ballads in America" suggests to me the probability that Newfoundland is still an untilled field of ballad material. It is certainly true that among the fishermen of Fortune Bay, and also in the districts from Brigus to Fogo, the old ballads still survive on the lips of fishermen, who sing or recite them on winter nights by the fireside of a neighbor. Moreover, the sealing songs of the North are begging to be collected, and in them perhaps lies the most real seed of romance that a native American balladry can show. Men like Nicholas Peddle, of Mosquito, Levi Chipman, of Spaniard's Bay, and Edmund Wornell, of Greenspond, are as interesting as Raftery and Carolan, and though as poetry much of their work is curiously like that of the Sweet Singer, nevertheless they know the traditions and embody them in verse. And the Devonshire fishermen from whom the Newfoundland captains are descended would find their speech on these men's lips if they were to return to-day.

The people of Pictou and Antigonish Counties in Nova Scotia have not yet forgotten their ballads, and if we ever produce a Synge to re-create in an alien speech the poetry of the more remote Scotch districts in Nova Scotia there will be as potent a literary exodus to this land as there is now to be witnessed from London and Dublin to the Aran Islands. Even now in Antigonish there are scholarly students of the Gaelic poetic remains which exist in verbal tradition on the lips of the farmers and fishermen, and it is a matter of pride with many who have little English that their Gaelic is a language in which they may shape their images in poetic form. I know of no country where you will find so many professed "poets" in a small district.

Edward J. O'Brien.

South Yarmouth, Mass., February 13.

LOSS OF THE SOCIALIST PARTY.

To the Editor of The Nation:

Sir: I am sorry that "A Former Member of the Socialist Party," writing in the *Nation* of February 12, did not give the causes for that party's loss of 45,000 members between March, 1912, and June, 1913. To most of us "former members" these causes are patent enough, but not to the general public.

The Socialist party in the United States is composed of two factions: reformers and revolutionists. The majority of the former left because the platform of the Progressive party promised them everything they desired. The majority of the latter could not conscientiously remain in the Socialist party after that party inserted in its constitution the clause known as "section 6," which denounced as non-Socialists all persons for any reason advocating "crime, sabotage, and violence."

RELIGION UP TO DATE.

To the Editor of The Nation:

Sir: At the door of a church near Boston there is a huge sign, with such words as these: "All aboard for next Sunday—Everybody come—Grand music—Illustrated sermon—Come and GET THE HABIT." Recently in a Young Men's Christian Association house the announcement was made that every evening there would be prayers, followed by sandwiches. In another church the preacher acts out in the form of melodrama the Biblical text of the day; in still another one the priest advertises services, followed by refreshments and a dance. Indeed, one is led to ask: Why should any one oppose the all-pervading tendencies of the day, and try to keep vaudeville and religion apart? Why not have tango-sermons, followed by "The Church's One Foundation," appropriately reduced to a one-step rag?

And this is called a religious revival. Verily, "il en a toute la fureur triste."

Cambridge, Mass., February 15.

NOTHING BUT THUNDER.

To the Editor of The Nation:

Sir: There was once a man—I mean Alexander von Humboldt—who spoke kindly of the Spanish-Americans, and they cherish his memory ever since, styling him "the sage who approached most nearly to divinity by the power and extent of his intelligence." France acts to a certain degree as a publishing centre for them, issuing from her presses Spanish-American works of a consummate scholarship, such as Rufino José Cuervo's "Diccionario," as well as the exquisite poetical effusions of an Acuña or a Chocano, and the ever-grateful Spanish-Americans call her *el cerebro del mundo*. What do they get from you?

Nothing but thunder!

O, it is excellent
To have a giant's strength; but it is tyrannous
To use it like a giant.

Interrupt an American in the midst of his vociferations against the Mexicans, and ask him to name a Mexican poet, and will he feel any shame at not being able to name a single one? The American method of spreading information which keeps an inmate of a log cabin well posted as to some recent sensational event in a foreign country and leaves him in a total ignorance as to the intellectual achievements of the self-same country must be done away with, and the sooner the better. A few days ago I was asked to translate a business letter from Mexico, and was greatly delighted on seeing the words *fluctuat nec mergitur* on the trade-mark of the firm. Thus I can close this letter with a prayer and a hope.

Joseph de Perott.

Literature

A LEADING FEDERALIST.

The Life and Letters of Harrison Gray Otis, Federalist. 1765-1848. By Samuel Eliot Morison. Boston: Houghton Mifflin Co. 2 volumes. $6 net.

The career of Harrison Gray Otis covers the period during which Massachusetts Federalism played its part in our history and passed to its decay. It is described by Mr. Morison, a descendant of Otis, with fairness and ability. It may be said that the biographer does not overestimate the importance of his subject, who was not a leader of the first importance. It is as a man who reflected the will of his party rather than as one who controlled it that we must make up our verdict in regard to Otis. He was at the head of the Boston aristocracy, and was honored for his so-

cial position, his capacity as an orator, and his tact as a party manager. He entered Congress in 1797, when the Federalists had control of the Government, because the Republicans were committed to the defence of France. He supported the alien and sedition laws, the Judiciary act of 1801, and the attempt of the Federalists to make Aaron Burr President. He was, says his biographer, "a typical Federalist, representing his party at its best and at its worst." He retired to private life in 1801, built up a lucrative law practice, and made money in various non-professional ventures. During this period he became the visible head of the Federalist party machine in Massachusetts and gave most of his political activity to State politics. From 1817 to 1823 he was a Senator in the national Congress, where he devoted himself to a fruitless effort for bringing about a restoration of New England to a position of equal influence among the States.

The superior class still ruled in the good old Bay State. In Virginia and elsewhere in the South any politician who valued his prospects swore by the gods of equality. Aristocracy there must wear the mask of democracy, if it had any political success at all. In Massachusetts a public man might declare that the democratic control of government was a peril to society, and escape with his life. To those who viewed the Federalist party from afar, Otis, brilliant orator, most politic and courteous of hosts, dispenser of princely hospitality, and chairman of its central caucus, was its head and chief ornament. Those who knew the inside of things realized that he was only a figurehead. There was a powerful machine, with a central committee and many subordinate committees, and none of them selected by the rank and file of the party, and Otis was at the head of the Central Committee. But behind him was the Essex Junto, a small group of able men, who were too wise to show their hands, but who controlled nominations as rigidly as party bosses of the present time. None knew it better than Otis himself. He was, says Henry Adams, "no favorite with any class of men who held fixed opinions." John Lowell, probably the most influential of the Junto, said: "Mr. Otis is naturally timid and frequently wavering—to-day bold, and to-morrow like a hare trembling at every breeze." He was not popular with the leaders, and for many years he was denied his dearest wish, a nomination for Governor. When it came to him in 1823 he was defeated.

The most noted event with which Otis's name is associated is the Hartford Convention. He was second on the list of Massachusetts delegates, wrote its most important report, and took on himself the main share of the labors of the meeting. In later life his enemies attacked him fiercely for his part in what they called a treasonable movement. He wrote extensively in its defence, but was never able to satisfy the public that he had uncovered all that was done in that secret assembly. To many persons it will be a disappointment to learn that no important new evidence has been brought to light through the industry of the biographer. This is in spite of the fact that many letters by and to Otis have been used. The absence of evidence of the real intentions of the participants in the convention is a striking result of the examination of more than one collection of New England letters. Mr. Morison, like Henry Adams, concludes that the objects were to gain control of the Federal revenue and to force Congress to permit New England to provide her own defence. He concludes that the constitutional amendments suggested were only to satisfy the people who resented the domination of the non-commercial States and who were tired of submitting to the power of the South through the representation of three-fifths of the slaves. This may be true, and we are not justified in saying that there was more behind the movement than came to light; but to take such a position is hard in view of the attitude of New England earlier in the war. It is certain, however, that Otis's part in the movement, as far as the movement went, was not that of a radical. He rode on the wave somewhat behind its crest. Mr. Morison has described the performance with excellent spirit. Although he pleads the cause of New England, he does it in a broad and intelligent way. He successfully shows why she felt herself aggrieved.

It is, however, as a means of knowing the political and social conditions in Massachusetts that this Life of Otis is most significant. Herein is its contribution to knowledge. A chapter on The Federalist Machine, 1800-1823, contains new and valuable information on party history. It shows what party control was like before the popular convention gave the party a popular basis. The position Otis took in regard to abolition brings out a side of the controversy too much neglected by the historian, who has usually fallen under the Garrisonian spell. To Otis the movement was rash and unnecessarily provocative of sectional bitterness. His attitude on the tariff is also interesting. His vote in the Senate defeated the bill of 1820. He said at that time that the tariff would ruin the interests of navigation, and his vote had the approval of his State generally. Shortly afterwards he appears as a large owner of cotton-mill stock, and noted that manufacturing was the industrial hope of the community. "Two years ago," he said in 1823, "our sun had sunk never to rise again, as many said and more feared. Manufacturing stock with its liabilities made a man to be considered as so much minus. . . . All is now reversed, and the stocks as well as spirits have risen *inordinately*." Ten per cent., he added, was the usual dividend. Like most other wealthy New Englanders, he now became a protectionist.

The author enlivens his biography by making it keep close step with the personal life of the subject. He realizes what is so easy to forget, that a biographer is not entirely an historian. It is Otis in his relation to the times, and not the times in their relation to Otis, that Dr. Morison presents to us. He has even felt justified in showing in rather large proportion the attractive social qualities of his subject. If this should displease the reader who happens to be a student of history, it will please a much larger number who read for information and pleasure and who appreciate the minor side of human nature as well as the march of public events. In fact, Mr. Morison has done the difficult task of writing a good book about a small man in such a way that it will please the general reader and be useful to specialists.

The Flying Inn. By Gilbert K. Chesterton. New York: John Lane Co.

Mr. Chesterton is now possessed by the Destiny of the English which seized upon Rudyard Kipling when he gave up being merely a teller of plain tales from the hills and a singer of barrack-room ballads, and began to write stories like "An Habitation Enforced," and those in "Puck of Pook's Hill."

But Mr. Chesterton's Imperial idea is not Kipling's. Chesterton has always been anti-Imperialist—even boasting openly of being a Little Englander. He has long made it his business to rope, tie, and brand with their right names the wild horde of runaway words that have (as he asserts) got most men's vision of truth so sadly mixed and topsy-turvy. Now your British Imperialists have for the sake of their Imperial Idea, under cover and sanction of these spacious words, made unholy alliances. They are joined with the Japanese for the sake of the Empire of the East; they are champions of the Turk against Christendom for the sake of the Empire of the West and the overlordship of the sea. They let the military virtues of the native-born English decay, and they recruit the Imperial British army among the heathen yellow, brown, and black men of His Majesty's other dominions. They do, positively, in some of those dominions (so good churchmen complain) actively support the Mussulman against the Christian missionary.

Having gone so far under the mere spell of a phrase, why should they not go further? It pleases Mr. Chesterton's

sense of logic and his lively fancy to assume that they have gone the limit—to identify the temperance movement, which is spoiling the taverns of Old England, destroying the indigenous race of Sam Wellers, wiping out the fine Dickensian atmosphere of the Island, with the Mohammedan interdict against alcohol. The great ones who are making England over again in the Imperial image are victims of the subtle fascinations of the East—they play sedulous ape to the Turk, borrow his trappings, from his fez to his harem. For the purposes of the allegory, this baleful influence is embodied and concentrated in one fanatic statesman, Lord Ivywood, and it is Ivywood who levies war on the inns of England. The native powers, in like fashion, are gathered into the person of Patrick Lalroy, as good an Englishman as the Iron Duke or Bobs of Kandahar, a huge Richard of the Lion Heart figure, red-headed and hot-blooded, who goes singing about the kingdom with an inn sign and a barrel of rum and a round Cheddar cheese—the Flying Inn, in short.

The minions of the law are behind him, and adventure, audacity, romance, keep him company, whether he travels with a donkey, a stolen motor car, or an armed uprising like that of Wat Tyler or Jack Cade. There is a dog, too, to bark joyously at his heels, and a publican, the last of the sturdy British stock. It is this publican who makes the "Song Against Grocers, by Humphrey Pump, sole proprietor of The Old Ship Pebblewick, celebrated as the house at which both Queen Charlotte and Jonathan Wilde put up on different occasions, and where the ice-cream man was mistaken for Bonaparte."

Here is part of the song:

God made the wicked Grocer
  For a mystery and a sign,
That man might shun the awful shops
  And go to inns, to dine,
Where the bacon's on the rafter
  And the wine in the wood,
And God that made good laughter
  Has seen that it is good.

His props are not his children,
  But pert lads underpaid,
Who call out "Cash" and bang about
  To work his wicked trade.
He keeps a lady in a cage
  Most cruelly all day,
And makes her count and calls her "Miss"
  Until she fades away.

The righteous minds of innkeepers,
  Induce them now and then
To crack a bottle with a friend,
  Or treat unmoneyed men.
But who hath seen the Grocer
  Treat housemaids to his teas,
Or crack a bottle of fish sauce,
  Or stand a man to a cheese?

There is also a lady in the book, an alluring, elusive sort of lady. It is for her that the incarnate powers of darkness and light contend, and she is lost and won after watching from a turret tower window (all lattices and arabesques) such a fight as Helen saw from the walls of Troy or Rebecca from the castle keep beside the wounded Ivanhoe.

There is an astonishing deal of rollicking good stuff in the book, wit, satire, drollery, philosophy, and an amazing trick of character-drawing in a style that mingles realism, the fantastic, even the passionate and fanatic. For the benefit of those who may wonder what he is driving at, Mr. Chesterton has provided a compact exposition or moral of the fable in these words of Patrick Dalroy:

Did you ever hear of the great destiny of Empire? . . . It is in four acts: Victory over barbarians. Employment of barbarians. Alliance with barbarians. Conquest by barbarians.

Children of the Sea. By H. de Vere Stacpoole. New York: Duffield & Co.

The old fable of the leper's bride is still capable of its blood-chilling office. Too often it has served the turn of pathos, or at best of melodrama; too seldom succeeded, as in this tale, in approaching the effects of pity and terror which belong to the tragic mood. The action is set with extraordinary effectiveness, the first scene in Japan, the second in Iceland; but adroitness of staging goes but a little way towards accounting for the power of the performance. These are human characters, embodied with skill and sympathy, and the chief factor in the catastrophe is moral, not physical.

If Ericsson, chief buoyman of a Franco-Danish cable-ship, had not been an habitual light-o'-love, he would not have gone philandering after a strange girl on the Japanese coast and been so dreadfully befooled. Fate punishes him, and in the punishment is involved the Icelandic maiden Schwalla, with all her youth and love and innocence. But, in truth, pity broods over them both, they are almost equally childlike and hapless. For Ericsson, though "a brigand towards women, yet, strangely enough, . . . was not a libertine." His sin was not the grosser sin of sex; though he followed wandering fires, his quest was pure love. In Schwalla he found it—too late.

Apart from its tragic theme, the story has interest for its picture of an Icelandic village community, and for its portraiture of the few persons directly concerned with the tale. Each of them stands out warm and vivid—Ericsson, the stalwart and conquering and doomed; Schwalla the strong and pure, fit to be his mate; Magnuss the egoist and dog-in-the-manger, great-hearted poet and friend. These and others among the figures which people this little world have value of their own. They are not the conventionalized puppets of fable, but human beings, in whose midst a dreadful thing befalls. We have come to like and understand them when the swift inevitable blow falls—on us as well as on them. It is the end of our little company, the end of Ericsson and Schwalla as creatures of this human world. What becomes of the bodies which fate has not been able to part, is a secondary, almost irrelevant, matter, and may well be left unsaid, as the chronicler here leaves it.

Old Mole. By Gilbert Cannan. New York: D. Appleton & Co.

Mr. Cannan's novel, "Round the Corner," was reviewed but recently in these columns. With the fine martial regularity of the better-class English novelist the author puts forth his new contribution—a well-constructed, skilfully handled book, depicting life in the England of to-day. The book is an advance on its predecessor. It is clever, even eloquent, certain to hold the attention of the reader; but still it leaves in the mind a vague incompleteness. Few more picturesque characters than Old Mole have set forth on their travels in a latter-day English novel. There is a flavor of Fielding in the tale. Herbert Jocelyn Beenham, M.A., "sometime sixth-form master at Thrigsby Grammar School in the county of Lancaster," is no ordinary schoolmaster. And even though an absurd combination of circumstances sends him, after twenty-five years of teaching, spattered with scandal, into a caravan of strolling, somewhat shady, and drunken players, there is nothing more silly about him than about Parson Adams or a hero of Le Sage. A picaresque aroma greets us at the very outset of the book and continues well into the heart of it.

The growth and development of Old Mole continue amain, but once he quits the strolling life and turns, by those vicissitudes that make life, into a London celebrity, he is no longer so interesting. The tale runs to its logical conclusion and Old Mole continues a lovable old fellow enough. But undeniably there is the lack we spoke of, and it lies more, perhaps, in the heart of the author than in any of his characters. For though he would scarcely believe it, Mr. Cannan is still an intellectual in an age whose great men have left and are leaving mere intellectualism behind them. One is reminded of a passage in a book of Fielding Hall's that bears upon the point. "We want," he says, "that inward light that never dies. We want a greater unity than nature or humanity; to feel at one with that which never dies or changes." When Mr. Cannan attains to the vision of that inward light, his novels will attain to something much more than mere skill or cleverness or eloquence.

THE HOLY GRAIL.

The Quest of the Holy Grail. By Jessie L. Weston. (The Quest Series, edited by G. R. S. Mead.) New York: The Macmillan Co. $1 net.

This is a clear and readable summary of modern speculations in regard to the origin and evolution of the legend of the Holy Grail. As in her larger works on the same subject, Miss Weston rejects the theories that this famous legend may have had its origin in Christian ceremony or traditions, or in folklore (more specifically Celtic) conceptions concerning a food-providing talisman; on the other hand, she again urges her own theory that it sprang from some occult ritual in honor of the Vegetation Spirit and that its closest parallel is to be found in the ancient Adonis cult of Egypt and the East. The Vase and Lance of the Grail procession she interprets accordingly as "well-known phallic symbols, the Vase or Cup [*i. e.*, the Holy Grail] representing the female, the Lance, or Spear, the male element, while the blood is the Life." This theory has, of course, excited widespread discussion, but from the nature of the case it withdraws itself from proof, and we do not believe that it will ever get beyond the status of an ingenious speculation. The gap of at least a thousand years between the Adonis cult of antiquity and our earliest records of the mediæval legend is in itself a serious matter. This, however, is not all, for, to employ Miss Weston's own words, "we do not know precisely—in fact, we know very slightly—what really took place at these feasts [*i. e.*, of Adonis]." To be sure, Miss Weston cites some supposed modern survivals of these rituals which are intended to honor and propitiate the animating Spirit of Nature, but the resemblances with the Grail legend are of the vaguest kind.

Apart from this general theory of origins, there is much in Miss Weston's interpretation of the texts that seems to us objectionable. To begin with, we have as little faith in Wauchier's appeal to a Welshman, Bleheris, as a source for his continuation of Chrétien's "Perceval" as we have in Layamon's similar appeal to Bede and Saint Albin at the beginning of his "Brut," not to mention other manufactured authorities of mediæval poets. No one, however, would judge from Miss Weston's book that there were still doubters on the subject, for she states without qualification: "but in any case we now know that the earliest extant form of the Grail story came from Wales." In a similar spirit throughout the present work she speaks of the so-called "Didot-Perceval," as if it were beyond all question the prose version of Robert de Borron's "Perceval." As a matter of fact, no one knows whether Robert de Borron ever wrote a "Perceval." Miss Weston is here taking for granted, of course, that the results of her studies on the subject in the second volume of her "Legend of Sir Perceval" are assured. This seems rather strange, however, in view of the fact that not a single Arthurian scholar (except Dr. Sommer, who, *more suo*, claims to have anticipated her) has accepted this supposed demonstration. For our own part, we differ with Miss Weston on certain fundamental principles of method. When a new conception concerning the Holy Grail appears in one of the later texts, we do not believe that this is likely to be an original trait of the legend neglected by earlier writers—rather, we should say that all the chances are in favor of its being an independent modification or addition of the author of the later text. We cannot accordingly ascribe to Wauchier's continuation of Chrétien's "Perceval" the same authority as Miss Weston does, and as far as the Vulgate Cycle of the prose romances is concerned, the case is even plainer; yet Miss Weston seriously connects a detail of one of the most fantastic episodes of the prose "Lancelot" (Gawain's visit to the Grail-Castle) with the Weeping Women feature of the Adonis rites. Altogether, she makes hardly any allowance for invention on the part of a group of writers who, as it appears to us, gave as free a rein to fancy as any that ever lived.

Miss Weston speaks of Dr. Furnivall's edition (1864) of the Old French "Queste del Saint Graal" as the only edition of this work, but we have now that of Dr. Sommer (which records the readings of various manuscripts and, besides, is much more accessible) in his "Vulgate Version of the Arthurian Romances," Vol. VI, published by the Carnegie Institution of Washington, D. C. The "Merlin"—continuation (or "Livre d'Artus") of MS. 337 of the Bibliothèque Nationale, which is here referred to as unpublished—has also recently appeared as Vol. VII of the same series. Furthermore, Miss Weston seems unaware of the existence of Miss R. J. Peebles's Bryn Mawr thesis, "The Legend of Longinus in Ecclesiastical Tradition and in English Literature, and its connection with the Grail" (1911), which strengthens, however, materially the argument for the Christian origin of the Grail legend.

Splendid Failures. By Harry Graham. New York: Longmans, Green & Co. $3 net.

Five of the papers here collected have appeared in English reviews; the three now printed for the first time are quite as good. The title "A Splendid Failure" originally belonged to the paper on George Smythe, but very well suggests the character of the group, or rather the characteristic which they have in common. Smythe, Wolfe Tone, Toussaint L'Ouverture, Haydon the painter, Charles Townshend, "the Infant Roscius," Hartley Coleridge, and Maximilian of Mexico—a company of strange bedfellows, yet here they lie. In the thirty pages or so allotted to each Mr. Graham has contrived to give a clear impression of their personalities and their careers. Wolfe Tone, "the first of the Fenians," and George Smythe, "the Paladin of Young England," have been so thoroughly submerged by the wave of time as to call for somewhat violent means of resuscitation. Yet Tone was one of the most spirited and picturesque figures of his day, an Irish patriot who paid the full price for his Irishry. It was in the period of our own successful Revolution that he conceived the plan, which to-day sounds so modern and so unhopeful, "to break the connection with England . . . to unite the people of Ireland, to abolish the memory of all past divisions, and to substitute the common cause of Irishmen in place of the denominations of Protestant, Catholic, and Dissenter."

George Smythe's splendor, like that of Wolfe Tone, Haydon, Charles Townshend, and Hartley Coleridge, was a splendor of promise rather than of achievement or desert. In all of these instances failure resulted from lack of self-control. Smythe was loved by Rogers, eulogized by Macaulay, marvelled at by all his contemporaries. He was the wit without peer, the orator who was to send his age down to history, the brilliant young statesman from whom anything might be expected. Nothing remains of it all; he is remembered vaguely as the original of Disraeli's "Coningsby." He was not a victim of fate, but simply failed, as the current phrase is, to "make good." With Hartley Coleridge we incline to lay something more to the score of inheritance: his weakness and his failure were hardly less. Haydon's lack of self-command took a different form. He knew what he wished to do and bent himself to his task with untiring energy. But he lacked poise, judgment, common-sense, and his genius o'erleaped itself.

The failures of William Henry Betty and the Emperor Maximilian are of a very different sort. In his character of the "Infant Roscius" Betty was anything but a failure. The boy, under his 'teens, who could so cry out on the top of question, so berattle the English stage, that players like Charles Kemble and Mrs. Siddons herself were forced to share his triumphs in order to triumph at all—such a boy, even if his supremacy ended after two seasons, must be held to have succeeded. Betty commanded ten times the salary of the best actors of the day. The House of Commons once adjourned, on Pitt's motion, to see the Infant Roscius in "Hamlet"—it was one of the most amazing flukes in his-

tory. But it was a fluke. When Betty, his education completed, his manly stature attained, again ascended the stage, it was to appear with small applause before provincial audiences. He seems to have accepted the situation with a good grace, and his early success had made him independent. The fluke by which Maximilian ascended his perilous throne was to have no such comfortable corollary. Yet that also was a fluke. His momentary glory was a glory of circumstance, and not of character. The reverse is true of Toussaint L'Ouverture. Here is the one heroic figure of the group. His success was on the great scale; in no generous sense, no sense that he himself would have accepted, did the pathos of his end affect it.

Alone in the Wilderness. By Joseph Knowles. Boston: Small, Maynard & Co. $1.20 net.

As the complexity of civilization increases, experimental returns to aboriginal simplicity will doubtless multiply; though one can scarcely see why any one should care to repeat the triumphant experiment of Mr. Knowles. At last the dream of a thoroughgoing return to nature has been realized. A self-tutored artist (formerly a wilderness guide), Mr. Knowles went into the woods of northern Maine in August, 1913, naked, without so much as a match or a knife, and, after living for the stipulated two months in total independence of the advantages of civilization, emerged tanned and bearded, clad in bearskin and deerskin, carrying bow and arrows and a deer-horn knife. Before the experiment, Mr. Knowles's physical condition, as recorded by Dr. Sargent, of Harvard University, indicated that he was an exceptional man; after the experiment, a second examination showed an appreciable gain.

His life in the woods the author habitually views in two aspects, the physical and the mental. He entered the woods on a rainy day, and, being unable to make a fire, he spent two nights resting and running alternately at short intervals in order to keep warm. Afterwards he enjoyed the warmth of a fire and the shelter of a lean-to, save for one miserable night which resulted in a fever. His food consisted of berries, bark, fish, partridges, squirrels, and some venison and bear meat. The bear he trapped, and killed by clubbing him on the nose; the deer he killed by breaking his neck by main force. Mr. Knowles apparently did not suffer through the absence of salt from his diet, nor from the extreme irregularity of his eating, as regards both quantity and time. Nor was he rendered uncomfortable through giving up suddenly the habit of smoking cigarettes. His physical life, in brief, though not without tribulations, seemed to him of almost trifling importance in comparison with his mental life.

"My suffering," he writes, "was purely mental and a hundredfold worse than any physical suffering I experienced." It had never occurred to him that he might be lonely, but the thought of his isolation and of his friends and his past life tortured him so relentlessly, especially at twilight, that he vowed again and again that he would return next day to the camp whence he had entered upon his wanderings. Seeking diversion from his thoughts of civilized life, he drew, on birch bark, with burnt sticks from his fires, a number of sketches, first-rate examples of which illustrate his book; and he found further diversion in cultivating the friendship of a chipmunk, a flock of partridges, and a deer and fawn, to all of whom he spoke as to human beings.

Mr. Knowles's account of his experiment, though badly written with respect to grammar and diction, is sufficiently vivid and detailed. The chief defect in the book consists in the conclusions that he endeavors to draw. Though these conclusions are, in spirit and substance, in accord with some of the leading thoughts of our day, they are set forth in a disorganized, slapdash manner, and, when related with the author's intentions regarding his future, are fatuous. His experiment is to "lead up to something of international importance and magnitude"—at least, if his plans are carried out they "will create a new foundation on which the nation may stand." More specifically, what he hopes to establish, "with the coöperation of the United States Government," is a "College of Nature," "where young men may go for a short time, just as they go to college to learn things scientific." It is to be hoped that Mr. Knowles will use his influence, such as it is, wisely. Whatever the extent of his influence, he has certainly attracted in New England a considerable public attention of a cap-flinging kind, which is well illustrated by a photograph showing "a portion of the crowd that greeted Joseph Knowles on his arrival in Boston." Since, however, a small part of the public remains skeptical, Mr. Knowles is planning a second excursion, on which he will allow "a dozen representative men" to accompany him and watch him.

Vom Weltreich des deutschen Geistes. Von Eugen Kühnemann. München: C. H. Beck.

There is a tendency among the writers of books to make a volume of miscellaneous prose something like a scrap-bag into which is thrown everything that cannot be placed elsewhere: essays, addresses, after-dinner speeches, book reviews, etc. The reader who expects from a book something different from what he is accustomed to read in the papers, would prefer, however, not to find in it references to yesterday's performance of a play, to last year's literary sensation, to banquets and other events of hardly more than temporary and local interest. To open a book with so momentous a title as the one quoted above and find the very first selection beginning:

> Hochansehnliche Festversammlung! Nach den Worten des Herrn Ministers ist die Königliche Akademie zu Posen nun eröffnet!

and a number of others introduced by allusions to the festive board at which they were delivered, is not likely to attune the reader's mind to the import of its message.

The author will be known here as the first German to hold the Carl Schurz professorship at the University of Wisconsin, from his exchange professorship at Harvard and his lectures and addresses at Columbia University, Carnegie Hall, etc. He enjoys a prestige and popularity that impose certain obligations, and to publish a book without removing the all too obvious traces of its origin seems a hazardous undertaking. The note of nationalism which runs through the volume, and the virtuosity with which the author plays upon the emotions of his readers, continually remind of the platform and of a more or less solemn or festive gathering. Without the passages that frankly refer to these occasions, the reader might take the book more seriously. For there are in it some commendable papers on Socrates, Plato, Rousseau, Frederick the Great, Kant, Fichte, Herder, Schiller, on the last of whom Professor Kühnemann is especially authorized to speak. Even the papers on Bismarck and Schurz and the Schurz memorial address are thoughtful and suggestive. But the festive mood lends itself to the utterance of so-called beautiful sentiments which on the printed page impress as sonorous platitudes, and Professor Kühnemann has not escaped the pitfalls of his oratorical vocabulary. Moreover, the things said and done during his visits to this country, while undoubtedly meritorious in themselves and significant to the academic world immediately concerned, are hardly of such momentous interest as to be faithfully recorded in a book intended for the general reader. They, too, were undoubtedly included to emphasize the note of Germany's intellectual hegemony, which point of view explains the author's criticism that Gerhart Hauptmann unduly accented the note of pacific internationalism in his "Festspiel in deutschen Reimen."

Some readers will also take exception to Professor Kühnemann's attitude towards modern science and the manner in which he disposes of Haeckel. He

says in the address entitled "Leben und Wissenschaft":

Es ist in frischem Gedächtnis, wie ein verdienter Forscher vor unser Volk getreten ist mit dem Anspruch, die Welträtsel zu lösen; wir kennen seinen beispiellosen Erfolg. Denn dieselben Leute, die sich ungebildet vorkommen würden, wenn sie nicht den Theologen und Philosophen bei ihren Gedankengängen das ungläubigste Misstrauen entgegenbrächten, ergeben sich so leicht wehrlos den Behauptungen, die von der Seite der Naturwissenschaft kommen. Die moderne Naturwissenschaft ist ohne Zweifel ein Stolz des menschlichen Wissens. Aber diese Erscheinungen zeigen, dass der Glaube an sie in der gegenwärtigen populären Bildung zum Aberglauben geworden ist.

His attitude towards American education may be gathered from the following sentences on President Eliot:

Eliot gehört nicht zu den grossen Denkern, nicht zu denen, die wie Plato, wie Kant, wie Goethe den Jahrtausenden geboten. Er hat nicht aus unerhörten Tiefen neue Quellen aufsprudeln lassen für die Menschheit. Er ist rein amerikanisch. Er hat mit dem gesundesten Verstande und mit unerschütterlicher Energie die Umbildung von Harvard zur Gelehrtenuniversität im europäischen Sinne vollzogen, immer aber den Gedanken der Erziehung zum öffentlichen Dienst des ganzen Volkes festgehalten. Er hat die Atmosphäre geschaffen, in der der Typus des Gelehrten auf amerikanischem Boden gedeihen kann.

Notes

Mr. W. E. Carson is bringing out, through Macmillan, a new edition of his "Mexico, the Wonderland of the South."

We may expect in a few days from the University of Chicago Press "Unpopular Government in the United States," by Albert M. Kales.

The following are titles in Little, Brown's list of forthcoming books: "From an Island Outpost," impressions and observations by Mary E. Waller; "Felicidad," a romance by Rowland Thomas; "The Adventures of Peter Cottontail" and "The Adventures of Unc' Billy Possum," both by Thornton W. Burgess, and "Great Jurists of the World from Papinian to Von Ihering," in the Continental Legal History series.

"The Business of a Gentleman" is a story by H. M. Dickinson which Putnams are issuing this week.

This week John Lane Co. is publishing "The Garden Patch," by Edward DuBois Flint, and a popular edition of "The Red Lily," Anatole France's manual of garden plants garnished with poetry and observations.

Books soon to be brought out by Small, Maynard & Co. include: "Mrs. Brand," by H. A. Mitchell Keays; "The Dog and the Child and the Ancient Sailor Man," by Robert A. Wason; "Sunrise Valley," by Marion Hill; "Sweetapple Cove," by George Van Schaick, and "More About King Edward," by Edward Legge.

A. C. MClurg's spring announcements include in fiction: "The Hoosier Volunteer," by Kate and Virgil D. Boyles; "The House of the Dawn," by Marah Ellis Ryan; "Fine Feathers," by Webster Denison; "Shea of the Irish Brigade," by Randall Parrish; "The Green Seal," by Charles Edmonds Walk.—History and biography: "The Coming Hawaii," by Joseph King Goodrich; "Kit Carson Days," by Edwin L. Sabin, and Junipero Serra, his Life and his Work," by A. H. Fitch.—Economics and sociology: "A Primer of Political Economy," by Alfred B. Mason, and in the National Social Science series, edited by Frank L. McVey, the following: "The State and Government," by John S. Young; "The City," by Henry C. Wright; "Political Economy," by Frank L. McVey; "Competition, Fair and Unfair," by John Franklin Crowell; "The Cost of Living," by Walter E. Clark; "Rural Welfare," by John L. Coulter, and "Statistics," by W. B. Bailey.—Miscellaneous: "The Art of Story-Telling," by Julia Darrow Cowles; "Daly's Billiard Book," by Maurice Daly and W. W. Harris; "Earmarks of Literature," by Arthur E. Bostwick; "Right Living, Messages to Youth from Men Who Have Achieved," edited by Homer H. Cooper, and "Will o' the Wasps," nature studies by Margaret Warner Morley.

The following miscellaneous books are in Houghton Mifflin's spring announcements: "The Women We Marry," by Arthur Stanwood Pier; "Stories and Poems and Other Uncollected Writings," by Bret Harte; "Overland Red, a Romance of the Moonstone Cañon Trail," anonymous; "When Thoughts Will Soar," by Baroness Bertha von Suttner, authorized translation by Nathan Haskell Dole; "The Heart's Country," by Mary Heaton Vorse; "Memoirs of Youth," by Giovanni. Visconti Venosta, translated by William R. Thayer; "A Child of the Orient," by Demetra Vaka (Mrs. Kenneth Brown); "The First Step," a short novel by Eliza Orne White; "In the High Hills," poems by Maxwell Struthers Burt; "Henri Bergson," by Emil Carl Wilm; "Commodore George Hamilton Perkins, U. S. N., his Life and Letters," by Carroll Storrs Alden; "Ægean Days and Other Sojourns and Studies in the Isles of Greece," by J. Irving Manatt; "The Misadventures of Three Good Boys," by Henry A. Shute; "Confederate Portraits," by Gamaliel Bradford; "The Owl and the Bobolink," by Emma C. Dowd; "Where Rolls the Oregon," by Dallas Lore Sharp; "What Is it to Be Educated?" by C. Hanford Henderson; "A Life of Tolstoy," by Edward Garnett; "The New Politics and Other Essays," by William Garrott Brown; "Before Vassar Opened, the Beginnings of the Education of Women in America," by James Monroe Taylor; "Religious Confessions and Confessants," by Anna Robeson Burr; "The Americans in the Philippines," by James E. Le Roy, with an introduction by William H. Taft; "Letters of a Woman Homesteader," by Elinore Pruitt Stewart; "Elizabeth and Mary Stuart, the Beginning of the Feud, a Narrative in Contemporary Letters," by Frank A. Mumby; "The Sister of the Wind and Other Poems," by Grace Fallow Norton; "On the Cosmic Relations," by Henry Holt, and "The Place of the Church in Evolution," by John Mason Tyler.

Among the books announced by Rand, McNally & Co. are "Figures Famed in Fiction," by H. G. Pillsbury, and "Where He Dwelt," a life of Christ by Alfred T Schofield, M.D.

From time to time we have commented on the successive issues of the "Collected Works of William Morris," which the Longmans have been publishing, and as the long row of the volumes increases —there are twenty of them now—their monumental effect becomes more apparent. Though they show nothing of the artificial typography of the products of the Kelmscott Press—being indeed more readable than those books, if not so lovely—their handsome page and excellent photogravures would have delighted the eye of the master printer. The four volumes now issued, XVII to XX, contain "The Wood Beyond the World," "The Well at the World's End," "The Water of the Wondrous Isles," and several of the shorter prose romances. They are part of the marvellous improvisation that went on in Morris's busy brain in the intervals between his Socialist propaganda and his occupation with the Kelmscott Press. His daughter, Miss May Morris, who continues her delightful introductions, tells how in that period of nine crowded years he wrote ten of these tales, some of them works of considerable length. He seldom corrected; if his first draft did not suit him he would ordinarily throw it away, and make a fresh start; and not the least interesting part of the introductions is the number of these fragmentary sketches and beginnings which Miss Morris has rescued. Especially by comparing these later fragments with some from his Oxford days, which she also prints, one sees how little Morris really changed or grew in the thirty bustling years between his youthful and his mature prose. There was increase of knowledge and, possibly, a more portentous fluency, but he was the same light-armed improviser always; of true gravity or the power of arresting the reader he had as much in the callow Oxford era as in his age of social zeal. Miss Morris gives a picture of him presiding at the Hammersmith lectures which is like a flash of critical intuition into his soul, although she did not mean it to be taken in just this way:

Whenever possible, my father would take the chair for the Sunday lecture, and after this lapse of years I can hardly picture the meeting-room without him as the central figure—though indeed something of him was always with us when not present. I can see him seated at the plain wooden table taking notes, or absently decorating the paper with flower-work and lettering; or, with his head splendidly relieved against a background of indefinite mixed shadow, speaking down the narrow room on "Early England" to listeners happy to be taken for an hour out of the stress of disputed problems. When the meeting was over, Mr. Walker, or one of us, would often go to the chairman's table just to see what the little drawings were, left on paper or blotting-pad. Such pretty wanderings of the pencil! A sort of planchette-drawing—dream-roses and

twining garlands that formed themselves unbidden.

Somehow that involuntary wandering of the artist's hand in pretty, decorative ways, that uncontrolled revelling of the imagination in an ancient world idealized out of all semblance of the reality, seem to let us very intimately into the secret of his social revolt and of his revolutionary tales. In any proper sense of the word he was no Socialist at all, but, like a good many other of the more refined of the brotherhood, an anarchist of dreams; his picture of the converted world is like that which must come to a naughty child who has run away and fallen asleep in a meadow of miraculous flowers.

The president of Gonville and Caius College, Cambridge, Dr. John Venn, has gone into some pleasant by-ways of research for the material of a volume of short essays which he has brought together under the title, "Early Collegiate Life" (Cambridge, Eng.: Heffer). Drawing on the records of his own college for illustration, Dr. Venn gives in these papers an intimate and no less entertaining picture of life in one of the great universities of England when the institution was in its youth and early manhood. Some of the papers were read on the occasion of particular college celebrations, and there is a filial piety in those dealing with the memories of founders and benefactors that is very charming and that emphasizes pleasingly the continuity of collegiate traditions and ideals. The essay on The Early Undergraduate reveals the fact that, in the course of some four hundred years, that species has suffered variation principally in its external plumage. In 1579 the Vice-Chancellor complains of a young gentleman of the name of Punter that "he was detectid of much disorder; as, namely, that he had uncased, as they call it, one of the stagekeepers of Caius College plucking off his visor," and that thereafter Punter had been guilty of other flagrant indiscretions. *Mutatis mutandis* we seem to recognize the picture. There is some uncommonly good reading in the chapter entitled Academic "Sports," the "sports" referred to having no relation to athletics, but being various eccentric characters who at one time and another have been members of Caius College. Undergraduate letters of the seventeenth and eighteenth centuries throw an interesting light on university life of the time, especially on the expenses incidental to a university career, and here again the diplomatically worded appeals to his father for money of a certain William Gaudy can be paralleled by modern instances.

In "The Forest of Dean" (Dutton) Arthur O. Cooke has made a welcome contribution to the literature of touristry. His book pretends to no more ambitious aim than that, and it fulfils its purpose admirably. The Forest of Dean is less familiar to the tourist than the larger crown preserves of the New Forest, but it is hardly less interesting, and certainly not less picturesque. It is curious, therefore, that it has not heretofore found a writer to celebrate its beauties in a volume more pretentious than the guidebook. Lying on the peninsula of Gloucestershire, between the Severn and the Wye, the Forest is in the heart of some of the most beautiful scenery in England. As a crown preserve it dates probably from pre-Norman times, and it has shared in the checkered history common to all the crown lands, its early records telling the familiar tale of oppression by the royal huntsmen in protecting their "tall deer" from the onslaught of the vulgar, and of contumaciousness on the part of the sturdy, half-tamed inhabitants of the Forest. Mr. Cooke's purpose is descriptive rather than historical, and his account of the history of the Forest is perhaps more condensed than it need have been. The descriptive chapters, however, are excellently written, dealing not only with the scenery and points of interest, but with the life of the people and the industries of the Forest. The book is freely illustrated with drawings of considerable merit, in color and in black and white, by J. W. King.

The relations of the judiciary and the people, under our system of government, have never received a better exposition than in Mr. Frederick N. Judson's Yale lectures which make up the little volume, "The Judiciary and the People." Mr. Judson is impressed with the grave importance of his theme, and discusses it seriously, candidly, and courageously. There is no flippancy, no appeal to emotion, no demagoguery. The first lecture is devoted to the independence of the judiciary and the separation of the powers of government, under our Federal and State Constitutions. In the second and third lectures, the supremacy of the judiciary over illegal executive acts and unconstitutional legislation is explained and justified. While the author has no hesitation in rejecting the view that the courts were guilty of usurpation of power, when they began the practice of nullifying statutes, because unconstitutional, he is not disposed to commend all of the decisions which have annulled legislation. He notes with commendation the more liberal construction by the United States Supreme Court of the police power, and ascribes the narrower view often taken by State courts to the "excessive restraints upon legislative power" in many State Constitutions, and to the "progressive deterioration in the character of State legislation." The fourth lecture is the one which will be read with most interest and profit, for it deals with the recall of judicial decisions and judges. While it contains nothing which is very novel or brilliant, it presents the leading arguments for and against these schemes with the utmost fairness. Mr. Judson's conclusion as to the recall of judicial decisions is, that "it misconceives the fundamental theory of our political system with its distribution of the powers of government." He is equally outspoken in his condemnation of the scheme for the recall of judges. Its tendency, he believes, "would be to substitute for the fearless and independent judge, a spineless, flabby, cowardly judge, shaken by every wind. . . . The fatal objection to it is not that the people would necessarily be unwise in its exercise, but because its existence, whether exercised or not, would be fatal to the independence of our judges." In the concluding lecture, Mr. Judson deals with the defects in our judicial procedure. Most of these he traces to legislation based upon distrust of the judiciary, and the consequent inability of judges properly to control the conduct of trials. "The only effective remedy for this deplorable situation," he declares, "is the vesting of a larger discretion in the judges, so that they may have the power and the independence to disregard technicalities, to regulate the rules of procedure, and inaugurate a reform of the anomalies of our archaic rules of evidence."

A quaint and extraordinary anthology has been brought together by Mrs. Mary Elizabeth Brown and published by Putmans, under the title of "Dedications." These, taken mainly from English and American books, but with a few foreign titles included, are divided into groups in accordance with the person or object addressed, and there is a certain interest in the resulting categories, such as, for example, "To Deity," "To Lovers of Mankind," "To Oneself," "To Animals," "To Things Spiritual," "To Any and Every One." Within each group the dedications are arranged chronologically, and a philosopher could find much to muse on in the change of tone from the sixteenth to the twentieth century. Perhaps what will astonish most of those who open the book is the amount of graceful literature, in prose and verse, to be found within its covers; it is a kind of history of men and manners in allusion and epigram and direct eulogy.

Quiet as a falling leaf is the manner of Lady Ritchie in her last volume, "From the Porch" (Scribner). Whether entitled "Divagations," "Monographs," or "Reminiscences," her substance is largely the memories of other days. What a various experience has been hers. In "A Discourse of Modern Sibyls" she gives personal recollections of George Eliot, Mrs. Gaskell, Charlotte Brontë, and Mrs. Oliphant, with the placidity of a knitter in the sun. A whole chapter is devoted to Charles Dickens, and Browning, Carlyle, and Tennyson walk for us again in Kensington Gardens. In her "Monographs," she frequently uses letters to call back the faded faces of little-known people of a bygone age. "The Swan of Lichfield" appears in a garb much less Johnsonian than one would expect. Mrs. John Taylor, of Norwich, sits quietly among her group of friends. Major James Rennell, the geographer, writes old-world letters to his grandson. Morland and Stevens rise briefly from the past. Other more personal papers there are, but all are fitly included in "From the Porch," for all are like glimpses down a vista flecked by the soft sunlight of an English afternoon.

The reprint of Lord Cromer's "Political and Literary Essays" (Macmillan) conveys the same impression of his mental quality that was made by his "Modern Egypt." The reader renews acquaintance with an intellect of singular poise and sagacity. One finds here fuller proof of the author's range of reading and delight in literature for its own sake; and the pages on Disraeli, which we had

noted on their first appearance in the *Spectator*, are touched with more moral fervor than Lord Cromer customarily cares to display. His seizure upon the Oriental nature of Disraeli, together with his exposing of the man's character in all its ethical poverty, was not only a piece of honest criticism, but a bold thing to do. It provoked many in England to resentment. They did not like to see the adventurer stripped by the statesman.

The bulk of Lord Cromer's volume, however, is devoted to variants of his old themes. British Imperialism, the policies of colonial government, the treatment of subject races—with all these he deals. Out of his own long experience and reflection he has evolved certain rules of administration, and these he would apply, with the necessary local adjustments, whether in Egypt or India, China or South Africa. Lord Cromer is fully aware of the nemesis which a Christian and democratic government over weaker peoples creates for itself. It is committed to their education; yet their education invariably results in discontent and agitation. But there is no turning back. We must allow enlightenment to do its work. Only, the wise governor, the foresighted Imperialist, will be all the time conceding enough to native demands to knock the props from under the native demagogue or insurrectionary. It is obviously a dangerous game, requiring the closest observation and the nicest play, but of such is Imperialism, according to one of its greatest modern practicers and expounders.

Mr. Francis Watt is not a particularly clever writer, nor is he even very skilful as a compiler, but a "Book of Edinburgh Anecdotes" is the sort of thing that would make itself, and his volume of that title, published by Scribners, has abundance of entertainment, not to mention some good pictures. The scattering fire of witticisms and stories is divided into chapters in accordance with the men concerned—lawyers, churchmen, scholars, doctors, royalty, authors, artists, and the like. A comparison of the wit of these various classes might make a pretty little essay, and the palm, we think, would certainly go to the bar and bench, with literature a good second. It is noticeable also that the faces of the lawyers, as shown in these portraits, are the strongest and most full of character, as if that profession was best suited to ripen the canny and disputatious traits of the Scots nature. Those who know their "Weir of Hermiston" will not be surprised to find a vein of sardonic grimness running through the legal humor of Edinburgh, and there is no better specimen of this than the Lord Justice-Clerk Braxfield, on whom Stevenson is said to have modelled his Judge. One of Braxfield's maxims was: "Hang a thief when he is young, and he'll no' steal when he is auld." His opinion of reformers was equally thoroughgoing: "They would a' be muckle the better o' being hangit." And it was at the trial of the reformer, Gerrald, that he made his famous, and most blasphemous, remark. The prisoner had urged that the Author of Christianity himself was a reformer. "Muckle He made o' that," growled Braxfield, "He was hangit."

Of the literary anecdotes collected by Mr. Watt we can quote only one. It is characteristic at once of De Quincey's magniloquent way of talking, even when ordering a dinner, and of the Scottish servant of the old days. "Weel," said the cook, "I never heard the like o' that in a' my days; the bodie has an awfu' sicht of words. If it had been my ain maister that was wanting his denner he would ha' ordered a hale tablefu' in little mair than a waff o' his han', and here's a' this claver aboot a bit mutton no bigger than a preen. Mr. De Quinshay would mak' a gran' preacher, though I'm thinking a hantle o' the folk wouldna ken what he was driving at."

The omniscient Baedeker has not yet felt the need of covering South America. It is to be hoped that with the opening of the Panama Canal and the consequent inevitable increase of tourist traffic to the Southern Continent, he will rise to meet the occasion. A professional maker of guide-books is always at a tremendous advantage over the amateur. Long years of experience have taught him what information is safe to be included, and what may properly be omitted. In the meantime, by far the most useful *vade mecum* for the intending tourist is Miss Annie Peck's "South American Tour" (Doran), which has just appeared. Although it has many of the faults which one finds in amateur guide-books, including the presence of time-tables, always subject to change, irregular and unsystematic arrangement of details, and an inadequate index, it is really a creditable performance. Numerous photographs add to its value and many of them, now appearing for the first time, are unusually interesting. The personality of the author does not obtrude itself unpleasantly. The book contains interesting, brief historical paragraphs and a vast amount of detail, which testifies to care and diligence in the work of compilation, although there are a number of amusing mistakes, chiefly due to the author's unfamiliarity with the Spanish language. "Matriz," for instance, which, as everyone one knows, is the term applied to a cathedral or metropolitan church, is supposed by the author to be the name of a large plaza! Even Baedeker is at times unconsciously humorous in some of his detailed explanations, so it is not surprising that Miss Peck should have thought it necessary to state that in the Maury Hotel "generally a button will be found near the head of the bed, by which the light may be extinguished after retiring." Although there are no references to the chief cities of Venezuela and Colombia or the Guianas, on the excuse that the ordinary visitor to South America does not visit these places, the rest of the Continent is well covered from the tourist point of view. Most of the places described appear to have been visited by the author. Considering the amount of pains which Miss Peck has taken in producing the text, it is greatly to be regretted that her publishers did not supply the book with an adequate map of South America and plans of the principal cities.

Theodore Low DeVinne, president of the well-known DeVinne Press, died Monday at his home in this city. He was born at Stamford, Conn., December 25, 1828. He learned the printer's trade in the office of the Newburg *Gazette*, and later was an employee and then partner of Francis Hart. After Mr. Hart's death he succeeded to the business, in 1877. With a great love for artistic printing he stoutly maintained that the best work could not be done with typesetting machines. As an author, he is remembered for "Invention of Printing," "Historic Types," "Christopher Plantin," "Plain Printing Types," "Notable Printers of Italy During the Fifteenth Century," etc. At one time he was a valued contributor to the *Nation* on matters of typography and the like.

Edward le Moyne Heydecker, Assistant Tax Commissioner in this city, who died early last week, aged fifty, was the editor of the "General Laws" and of various textbooks, and was author of "Commentary on Mechanics' Liens" and "War Revenue Law, Annotated."

Dr. Roswell Park, one of the most eminent of American surgeons, died suddenly at his home in Buffalo on Sunday. He was born at Pomfret, Conn., in 1852, and in 1872 graduated from Racine College, Wisconsin. Since 1883 he had been professor of surgery at the University of Buffalo. Dr Park was one of the physicians who attended President McKinley after the assassination. He was the author of "Lectures on Surgical Pathology," "History of Medicine," "Textbook of Surgery," two volumes; and "The Principles and Practice of Modern Surgery."

Alphonse Bertillon, whose system of identifying criminals by thumb-prints has been widely employed, died in Paris on Friday. He was born in Paris in 1853, and early became interested in anthropometry. In the early eighties he demonstrated the value of his discoveries, and since that time had been head of the department of identification of the Paris police. He was also a handwriting expert, and it will be remembered that in this capacity he was called in to testify in the Dreyfus trial. Among his numerous treatises are works on anthropology, ethnology, and criminal photography, besides those in his special field. For his services to science he was made a chevalier of the Legion of Honor.

Drama

Mr. Faust. By Arthur Davison Ficke. New York: Mitchell Kennerley. $1 net.

This modern paraphrase of the Faust legend is clever enough to justify the boldness of its inception. Its motive is the glorification of the spirit of individualism and the theme is worked out with no little dramatic ingenuity and uncommon literary imagination and facility. Faust is a man of the world, young, rich, cultivated, and cynical be-

cause of the variety of human pleasures and ambitions. In the first act he is discussing life with his two friends, Brander, who, being in love, is an optimist, and Oldham, a pessimist, whom disgust with existing conditions has brought to the verge of suicide. When they leave him, he moralizes, in a passage of notable eloquence, on the vexatious problems of life and liberty, and consigns to the Devil a statue of Washington for the calm indifference which it expresses to the doubts with which he is afflicted. Then Satan appears in the guise of a well-dressed commonplace citizen, introduces himself courteously, and, after accepting a glass of Scotch whiskey, offers his services. The conversation that follows is written in an admirable vein of serio-comic satirical humor worthy of Shaw or Gilbert. Faust, finally convinced of his visitor's identity, maintains that he is powerless to minister to the discontent that comes of exhausted experience and laughs contemptuously at the old temptations of sensual pleasures, poetically portrayed, and the power of incalculable wealth. Changing his tone, Satan next depicts the joys of an earthly Paradise, remote from all the distractions of civilization, the abode of perfect peace, and pledges himself to become the slave of his host unconditionally, if he cannot find happiness therein. Faust accepts and presently departs with the subservient fiend and Oldham, who has returned to say farewell before killing himself, and joyfully seizes the chance of a respite from his troubles.

The scene then shifts to a tropical elysium, wherein resides a venerable Buddhist, who expounds "the way" and dilates upon the blessedness of Nirvana. Oldham is converted; but the imperious will of Faust revolts at the idea of absorption into nothingness. He refuses the proffered Paradise and challenges the Devil to acknowledge defeat and submit to servitude. But Satan, temporizing, says that he knows of a yet more certain sanctuary, and straightway transports Faust and himself to the nave of a great cathedral, wherein he appears as a priest, explaining that, contrary to all received notions concerning him, he is really one of the humblest agents of the Almighty, his mission being to suggest evil to men solely with a view to their ultimate salvation. Faust, bewildered, gradually succumbing to the emotional influences of solemn ceremony, celestial music, and the atmosphere of the place, is on the verge of a rapturous profession of faith, when he realizes that this must entail the submission of his own individual to the Eternal will, and, in an outburst of passionate protest, asserts his own inviolable independence, though with little comprehension of the subtle ecclesiastical distinctions between predestination and free will. In the fourth act Faust, who now recognizes Satan as his inveterate foe, bent only upon his enslavement, creates a riot in a public meeting, by denouncing the theistic idea and declaring that Satan is the father of all the creeds, which are only his lures for the general destruction of mankind. In the resultant uproar he is stricken down, and in the last act he is dying, using his ebbing energies to complete the story of his trials for the benefit of the world. Satan, still his familiar, assails him for the last time, warning him that the death of the body is followed by the slow, agonizing, and final dissolution of the soul, but that this bitter experience may, in his case, be averted. Let him surrender his book and he, Satan, having the power, will insure for him dead, painless oblivion. This temptation, too, Faust spurns, triumphantly proclaiming that he has found his peace in the assurance that he, whether immortal or not himself, is at any rate a part of the life-principle that is immortal, and that, in the end, he will have his share in the immortality to be reached by later generations of aspiring souls kindred to his own. His book he bequeaths to his one disciple, Midge, the intelligent but ignorant little servant girl whom his friend Brander, repenting her seduction, has married. The cynical reader will ask: Does Mr. Ficke have in mind that Satan is so nervous about the influence of "Mr. Faust"?

Mr. Björkman has done well to include this play in the Modern Drama series which he is editing. That it could ever be a success upon the stage is most unlikely. To the religious public it would, of course, be anathema. But it is essentially dramatic, and deals with great issues in a serious, if somewhat fantastic, way. The employment of an active personal Devil in a rationalistic scheme is obviously illogical, but as a dramatic figure he is strong and subtle. in intellect and guile he is a worthy representation of the Prince of Darkness. And the study of Faust, self-centred, aspiring, and indomitable, is drawn with consistency and power. But in the final estimate it is not easy to discern much difference between annihilation and complete fusion in a flood of immortal ether.

"Sanctuary," Percy MacKaye's bird-masque, which was given last summer in New Hampshire, will be published at once by Stokes.

Included in the spring announcements of A. C. McClurg & Co. are "Gerhart Hauptmann, His Life and Work," by Karl Holl, and "The Green Cockatoo and Other Plays," by Arthur Schnitzler.

Mr. Edwin Björkman, whose authorized translations, for the Scribners, of Strindberg's plays have now reached a third series, calls the present instalment unusually representative. It is said to give "a cross-section of Strindberg's development as a dramatist from his naturalistic revolt in the middle eighties to his final arrival at resigned mysticism and Swedenborgian symbolism." To discover quite this would require a closer reading of the text than the reviewer has been able to compass. On the surface most of these plays present the old familiar picture of an author grieved and peevish because life falls short of his ideal. It is, of course, the writer himself speaking when one of the characters says: "I tell you . . . that when you happen to be born without a film over your eyes, then you see life and your fellow creatures as they are—and you have to be a pig to feel at home in such a mess." The play, in the present batch, which most completely embodies this spirit is "After the Fire." The house of a dyer of supposedly respectable family has burned down. The action of the drama takes place among the ruins, which furnish a diabolically clever device for disillusion. First, all the keys are found together, which fact would seem to prove that the fire was incendiary; next the position of a certain lamp implies illicit relations between the owner's wife and a boarder; the owner also is convicted of diverting to himself a portion of the inheritance designed for his brother; and by hidden closets it is seen that the late sire of the family had made his fortune by smuggling.

"Debit and Credit" and "The Thunderstorm," which are included in this volume, are mere sketches in a similar vein. In the former a doctor of philosophy, through a loan contracted by his brother, has achieved some fame as an African explorer. When he returns to Sweden the net of evil circumstances which this and another loan have set going tightens about him to the point of suffocation. To cap the climax, his fiancée proves to be a harlot. "The Thunder-storm" seems less unfinished because it contains at least one complete picture, that of a selfish old gentleman who, having left his wife and child according to a pre-marital agreement, has settled down to finish out his life in self-centred peace. Of course, the wife comes back to mock him, in Strindberg's approved fashion; has, in fact, been living over him in the same apartment house long before he discovered it, and with her new husband has been conducting gambling rooms. Even after the readjustment at the close of the play, the old gentleman feels no assurance that he has seen the last of her. "Advent," described by the author as "A Miracle Play," is in the manner of "The Dream Play," which has been fully characterized in these columns. It is only another long-drawn-out riddling of what passes on earth as respectability. "Simoom" is a study in atmosphere, and as such is well done. The action is supposed to take place in Algeria at the present time, and an Arabian girl at the dictation of her lover kills a lieutenant of the Zouaves by invoking the spirit of Simoom, the storm. The killing is artistically contrived by devices of song, dancing, and charms, all being designed to furnish hypnotic suggestion. The one bright spot in the volume is the

fairy play of "Swanwhite." Some have thought Strindberg in this instance under the influence of Maeterlinck, and he may have been so far as concerns petty details. But the play lacks the Belgian's organized symbolism, and may indeed be enjoyed without any reading between the lines. We commend it to those who are anxious to see Strindberg applauded on the American stage. It would furnish a happy surprise after the impression left by "The Father" and "Miss Julia."

Although Mr. Björkman's translations are, for the most part, in smooth, idiomatic English, they are not entirely free from slips which are easily traceable to Scandinavian usage. On p. 94 we read, "*What* does that concern me?" On p. 83, "Well, *what* does that help us?" On p. 68, "*If* I know how to hate?" for "Do I," etc. On p. 210, "How I have *had it* during the summer?" for "How I have got on?" On p. 211, "I hope you pardon." On the same page, "now when I" for "now that I."

Ellen Terry will leave England next month for Australia and New Zealand, where she will talk about the heroines of Shakespeare. She will begin her venture in the Town Hall, Melbourne, on the 5th of May.

The Paris correspondent of the London *Times*, writing on January 27, says:

As was expected, M. Albert Carré, the new administrator-general of the Théâtre Français, has made it one of his first duties to secure for the theatre a closer monopoly of the services of its *Sociétaires*, or actors and actresses who have a financial interest in the institution. The Minister of Public Instruction, M. Viviani, to-day issued a decree modifying the famous Decree of Moscow, which contains the original constitution of the Comédie Française, and was signed by Napoleon in the Kremlin in 1812. For the future *Sociétaires* will not be allowed to use their leave of absence for their personal profit, unless authorized to do so by Ministerial decree, and the plays in which they perform outside the Théâtre Français must be on its répertoire. The regulations with regard to length of leave are to be strictly enforced, and *Sociétaires* will be fined £4 for every day taken beyond their allotted time. After three days the fine will be increased to £20 a day. The question of performances by the whole company outside Paris, such as those given in Brussels in the autumn, is still under consideration.

Music

EARS TO HEAR.

London, February 7.

St. Paul is not usually considered an authority on the arts, but there is an *obiter dictum* of his about music that is not out of date even to-day. Any concert-goer will immediately recognize its truth and value. "I will sing," said the apostle, "with the spirit, and I will sing with the understanding also." Would that every modern "artiste" would follow his example!

The Pauline principle requires to be applied to playing and hearing as well as to singing. The second part of it needs especially to be emphasized. For every ten persons whose emotions respond to the music they perform or hear, there is not more than one who plays or listens intelligently. The conviction is growing that it is on this side that musical education in England most needs development. The standard of technical performance—of manual dexterity, that is to say—has notably risen during the last few decades. For example, there is a much higher finish in orchestral playing nowadays than a generation ago. But do not the finest performances lack something of their due effect if audiences are not able to "appreciate," in the strict sense of the word, the compositions to which they listen? The lack is now evidently felt, and attempts are made on all sides to repair it. Musical "appreciation" is becoming the subject of books and lectures, and advertisements of classes in it are occupying more and more space in the musical press.

One of the January educational meetings was a week's conference of music teachers and others held at Hammersmith. The programme devoted a whole afternoon to a discussion on the teaching of "musical appreciation"—or of "the appreciation of music," as one of the more precise speakers suggested it should be called. The conference was unanimous in the belief that appreciation ought to be taught, and could be taught. The chairman, Percy A. Scholes, one of the most active propagandists of the Home Music Study Union, did his utmost to elicit some expression of adverse opinion, but no *advocatus diaboli* could be induced to appear. That in itself was surely a sign of the times.

The keynote of the discussion was the recognition that music has to do with three things—the physical, the intellectual, and the emotional. Appreciation implies the joint operation of the three. In teaching, it has been the custom to pass directly from the physical part to the emotional, especially in the case of children of exceptional musical talent. Only in a minor degree has any intellectual element found place in the course. If it has become at all prominent it has been taught quite apart from the other elements. Harmony, for instance, has ordinarily been taught away from the keyboard, and the student has mastered its rules much as though he were taking lessons in mathematics. In advocating that the emotional and intellectual sides should not be kept apart, Mrs. Curwen happily referred to the delight children take in pulling things to pieces. Let the teacher show the child how to pull a tune to pieces. The child will follow the process with lively interest. "Oh, that's how tunes are made, is it?" he will exclaim, and straightway he will wish to try to make up tunes for himself.

Stress was laid by several speakers upon the importance of carrying the intellectual analysis of music as far as the point at which it works sub-consciously. The chairman aptly quoted the old rhyme about the centipede which lost her power to run owing to the toad's malicious query, "Pray, which leg goes after which?" The objection to the analytical programme, said Prof. Stewart Macpherson, is that it takes your mind off the music when it should be on it. All that is in the programme should have been done beforehand. Another speaker gave the practical advice that, before children were taken to a concert, the programme should be gone through at home or at school. It was difficult to "get the hang" of chamber music, in particular, until one heard it a second time. Perhaps this will help to explain the difficulty of obtaining an audience for new works. The musical critics usually attribute it to a lamentable popular indifference to the arts. But, if the public is so insensitive to the appeal of music, how is it that a Beethoven programme will always draw a full house? One reason, at any rate, for the difference is that the Beethoven music is so accessible for previous study. For a small sum people can buy the overtures, symphonies, trios, or anything else, arranged for piano solos or duets. They play these over at home, and are therefore prepared to listen with intense interest when they hear the same things produced in all their glory in the concert-hall. If present-day composers were shrewd men of business, they would take care that every advertisement of a "first performance" was accompanied by the notice: "An arrangement of this work for the pianoforte can be obtained for one shilling." However that may be, a certain degree of familiarity seems to be essential to the fullest enjoyment of the best music, and the counsel that children should be shown beforehand the development of the themes they are going to hear at concerts is well worth following.

Something was said at the conference about the connection between the physical sensations of tone and the appreciation of music. If these sensations were properly cultivated, we should not tolerate the awful voices, the street noises, the domestic noises—or the school pianos, added an interrupter—that we put up with now. Parents, it was urged, should pay more attention to this part of musical training.

The discussion was brought to an excellent close by Professor Macpherson's outline—in response to an appeal from the chairman—of the proper equipment of a teacher of musical appreciation. First, he must have a real love of music and a strong desire to pass it on. He must be able to play well enough to illustrate what he is teaching, and not

to destroy the hearing sense of his pupils. There should be no false shame about him, and he should not hesitate to use the pianola in the case of pieces beyond his own powers. He should not merely be a pianist, or a singer, or a harmony teacher, but a musician—a musician all round, with an ever-growing knowledge of music. And he must have plenty of sympathy. He must not tell a child that he has got to feel this or to appreciate that, but must draw out the child by means of a wise direction of his thoughts. H. W. H.

Massenet's "Don Quichotte" had four performances in Chicago during the first season of Campanini's management. The other novelties were Franchetti's "Cristoforo Colombo," Kienzl's "Le Ranz des Vaches," Leoncavallo's "Zingari," and Fevrier's "Monna Vanna." Of the thirty-six operas sung, seventeen were Italian, eleven French, and five German. American opera was represented by Victor Herbert's "Natoma." No fewer than ten of the operas in the list were each sung only once. "Die Walküre" had the same number of performances as "Don Quichotte." This was exceeded only by "Madama Butterfly," which had five. The critics agreed that "Don Quichotte" improves on acquaintance.

Caruso at one time sang in Paris for about $100 a night. Now he gets $2,500 or more—in New York. Patti got $5,000 a performance in New York, but in Paris, as a writer in the *Musical Leader* points out, she got only $200 or $300 a night. It must be remembered, however, that the maximum receipts in the largest opera house in Paris are only $4,000; whereas the Metropolitan often has an audience that paid $12,000 or more. The world's greatest singers make New York their headquarters simply because they earn more here than elsewhere. There is no sentiment about it. If their "cachets" were screwed down too much, they would remain in Europe.

Every summer, as Robin H. Legge informs readers of the London *Daily Telegraph*, England is invaded by foreign singing teachers and their pupils. The teacher takes an English country house and fills the neighboring village with his pupils.

Marion Bauer's suite of four piano pieces, entitled "In the Country," has in a few months reached its second edition. It is published by Arthur Schmidt.

The London Philharmonic now includes a British composition in each of its programmes.

Alfred Bruneau and Theodore Dubois were among the pall-bearers and speakers at the funeral of the great French pianist, Raoul Pugno. In his address, Bruneau said:

> It was by delicacy and tenderness that he first captivated his hearers. His miraculous hands never seemed impatient to let loose the thunderous chords which were in reserve. Those hands were supple and coaxing, they called into being tones which, under the subtle caresses, reached into our very souls. To join and to vary colors they were true rivals of the innumerable and magic instruments of an orchestra. Those hands have created marvels—bewildering and sublime tonal fairy tales.

A new chamber music organization is about to be launched in New York, which, by reason of its personnel, as well as the unusual combination of flute, harp, and 'cello, gives promise of an interesting future. This organization is to be known as the Trio de Lutèce, and enlists the co-operation of three artists of recognized worth, George Barrère, flute; Carlos Salzedo, harp, and Paul Kefer, 'cello.

Art

THE PENNSYLVANIA ACADEMY.

The jury of the Pennsylvania Academy, this year, has evidently favored the idea of an exhibition that may be small, but must be good. The discriminating character of the selections made and, likewise, the astuteness of the hanging committee are demonstrated by the genuine and sustained interest felt in passing through the different galleries of the exhibition. There is no room or corridor that does not offer more or less potent inducements for lingering, either to see the work of a well-known artist or to make the acquaintance of one still unfamiliar. Jonas Lie's Panama pictures in a room to themselves, Donato's sculpture in one hall and Manship's in another, so arranged that the value of the contributions can be readily appreciated, are some of the attractions. In truth, a sort of holiday atmosphere pervades the place, and the impression is subtly conveyed that leisure and enjoyment are not foreign to a general art exhibition.

Doubtless, one of the factors in bringing about this agreeable state of affairs is the intimate relationship existing between the Academy and the Schools of Painting and Sculpture, which it fosters and directs, in the very building in which the exhibition is held. Art students are frequently met in the galleries, evidently very much at home there, and keenly alive to the merits and defects of what is exhibited. Their interest has the personal element of desire to see the work of the artists who are their teachers, and also of the artists who were once students in the school; and their discerning comments set one to reflecting upon the importance of this sort of easy familiarity with good art. It is unquestionably a valuable by-product of an artistic education, establishing, as it does, standards of criticism, and creating, ultimately, an intelligent public for the appreciation of what artists produce, while the fact that the greater number of these young people do not themselves become artists, but stray off into widely diverging paths, does but extend the sphere of influence.

Nevertheless, in spite of the many who fall by the way, these students may, and do, make artists, as is just now foreshadowed, for example, by one of their number—Gertrude Lambert by name—who has been exciting comment by achieving the distinction of having her work admitted into the Academy exhibition. Evidently painting from the class model, she has made with a few rich colors a telling composition of a portrait of a tragically intense, foreign-looking girl standing against a luminous gray background. Her picture suggests the temperament and painting of the youthful Géricault, and, barring the uncertainty of all such predictions, it seems probable that we shall hear of her in the future.

At any rate, more tentative than this student production are the works of the modernists—as the Post-Impressionists and their confrères are now calling themselves—whose appearance in this exhibition is limited to a few casual and sporadic manifestations that usually carry with them more or less cause for regret. If the last part of this last statement is correct, it may be a happy thought to ascribe the shortcomings of Glackens's Family Group to this movement, on the ground that the picture was shown last winter at the International Exhibition. However that may be, the picture rather needs sympathetic consideration, for certainly the color, always this artist's chief interest, has quite escaped his control, and riots violently and inharmoniously over the canvas. Yet it is not so incoherent but that one may feel respect for its unfulfilled possibilities and recognize the ambition to accomplish something in flesh and color akin to Renoir. The attempt seems an instance of more courage than judgment on the part of the artist, which can be condoned the more readily in view of the refreshing charm of his use of light and color in his two other pictures of this exhibition—The Green Car and The Bathing Hour, which have no apparent connection with the modernists, and reveal him quite master of his means of expression. Arthur B. Davies adds another touch of mystery to one of his pictures by introducing the cubist idea of form in a clever kind of supplementary way, as if he would be in the fashion at any hazard (most unlike Davies, by the way), or perchance was displaying the badge of some secret order. His other painting, Avator, has no hint of any influence later than Blake, with whom he has always been sympathetic.

Whatever may be the effect of the views of the modernists upon their own work, I believe they have an influence upon the artistic contingent that is not malign, because it sets those others to thinking and tends to make them react from the object-lesson before them, with

a more vivid appreciation of sanity of line, form, and color.

Robert Henri's Irish character portraits, in which be has made subject, brush-work, and color reinforce one another with delightful freedom and understanding, really show nothing newer in method than was practiced in the days when Hals and Rubens walked the earth. To the portrait called Herself was awarded the Carol H. Beck medal, as the best portrait in oil in the exhibition, and she bas the air as to say that such distinction could be no surprise to her; sbe is altogether buxom and happy, of kindly mien, ruddy complexion, and bounteous amplitude of quivering yet solid flesh beneath her simple peasant dress.

There are many portraits shown, giving on the part of a number of people renewed evidence of confidence in the artist and in posterity, which the event does not always justify. The portrait of Booth Tarkington, by Wayman Adams, is in the nature of a character study, and is interesting for the expression of unwieldy weight in the seated figure and the sinister, brooding intentness of the face. Leopold Seyffert's portraits of women, of which there are several, are marked by a studied simplicity and a quite obvious attention to working out the color scheme, which, however, does not prevent them from pleasing by the refinement with which it is accomplished. His portrait of Mr. Yarnall also gives evidence of thought; the composition verges too near that of Whistler's Mother to be called new, but the adaptation and the figure are so in accord that the result is a portrait of definite interest.

Howard Gardiner Cushing gives the typical modern girl and the picturesque possibilities of her costume with distinction. There is excellent tone in the picture, and the color is delightful, but the girl, the vase, and the table seem too manifestly posed against the blankness of the background. Jean McLane's portrait of two children, which won the Lippincott prize, is undeniably clever also, but there is an obvious striving for effect in the keying up of the light; lacking such effort, the less-studied aspect of her other picture of a child and her nurse is the more agreeable of the two. In general, it may be observed that simplicity of setting is a characteristic of many of the portraits, and that they gain in dignity and force when the attention is thus allowed to concentrate on one part of the picture.

Of figure painting other than portraits, Gari Melchers's Maternity is a brilliant piece of painting, fresh in coloring and fine in the rendering of the heads of mother and child. He is an artist who has always been gifted with feeling for color, and the hardness that was often a quality of his early painting has been modified in this picture to a more delicate firmness. The Tenement Mother, by Marie Danforth Page, is a strong, expressive group, without any especial charm, but with good qualities of drawing and handling, and less artificial in treatment than Miss Genth's Mother and Child, which hangs near it.

In landscape a plea might be made for more sky and less spottiness and overemphasis of pattern, though when one comes to the study of individual pictures tbere is enough variety to gratify any taste for landscape of the restless and intricate sort. Schofield's Hill Country, which took the Temple medal, is an admirable portrayal of a wide stretch of snowy landscape, so painted that it holds a well-balanced mean between the temptations of over-fretted surface on the one hand and uninteresting emptiness on the other. Rosen's snow scene is less extensive and more poetic, with soft snow, beautiful reflections, and a pleasant feeling of space. Parke Custis Dougherty has something of Rosen's way of seeing nature, with a stronger feeling for the value of an occasional accent of decided color. Childe Hassam's The Yachts is a charming composition of summer sea, white sails, and blue sky, nice in tone and Japanese in suggestion. Richard Farley manages to embody a good deal of the poetry of sea and shore in his marines, and in the one called An Angry Sea movement and speed are well felt.

Jonas Lie's Panama paintings give scope for the display of his characteristic force and energy. More attention to selection and elimination would have given some of these canvases greater pictorial value, as Pennell's lithographs from the same vicinity bear witness, but they all have, along with the artistic value which is by no means slight, the enhanced interest that belongs to them as representations of transient phases of an enterprise of moment to both sides of the world. Energetic painting naturally suggests George Bellows, whose Polo Crowd and Snow Dumpers bave all his accustomed vigor of action and ability to compel attention. The borses of tbe snow dumpers are quite extraordinary, can only be explained, in fact, as instances of sympathetic drawing—they are so entirely incorrect and at the same time so highly expressive of life and movement. Berenson would certainly style Bellows's art archaic, a term that he defines as meaning an art that "is going through the process of learning to construct tbe figures and discover the attitudes required for the presentation of form and movement." Whatever we call him, or however we regard his achievement, his work always makes a centre of discussion and interest that we should be sorry to be without.

The excellence of the sculpture displayed is remarkable, and, among all the different forms it takes, the assemblage of fountain figures is unusual; their appearance brings pleasant suggestion of the existence of many formal gardens and inner courts that may need adornment. Janet Scudder's Boy With Fish is a graceful example of such figures; Edward Berge's Frog Boy is another, and others still could be mentioned; of them all the most impressive is Paul Manship's Duck Girl, to whicb the Widener memorial medal has been awarded. The exhibition of this figure and several others by Manship, shown here for the first time, gives very convincing proof of the range of his art. His industry, readiness, and fertility of expression recall Gainsborough's impatient tribute to Reynolds's art, when he said: "Damn him! he's so various." The Duck Girl is classic in treatment, with a modern understanding of that term; contrast of line and surface and subtle play of light and shadow with a material that looks like the bronze it is, and not like clay transformed—all combine to make a beautiful figure stamped with the individuality of the sculptor. Very different from this is his portrait of a week-old baby, which is convincingly realistic as a portrait of very early infancy, but gets its charm from the lines and folds of hooded cloak and encircling bands that envelop the little form placed upright in a shallow niche that stands on a base adorned with graceful festoons. Renaissance suggestion, of course, but no copy—just a case of the artist's taking his own where he finds it.

This exhibition of Manship's work serves to show that it is not superiority of modelling, but his feeling for line and his genius for design, enriched by his knowledge and understanding of the traditions of great art, that make him so unusual. Giuseppe Donato is another sculptor well represented in tbe exhibition and spoken of frequently with admiration. He has unquestionably many gifts, not the least of which is a fertile imagination, but he can scarcely be regarded with the interest that would be accorded to an independent sculptor so long as he is dominated by other sculptors, and as yet Rodin and MacMonnies obscure his personal vision.

L. E. S.

Spring announcements of A. C. McClurg & Co. include: "The Two Great Art Epochs," by Emma Louise Parry; "Cubists and Post-Impressionism," by Arthur Jerome Eddy, and "Indian Blankets and Their Makers," by George Wharton James.

Don C. Seitz has gathered into a booklet, with a portrait, "Whistler's Stories" (Harper). It is a good idea thus to fix the present state of the Whistler legend before too much has been forgotten or too many apocryphal additions have been made. Mr. Seitz makes a pretty

clean sweep both of written ana and of oral anecdote. Very little of a genuine sort is likely to be added. The collection contains, of course, many brilliant sayings, but the whole effect is hardly pleasing. It is, after all, a very limited kind of wit. In the retort malicious yet semi-courteous nobody has surpassed Whistler. But his repertory is pretty well exhausted by such brittle flashes. His wit is invariably at somebody's expense, it lacks humor and humanity. At times, however, it has extraordinary finality. "Do you think genius is hereditary?" asked an admiring lady one day. "I can't tell you, madame," Whistler replied. "Heaven has granted me no offspring." The level of this collection is well below that of "The Gentle Art." Still lovers of Whistler will want to own it, even if it confirms on the whole Degas's quiet reproof, "Whistler, you talk like a man of mere talent."

The appearance of the third volume of M. Salomon Reinach's "Répertoire de reliefs grecs et romains" brings to a close the publication of extant classical reliefs on which the author has been at work a number of years. Every reader will sympathize with M. Reinach's confession in his preface that this has been a work "magni laboris et sudoris"; for the collection of such vast material must have involved endless patience. But his satisfaction at the completion of a work which will be of such invaluable help to every student must be proportionately great. The first volume, which appeared in 1909, was entitled "Les Ensembles," and contained reliefs with groups of figures which either formed part of the decorations of ancient buildings or ornamented smaller objects. The second volume, which was published three years later, and the present one deal with the other classes of reliefs, arranged alphabetically according to their present localities. The obvious disadvantages of an arrangement according to countries and museums are corrected by a full index of subjects with references to all three volumes. The author makes no pretence of having attained, or even aimed at, absolute completeness; but the majority of known reliefs are here presented in an easily accessible form, which will save every archæologist many hours of research work and many purchases of other books. The text is limited to the legends on the plates giving the titles of the objects represented, their present locality, and references to their chief publications. One might almost wish that this work could have gone one step further; and instead of giving merely black-and-white illustrations which serve only as records of the compositions of the objects, could have conveyed also something of their artistic merit. But then the price would have had to be so much higher that it would have placed the book outside the reach of the ordinary student. (Paris: Ernest Leroux).

Henry L. A. Cuimer, painter of Western landscapes, died early last week in Salt Lake City, Utah. He was born at Davington, Kent, Eng., and came to this country in 1867. His best-known paintings are The Mystery of the Desert, Shoshone Falls, The Great Augusta Bridge, and Temple of Om. He also wrote "Resources of Utah."

Finance

CURRENCY LAW AND GOLD EXPORTS.

During the past week, $4,000,000 gold was shipped from New York to Paris, making $12,000,000 sent since the year began. News of the withdrawal was received complacently on the markets, whose attitude seemed to be that we can spare the gold, that France needs it, and that relief of the situation at Paris —the one troublesome spot in the present financial horizon—is the paramount consideration. In point of fact, the Bank of France has managed to add $14,000,000 to its gold reserve since the opening of the year, nearly all of it derived from the American shipments; and it is primarily to those receipts that one must ascribe the reduction in the French bank rate, the fall in money rates on the Paris open market from 4 per cent. to 2⅞, and the resultant manifest sentiment of relief on the Continental markets.

These shipments of gold, as it happens, have thus far footed up almost exactly the same amount as did our gold exports to Paris in the same weeks of 1913. The recent shipments have, however, aroused some European observers to conjecture as to a possible continuous flow of gold from the United States to Europe when the new banking and currency bill goes into force. Mr. Moreton Frewen, a somewhat erratic economic thinker, of the old bimetallist school, has lately warned us to "make up our minds to lose perhaps $300,000,000 or $400,000,000 of gold in the next two years." Nobody else has made such foolishly extravagant predictions. Sir Felix Schuster, for example, simply said of our new law, in his recent speech to his bank's shareholders, that "it is too early yet to say how the general situation as regards gold will be affected."

The question is interesting, though not because of fear of that export of gold through currency inflation which Senator Root predicted. That is abundantly guarded against by the 40 per cent. gold reserve required against outstanding notes. But the law allows a city bank, instead of the 25 per cent. reserve now required in cash against its deposits, to keep only a 6 per cent. cash reserve on hand, with the rest of its reserve (which in future would aggregate 18 per cent. of its deposits) represented by credits at a Federal reserve bank.

This provision will dispense with a considerable part of the cash requirements; for the credits last-mentioned would be obtained by rediscount of an individual bank's commercial paper. Against the deposit thus created, the Federal reserve bank must keep a cash reserve of at least 35 per cent. Instead of 25 per cent., as at present, the total minimum amount of cash which must be provided against an individual bank's deposit liabilities would therefore be something like 10 per cent.

What would become of the rest of the cash—whether gold or other "lawful money"—which is at present held in bank reserves? There are several answers to the question. One is, that every member bank must begin by taking stock in its regional district bank, in the ratio of 10 per cent. of the member bank's capital and surplus. That would drain off into the regional bank reserves a good part of the present cash reserves of national banks. When the issue of notes under the new law is in progress, each regional bank must keep 40 per cent. in gold against its outstanding notes. It would undoubtedly have to draw on the country's general supply of gold, to provide for such requirements.

How much gold would be left unemployed after this was done, is a matter more or less of conjecture. Supposing a very large amount to be thus left in the hands of individual banks, in excess of minimum reserve requirements against deposits, would it flow at once to Europe? Such an inference would be just a little bold. It would create a good deal of difficulty about explaining why the New York banks last June, with a surplus of $41,000,000 above required reserves, and with $300,000,000 specie in their vaults, not only did not send all the unnecessary excess to Europe, but actually, at just that time, ceased exporting gold entirely—this notwithstanding the well-known fact that Paris was still endeavoring to draw gold to its bank reserves.

In fact, the past experience of our market gives no color whatever to the assumption that, whenever our banks have more gold than the law requires as reserve against deposits, they will send the excess to Europe. To precisely the extent that our banks have ever accumulated and kept a handsome "surplus reserve"—and they have done so most of the time in the past half-century—they have shown that the mere fact of more gold being in the country, and in the vaults of the country's banks, than was needed for lawful bank reserves does not infer that foreign countries will get the excess. That depends on other considerations.

There have been years in the past when our gold export for a twelvemonth has exceeded $100,000,000. But there have also been years when our gold import was even larger than that figure. There will be similar vicissitudes in the movement—due to business

activity, international investment activities, or the course of international trade—even after the new currency system is inaugurated. The one sure outcome of that system is that our markets will not, as in 1906 or 1907, be driven to the recourse of prodigious import of gold from Europe's markets, whether to support a highly extended volume of trade activity, or to protect our business community against panic. If, for similar reasons, there were to be a somewhat larger average shipment to Europe, in our seasons of dull trade, from the ninety millions worth of gold produced every year from the mines of the United States, that would be no misfortune to any one.

CHICAGO HISTORICAL SOCIETY'S COLLECTION

THE DIARY OF JAMES K. POLK

DURING HIS PRESIDENCY—1845 to 1849

Edited and annotated by MILO MILTON QUAIFE, Associate Professor in Lewis Institute of Technology; with Introduction by ANDREW C. MCLAUGHLIN, Head of the Department of History, University of Chicago.

Four volumes in box. **Price $20.00 net.**

A. C. McCLURG & CO., Publishers

All serious students of American History owe a debt of gratitude to the Chicago Historical Society for the publication of the *Diary*. . . . The reader who undertakes the perusal of the four volumes will find them more interesting than most novels.—*New York Sun.*

A work of great importance to our generation and especially to the historian.—*William E. Dodd,* in *Louisville Herald.*

Of the historical value of this diary there can be no doubt. . . . Above all, this book is vivid, bitter, living, past politics.—*New York Tribune.*

The publication . . . is a literary event of first-class importance.—*Boston Transcript.*

A notable addition to the source materials for the study of the middle period of United States history . . . perhaps the most important publication in the field of American history.—*Francis W. Shepardson* in *Chicago Tribune.*

I found it indispensable to an accurate knowledge of the period of which it treats. . . . In my judgment the Chicago Historical Society has made good its *raison d'etre* by that work alone, and has earned the gratitude of all future generations of historical students and workers by rescuing from oblivion so important a record of our country's history. — *Horace White* (18 West Sixty-ninth St., New York City).

I should be very greatly pleased to have this important, valuable, and very well edited book, on the publication of which the Society is to be congratulated.—*Dr. J. Franklin Jameson,* Carnegie Institution, Washington, D. C.

NEW BOOKS ISSUED BY **E. P. DUTTON & COMPANY** PUBLISHERS NEW YORK

THE MOST FAR-REACHING PIECE OF MODERN FICTION IS THE NEW NOVEL BY

H. G. WELLS

Ready March 10.

THE WORLD SET FREE

Cloth, net, $1.35.

Dr. EDWIN E. SLOSSON, who classes Mr. Wells among "the twelve major prophets of to-day," touches the true reason of the strength of his hold on the public imagination in saying, "There is a desperate sincerity about the man that I like." He tells a thrilling wonder story, not for the sensation's sake, but with intense conviction of its essential truth.

"Mr. WELLS is distinguishedly a maker of books, informing, vitalizing, indispensable books. . . . There is no writer to-day who gives his readers such a satisfying sense, by the mere delight of attending to him, of having participated in a social solution."—MARY AUSTIN in *The American Magazine.*

"Everything that H. G. WELLS writes is worth considering. He has one of the most active, inquiring, honest minds of our generation."—N. P. DAWSON in *Everybody's Magazine.*

"Mr. WELLS compels one's attention. He makes an effective tale. Admiration cannot be withheld. *One simply must read him.*"—*The New York Times.*

EAT AND GROW THIN

With an Introduction on the Mahdah Diet, by

VANCE THOMPSON

Cloth, net, $1.00.

A collection of the famous Mahdah menus and recipes—hitherto unpublished—for those who are trying to reduce their weight and fat.

There is no lack of good living in the Mahdah method, but an assured reduction, and a positive increase in health and strength.

NEW BOOKS

THE PRESS GANG AFLOAT AND ASHORE

By **J. R. Hutchinson** Illustrated. Cloth, *net*, $3.00.

A vivid, racy account of an institution which played an interesting part in our early history as an independent nation. It was a factor, too, in industrial history, because of the running fight between Trade, claiming exemptions for its workmen, and the Admiralty, claiming men for the navy.

THE ROMANCE OF NAMES

By **Ernest Weekley** Cloth, 12mo, *net*, $1.25.

By the author of "The Romance of Words." An excursion, both scholarly and diverting into the curious and romantic history linked with place names, surnames, etc.

A HISTORY OF RUSSIA By **V. O. Kluchevsky**

Professor in the University of Moscow. Vol. III. Just ready, *net*, $2.50.
The Set of Three Volumes. Now complete, *net*, $7.50.

The final volume of the only History of Russia which gives any complete and rounded view of each period surveyed. Fearless in his criticisms, as well as independent in his methods, the author discusses the economic, legal, and religious institutions of ancient and modern Russia as well as its political history.

THE RECONSTRUCTION OF THE NEW COLONIES UNDER LORD MILNER, 1902-1905

By **W. Basil Worsfold** Two volumes. Demy 8vo, *net*, $7.50.

Not since the issue of Lord Cromer's "Egypt" has anything been published on political administration which approaches this in importance. It is indispensable to any one who has occasion to refer to conditions in South Africa following the Boer War.

GOTHIC ARCHITECTURE IN SPAIN Two volumes.

By **George Edmund Street.** Edited with added material and illustrations by Georgina Goddard King. Cloth, cr. 8vo, *net*, $2.00.

An indispensable work, the source of nine-tenths of the best that has been written on this subject, is here brought to date.

MECHANISM, LIFE AND PERSONALITY

By **J. S. Haldane** Cloth, 12mo, $1.00.

An examination of the Mechanistic Theory of Life and Mind which aims to bring the great biological movements of the Nineteenth Century into definite relation with the main stream of human thought. The author is nearly as well-known in England as his brother, the Lord Chancellor, for his ability to pack an immense amount of knowledge and thought clearly into a small volume.

A PILGRIMAGE OF BRITISH FARMING, 1910-1912

By **A. D. Hall,** Director of the Rothampsted Experiment Station, author of "Feeding of Crops and Stock," "The Soil," etc. Cloth, 8vo, *net*, $1.50.

A review of modern farming as a money-making business; a description of rural England which is unique in its point of view and authority.

RELIGIOUS ART IN FRANCE, XIIIth CENTURY

By **Emile Male** Royal 4to, *net*, $6.00.

Translated by Dora Nussey. It is full of interest and significance, an interpretation of mediæval art through mediæval literature.

A PEPYS OF MOGUL INDIA, 1653-1708

Abridged from the diaries of Niccolao Manucci. Cloth, 8vo, *net*, $3.50.

Naive and entertaining intimate observations of the manner of life in the time of the great Moguls. The most valuable of sources for a detailed picture of this famous Indian empire.

THE CARE AND FEEDING OF CHILDREN

By JOHN LOVETT MORSE, Associate Professor of Pediatrics in Harvard University

HARVARD HEALTH TALKS, Vol. I

16mo. *Cloth.* 50 *cents.*

The first of a series of popular monographs that aims to present the most modern information on subjects of universal interest. Dr. Morse's experience both in practice and in presentation of all aspects of his subject makes his treatment unusually clear and authoritative.

HARVARD UNIVERSITY PRESS
CAMBRIDGE MASSACHUSETTS

Unpopular Government in the United States

By ALBERT M. KALES
Professor of Law in Northwestern University

This volume by a prominent member of the Chicago bar is an especially timely book, presenting with great clearness and cogency some of the political needs of the country, particularly the necessity of the short ballot. The author points out that the establishment in the United States of state and municipal governments, according to the plan of splitting up the power of government among many separate offices and requiring the widest and most frequent use of the elective principle, has cast so great a burden upon the electorate that an intelligent citizen is reduced to a state of political ignorance inconsistent with self-government. This situation has made it possible for a well-organized hierarchy to acquire the real power of government and to retain it, in the face of popular disapproval, for selfish ends. The author discusses various expedients for restoring the American ideal of democracy and considers constructive proposals like the commission form of government for smaller cities, and the application of the principles underlying this form to larger cities and the state, and to the selection of judges.

A Book of Prose Narratives

Edited by CHAUNCEY W. WELLS, Associate Professor of English in the University of California.

301 pages, $1.25

A volume supplying more than 20 models for the writing of simple narration. It is a departure from the ordinary manual, in that it excludes stories, yet covers a wide range of history, legend, and autobiography, from the Bible and the Sagas, Herodotus and Pliny, Benvenuto Cellini, Defoe and Franklin, Macaulay, Carlyle, Froude, and Stevenson. In addition, the book serves as a delightful introduction to the literature of legend and history, and especially to a later study of fiction and drama.

GINN AND COMPANY

MARTIN LUTHER

By GUSTAV FREYTAG. Now translated for the first time from the famous *"Bilder aus der deutschen Vergangenheit."* 26 illustrations. 150 pages. Cloth, gilt top, $1.00 net; paper 30 cents.

"Upon a fair and liberal estimate of Luther's character and influence the author draws a series of brilliant pictures of the most salient points in the reformer's career. He writes with admiration, sympathy, and humor, and the brief narrative is made fuller by a number of illustrations taken from old German prints and manuscripts. The translation is well done, and serves the purpose of making real and vivid to English readers this man of extraordinary resolution and influence upon his contemporaries and posterity."—*Philadelphia Public Ledger.*

"Freytag's vigorous sketch of Luther as he stands, like Thor of old, enveloped in murky clouds while the lightning flashes and the thunder-hammer booms, serves well to illustrate the climax of that great struggle which forms the innermost kernel of mediæval history—the struggle between the iron-heeled collectivism of the Romans and the fierce individualism of the Germanic races."—*Chicago Tribune.*

In the Boston *Transcript* of December 17 Mr. W. H. Downes calls this a "brilliant and readable book," and says Mr. Hale's "conclusions are logical and sound." This work fixes Mr. Hale's place as authority on Vermeer.

Large 8vo, fully illustrated. Buckram, $10 net, boxed; half levant, $20 net, boxed. Carriage additional. Descriptive circular on request.

All That's Good In Printing

LETTERS AND MEMORIALS OF Wendell Phillips Garrison

Editor of The Nation, 1865-1906

In one volume, crown 8vo, 300 pages, with photogravure portrait.

During the forty-one years in which he edited the *Nation*, with a thoroughness, ability, and conscientious devotion unsurpassed in the records of American journalism, Mr. Garrison was an indefatigable correspondent, never employing an amanuensis, but writing tens of thousands of letters with his own hand to his contributors, who embraced practically all the leading American scholars and critics of the period. From a dozen groups of these, which have been kindly loaned by the recipients, a sufficient number of selections has been made to illustrate the relations between Mr. Garrison and his great corps of contributors, the frankness and tact which he exercised towards them, and the wide range of his interests, tastes, and sympathies. The volume also contains a brief sketch of his life, a dozen of his best poems, and several of his characteristic editorials, reviews, and essays, besides a fine photogravure portrait.

Price, $1.50 net postpaid.

End of the Sale, Direct to the Public, of the

New Encyclopaedia Britannica

Prices to be from $29 to $50 more

DISCONTINUANCE OF MONTHLY PAYMENTS

THERE IS STILL TIME FOR YOU TO DECIDE

You must have a general idea of the characteristics of the new Encyclopaedia Britannica, for it has been so much used and quoted and talked about that it is definitely classed as one of the greatest achievements of our day. But what you probably do not know is that it is a *"different" kind of utility book* from any that has ever been published; different in get-up, different in contents, different in style, different in method of construction, different and better suited to your needs in the fact that it was *built for service*—for *your* service.

Send for the prospectus to-day. You will then be in a position to settle the matter once for all. Any argument in favor of waiting until to-morrow is also an argument in favor of waiting until the price has been increased in America, as it was in England in December last, and that is surely the wrong course to take. *For an inquiry form see the bottom of this page.*

The Price OF THE NEW ENCYCLOPAEDIA BRITANNICA a Few Weeks Hence

$29 to $50 more than at present—will not be an extravagant price for the book; *but it would be an extravagance for you to pay it needlessly,* by neglecting this opportunity to pay less.

ON BEING "ALERT"

To be *"alert"* of mind does not mean that one must jump to a conclusion, but that when a conclusion has been formed, one must be in readiness to give instant effect to it. The word, indeed, comes from the old Italian *"all' erta!"—"Go to the watch-tower!"* the warning which, in the eventful Middle Ages, sent lookouts to their posts to see when rapid action would be necessary.

The public have shown alertness in recognizing the merits of the new Encyclopaedia Britannica. Those who are alert enough to obtain it now will be just in time to avoid the higher price which is about to be charged for it. That alertness has already been displayed by more than *fifty-eight thousand purchasers.*

A Book for Everybody, on Terms for Everybody

Whether you are a banker or a bank clerk, a business man or the mother of a family, a university professor or a young man starting a career, whether you use the Britannica as a question-answerer or for continuous reading, you cannot, in this day of specialization, escape the need for the specialist's knowledge which this one book yields. It deals with the common, everyday knowledge you require in your work and your home, as fully and as faithfully as with modern science, art, literature, religion, philosophy and history.

The reasonable price of the book and the convenient plan of paying for it in payments as low as $5.00 per month, have placed this great efficiency library in the hands of thousands of subscribers with incomes of the most modest size.

NOW is the Time to Decide

The Cambridge University Press has announced *the termination of the direct sale* to the public, at a special low price and with the privilege of partial payments. Save money by acting **now.**

YALE UNIVERSITY PRESS begs to announce that it has begun the issue, under the direction of the Department of History, of works of scientific historic value under the general title of

YALE HISTORICAL PUBLICATIONS

This title covers three distinct series: Studies, Manuscripts and Edited Texts, and Miscellany.

Series I.—STUDIES

It is intended that Studies shall be confined to strictly scholarly works by members (present or past) of the Historical Department of Yale University, who have produced their work either in part or whole while connected with the University.

Series II.—MANUSCRIPTS AND EDITED TEXTS

It is planned that this avenue of publication shall be made available to scholars in any part of the world and the series as projected will include printed manuscripts or edited texts in any language and relating to any country. Two volumes have already been published.

Series III.—MISCELLANY

It is expected that the contents of this series will include all scholarly and general historical works not specifically intended to be included in the two foregoing divisions. Inclusion is not confined in any particular except that of qualification, which is determinable by the Department of History of Yale University.

THE SERIES IN DETAIL

It is intended that the Publications shall represent a high standard of typographical excellence.

In the case of Series I, a legible font of Scotch Roman type has been selected and the typographical treatment will be as far as practicable uniform. The binding shall in each case be cloth.

In the case of Series II, while an attempt will be made to secure uniformity, the demands of the text will control the type to be used. All issues in this series will be bound in boards.

In Series III, a standard old-style Caslon type has been selected, while the binding is cloth.

VOLUMES ALREADY ISSUED

SERIES I.— I. COLBERT'S WEST INDIA POLICY, by STEWART L. MIMS, Assistant Professor of History in Yale College.

"Mechanically, the book, with its ample page, strong but open type, is most agreeable to use; and in this regard, as well as in its scholarly conscientiousness, it is an auspicious inauguration of the Yale Historical Studies."—Prof. C. H. Hull in *The American Historical Review.*

"This is one of the most important works upon the history of the West Indies that has appeared in recent years. . . . It is a scholarly, clearly written, and valuable work."—*United Empire, The Royal Colonial Institute Journal.*

8vo. Cloth binding. 385 pages. Index. Price $2.00 *net*, carriage extra.

II. STUDIES IN TAXATION UNDER JOHN AND HENRY III, by SYDNEY K. MITCHELL, Assistant Professor of History in Yale College.

This work deals with the aids, scutages, tallages, and dona, constituting the extraordinary income of the English kings, during the period of transition from feudal to modern taxation. Dr. Mitchell writes that his plan has been "to give as complete an account as possible of each tax levied during the reigns of John and Henry III, presenting all the material which is in print and as much from the unprinted rolls as could be gathered in a limited time." He describes the circumstances under which each tax was levied, the incidence, the assessment and collection, and the amount yielded.

8vo. Cloth binding. 405 pages. Index. Price $2.00 *net*, carriage extra.

SERIES II.— I. A JOURNEY TO OHIO IN 1810, as recorded in the Journal of MARGARET VAN HORN DWIGHT. Edited with an Introduction by MAX FARRAND, Professor of History in Yale University.

"Enjoyment and a vivid picture of the manners and living conditions of the time are to be gained by its perusal."—*The Journal of Political Economy.*

"Her diary is a work of extraordinary charm and interest, for she possessed a most vivacious mind, was both observant and imaginative, and has moreover a quite considerable literary gift. . . . Mr. Farrand is to be congratulated in bringing to light this charming work."—*London Spectator.*

(Third printing.) 12mo. Board binding. 60 pages. Price $1.00 *net*, carriage extra.

II. VOYAGE AUX ÉTATS-UNIS DE L'AMÉRIQUE, 1793-1798, by MOREAU DE SAINT-MÉRY. Edited in the original French by STEWART L. MIMS.

This diary of the eighteenth century recently discovered in the colonial archives of Paris is now published for the first time. It contains an interesting account of a voyage across the Atlantic and of a five years' sojourn in the United States. Personal impressions of men of prominence and of passing events add charm to the journal, and will appeal to every reader interested in the formative years of our national life.

8vo. Board binding. 440 pages. Frontispiece. Index. Price $2.50 *net*, carriage extra.

(In preparation.)

III. BRACTON: DE LEGIBUS ET CONSUETUDINIBUS ANGLIÆ, edited by GEORGE E. WOODBINE, Assistant Professor of History in Yale College.

To be complete in six volumes—Volume one of which it is expected will be issued during the year. Contents of Volume I: The manuscripts, their pedigree and value; the Addiciones, their origin, character, and relation to the text. Volumes II and III: Latin text with notes and commentary. Volumes IV and V: English translation of Latin text. Volume VI: Introduction and Index.

6 Vols. Imperial octavo. Board binding. Vol. I, 464 pages. Price $5 *net*, carriage extra.

SERIES III.— I. THE COLONISING ACTIVITIES OF THE ENGLISH PURITANS: THE LAST PHASE OF THE ELIZABETHAN STRUGGLE WITH SPAIN, by ARTHUR PERCIVAL NEWTON of the University of London. With an Introduction by Charles M. Andrews, Farnam Professor of American History in Yale University.

This book deals with the English Puritan Colony, founded on Providence Island in the Caribbean Sea, under the direction of the Earl of Warwick and John Pym. So closely allied were the interests and ideals of the Puritans in England and America between 1630 and 1641 that the description of the life of this colony contains topics of unusual importance, as well as historical facts the significance of which has not heretofore been realized.

NEW HAVEN CONN. **YALE UNIVERSITY PRESS** 225 FIFTH AVE. NEW YORK

The Nation

NEW YORK, THURSDAY, FEBRUARY 26, 1914.

The Week

As silently and as inevitably as on the question of the tariff and the currency, Mr. Wilson's ideas are now coming to realization in the field of international relations. The ratification of the long-delayed arbitration treatics simply emphasizes what the events of a year have shown, that the best judgment and conscience of the country are speaking through the President. "A majestic pedagogue, a doctrinaire Puritan idealist," says the Paris *Temps* of Mr. Wilson to his dispraise in the matter of Mexico. But it is the pedagogue and the Puritan doctrinaire who has succeeded in combining clear reasoning and a strain of idealism in a winning formula. It is the pedagogue and idealist who, on this question of arbitration, for example, has swept away all the petty prejudices, all the tawdry slogans of national dignity compromised, and pusillanimous surrender to Great Britain and betrayal of our Irish citizens and our German citizens—all this tinsel argumentation that has stood in the way of this nation's definitely giving its adhesion to the principle of international good-will. It is the doctrinaire and pedagogue who has manifestly won over the better judgment of the country to admit that in our action on the Panama Canal tolls we were guilty of a breach of faith, and that we are ready to-day to make amends.

The Republicans' strongest practical argument for a Republican-Progressive amalgamation does not strike a responsive chord in the Philadelphia *North American*. "We do not find," confesses this ardent Progressive organ, "that our patriotism is greatly inflamed by appeals from Taft Republicans to unite against the 'common enemy.'" Not that the Wilson Administration presents the shining record that would have been inevitable under Roosevelt and Johnson, but still the Underwood tariff bill is preferable to "the iniquitous Payne-Aldrich bill," the Glass-Owen currency measure is better than the Vreeland-Aldrich scheme, and even the Wilson Mexican policy, while "bad enough," is merely a legacy from the Taft Administration. Nor is the *North American* particularly disturbed when it turns its eyes to Pennsylvania. "Think," say its agitated friends, "of Pennsylvania being represented by a Democratic United States Senator!" "We think of it," is the reply, "and find ourselves disappointed, but calm." The reason for this strange attitude is that the candidate will be A. Mitchell Palmer, as between whom and Penrose there is but one choice. Of course, Pinchot would be the ideal Senator, but Palmer will do very well. This kind of reasoning is becoming so common in Progressive journals all over the country, that, if their hatred of Republican policies and leaders were not so evident, one might suspect a deep-laid plot to flatter the Democratic party into dropping the cheese it now holds.

The appointment of the commission, announced by Seth Low as head of the National Civic Federation, for the study of the workings of all pure food and drug laws, State and Federal, will bring to the attention of the public the limitations of the most conspicuous Pure Food law we have. The bitterness of the contest in connection with this measure, first over its passage and then over its enforcement, has led multitudes to think that it amounts to a guarantee against improper foods and medicines. All that it does, however, is to prohibit fraud. Yet, as Dr. Alsberg explains, fraud is not so hard to fight as insanitary conditions which affect foods that may be offered for sale. The only safeguard against such sources of danger is inspection of the place of production and medical supervision of the workmen. This, in turn, must rest upon an adequate health service. The larger cities have been forced to pay attention to this service, with the result that in the matter of health protection they are far in advance of communities which would naturally have been expected to be the envy of the centres of population. To spread the gospel of really pure food is the object of the new commission, and it wisely begins by undertaking to find out the facts of the existing situation.

The reasons given by candidates why they should be elected to the offices they seek would form the material for a valuable thesis on political psychology. The "Official State Publicity Pamphlet" of South Dakota contains a good assortment of such reasons. One candidate for Congress "has studied the money question extensively and believes it possible to eliminate the multi-millionaire in the distribution of money." Another has the distinction of having drafted a bill for the protection of State funds, "which passed and became a law without one word being changed from the original." A third defines himself as a strange kind of party man: "Republican. Same kind in Washington as in South Dakota." And who could vote against a man who is "liberal on public questions and of charitable temperament"? The autobiographical details are even more interesting, as when we learn concerning one candidate that "his regiment armed with a repeating rifle was very successful in a hundred battles and skirmishes"; of another that "he and his helpmate struggled through the pioneer days with a determination to win, and they did win"; and that another was born in Norway, "of Danish-Norse and Phœnician-Norse deseendants." Irrelevant, these particulars? On the contrary, they show how thoroughly human is the game of office-seeking.

In the reappointment of a Municipal Court judge in the District of Columbia, only an eagle-eyed statesman could see a blow at the entire fabric of our Government and, indeed, at the whole Anglo-Saxon race, but Senator Vardaman has no hesitation about it. President Wilson has nominated Judge Terrell to succeed himself. The Mississippi Senator will fight confirmation, just as he would fight any other form of treason to our beloved country. No one denies that Mr. Terrell has given satisfaction during the term for which President Roosevelt originally appointed him. He is an educated man, a university graduate, had been a teacher in Washington, and a member of the Board of Education. But he is a negro, and the idea of a negro on a bench subverts all of Senator Vardaman's ideas of jus-

tice. Can a black judge know the law? Are proud white men who violate the city ordinances or who cheat and steal to be compelled to hear a negro judge defino their misdemeanors and pass sentence upon them? Not if Vardaman and Hoke Smith can prevent it. As for President Wilson, he could not have done other than name Judge Terrell again without stultifying himself.

Who shall decide, when two doctors, both expert in diagnosing the morbific conditions due to the presence of the Money Devil, disagree? The case is one between Dr. La Follette and good old Dr. Bryan. The former, after making a careful examination of the currency bill, declared that the symptoms were unmistakable: the Money Trust disease was written all over it. But the alarmed members of the family called Dr. Bryan in consultation, and he proceeded to rap the less skilled practitioner over the knuckles. In that well-known medical journal, the *Commoner*, he publishes his opinion, which is as follows:

> Then came the titanic struggle for currency reform. The money power, which has for a generation held the nation in its grip, fought desperately to retain its control. It required the high courage and the persistent perseverance of the President to win the victory. Victory was won, and the country is free. The finger-prints are still visible upon the nation's throat, but the hand is gone and the nation breathes a sigh of relief.

For us this is conclusive. If Dr. Bryan can find no traces of the Money Devil, then he must have flown up the chimney howling.

The question of the Johns Hopkins presidency has at last been solved by the offer of the post to Prof. Frank J. Goodnow, and its acceptance by him. Professor Goodnow's ability in his own field, his administrative capacity and experience, and his exceptional working power give promise of success in his new undertaking. In personal traits, he differs from what is generally thought of as the typical university president; he is eminently plain and straightforward in his ways, and it will be through these qualities rather than by means of diplomatic management that his influence will be built up. He has a difficult and complex task before him, with the Baltimore university not only about to change its home, but branching out into the field of technology. From the very start, he will be confronted with the conflicting claims of extent on the one hand and quality on the other; and we trust that he will recognize the vital importance of firmly adhering, in spite of all temptation, to the idea of high quality as the paramount aim of the University. It is upon that basis that it has rendered its great service to American scholarship and science, and it is upon that basis only that its distinctive merit as an institution of national importance can be maintained.

The complicated but exaggerated discord in the administration of the University of Illinois, involving the board of trustees, President James, and Gov. Dunne, has been ended for at least the time with two pleasant assurances uppermost. One is that the difficulty was in no wise political, but rooted in an apparent personal animosity of one or more of the trustees towards Dr. James; and that the State University has no fight on its hands against an injection of politics or religious controversy into its affairs. The other is that President James has commanded the support, in an assault upon his authority, not only of the faculty, alumni, and a majority of the trustees, but of Gov. Dunne and of the State generally. The relations of the head of the University to the Legislature have necessarily been close; in procuring funds and sympathetic interest his labors have properly been of a lobbying nature; and the energy and success with which he has pleaded the cause of a swiftly growing institution, obtaining two years ago a permanent mill-tax levy, which yields it nearly $3,000,000 annually, have gained him heated opponents. Yet the great concern of the press in the present difficulty was to show, in the words of the Chicago *Tribune*, that "the public will not tolerate for an instant the utilization of the resources of the University for community politics or any other" ulterior purpose. But this was apart from the practical question raised by the disaffected trustees, which was of divesting the president of important administrative duties, and vesting them in the board, in somewhat the fashion followed at the University of Kansas. The anomaly of lodging the executive powers of a great University in a board elected on party tickets, moved by frequent dissensions, and incapable of independence and enlightened knowledge, is everywhere recognized.

It is announced that President Wilson has decided to ask Congress to authorize the raising of our diplomatic mission in Argentina to the grade of an embassy. Mexico and Brazil are the only Governments in this hemisphere to which we accord that high recognition, and yet nothing could be more in accordance with our professed interest in our southern neighbors than the prompt bestowal of the compliment as soon as it is warranted. In the case of Argentina, there cannot be much doubt that this time has arrived. The amount of commerce between that country and this, and the bright future that apparently lies before Argentina as an influential factor in this part of the world, are given as sufficient grounds for the step determined upon by the President. It may be noted in addition, however, that Argentina's status as a "Power" would add weight to her part in any joint representations or intervention in Mexico. The effect of the recognition in Central and South America must be an encouragement of the not too prevalent feeling that the United States is ready to make good the friendly speeches which a series of our prominent men has addressed to the peoples of those countries. The dispatches from Buenos Ayres show that the President's step has been most favorably received in the Argentine.

Sir Edward Grey's declaration in the House of Commons that the British Government has no intention to impose responsibility on the United States in the matter of Pancho Villa and William Benton, is quite in line with the friendly course pursued by Great Britain with regard to the entire Mexican situation. But even more to the point than Sir Edward Grey's assurances is the explicit statement made by the Under Secretary for Foreign Affairs, that any attempt on the part of Great Britain to intervene in Mexico would be futile and impolitic. These straightforward words put the situation in the clearest light. Even when the full truth of the Benton episode is ascertained and guilt is affixed upon Villa, it is idle to suppose that

English arms can be brought into play in Mexico to vindicate the principle of *civis Britannicus sum*. If foreign intervention in Mexico is to come it must be upon this country's initiative. Once that is acknowledged, it may also be acknowledged that the death of Benton has intensified President Wilson's difficulties; that, judged by precise international etiquette, our position in Mexico is irregular as well as difficult; but that transcending all violations of international etiquette is the simple consideration that this Government has sincerely been trying to make the best out of a fearfully complicated situation, and that we have the right to ask other nations to be patient under provocation, seeing that we have ourselves been the principal sufferers.

The Canadian press has split on the report of a Parliamentary Commission that $40,000,000 was wasted in building the Western Transcontinental Railway, while all of it east of the St. Lawrence is superfluous; and there is an equally deplorable division in the House of Commons. There is room for a thousand party squabbles in defining "extravagance," but a question so practical and grave ought to evoke common-sense and patriotism for its resolution. The defence of the Liberal planners is that Canada, from reasons of safety and permanence, should always have as costly a railway as her purse can buy. The Conservatives hold that, at $161,300,000 for the 1,344 miles from Quebec to Winnipeg, the Transcontinental has cost half as much again per mile as the Canadian Pacific; and they grow eloquent over huge specific sums that might have been saved, as $6,200,000 by momentum grades, $2,400,000 by sharper curves, and $7,000,000 by cheaper stations and bridges. From the beginning the investigation had a partisan color, no Liberals occupying seats on the Commission; and the Government has itself to thank that the charges are treated as a campaign document. They are made, however, in all official seriousness; and with the sum involved so large, it is to be hoped that the public will insist on a determination whether milk has actually been spilt, and on an investigation of responsibility for it.

It is now a year since Lloyd George announced that 15,000 doctors had joined the panels under the medical benefit provision of the National Insurance Act; he gave an account the other day of the effect on the profession. Out of 22,500 general practitioners in Great Britain, 20,000 are now enrolled, and divided last year nearly $23,000,000 from the Government. The average for each doctor was stated to be $1,150, while in London it reached $1,650 and in Liverpool $1,850, with further receipts due to drugs and prescriptions. As but one-third of the population is insured under the act, and the remaining two-thirds pay at least as high for medical attention, he estimated the average physician's income in London at $5,000, in Liverpool at $5,500, and in Manchester at $4,500. "Some make considerably more, some considerably less, but undoubtedly it has raised the level of the remuneration of the profession." These figures were unchallenged at the medical dinner at which he was speaking. It is, of course, true that empanelled doctors now work harder; but the harder work represents benefit to thousands who formerly went without needed medical aid.

The landing of the labor agitators from South Africa in England, will raise the whole question of the legality of the action. Meanwhile, some people are wondering why, if the South African Government is so confident that its course was warranted by law, it should be going to the Union Parliament to ask the passage of an act of indemnity for all it has done. But this merely brings out the nature of martial law, under English jurisprudence, and its difference from the "state of siege" familiar in Continental procedure. The English theory is that martial law is not a positive thing, but rather the negation or suspension of law. Then when the regular reign of law is restored, those who resorted to the proclamation of martial law, or took orders under it, need to have all their acts validated. In the Bill of Indemnity laid before the South African Parliament, it is provided that no official, high or low, shall be proceeded against for "any acts, matters, or things whatsoever in good faith advised, commanded, ordered, directed, or done" under the proclamation of martial law. The enactment of such a bill would undoubtedly place the South African officials beyond the reach of any legal process, and would effectually prevent any interference with them by the British Government. Self-government cannot be granted without taking the consequences; nor can it be recalled at pleasure. This is almost certainly the view which the Prime Minister will take in replying to the protests of the Labor members of Parliament.

The Hobhouse bill pending in the British Parliament to prohibit importation of "plumage and bits of birds," which dispatches report as already effecting a revolution in taste and public sentiment, represents a sequel to the American law in which scientists can take much pride. How salutary is the impulse our legislation has sent round the world is shown by an international symposium of naturalists in the *Nineteenth Century*. The report that last week, of 6,974 birds of paradise offered in London, 5,230 remained unsold, while of 8,618 crowned pigeon crests only 970 found buyers, was paralleled as early as October by sales which left on the market egret plumes representing 15,000 birds. Legislation is already passed in one Continental country, and there seems no doubt that, in spite of dealers who aver that their work tends to the preservation of birds, a trade whose history is marked by frequent annihilations and consistent cruelty will in time be stopped everywhere.

The Russian Government, so backward in many of the primary duties, has been the proud pioneer in at least one field. In its efforts to encourage the consumption of liquor, the Russian bureaucracy is without a rival among the nations. Alcoholism, always a besetting sin of the Russian people, has developed in the last ten years to the dimensions of a plague. These ten years coincide with the establishment of a complete Government monopoly in alcohol. The country's drink bill has doubled since 1904, and now amounts to nearly a billion rubles, or five hundred million dollars. For a people on so low an economic level as that occupied by the Russian peasantry, the waste is enormous, and the seriousness of the problem has led to the enactment of a bill by the Duma for combating drunkenness. But in the Council of State it has met with the sharp opposition of the Ministry.

BRISTOW VS. COMMON-SENSE.

It is not worth while to waste words on Senator Bristow, of Kansas. His railing attack on the President last week met with such prompt rebuke in the Senate that he himself felt compelled to retreat from the plain meaning of his own language. He had intimated in the most unmistakable way his belief that Mr. Wilson's attitude towards free passage of American ships through the Panama Canal had been dictated by the transcontinental railways. Of course, he presently ran away and said he did not mean it, when he was called to task by Senators of all parties. That is the Bristow of it. The unhappy man is at his wits' end to find a way of getting elected to the Senate again, and simply followed the good old Kansas rule: when you have nothing else to say, or no real issue to raise, just damn the railways and accuse the Democrats of all the crimes in the calendar. This is probably the true explanation of Senator Bristow's indecent performance, and so far as he personally is concerned, we are content to let it go at that.

To his outbreak of folly, however, we owe it that several Senators spoke words of truth and soberness. A refreshing common-sense, for example, pervaded the remarks of Senator Owen with reference to the bearing of the Baltimore platform upon the question of exemption of our coastwise ships from the payment of tolls at Panama. Some people have talked on this subject as if they suffered from a strange mental disease, which we might call *platformitis*. They conjure up an unreal state of affairs, and then solemnly argue from it to impossible consequences. Apparently, they would like to substitute for the Constitutional provision forbidding Congress to pass any act in violation of a contract, a clause exalting the obligation of a platform still higher. Indeed, there has been a lot of wild talk to the effect that a Democrat who is ready to depart by so much as the tenth part of a hair from any of the planks of the party platform is no better than a swindler or a forger.

Senator Owen put the right stamp upon this kind of ranting. He quietly pointed out, what everybody in his senses knows to be true, that there are a great many things in the promiscuous and hastily concocted deliverances of platforms which cannot be thought of as binding the party to a given course of action in the future, no matter what may happen. The canal-tolls plank at Baltimore was one of these. It was considered by only half a dozen men, and that in secret; while it is safe to say that when the tired Convention adopted the platform in a block, not one delegate in fifty so much as knew that there was such a plank. The idea of fettering a party for all time by a process of that kind is the height of absurdity. Even if it were possible to create a semblance of moral obligation in this way, are statesmen to bind themselves not to let events teach them anything? Granting that, in July, 1912, they thought the policy of toll-exemption wise, are they to be precluded, in February, 1914, from changing their minds, if the weight of argument and a sense of national duty compel them, and from giving their countrymen the benefit of their mature judgment? The thing is preposterous.

It was also owing to Senator Bristow that the Senate had the opportunity to hear a rather notable defence of a Democratic President from the leading Republican on the Foreign Relations Committee, Senator Lodge. The Kansas Senator had emitted a fine barbaric yawp about his unwillingness to see the policy of this country determined by Great Britain, Japan, or any other impudent foreign Government. This was, of course, primarily intended to go careering over the windy plains of Kansas, but the Massachusetts Senator recalled his colleagues to the gravity of the situation which now confronts the United States. The Mexican affair is imposing upon our shoulders a heavy international burden. While we are attempting to stagger along under it, we plainly need the forbearance and good will of all other countries with large interests in Mexico. This nation is, in a sense, asking the other Powers to make it a mandatory of civilization in the effort to restore peace in Mexico. But, as Senator Lodge forcibly said, the United States cannot act as an outlaw among the nations, at the same time that we are inviting them to repose a trust in us. It is this aspect of the matter which so closely relates our scrupulous observance of the Hay-Pauncefote treaty to the whole question of our foreign policy, particularly just now as it affects Mexico.

We can't eat our cake and have it too. In that homely saying lies the pith of the argument which President Wilson is urging upon Congress and the country. The task which he has undertaken is one of undoubted difficulty. Selfish interests are against him. Blatant jingoism is an obstacle in his way. The false pride of Congress is a hindrance. But when we reflect that the course which he advocates is one in which the national safety as well as the national honor is involved, we are bound to believe that the sober second thought of the people will so array itself on his side that his final success is certain.

GOVERNMENT EFFICIENCY: Q. E. D.

In a remote age, and before the benefits of large-scale production and centralized management had been clearly recognized, there was passed, in a certain country, a law establishing a tax upon incomes. There was a great to-do about the drafting of the bill; its language was so complicated and awkward that many persons versed in public affairs, and entirely friendly to its general purpose, felt bound to criticise it with considerable asperity. But such was the confidence of the Government in its ability to find a way out of these difficulties, that, in spite of the mutterings of the grumblers, the bill was duly and promptly enacted into law.

This confidence was based on the circumstance that there prevailed in those days what to us must seem an amazing trust in the efficacy of individual enterprise. Instead of employing a force of salaried experts in the service of the Government, it was the custom to turn over questions like these to private law firms engaged for the purpose; and as for the mechanism of collection, the whole thing was to be entrusted to some one or other of the agencies that made it a business to do similar service for private corporations. How singularly the expectations of this method were disappointed is well known to all readers of history; and indeed many authorities on the history of institutions date from this incident the definitive establishment in the public mind of the superiority of centralized and governmental management over the operation of private agencies. The thing itself was not of paramount importance; but it

bristled with points that nobody could fail to see, and the lesson sank deep into the public mind.

Of the bungling of the law firm with the questions which it fell to them to decide, it would be tedious to speak. It was felt that there was some excuse for their flounderings in the curious ineptitude which ran through the language of the law. Still it did seem exasperating that the lawyers entrusted with this task—which, after all, was not of great dimensions and presented no profound problems to solve—should not at least have come to their own conclusions in a short time, and stuck to them. What actually happened was that, although a number of months intervened between the passing of the law and the beginning of the process of collection, scores of doubtful questions still remained suspended in the air when that process was first set in motion; nor was this the worst. Throughout the period during which the collection firm was getting its blanks filled out by the taxpayers, ruling after ruling kept appearing from the offices of the law firm, each making a modification or reversal of some previous ruling. Seldom had there been so flagrant an exhibition of the hollowness of the claims made for that rivalry in excellence which used to be the boast of believers in the competitive system.

But it was the operations of the collection agency that furnished the crowning example of the unsatisfactory character of private enterprise. From the moment it took hold to the end of the period within which returns had to be filed by individuals under penalty of the law, the air was thick with reports, conjectures, statements, and counter-statements, as to what had to be done, and when, and how. The famous "Form 1040," which was the final fruit of the labors of the agency in its effort to smooth the path of the wayfaring man, is a curiosity in ways too numerous to mention. Two little points must suffice: Although for the year 1613, when the act went into force, the tax was payable only upon incomes accruing during the last ten months of the year, the heading of the form was:

Return of Net Income Received or Accrued During the Year Ended December 31, 161—.

Underneath this appeared, indeed, in smaller type, the parenthesis:

(For the year 1613, from March 1 to December 31)

But this is the only word of warning or guidance the taxpayer had. Thoughout the paper, the year is spoken of just as though a whole year were in question; and exemptions, supertax, deductions—everything is on that basis. Even on the full page of "Instructions," printed on the back of the form, not a word about the ten months appears, and all figures are whole-year figures. The second point we have reference to is that, although it is stated in the "Instructions" that husband and wife may make a joint return, there is no indication anywhere in Form 1040 that that form is intended to serve this purpose. Everything in it is worded so as to refer to a single individual; and it was only by special inquiry that the hundreds of thousands of husbands and wives affected were enabled to learn that there was no other form, and that they had themselves to make in writing whatever modifications were necessary.

Now this may seem a small matter to rake up from the ashes of ancient history; but small matters may be significant. Under government management it is inconceivable that there should not have been a form printed expressly for the peculiar ten-month year 1613; it is inconceivable that there should not have been a form expressly for joint returns by husband and wife. In the failure to do these obviously necessary things, we see plainly the ingrained vice of the senseless parsimony which characterizes private business; even where, as here, no expense whatever is saved, the habit asserts itself. How many thousands of persons made erroneous returns owing to the innumerable imperfections of the collection agency's work, how many millions of hours were, in the aggregate, wasted in making inquiries which reasonable foresight and competent management would have made unnecessary, has never been computed. But the experience was worth far more than it cost. For the showing of the competitive system in this matter was at once so discreditable and so conspicuous that the nation resolved to put every form of business into the hands of the Government as rapidly as it was possible to effect the transfer, and the cry of the reactionaries that there were some things that could be better done by private enterprise was silenced forever.

How just was the conclusion drawn by our ancestors of three hundred years ago has been singularly illustrated in the experience of the past few months. With its operation entrusted wholly to the efficient hands and potent machinery of the national Government, the income tax of 1914 has given rise to none of that annoyance, perplexity, and blundering which made the experience of 1614 so trying, and its smooth and perfect working has been greeted by a unanimous chorus of admiration.

BUSINESS AND THE TRUST BILLS.

Between the attitude of business towards the industrial and commercial situation and the attitude of the Administration towards the programme of corporation legislation, there is more than one point of relationship. There is, to begin with, a striking resemblance between the two. For the temperament of business is neither buoyant nor depressed, but rather that of favorable and yet cautious expectation; and the temperament of the Administration, so far as can be judged by the reports that have been coming in from day to day, is neither aggressive nor timid, but indicates an intention to accomplish something substantial, yet to run no unnecessary risks and to invite no new complications. And it is safe to say that this feeling-the-way attitude on the part of the Administration is in a considerable measure the effect of the like attitude on the part of business. If industry and trade were as depressed as some opponents of the Administration represent it, or if they were as flourishing as we all should like them actually to be, the chances are that the programme of the President and Congress would by this time be far more distinctly outlined than it is.

To steer a wise course in such a situation as now surrounds the Administration is a delicate problem of public policy. Committed to do something, but something very imperfectly defined, it has to take into account not only the inherent merits of any given proposal, but also the political forces that come into play and the immediate effect upon business prosperity. In particular, it has to bear in mind that two great economic measures have just been enacted, and

that a false step in this new matter might redound to the discredit not only of the Trust legislation, but also of the tariff and currency measures. On the other hand, it must set down at their true worth idle rumors and extravagant pictures of distress. From sources least entitled to make such attacks—newspapers usually given to hounding the corporations—there come, for example, flamboyant criticisms of the Administration, upbraiding it for turning its attention to corporation laws instead of devoting its energies to the stimulation of business. The figures of unemployment are paraded as proof of the sad plight in which the country finds itself. That there is more unemployment than usual seems undeniable. But in the first place, there is a great deal of evidence that the situation is growing better, not worse; and, secondly, the figures themselves have no such meaning as is usually assigned to them. Some time ago the statement was made—and probably it is fairly near the truth—that there were in New York city about 325,000 men unemployed on any given day, this winter. But this is by no means so alarming or so significant as it may seem at first sight. For, if all the men who work for a living in this city were occupied, on an average, nine-tenths of the time, there would be a daily average throughout the year of about 150,000 men without employment; and when we remember that the winter necessarily furnishes much more than the average, and that there is furthermore a big drift of unemployed outsiders to the city every winter, only a comparatively modest number is left to be accounted for.

Up to the present, what seems to have emerged most clearly as regards the "Five Brothers" is that the bill designed to give a new definiteness to the prohibitions of the Sherman act is in a fair way of being abandoned. If the spirit of soberness engendered by a business situation hopeful and yet not buoyant has in any measure contributed to bring about this result, it is a good thing. The reasons in favor of the policy of letting the law alone in this respect were strong enough before the present Administration entered upon its career; and they have been greatly strengthened by the course of events since that time. What Attorney-General Wickersham and President Taft thought of the rapidly growing efficacy of the law as it stands, Attorney-General McReynolds and President Wilson have abundant additional reason to think. That their opinion is to this effect has been indicated in a number of ways.

A matter of some interest in connection with this point is the reference to it in the Baltimore platform. "We regret," says that document, "that the Sherman Anti-Trust law has received a judicial construction depriving it of much of its efficacy, and we favor the enactment of legislation which will restore to the statute the strength of which it has been deprived by such interpretation." Now, whatever may be thought of the desirability of "the enactment of legislation" here contemplated, there is no room for difference of opinion as to the statement of fact upon which the recommendation is expressly predicated. Not only is that statement false, but there is to-day virtually nobody who contends that it is true. Everybody knows that the Sherman act, so far from having been "deprived of much of its efficacy" by the Supreme Court decisions in the Standard Oil and Tobacco cases, has been clothed by them with an efficacy it had never before attained. To those who make, or talk as if they made, a fetich of platform declarations, this interesting dilemma is therefore presented. Either they must deny a patent fact, or they must stick to the conclusion even though they admit that the basis on which it rests was an error. Either position would be an absurdity; and sane Democrats will not allow themselves to be impaled on either horn of this dilemma. When a platform recommendation is manifestly unworkable, all that has to be done is to ignore it.

SANITY IN EDUCATION.

If there is one field of activity more than another in which calm and well-balanced considerations might naturally be expected to prevail, it is the field of education. Teaching is one of the oldest pursuits in which men engage. It is a pursuit, moreover, to which a long line of philosophers have devoted close attention, and concerning which they have left the results of their observation and thinking for the benefit of later generations. Yet is any other profession so prolific of fads?

This aspect of education is the subject of an address "On a Certain Arrogance in Educational Theorists" by Superintendent Maxwell, of this city, which is published in the last number of the *Educational Review*. Dr. Maxwell does not imitate these theorists by exhibiting towards them the spirit which he denounces. On the contrary, he strives to find in their foolish schemes the kernel of good which may be there. He recalls the days when vertical penmanship was all the rage. With what dramatic action would a prominent advocate of the system seat himself at a small table on the platform, and illustrate by clever contortions of his body the unwholesome postures too generally assumed by school children in producing the slant penmanship then in vogue! How merry he made his audience over the picture presented by Mr. Samuel Weller as, with the aid of a protruding and gyrating tongue, he laboriously indited his first love-letter! "I well remember, too," remarks Dr. Maxwell, "the tone of authority, almost of infallibility, with which he spoke; how he made us all feel that we were absolute tyros in the matter of teaching penmanship; and that, for the first time, in the light of his dramatic and luminous exposition, our ignorance and our errors were revealed, . . . and how the straight path of vertical penmanship, in which there was to be no variableness neither shadow of turning, was to lead to health and efficiency in our pupils."

We know the outcome of that campaign. The order went forth to teach vertical penmanship; the attempt was made to obey it. But "instead of writing vertical penmanship, our pupils, for the most part, acquired a slow, stiff, backhand penmanship, unlovely to the eye, and therefore illegible, and they assumed just as unhygienic postures as before." The *coup de grâce* was given to the system when the business world raised an outcry over the inefficiency of the public schools, and graduates had to go to commercial schools to learn how to write rapidly and legibly. Yet the idea was not all bad. Children did sit in unhealthful attitudes during their work. Only, the right solution had not been found. Equally untenable were the notion that memorizing had nothing to recommend it, and the theory that the recess was a relic of barbarism, but each had its suggestion of improvement over existing conditions. What pre-

vented that improvement from being made much earlier, however, was the insistence of the root-and-branch reformers that there was nothing valuable in the old practice and nothing experimental in the new.

Of particular timeliness is Dr. Maxwell's analysis of the present stirring about vocational education. Never, as he well says, "did the trumpet of arrogance give forth a less uncertain sound than in the agitation with which the educational world is now seething for the introduction of industrial or trade teaching in the public schools." He puts his finger upon a vital spot when he dares to explain that this agitation originated with the manufacturers, who, having been cut off from the apprenticeship system of training workmen, found it difficult to obtain a sufficient supply of skilled artisans, and accordingly proceeded to try to persuade the State to assume the burden. Dr. Maxwell's discussion of this problem, his distinctions between what the schools can do in the way of industrial training and what they ought not, for the sake of the child, to undertake, should be read by every teacher and parent in the land. Here is his declaration of principles:

> I am in favor of whatever reasonable education will fit young people for their life work. But I am not in favor of giving any narrow trade schooling at the expense of that general training which is the right of every child, native or adopted, of the Empire State—that education which is founded on the right of the child to his spiritual inheritance—his inheritance of literature, of the arts, of institutions, and of religion—that education which proclaims that every power of the child, intellectual, physical, and moral, should be trained, or put in the way of being trained, to its fullest efficiency.

Specifically, he holds that "the school is not the best place to train the skilled workman," and that manual training should be expanded so as to "develop skill in all the rudimentary processes that are common to all the trades."

It is not only because of the wisdom of these particular recommendations regarding vocational training that they should be widely read, but because also of the spirit of reasonableness, of moderation, of love for the old in combination with welcome for the new—in a word, of sanity—that they so unmistakably exhibit.

THE PHILOSOPHER REDIVIVUS.

January was the month of Fichte in Germany; of magazine articles, memorial lectures, public meetings in honor of the philosopher of the War of Liberation, who died a hundred years ago. Germany has been celebrating the *Bürgerkrieg*, with whose events his last years were inwrought. His "Reden an die deutsche Nation," delivered before crowded halls of the Academy of Sciences in 1807-8, when the French still occupied Berlin, were exhortations to patriotism and national union with a very actual core of revolt. Quite apart from this, Fichte would be honored as a moulding spirit. From his teachings have come impulses to which modern Germany traces much of her economic and cultural development. He is one of the few who have brought philosophy into contact with practical life. His metaphysical ideas, that the essence of the Ego is action, that it is unconditioned because it is acting out its own nature, have appealed at once to the mysticism in German blood, and to the practical spirit of men eager to bring their environment under control.

That this conception of philosophy as something that comes home to the bosoms and business of men is growing, there seems just now a good deal to show. "A revival of philosophy" is the way English reviews speak of the remarkable interest in Mr. Balfour's Gifford lectures at Glasgow. Hundreds of plain citizens have waited in *queues* before the hall, and hundreds of thousands have read the press reports. Announcement that M. Bergson would deliver the spring Gifford lectures is met with an enthusiasm presaging even wider attention. The *conférences* of M. Bergson in Paris, meanwhile, are attended by people of all nations. Germans, Russians, Americans, and Italians are reported as taking notes minutely on "The Idea of the Soul in Spinoza" and "The Method of Philosophy." And it was Bergson who testified to finding "a real and hungry interest in philosophy" in New York. All this may be partly discounted by the public reputation of Balfour, and the immense vogue of Bergson. In some, the popularity of a thinker inspires distrust. Yet there is a growing public interest in pure philosophy. The atmosphere is different from the time when Kant or Hegel labored in academic chilliness, little known outside a specialized circle. The change seems due in large part to the labors of James and others, who believed that philosophy is the concern of humanity. At any rate, it is interesting whole new groups, as an instrument in the direct attack on life's problems.

The nature of such interest is an elusive social phenomenon. It may spring from a sudden and inexplicable wave of curiosity. As in the individual, it may become almost an obsession. It affects certain states of mind much more than others. Merely to speak of the present movement as a "revival" is significant. At times, men and women take to thinking metaphysically. Wireless, dreadnoughts, radium, aeroplanes, cannot stand before a rebirth of interest in ultimate things. Such a sincere concern, even if but temporary, might explain the interest of thousands in Haeckel, Balfour, and the rest. Moreover, the trend of philosophy in the nineteenth century built up many anterooms to metaphysics. Psychology and sociology had their first anchorage in philosophy. Mill and Comte are still philosophical names. The interest of natural scientists in philosophy has been intensified by the evolutionary theory. No biologist can have failed to read "Creative Evolution." The man of ideas and information has a thousand new reasons to be interested in philosophical discussions.

While remaining wary of exaggerated claims, we may be glad that philosophy seems stirring in her mystical and remote seat. It was the belief of James, as it is of some later leaders, that she should display qualities of wide and immediate human concern. Why cleave too closely to the old view of philosophy as a great system perfectible only in the future? Why not claim for it definite, living ends—at least of inspiration? Bergson, whether he live long or not, has stripped it of technical jargon and given it a style of literary appeal; subtle, yet with free play of illustration to make the abstract concrete. If many are to find in philosophy results commensurate with the ancient impulse that sends them there, it must be because it takes on a more human mission. It was its social quality that made it memorable in the case of Fichte, and justified the inscription from Daniel on his grave: "And they that be wise shall shine as the brightness of the firma-

ment; and they that turn many to righteousness as the stars for ever and ever."

SCANDINAVIAN BOOKS.

BERGEN, Norway, February 13.

Norway's famous novelist, Knut Hamsun, shortly before Christmas issued a new story, "Børn av tiden" ("Children of the Hour"), which ranks as one of the best of his latter-day works. It is a quiet description of life and conditions in the north of his country, where the people have a stamp of their own. He knows their way of thinking and feeling, and in a few words can draw a vivid picture. The book is full of keen observations and witty remarks, at times bitterly ironical, and gives evident proof of the author's profound knowledge of human nature and sympathy with the struggling and suffering of men.

A book of memoirs which was looked forward to with great interest is the Norwegian professor Yngvar Nielsen's "Fra Johan Sverdrups dage" ("From Johan Sverdrup's Days"). It has proved to be in some respects a disappointment. The author took an active part in Norwegian politics in the latter part of the last century, more particularly in the eighties, and being a warm personal friend of the last union-king, the late Oscar II, he was known to have exercised considerable influence on that ruler's opinions of political figures and alignments in those stormy days. However, the book is less illuminating than was to be expected, and the author has not always avoided personal animus in characterizing political opponents. In spite of this drawback, the work will prove interesting reading to any one studying the modern political history of Norway.

The most sensational book of the past season in Norway is a three-act play, "Paradesengen" ("The Bed of State"), by the well-known dramatist, Gunnar Heiberg. It has met with almost unanimous denunciation from the press and public in its home country, and it is doubtful whether any Norwegian theatre dare give it a performance. The author has used living models in the boldest way imaginable, and builds the plot around the sick-bed and death of Bjørnstjerne Bjørnson, imputing to the latter's relatives the utmost eagerness to traffic in the great man's fame. The play is a malicious and venomous pamphlet, and artistically ranks below the run of Heiberg's work. A very different book, though centring on the same subject, is "Fra Bjørnsons sidste dage" ("From Bjørnson's Last Days"), the diary kept by Bjørnson's nurse, Miss Nulle Finsen. It is a detailed account of Bjørnson's remarkable struggle for life, of his varying moods from day to day, and a record of his many noteworthy sayings uttered at the time. Nevertheless, it is a question whether such intimate family interviews should be given to the public.

Other noteworthy Norwegian books are Niels Kjær's extremely witty and satirical comedy, "Det lykkelige valg" ("The Fortunate Election"), ridiculing present-day tendencies in Norwegian politics; Erik Vullum's popular historical work, "Hvorledes Norge blev frit" ("How Norway Became Free"); Olaf Bull's exquisite little volume of verse, "Nye digte" ("New Poems"), and the novels, "De unge dage" ("The Young Days"), by Peter Egge; "Den gamle bygd" ("The Old Parish"), by Hjalmar Christensen, and "Eiler Hundevart," by Regine Normann.

The Swedish author, K. G. Ossian-Nilsson, is an industrious and voluminous writer. Lately he has issued two new stories, "Odets man" ("The Man of Fortune") and "Lille Benjamin" ("Little Benjamin"). The former is a substantial autobiographical novel, picturing the author's own life from childhood through stormy years of struggle and development up to the mature days of manhood, when he casts a retrospective and contemplative glance at his own career. The story is full of life, and the psychological analysis of the young hero is of great interest, although not always quite convincing. "Little Benjamin" is a delightful story of a clergyman, who precipitates a quarrel with his brother clergymen by his liberal religious views. Other Swedish novels are Hjalmar Søderberg's "Den alvarsamma leken" ("The Serious Game"); Marika Stjernstedt's "Daniela Hertz" and "Alma Wittfogels rykte" ("Alma Wittfogel's Reputation"); Elin Wägner's "Helga Wisbeck," and Sven Lidman's "Tvedräktens barn" ("The Children of Discord").

The first ten years of the last century of Swedish history have lately been made the subject of many publications. The historian Sam Clason's new contribution to the elucidation of this period, "Gustaf IV Adolf och den europeiska krisen under Napoleon" ("Gustaf IV Adolf and the European Crisis under Napoleon"), deserves serious attention. The four essays, of which the book is made up, are scientifically supported and at the same time are sufficiently popular in treatment and style to make them capable of general interest. The author has made thorough investigations of foreign archives and examined Swedish sources with critical accuracy and impartiality, as was the case with his previous investigations on the same subject. The titles of the essays are "Sweden's Commercial Interests and the Struggle between France and England," "Stedingk's Memoirs, a Biased Publication," "Russian Dispatches from Sweden at the Outburst of the War," and "The Peace to Fredrikshamn."

The most important of the new Danish books is the novel, "Gæst den enøiede" ("Gæst the One-eyed"), by the young Icelandic author, Gunnar Gunnarson. The scene is laid in Iceland, that island of mysticism and faery, and the leading motive of the story is summed up in the last wish uttered by the hero: "Oh, that all might know that the greatest thing in the world is to deny one's self and bring peace on earth." It is a beautiful glorification of self-abnegation and charity. The story appeals to the best human instincts and deserves to find a large circle of readers.

Perhaps the most popular present-day writer in Denmark is Jeppe Aakjær, of Jutland, whose last book was reviewed in a former letter to the *Nation*. His novels are written with great force and have contributed largely to the improvement of the condition of the Danish peasantry, and his melodious and beautiful lyrics, easily accessible to the popular mind, rapidly became folk-songs which are sung all over the country. A small biographical sketch of Aakjær has been written by K. K. Nicolaisen. It is the first attempt at a biography of Aakjær in book-form, and though only fragmentary in scope and treatment, it may prove of interest to those wishing to get a survey of the poet's chief works and characteristics. Otto Gelsted's biography of the famous Danish writer, Johannes V. Jensen, is far more extensive and detailed. It is a well-written description of Jensen's life on the background of literary tendencies and currents among the younger generation in the nineties.

Among other biographies is the volume in the series "Mennesker" ("Men") written by Vilh. La Cour, and dealing with the life and work of the late editor and politician, J. Jessen. For its brief scope it gives much information. A larger and far more important work is Erik Henrichsen's biographical sketches of the statesmen and politicians who took a leading part in the Danish Constitutional campaign of the years 1870 to 1901, "Mændene fram forfatningskampen" ("The Men of the Constitutional Struggle"). This substantial volume is made up of eight essays dealing with the lives and times of as many political leaders, from Estrup to Klaus Berntsen, and gives a comprehensive, accurate, and intensely interesting survey.

Other recent Danish books are stories of the Congog by Jürgen Jürgensen, "Den store og den lille flod" ("The Big and the Small Flood"); a beautiful story by M. Andersen Nexø, "Lykken" ("Happiness"); a novel by Jakob Knudsen, "En ungdom" ("A Young Man"), though it does not rank with his previous works; a third collection of letters from Danish emigrants edited by Karl Larsen, "De der tog hjemmefra. III" ("Those Who Left Home," Vol. III), and a valuable critical examination by

Hans Brix of the poet Johannes Ewald's life and works. ARNE KILDAL.

NEWS FOR BIBLIOPHILES.

Not long since a London dealer advertised under Defoe's name a book bearing the following title:

A Free Discourse Wherein the Doctrines Which make for Tyranny Are Display'd. The Title of our Rightful and Lawful King William Vindicated. And the unreasonableness and mischievous Tendency of the odious distinction of a King de Facto, and de Jure, discover'd. By a Person of Honour. [A quotation of 4 lines from "Somn. Scip. ℔ 1. 6. Ciceronis de Republica."] London: Printed for John Lawrence at the Angel in the Poultrey, and Richard Baldwin near the Oxford-Arms in Warwick-Lane. 1697. 8vo 1 l. + 122 pp. + 2 ll. of advertisements.

On being questioned why he attributed to Defoe a book not previously known to students, the dealer very frankly replied that he could find no support for the ascription. Meanwhile, an examination of the copy owned by Harvard University—the gift of the "republican" Thomas Hollis—led not only to the conclusion that the style pointed but slightly, if at all, to Defoe, but to the discovery that an old hand had stated at the bottom of the title-page, "This was writt by Sr. Robert Howard." Whether or not this hand be that of Hollis, the fact that that worthy was an enthusiast for seventeenth-century republican literature would lend some support to any attribution found in a Whiggish book coming from his library.

Thus far no support for the ascription to Sir Robert Howard has been obtained from the usual sources of bibliographical information. There seems to be, however, a fairly strong chain of reasoning which tends to warrant our adding to the bibliography of Dryden's brother-in-law an item not given to him by the British Museum Catalogue or by the Dictionary of National Biography. In the first place, the author writes (p. 105) as if he were an old man, familiar with Parliament at the time of the Revolution. Moreover, it was a "Person of Honour" that wrote "A Free Discourse," and eight years before Howard had adopted this disguise when writing his "Historical Observations Upon the Reigns of Edward I, II, III, and Richard II." His "History of Religion" (1694) was from the pen of a "Person of Quality," and the book just named heads the list of publications advertised by Baldwin in the little book we are discussing. Furthermore, our author was plainly an admirer of "Julian" Johnson—the Ben-Jochanan of "Absalom and Achitophel"—to whom Sir Robert Howard addressed a "Letter" in 1692, and whom he praised in "The History of the Reigns of Edward and Richard II" (1690). Finally, the substance and style of the book last named, the authorship of which Howard acknowledged on the title-page, seem strongly to support the ascription to him of the work under discussion, "A Free Discourse."

The matter is to be decided only by an expert on Howard's writings, and—in the absence of a clearing-house of bibliographical information—one may be pardoned for fearing that it has been settled already without one's knowledge. One should be prepared to admit, also, that attributions found in old books have an uncomfortable way of turning out to be wrong. For example, in *Notes and Queries* (1st ser. II, 248) a contributor, "B. R.," stated that his copy of "A Discourse of the Nationall Excellencies of England. By R. H." (1658) had been conjecturally ascribed to Sir Robert Howard. The British Museum Catalogue, under "England," gives this book to R. Hawkins. Has any student of bibliography information tending to show that Howard was not the "Person of Honour" who in 1697 came forward to defend King William's title in "A Free Discourse"? W. P. TRENT.

Correspondence

THE AMERICAN HISTORICAL ASSOCIATION.

TO THE EDITOR OF THE NATION:

SIR: I have read with interest the letter of Dr. Dunbar Rowland in your issue of January 22 in regard to the management of the American Historical Association, and the replies of Messrs. MacDonald and Jameson, appearing in the issue of February 5. Neither of these replies appears to me to face squarely the real charge, which is, to put it bluntly, that the American Historical Association is run by a small clique or ring which controls the elections and divides the honors among the members and adherents of the group. This charge has been made with increasing frequency during the last few years. It has been made usually in a jesting way, nobody caring to appear to treat the matter too seriously, both at the meetings of the Association and wherever groups of historians have been casually thrown together. Furthermore, there appears to be very little difference of opinion as to who constitute the ring.

I did not support Mr. Rowland's movement at Charleston because I did not approve of the remedy he suggested, but I do believe that the facts which I am about to submit afford ground for a radical change of *policy* on the part of the Association. As I have served on the nominating committees of both the American Historical Association and the American Political Science Association, I hope I may be allowed to contrast the policies of the two organizations in the matter of elections to office. The tenure of such offices as secretary, treasurer, and the managing editors of the reviews published by the two associations should in the nature of things be more or less permanent, and in the following discussion we shall leave these offices out of consideration. The constitution of the American Historical Association provides for the annual election by ballot of seven officers and six members of the Council; and the Council, composed of the officers and councillors so elected, together with the ex-presidents of the Association, chooses the board of six editors of the *American Historical Review*. Now, leaving out of account the two secretaries, the treasurer, the curator, and the managing editor of the *Review*, we have fourteen positions of honor, with little work attached, to be filled each year. Of the fourteen men at present holding these positions thirteen were in the office-holding group last year, and only one was taken from outside. At the recent meeting of the American Political Science Association I was chairman of the committee on nominations. Omitting, as was done in the case of the American Historical Association, the secretary and treasurer and the managing editor of the *American Political Science Review*, there are in the Political Science Association seventeen positions to be filled each year. Of the seventeen men recently chosen only six held office the preceding year, and eleven were taken from the general membership of the Association.

Why this difference in associations whose constitutions and general purposes are similar? It is the fixed policy of the Political Science Association to encourage the younger men who have demonstrated their ability to do good work by sharing the honors of the Association with them, and enlisting their aid and counsel. What, on the other hand, appears to be the policy of the American Historical Association? Is it a purely selfish one of reserving the honors for a select group of older men, or is it to guard zealously the interests of the Association against the radical views of the rising generation of historians, or yet, is it possible that the present group of office-holders believe that they enjoy a monopoly of the brains and talent of the Association? As long as the ex-presidents are members of the Council for life, not even the presence of two such doughty Progressives as Col. Roosevelt and Professor Hart can rescue that body from hopeless conservatism. Surely, then, a little new blood should afford no ground for alarm. JOHN H. LATANÉ.

Johns Hopkins University, February 20.

WESLEY OR SATAN?

TO THE EDITOR OF THE NATION:

SIR: I have just read in the *Nation* of this week the interesting contribution of Stuart P. Sherman. His reference in this to Wesley is to me surprising, and I question its accuracy. Wesley was a voluminous writer, and I do not profess to have read him exhaustively, but I was surprised at the implication that Wesley had somewhere said "Better to rule in hell than serve in heaven." Has not Mr. Sherman confused Wesley with one of Milton's conspicuous characters? I hope he will enlighten myself and other readers of the *Nation* on this point.

EVERETT O. FISK.

Boston, February 7.

TO THE EDITOR OF THE NATION:

SIR: In attributing to the founder of Methodism the wicked sentiment to which Mr. Fisk refers I leaned, perhaps a little too heavily, upon the Rev. Alexander Gordon, author of the article on Wesley in the Dictionary of National

Biography. The passage is as follows: "The story is told in a pamphlet of 1792 that the usher Andrew Tooke, of the 'Panthcon,' remonstrated with him [Wesley] for associating with his juniors whom he harangued, and got the answer, 'Better to rule in hell than serve in heaven.'" Gordon reported the story, I suppose, as characteristic, even if not strictly authentic.

I have not myself been able to find it in Wesley's works or his journals or his letters or in the biographies. But neither have I been able to find in the literary remains the man of whose conversation Johnson said that he could never get enough, and of whom he declared, "He can talk well on any subject." The Wesley that has come down to us—thanks to his own foresight and the pious solicitude of his literary executors and biographers—is an almost unmitigated saint, pretty thoroughly purged of worldly passion.

To the student of biography, however, the authorized version of Wesley seems just a bit incoherent; seems to lack a link which the "pamphlet of 1792" supplies. In the first chapter, so to speak, we behold the rigorous high churchman, the curator of the "Holy Club," the ascetic Oxford recluse, too apprehensive about his own soul's salvation to risk contact with Epworth rectory. In the second chapter we discover "the sole proprietor of scores of Methodist chapels all over the island." Having once tasted the delight of swaying thousands, he set up, in defiance of bishops, a more than archiepiscopal throne in the "suburbs of hell." Lest I exaggerate the autocratic nature of Wesley's rule, I quote the words of an unquestionably sympathetic biographer, Prof. C. T. Winchester: "He was absolute commander of the army of itinerant preachers; he was the judge who finally decided all cases of conduct or discipline; he had the power to admit or to exclude every member of every Methodist society in the United Kingdom." It hardly seems possible that Wesley's *favorite* text could have been that which bids us subject ourselves to the "higher powers." Almost at the end of his life he declared that he never willingly broke from the Established Church, just as Cobbett near the end of his life protested that he never desired to alter a single established institution of his country. As a matter of fact, both men did alter the institutions of their country; for in both was coupled with a general passion, more or less splendid, for saving the world an individual passion for having the salvation of the world in their own hands.

Now, as for associating Wesley with Satan, I must yield all the credit for that suggestion to Mr. Fisk. My own adventurous flight ends with Wesley and Cobbett. Yet I must say that, so far as my reading and observation go, all men of eminent organizing and administrative talents seem to approve the position of Wesley, or—if Mr. Fisk still insists that the passage is spurious—of "one of Milton's conspicuous characters."

STUART P. SHERMAN.

Urbana, Ill., February 20.

TRIBUTE TO DE VINNE.

To the Editor of The Nation:

Sir: The death of Theodore L. De Vinne removes a man of gentle disposition and sturdy and noble character. It is not eulogy but the plainest statement of fact to say that he occupied in his profession a position that few men reach in any profession—an acknowledged primacy. This came about, first, through his absolute mastery of the details of a craft which he elevated into a fine art, reviving the traditions of the old hand-printer; and, secondly, through his unfailing ideality, and another quality that goes with ideality—humility, the Cinderella of the virtues. He had pride in his profession and pride in his contributions to it, but never any false pride that kept him from learning a more excellent way. His associates of the *Century Magazine* were always sure not only that he would take the most honorable and generous position on questions of business policy—his passion for the best being a moral tonic—but that they could count on his devotion and ingenuity in providing resources to meet new emergencies in problems of printing.

In the days of the development of American wood-engraving these emergencies were continually arising. Mr. Drake's fertile experiments in extending the frontiers of that art made large drafts upon Mr. De Vinne's skill as a pictorial printer. The subtleties of one process called for subtleties in the other, and in the frequent and enthusiastic conferences between these two masters each learned from the other the possibilities and the limitations of the multiple reproduction of fine art. All sorts of adverse conditions had to be encountered: the painter or illustrator was unfamiliar with printing methods; the weather would affect the rollers; the ink would suddenly be found to be below standard, or the paper would run poor; but, come what might, Mr. De Vinne never lost patience. Artists, engravers, and pressmen were brought together, to the manifest improvement of the total result. Everything was sacrificed to good work, and the spirit of the old Florentine guilds took hold of the De Vinne Press. That the traditions of that intense period still survive, may be seen from the admirable printing of Cole's engraving of the Rembrandt portrait in the February *Century*.

Emphasis has justly been laid on the value of Mr. De Vinne's work to Mr. Cole's wonderful art. The time is likely to come when back numbers of the magazine will be sought for in garrets and bookstalls for the impressions of Cole's work alone, for there exist only a few sets of "engraver's proofs" of his blocks—these chiefly of the six sets of Old Masters and of the seventh group of Masterpieces in American Galleries, now in course of publication. Cole's burin, however, was not Mr. De Vinne's severest taskmaster; other engravers of our Golden Age of the wood-cut were more difficult to follow. But, though he sometimes approached the difficult problem with misgivings, the master printer never admitted an impossibility. He revelled in hard work as well as good work, and in passing beyond the frontiers that had been known to his craft. Now that he has passed beyond the Great Frontier of Life, let us hope that there will be something beautiful and congenial for him to achieve.

R. U. JOHNSON.

New York, February 17.

AN ITALIAN PHILOLOGIST.

To the Editor of The Nation:

Sir: On February 4 there died in Florence, at the age of eighty-one, Giovanni Tortoli, a man not widely known even in Italy for creative or scholarly production, but one who, having dedicated his whole life to lexicography and the study of the Tuscan idiom in its classical purity, certainly exerted a steady and beneficial influence for beauty on the literature of his contemporaries.

He was chiefly known in connection with the ancient and famous Academy of the Crusca, of which he had been a member ever since 1858, and president since 1905. He was one of the principal compilers of the famous, though still uncompleted, dictionary of that Society, and had besides published several erudite studies, chiefly on Ariosto and other sixteenth-century writers.

Tortoli was not the kind of philologist who has a passion for the mere science of minute linguistics apart from artistic expression, but rather one of those severe students of the classics in their own literature who yearn to bring to the rather loose literary expression of their time the austere simplicity of a former and undeniably greater age. He was a humanist in the art of words, strong in erudition and taste, whose dignified vocation it was to stand retiringly out of the mad rush of literary output, a warning and a restraint to his contemporaries, a teacher and a salutary example to writers of the future.

RUDOLPH ALTROCCHI.

Harvard University, February 22.

MR. BRYAN AND THE CURRENCY ACT.

To the Editor of The Nation:

Sir: The Democratic National Committee has issued, as a campaign document, a pamphlet on the new Banking law. Mr. Bryan is one of the contributors, and in an orderly enumeration of the meritorious features of the bill he places first: "The law (1) recognizes the right of the Government to issue money." This will be a revelation to those who have not a first-hand acquaintance with the contents of the bill, but have relied on press comments, especially the approval of such sound-money journals as the *Nation* and New York *Evening Post*. Those who have made even a cursory examination of the bill itself will know that there is no ground for such a statement.

The provisions for note issue will be found in section 16 of the act. The chairman of the board of the nine directors of each regional bank is designated as the "Federal reserve agent," and "he shall be a person of tested banking experience." When his bank is in need

of additional currency, it makes application through him to the Federal Reserve Board for the issue of notes. "Such application shall be accompanied with a tender to the local Federal reserve agent of collateral in amount equal to the sum of the Federal reserve notes thus applied for and issued pursuant to such application." It is true the Government issues the notes, but only to the banks, who must apply for them of their own free will and at the same time offer approved security for every dollar issued. There is no difference in principle between this and the old system; the difference is merely one of method of issue and form of security. United States bonds are no longer the sole basis of issue, but any form of approved commercial paper—"asset-banking," as in Canada. The Government on its own initiative cannot issue a dollar; it rests with the banks—where it ought to rest—to expand and contract the currency according to the requirements of business. The Federal Reserve Board in its discretion may refuse the application of the Federal reserve agent for notes, but has no power to compel him to issue any. If this is Government issue of money, as the greenbacks and Treasury notes issued directly by the Government and resting on no security but the credit of the Government, we shall have to extend our definition of the term and consider all money, however regulated, as Government issue. The fact that the notes are made obligations of the Government is the only consolation I can find in the bill for Mr. Bryan and those who sympathize with his views on money.

GLANVILLE TERRELL.

Lexington, Ky., February 14.

[This phase of the Act was fully discussed in the *Nation* in an editorial of December 25, 1913.—ED. NATION.]

A CALL FOR AMERICAN BOOKS.

TO THE EDITOR OF THE NATION:

SIR: May I call your attention to a way by which American publishers and authors could do something to advance the cause of American letters abroad?

Of the Paris periodicals which have a wide circulation among the more advanced and younger literary circles of Europe, none is more notable than the semi-monthly *Mercure de France,* which should not be confounded with a famous periodical of the same name which appeared in Paris during the ancient régime. More than a third of each number is given up to what is called the "Revue de la Quinzaine," one feature of which department is a collection of short articles devoted to the literary affairs of various countries, signed as a rule by natives or by Frenchmen who make a specialty of the literature about which they write. Thus we find in the Quinzaine from issue to issue "Lettres anglaises," "Lettres allemandes," "Lettres italiennes," and even "Lettres néo-grecques," "Lettres hispano-américaines," "Lettres brésiliennes," "Lettres roumaines," "Lettres tchèques," etc.

Until three or four years ago, the "Lettres anglaises" embraced things American as well as things British, with results which sometimes humbled our literary pride. Thus, books whose subject, author, and publisher were all three American, would appear in the *chronique* of the *Mercure* as if all three hailed from the United Kingdom, the name of the London publisher, who in many cases had simply imported a few copies of the book in sheets, being particularly in evidence, thus causing a glaring injustice to our authorship and our publishing activities. As I had friends among the ruling spirits of the *Mercure,* I used now and then to protest against this British seizure of our literary wares, not unlike what occurred on the high seas at the beginning of the last century in the matter of the impressment of our sailors. So one day the editor of the *Mercure*—M. Alfred Vallette—to whom more than to any one person is due its solid establishment in a city where so many periodicals are but ephemeral, turned on me and asked, "Well, will you take charge of the American side of the English language?" And this is how it happens that I am the author of the "Lettres américaines" of the *Mercure de France.*

And now may I ask, through your columns, the support of American authors and publishers in my efforts to show continental Europe that we do other things in the United States besides coin dollars and pack pork? When I ask for a book, I do so because there is something in it or about it that will help the cause on this side of the Atlantic. The honorarium attached to these letters is very small, and the writing them in French greatly increases my labor. So for me "there is no money in it." Nor can these necessarily short notices, which are purposely more bibliographical than critical, be of much direct and immediate commercial value to publisher or author. But they do something to open the eyes of the literary world over here to the intellectual movement in America, about which so many even intelligent Europeans are quite ignorant. For instance, I was once asked by the wife of a member of the Institute, and she herself something of a blue-stocking, if we ever gave Shakespeare's plays in America.

THEODORE STANTON.

Paris, February 13.

THE HARVARD-TECHNOLOGY AGREEMENT.

TO THE EDITOR OF THE NATION:

SIR: The editorial in your issue of January 15, and the letter in your issue of January 29, consider critically and in part adversely the Harvard-Technology "agreement." By the will of the late Gordon McKay, as published in the *Harvard Graduates' Magazine* (June, 1905 p. 757), he bequeathed to Harvard a great sum of money to found a school of applied science, on most liberal terms. Should the Corporation of Harvard fail to accept the gift, "strictly on the trusts," within two years, the testator then directed his trustees to form a separate and independent school to carry out his purposes.

In accepting the endowment the University authorities were bound to keep faith with the expressed wishes of the testator, but by virtually giving over to Technology the control of three-fifths of the income of that fund (also additional funds), they have acted in a way that seems widely removed from what was intended. Indeed, it is stated *(Harvard Grad. Mag.,* June, 1905) that Mr. McKay distinctly objected to leaving his money to the Institute of Technology. That the agreement was effected without due deliberation by the Board of Overseers, without the knowledge of the McKay trustees, and without consideration by the faculties concerned, gives evidence of haste, or indiscretion. After the action in regard to the McKay fund what assurance is there that funds now in hand, or that may come to the University, will be handled with regard to the expressed wishes of the donors.

Harvard University has never given degrees to women, but Technology is co-educational. It seems that conditions may well arise by which Harvard will be forced to give degrees to women under the combination agreement. The lover of Harvard and her fair name has cause to fear the results of this recent action, and the autocratic methods by which it was brought about.

Literature

THE SCIENCE OF RELIGION.

Introduction to the History of Religions. By Prof. C. H. Toy. (Hand-Books on the History of Religions, Vol. IV.) Boston: Ginn & Co. $3.

At last we have in English, and in a book written for the English-speaking world, an adequate outline of that wide series of investigations that, for the past half-century, have been applied to the origin and development of religious belief. By the grandiloquent eloquence of Max Müller we were led to believe that a comparative study of the religions of the world would throw light upon the nature of religion in general and counteract the disruptive effects of Kant's "Kritik." Under his guidance we turned over the weary, dreary pages of the Sacred Books of the East and emerged after that infliction in the same condition as Faust after his profound researches in all branches of study. But, if the comparative study of religions has not altogether satisfied the expectations with which they have been studied with such assiduity, much instruction has been elicited during the search as to the early beliefs of mankind, and it was time that these researches should be summarized in accessible and trustworthy form, as has at last been done by Professor Toy. His work is both wider and more detailed than that of Professor Jevons, his chief predecessor in English, while it is also more sympa-

thetic and less doctrinaire than the "Orpheus" of M. Salomon Reinach, its chief Continental analogue.

Excellent as is Professor Toy's summary of the problems of the science of religion, it is difficult to see how it can be considered by him, according to his title, an introduction to the history of religions. It is rather a series of essays on different aspects of the religious problem, brought together without much inner connection, as can be seen from an enumeration of its Topica. These run as follows: Nature of Religion, The Soul, Early Religious Ceremonies, Early Cults, Totemism and Taboo, Gods, Myths, Magic and Divination, The Higher Theistic Development, Social Development of Religion, Scientific and Ethical Developments in Religious Systems. This enumeration will be, of itself, sufficient to show that there is no attempt to deal with the subject in any historic order, otherwise Totemism and Taboo would obviously have come earlier in the analysis. But "Introduction" is a term that can cover a multitude of inconsistencies. Professor Toy's treatment, however, does not, by any means, suffer from this lack of historico-logical arrangement. He has seemingly no theory of his own as to the historical development of religious cult, thought, and feeling, and thereby escapes the narrowing influence of a self-imposed scheme, such as is discernible in Jevons and robs Reinach of any claim to adequacy. Professor Toy is a reporter, rather than an advocate.

It is, indeed, extraordinary how, in turning over these pages, we find them strewn with the remains of theories of the origin of religion that were successively the fashion of the scientific day. Phallicism and totemism, sun myths and forest cults, animism and fetichism, worship of the dead and of the living, wind and water, stocks and stones, stars and dragons, all flit across the scene, each offering the key to all the mythologies. Having no *parti pris*, Professor Toy deals, in turn, with all these aspects of early religion and is enabled to give to each its proper but restricted place. His criticisms of these one-sided theories are of admirable sanity, notably in the chapter on totemism and taboo, which, in the hands of W. R. Smith and Frazer, were at one time thought to solve the problem of religious origins. Professor Toy is equally satisfactory in his treatment of these scholars' view of sacrifice, which must also be regarded as one of the milestones of mythological theory that have now been left behind.

The value of Professor Toy's book consists in its comprehensiveness. In it the student of comparative religion will find, in one or other of its twelve hundred numbered paragraphs, concise information of the present state of scholarship with regard to almost any problem in which he can well be interested, and, in most cases, with reference to the best and latest literature on the subject. It gives not alone the savage or primitive views on the various topics, but includes references to the greater creeds of the historic nations. This feature of the work, which forms its main strength, has naturally its weaker side. No one man can entirely control the vast literature which has sprung up with regard to these problems during Professor Toy's long career as scholar, while, on many topics, it was impossible for him to go into sufficient detail to be really illuminating. In particular, his use of secondary sources on the complex and difficult problems relating to the religions of India leads, at times, to unsatisfactory vagueness. On the other hand, his expert acquaintance with Hebrew and Semitic religious phenomena gives his treatment often an air of confidence and thoroughness, which is the more satisfactory since none of his predecessors, except Tiele, has approached the subject from the Semitic field.

The wide extent over which Professor Toy's book ranges estops any detailed criticism in this place of his utterances on the many disputed points of his subject. A few sporadic notes may suffice to indicate the broad bearings of the book. In dealing, as he does occasionally, with the social relations of religion, he leaves out of account, for the most part, the economic background of its various phases, the connection, for example, of totemism with hunting, of the gods of field and forest with agriculture, and the like. In his discussion of the connection of totemism with the domestication of animals, in which he adopts his rather favorite agnostic attitude, further support might have been found from Galton's essay in his "Inquiries into Human Faculty." On burial ceremonies (189 *et seq.*) and on dead kin (360 *et seq.*) he might have made reference to Dr. Frazer's important study in the Journal of the Royal Anthropological Institute for 1886. One misses any adequate treatment of the Lares and Penates; Fustel de Coulanges may have laid too much stress upon the gods of the hearth and their connection with the political organization of Greeks and Romans, but to omit all reference to his views makes a serious gap in Professor Toy's wide treatment of his subject. His view of the origin of circumcision was, to a large extent, anticipated by Sir Richard Burton, of which he seems to be unaware. The suggested relations of bacteriology to demonology and taboo are not considered by Dr. Toy, though it is curious how many of the precautions taken against the presence of demons, or the transgression of taboo, resemble the most recent methods of sepsis. Modern hygiene has only recently discovered what a powerful demon Beelzebub (the god of flies) is. The myth of the lunar eclipse current in East Asia deserved fuller notice than is given in section 849. It is by no means certain that fairy-tales are survivals of myths, as is asserted on p. 881. Professor Toy's treatment of magic is perhaps the least satisfactory part of his work. Here his general agnostic attitude leads to a necessary vagueness. Following, for the most part, Frazer, he regards magic as a false science of sequences, which reminds one rather of the old explanation why treason did never prosper. Magic that reaches a true science of sequences is, according to this, either science or religion.

The book is concluded by an elaborate bibliography of the subject, running close to a thousand numbers. Some of the references are rather casual and vague, as, for example, "The Hibbert Lectures," "The Gifford Lectures"; but, as a rule, the selection is adequate. Hartland's book on the "Legend of Perseus," Tuchman's papers on Fascination, in *Melusine*, Goldziher's masterly sketch of Islam, and Fustel de Coulange's "La Cité antique" are the most notable omissions; Dr. Charles's edition of the Apocrypha and Pseudepigraphica was probably too recent for insertion in the list.

CURRENT FICTION.

The Forester's Daughter. By Hamlin Garland. New York: Harper & Bros.

Mr. Garland says in his "foreword" that he had intended to writer a longer and more important book about his Supervisor McFarlane and the problems of forestry, but that his heroine, Berrie, "took the story into her own strong hands and made of it something so intimate and so idyllic" that the "more prosaic element" had no chance. This is perhaps as well, since the forester and his difficult task have already been pretty thoroughly "novelized," and there are no signs here of fresh treatment at the hands of the present writer. We have hardly more than a rough sketch in the background of McFarlane, the old-time forester, and his college-bred staff, pitted against cattlemen on the one hand and lumbermen on the other. Nothing happens, not even the expected forest fire. As for Berrie McFarlane, she is the familiar maiden of Far Western romance, the rose of the rancho, with a hand for any cinch, and a heart for the single tenderfoot destined from all time to leave New Haven for her.

The original thing about the story is that this young gentleman, who rejoices in the distinctively Eastern name of Wayland Norcross, is not the latest conquering halfback to leave the Yale campus, but a "lunger" relegated to Bear Tooth Forest as to a last resort. But even this is not the most extraordinary thing about him. Instead of growing a new pair of lungs and winning

his way, over the prostrate bodies of herdsman and wood-butcher, to the post of Head Forester, he remains, what he seems to be at the outset, a weakling and a puppy. He thinks like a schoolgirl and talks like a book. Anybody can pick on him with perfect comfort; his hour of triumph is that in which the villain, his rival, topples him over like a man of straw and breaks his head as it deserves to be broken. This negative feat, heaped upon his previous record of pusillanimity, is too much for the heroine. All barriers are down between them; he is the perfect foil and fondling of a strong woman, and has to marry her whether he will or no.

Again we must express doubt as to Mr. Garland's capacity for extended narrative; and wish him a return of the sincere mood and restrained hand which produced those little classics of Middle Western literature, "Main-Travelled Roads."

William and Bill. By Grace MacGowan Cooke and Carolina Wood Morrison. New York: The Century Co.

It was worth the effort of collaboration to create a new hero for the boy-world. William and Bill are cousins burdened with the same name but designated differently in familiar discourse. Moreover, the respective appellations bestowed upon them are also a clue to their characters. William is mother's boy, stiff, petted, polite, with a distinct weakness for romance and gallantry. Bill is rather the unspoiled product of nature, blunt, outspoken, rough and ready, but tender at heart. However, "William and Bill" is not given over merely to a study of the two individuals. It points out that every true boy should have the characteristics of both these personages that the nature of Bill should be softened by a certain degree of Williamness, while William needs certain traits of Billiness to be quite complete.

Green Chalk. By Doris Somerville. New York: John Lane Co.

The man "who loves to be loved" and is distinguishable from all others of his kind by "an uncommonly black mole on his left cheek, somewhere near the eye," shatters the hearts of three—Lady Grace, the blonde adventuress who plays the game of love and disdain only less expertly than he; pretty Suzanne, the model from Montparnasse, who asks nothing better than to grovel at his feet, and, lastly, his young American wife. The latter he is obliged to marry to procure a certain fortune to which he has long considered himself entitled. She, poor thing, supposes she is marrying the painter whose admired pictures forever repeat one face, and that her own. But the man with the uncommonly black mole on his left cheek has nothing to do with the pictures beyond signing them and reaping the rewards of their fame. They are really the creations of his illegitimate half-brother, whom he keeps hard at work on a stipend. Happiness, for this humble child of genius, consists solely in the privilege of painting this one face *ad infinitum.* (In early youth he had been the victim of a motor-'bus accident. This face had bent above him then—and what more natural sequence than that he should paint it till he died?)

Is this, perhaps, the nightmare of an art student? The book is as full of studio and boudoir banalities as any Paris Salon—and infinitely more wearisome.

The Jam Girl. By Frances R. Sterrett. New York: D. Appleton & Co.

With reprehensible conservatism, we have limited the sphere of jam to the pantry-shelf and unregenerate urchins. Miss Sterrett, however, appears as its liberator, and reveals the true significance of this delicacy as a vital factor in industrial competition, as an incentive towards family feuds, and as a means of courtship. At least such is the mission in the "Jam Girl" from the town of Waloo, on the Mississippi.

These considerations account for the fact that when Judith Henderson and Hiram Bingham met in the night train from Lausanne to Paris, they were strangely drawn to each other. The sudden friendship was strengthened by a mutual appreciation of the "Raisinée de France" or "King's Jam" upon which they breakfasted in a tiny inn at Montarlier. Unknown to each other, both were the offspring of the jam of the town of Waloo. Their fathers had inaugurated the jam industry there and had devoted their lives to the manufacture of an ideal condiment. But dissension had set in, and business rivalry grew into a family feud. Only it did not pass on to the second generation.

Accordingly, it happened that when Hiram Bingham was returning from a trip abroad in search of famous jam recipes, outdoing those of the Hendersons, and found Judith Henderson in the train for Paris accused by the customs officers of smuggling a cake of milk chocolate into France, the heir of the Bingham Jam Factories gallantly came to her rescue. Both were free from the feelings of natural repulsion which they should have experienced. Nay, the unsuspecting "Bingham Jam" heir entrusted to his rival's daughter a rare collection of jam recipes employed by the house of Medici, when jam was at its dainty height in Italy. Later, the volume fell into the hands of Judith's father, and there were complications.

A jolly little farce, with diverting incidents; it will amuse the reader.

THE SPIRIT OF DIAMOND PITT.

Lady Hester Lucy Stanhope. By Frank Hamel. With 20 full-page photogravures. New York: Funk & Wagnalls Co. $5 net.

It is surprising that the author of this careful and interesting study has nowhere suggested a parallel between Lady Hester Stanhope and Lady Mary Wortley Montagu. Nearly a century separated them, and there are strong points of difference. Lady Hester was never what Lady Mary boasted herself, "a rake at reading." Politics concerned her more than books in youth, as occultism did in age—both as means of power. An amazing talker, she had no ambition to shine in literature. She was not at all the more interested in meeting Byron because he was a poet. "I saw nothing in him but a well-bred man, like many others," she remarks carelessly, "for, as for poetry, it is easy enough to write verses." When Lamartine, long famous throughout Europe, visited her in her hermitage on Mt. Lebanon, she assured him that she loved him, but had never heard of him. Much earlier, upon her first taste of what power means in the Orient, she had frankly expressed her creed:

> To command is to be really great; to have talents is to talk sense without a book in one's hand; and to have manners is to accommodate one's self to the customs and tastes of others, and to make them either fear or love you.

This is in refreshing contrast with the literary servility of Lady Mary Wortley. English society under Queen Anne was dominated by the wits and the poets. Matters were very different a century later. Lady Mary and Lady Hester each represented the "new womanhood" of an age. Both were spirited, fond of power, impatient of convention. Both tasted deep of the Orient, and experienced many years of self-imposed exile from England. Here, after all, the resemblance ends.

Lady Hester came of an imperious race. Independence and authority were her daily bread, and vast empire was the dream of her life. "Diamond Pitt" was her great-great-grandfather on both sides. Chatham was her grandfather, and the younger Pitt her adored uncle. From Diamond Pitt, that unconquerable buccaneer of the East India trade, her inheritance seems plainest. Like him, she loved to rule those about her with Oriental absolutism. Lord Rosebery has asserted that "his blood . . . all aflame from the East, . . . blazed up again in Hester Stanhope": and Mr. Hamel agrees that "she was atavistic, a reversion to type, and undoubtedly inherited from her great-great-grandfather his spirit of adventure, his love of the pomp and splendor of the East, and his forcible and aggressive attitude." Such a nature is not framed for domestic

joys. Lady Mary Wortley had far more feminine softness and amenability. If Wortley Montagu had been a marriageable man, he might have made a happy woman of Lady Mary. Lady Hester had no such possibility. One man she would have married if he had wanted her; it was well for him that he did not. She was a born potentate, and her consort would have had to acknowledge it, or suffer for his folly. Her happiest years were those in which she ruled as a sort of princess in the court of her uncle Pitt. His death left her at loose ends, homeless in England, and instinct drew her towards the East as the home of her domineering spirit. Her first disappointment of the heart, or of the sex instinct, had been followed by a deep mutual attachment with Sir John Moore. She spoke of him in later life as the man she was to have married; whatever the chances may have been, his death at Corunna put an end to them. The same year, she left England for Sicily, intending an ordinary journey; but she was never to see England again. In her suite (she was supposed to be poor, but she had a suite) went as private physician a young Dr. Meryon, just out of Oxford, who was to be her Boswell. Upon his letters and "Memoirs" our knowledge of Lady Hester's life out of England largely depends.

Biographers are complaisant beyond a single generation; your Johnsonian is likely to overlook Boswell's frailty as well as Johnson's own. Mr. Hamel nowhere seems to taste the peculiar savor of young Dr. Meryon's character: his habitual mental teeter between servility and bumptiousness, the daily endurance of insult, and semi-occasional flashes of resentment which his fancy magnifies into expressions of dignified independence. He has no humor and a vain pomp of words. But he has a single faculty which clears him, like Boswell, from the name of lickspittle, the faculty of honest worship. Suffering continually from the major tyranny and petty exactions of his mistress, he looks up to her as the greatest of women, compares her to Portia, Semiramis, Aspasia; declares that no one equals her in talent but Napoleon. His journey to Sicily lengthened itself to a seven years' exile, and he left her to drag a lengthening chain. Again and again, during the years that followed, he returned to the East at her summons, if necessary taking his wife and family (with whom Lady Hester would have nothing to do). They parted at last only when, a few months before her death, she began to wall up the approach to her little stronghold at Djoun, as a final act of defiance to the world.

A strange and picturesque career led up to that act. She had hardly left England when she met and attached to her party an English youth named Bruce, rich, handsome, and twenty. She was fourteen years older, but a liaison resulted which she herself refused either to deny or to mask as a marriage. After a few years they parted, as she had foreseen they must, and Lady Hester was left discredited at home, and, but for the faithful Meryon, alone abroad. But she had already shown extraordinary power over the Oriental mind, especially (in part by virtue of her fearlessness and her remarkable horsemanship) over the Arab tribesmen. Here, if social and domestic happiness were lost to her, she could still assert herself. Here she was hailed as a queen. There had been prophecies; and gradually the belief grew upon her that she was to be Queen of Jerusalem: all the East was to be in her hands, and all the West at her mercy. Studies in magic, isolation, unbridled authority in her small household domain, intensified her egotism. In later years she was insane as tyrants are, a pitiful, and it seems now, rather absurd, figure. England gossiped about her for a generation: it was said that she had secretly married an Arab chief, that she owned slaves, used Eastern methods of torture, and so on. She lived on credit for years and, when her creditors finally grew insistent, wrote the most insulting letters to Palmerston, and to Victoria herself. She became a laughing-stock. Yet even at this time one friend, Sir William Napier, rose in her defence:

> Her influence is vast with the Arab tribes, and with all those who have suffered from Ibrahim's army, or who sigh over the tottering condition of the Turkish Empire. She, more than any person, can secure to England the friendship of nations whose good-will must be vitally essential to our interests, when—and the time must soon come—we have to contend with Russia for the independence of the Porte. And if her disposition was not too noble, too magnanimous, to seek such revenge, English travellers in the East might bitterly rue the insults offered to Lady Hester Stanhope.

But Lady Hester was to be of little further account to herself or to England. A few months later she died behind her walls on Lebanon, alone but for a black servant, alone, embittered, and hopeless. So was snuffed out the last pale flicker of the ruthless, commanding spirit of old Diamond Pitt.

Transatlantic Historical Solidarity. By Charles Francis Adams. New York: Oxford University Press. $1.75.

The second course of American lectures at Oxford University was given by Mr. Adams. His predecessor, Mr. Rhodes, undertook to present in three lectures a general review of the War of Secession, necessarily in a very condensed form. Mr. Adams selected certain incidents of the time indicating how far certain of the main questions at issue touched the concerns of Europe. Rhodes considered the war as a civil or domestic quarrel; Adams views it first as the birth of a nationality, and secondly as involving matters in which Great Britain and France felt a vital interest. In either case the manner of treatment was influenced by a consciousness that the auditors knew little of the issues involved. Mr. Bryce had given friendly counsel on that point, and, thus warned, Mr. Adams sought to present essentials without an excess of detail. A difficulty in understanding the apparent conflict in authority between national and State governments may well be excused in Europe, because this conflict has in international matters been brought before them in an almost irreconcilable contradiction. The nation cannot be held responsible for outrages committed against foreigners by the citizens of a State, and the nation is powerless to coerce the States into rendering compensation. Explaining this matter of States' rights, the growth of nationality, the question of citizenship, their influence in bringing on the War of Secession, and how they have been in part determined by that conflict, Mr. Adams prepared the way for dealing with his selected incidents.

The more this diplomatic phase is studied, the greater the difficulty in accepting Seward's position. He undertook to prove that the war was a private concern, with which Europe had little to do; and that it was a great struggle for freedom, in which the sympathies and interests of Europe could be involved only in favor of the North. Such a position created confusion in the minds of European statesmen. The South could not be denied the rights of belligerents without treating them as pirates; the suppression of rebellion and maintenance of the Union need not be followed by the abolition of slavery. Europe viewed the conflict as a war of conquest rather than as one of emancipation. The attitude of the ruling class in England was well defined; in contrast Mr. Adams takes the Lancashire cotton crisis to illustrate the strength of the feeling among the workers for the North. A great cause of this feeling he finds in Mrs. Stowe's "Uncle Tom's Cabin." The wide influence of the book and the natural solidity of the English laborer carried him through the crisis in a manner worthy of all recognition. By cotton the South confidently expected to bring Europe to terms entirely favorable to its ambitions; the moral principle at stake held Lancashire firm, and at no time did a demand for recognizing the South or intervening in the struggle come from the workingman. On the issue of cotton the South staked its all—and lost.

This leads Mr. Adams to show how

narrowly the United States escaped intervention by Great Britain and France. Here the personal element becomes strong—the intentions of Palmerston, Russell, and Gladstone, the aims of the Emperor of the French, and the diplomatic passages which led to an actual agreement to intervene, when something interfered to postpone it. Such a dramatic situation Mr. Adams presents in language which will not bear condensation, and must be read to be appreciated. If a question arises on the importance given to a jealousy between Palmerston and Gladstone, the story is too well developed in detail to admit of any doubt. Another element of great importance must be considered. The influence of one man in the Cabinet against intervention at that particular time is indicated in Clarendon's "Memoirs," and will be found to balance in a large degree the feeling shown by Palmerston towards his younger and indiscreet colleague. The last lecture, devoted to Gen. Lee, a subject Mr. Adams has made his own, illustrates States' rights of old, allegiance to State and nation, and international fame.

The striking features of these lectures are: an original interpretation of the historical events of the war, its novel application to the neglected study of international policy, and the vigor of presentation. The breadth of view is noticeable. Gladstone is criticised for his Newcastle speech, but is highly praised for his later acknowledgment of error. The South committed rebellion, but the reconstruction period imposed adequate punishment. Such balanced judgments, heightened by the personal element and the methods of a trained investigator, offer good reading, a wholesome stimulus to the study of an important phase of the war, and a true contribution to its history.

Brest, Port Transatlantique Européen. By Claude Casimir-Perier. Pp. 383; 360. Paris: Hachette.

In August, 1911, the *Revue Politique et Parlementaire* contained an article on Brest by Mr. Casimir-Perier, and in the past year the Brest Chamber of Commerce published his brochure entitled "Comment on peut assurer à la France la Suprématie sur l'Atlantique." The results of his industrious study are now presented in definitive form.

Having in mind a notable speech at the Guildhall, we might appropriately entitle these volumes "Wake Up, France." Their principal purpose is the establishment of Brest as the chief port for the French transatlantic service, and their incidental service is to point out the weaknesses of the internal transportation systems of France and to show in detail how these may be materially improved.

The indictment of the French mercantile marine of to-day is dispassionate and thorough. Thus of the forty-eight navigation companies maintaining lines between Europe and the American hemisphere, only four are French. Of more than one thousand entries of steamships from Europe at New York in 1911 fewer than 150 were French. Between 1908 and 1911, of the cabin passengers carried westbound from Europe the percentage on French ships steadily decreased to less than 6 per cent. Furthermore, of the cabin passengers between New York and French ports, fewer than one-third travel by the French line.

As regards total tonnage employed by the principal companies in the transatlantic trade at the beginning of 1912, that of Germany was much more than twice that of France, while the English tonnage was nearly six times as great as the French. Of 221 steamers in the Atlantic trade, of 7,000 tons or more, only 13 carry the French flag. The largest French ship, the France, ranks only ninth in size among the ships in the transatlantic trade, and, further, was, when launched in 1911, a ship whose tonnage had been equalled ten years previously and exactly doubled by foreign companies at the time of its completion. The Imperator has since been launched, and five other ships, all more than twice the size of the France, are announced or are building. Nor is there any sign of progress in the construction of new ships, for the largest French liner under way, for the south Atlantic service, is of only 14,400 tons, and while the French line some time ago announced its decision to build a ship as large as any afloat, nothing has been done and nothing can be done effectively, as no French port on the Atlantic can accommodate a ship of such dimensions. Instead of progress there seems to have been retrogression. Nor does the French company in the south Atlantic give any more enviable service in its Bordeaux-Rio Janeiro line, on which it employs four "veritable veterans of the ocean."

The author discusses the availability of Brest from about every known or conceivable point of view, and follows up his arguments in favor of its unique superiority with a mass of statistics, maps, and diagrams. There are detailed maps of the proposed works at Brest, maps showing how all the changes in the railway systems are to be made, plans of the proposed Gare Maritime showing even the location of the escalators and moving sidewalks, and, indeed, a set of time-tables for eight through trains to be run, when the plan is consummated, from Brest to Berlin, Madrid, Vienna, Rome, etc.

Roughly, the plan is based on a saving of time by shortening the slower sea voyage while lengthening the distance of the land journey. The advantageous position of Brest, in relation to New York, Colon, and Rio Janeiro to the west, and the principal cities of Europe to the east, is elaborately developed by a series of graphic charts, by the details of distance, fare, etc. Other schedules show the relative advantage of Brest among twenty-two European ports as the proper routing point between Rio Janeiro, Para, La Guayra, Colon, Vera Cruz, New Orleans, and New York on the one hand, and seven principal Continental distributing points on the other hand.

The estimated cost of the "Brest-Transatlantic System" (including the Brest-Paris and Brest-Nantes lines, and the improvement of the Brittany canals) is stated as about 970,000,000 francs; of the two lines towards Switzerland, and Italy, about 195,000,000 francs; of the development in Paris, 56,000,000 francs; and of the other work on railways and canals, about 1,400,000,000 francs; making thus a total of some $525,000,000.

It is exceptional for an individual, apparently with no official or corporate position or backing, to produce the results of a study involving obviously such extensive and painstaking investigation, with such a mass of material, both in the text and in the accompanying charts and schedules. Mr. Casimir-Perier recognizes that on the technical side of his subject he is not an expert, but this production will itself compel the public to recognize him as a master of his subject.

The volumes should prove instructive to professors of economics, useful to shipping owners whose business is expanding, and suggestive to those engaged either in the study or in the business of transportation.

Notes

On December 18, 1913, the *Nation* printed a review of Theodore Winthrop's "The Canoe and the Saddle," edited and issued by John H. Williams, of Tacoma, Wash. It was there stated that the editor "has connected Winthrop's narrative with authentic history of the regions traversed, and has scattered through the book, in footnotes and in illustrations not formerly used in this connection, many interesting cross-references." It was further stated that "Mr. Williams's edition is often careless in matters of detail," and some of these errors were pointed out. In reply to this review Mr. Williams sent a letter for publication, in which he charged the reviewer with knowing "nothing of Winthrop's book," and argued the reputed errors at great length. This letter was sent to the reviewer with the request that he would give us such information as would enable us to determine in what

points, if any, our review was at fault. The reviewer's reply went into the discussion very minutely, and, to the best of the editor's judgment, seemed to show that the review was correct, or, at least, had not erred in any essential point. In order that the editor might arrive at the truth this letter of the reviewer was sent to Mr. Williams with the request that he would return it at his convenience. Mr. Williams has now seen fit to publish a pamphlet containing the original review, his reply, the reviewer's letter, and part of the correspondence ensuing, with vituperation of the editor and the publisher of the *Nation*. He closes his pamphlet with this quotation from a telegram of the publisher of the *Nation*, dated February 4: "Would be unprecedented in our history. * * * You have no authority or right to print our reviewer's letter, forwarded out of courtesy." The words of the telegram which are indicated by the three asterisks, and which Mr. Williams has omitted, are these: "Are quite ready to print statement one column in length summarizing errors of fact, but not discussing differences of opinion and judgment." Mr. Williams has not taken advantage of this offer, but opens his pamphlet with the assertion that he makes the documents public because the *Nation* refuses "to correct misstatements."

Doubleday, Page & Company are issuing: "The Panama Canal," by Frederic J. Haskin, and "The Carpenter and the Rich Man," by Bouck White.

John Lane Co. publishes this week: "Behind the Veil at the Russian Court," by Count Paul Vassili; "Auguries," by Laurence Binyon; "The Strong Heart," by A. R. Goring-Thomas; "The Iron Year," by Walter Bloem; "Simple Simon," by A. Neil Lyons; "When William Came," a story of London under the Hohenzollerns, by H. H. Munro, and "Somebody's Luggage," by J. F. Randall.

Charles Scribner's Sons announce the forthcoming publication of "Shallow Soil," by Knut Hamsun.

Mr. Edwin Björkman is writing for Henry Holt & Co. "A History of Nineteenth-Century Scandinavian Literature" from and including Ibsen, with a sketch of the earlier literature of the three countries.

It was announced a few weeks ago that "An Anglo-Manx Vocabulary," by the late A. W. Moore, Speaker of the House of Keys, with the assistance of Sophia Morrison and Edmund Goodwin, would be published if sufficient subscribers were willing to pay 15 shillings net for the book. Although the work is of undoubted interest to students of dialects generally and of the Manx language in particular, the promises hitherto received do not justify publication, which will have to be abandoned unless more support is assured. Prospectuses may be obtained from Mr. Humphrey Milford, Oxford University Press, through any bookseller.

The Century Co. will publish February 27 "Silent Sam and Other Stories," by Harvey J. O'Higgins, and Samuel Merwin's "Anthony the Absolute"; later a new story of Pennsylvania Dutch life, by Helen R. Martin, and "European Police Systems," by Raymond B. Fosdick, formerly Commissioner of Accounts of New York city. The last-named volume will be the third in the series of books published for the Bureau of Social Hygiene.

Miss Edith Williams, the founder of the Guilde Internationale, who, in the course of many years of residence in Paris, has done much to promote the study of English in France, has been appointed a Chevalier of the Legion of Honor.

A new edition of Prof. A. V. Dicey's "Lectures on the Relation between Law and Public Opinion in England during the Nineteenth Century" will be published shortly by Macmillan. Professor Dicey has added to the volume a comprehensive introduction dealing with the developments of his theme in the end of the nineteenth and the beginning of the twentieth centuries.

Macmillan's list of spring announcements includes, in fiction: "The Treasure," by Kathleen Norris; "Sandy," by S. R. Crockett; "The Reconnaissance," by Gordon Gardiner; "A Stepdaughter of the Prairies," by Margaret Lynn; "The Possessed," by Fyodor Dostoevsky; "Stories of Red Hanrahan," by Willian Butler Yeats; "The Valley of the Moon," by Jack London.—In public affairs: "The Philippines, Past and Present," by D. C. Worcester; "On Politics and History: A University Address," by Viscount Morley; "Property and Contract in Their Relations to the Distribution of Wealth," by Richard T. Ely; "Progressive Democracy," by Herbert Croly; "Violence and the Labor Movement," by Robert Hunter; "Progressivism and After," by William English Walling; "The Soul of America," by Stanton Coit; "Democracy and Race Friction," by John Moffatt Mecklin; "Why Is the Dollar Shrinking?" by Irving Fisher; "Work and Wealth: A Human Valuation," by J. A. Hobson; "Where and Why Public Ownership Has Failed," by Yves Guyot; "The American Doctrine of Judicial Supremacy," by Charles Grove Haines; "The Income Tax," by Edwin R. A. Seligman; "A Theory of Interest," by C. C. Hoag; "Training the Girl," by William A. McKeever; "The Industrial Training of the Boy," by W. A. McKeever; "The Progressive Movement: Its Origin and Its Principles," by Benjamin P. De Witt.

In religion, history, biography, and travel the Macmillans have a long list, including: "The Writings of John Quincy Adams," edited by Worthington C. Ford; "The Letters of Richard Henry Lee," Vol. II, collected and edited by James Curtis Ballagh; "The Establishment of State Government in California, 1846-1850," by Cardinal Goodwin; "Roman Imperialism," by Tenney Frank; "The Cambridge History of India," edited by Prof. E. J. Rapson, Vol. I, "Ancient India from the Earliest Historical Times to About the Beginning of the Christian Era"; "A History of the National Capital, from Its Foundation to the Adoption of the Organic Act," by W. B. Bryan.—Travel: "Egypt in Transition," by Sidney Low; "South America: Observations and Impressions," revised edition, by James Bryce; "Mexico: The Wonderland of the South," by W. E. Carson.—Religion: A new edition of "The Mediæval Mind," by Henry Osborn Taylor; "Can We Still Be Christians?" by Rudolf Eucken; "The Reformation in Germany," by Henry C. Vedder; "The Faith of Japan," by Tasuku Harada; "Modern Religious Movements in India," by J. N. Farquhar; "The Battles of Peace," "The Heresy of Cain," "Christianity Between Sundays," all by Dean George Hodges; "The Prophets of Israel," by Moses Buttenwieser.

The imported volumes on Macmillan's list include: "The Influence of the Gold Supply on Prices and Profits," by Sir David Barbour; "India Rubber Laboratory Practice," by W. A. Caspari; "The Theory of Relativity," by L. Silberstein; "Dictionary of Madame de Sévigné," by Edward FitzGerald, edited by May Eleanor Fitzgerald Kerrick; "History and Theory of Vitalism," by Hans Driesch; "From Far Lands: Poems of North and South," by "Gervais Gage" (J. Lawrence Rentoul); "Ownership and Taxation of Land," by Sir Thomas Whittaker; "Sophocles in English Verse," Part II, translated by Arthur S. Way; "The Gospels in the Light of Historical Criticism," by Dr. F. S. Chase, Bishop of Ely; "Orchestration," by Cecil Forsyth; "The History of Greek Philosophy," by Prof. John Burnet; "Spiritual Reformers in the Sixteenth and Seventeenth Centuries," by Prof. Rufus M. Jones; "Highways and Byways in Shakespeare's Country," by W. H. Hutton; "Roman Ideas of Deity," by W. Warde Fowler; "Nietzsche," by George Brandes.

Macmillan's college text-books, in various departments, embrace: "History of England," by Arthur Lyon Cross; "Contemporary American History, 1877-1913," by Charles A. Beard; "American Government and Politics," revised edition, by the same; "Readings in American Government and Politics," revised edition, by the same; "The Facts About Shakespeare," by William Allan Neilson; "Representative English Comedies," Vol. III, "The Later Contemporaries of Shakespeare, Fletcher, and Others," edited by Charles Mills Gayley; "English Drama of the Restoration and Eighteenth Century," by George Henry Nettleton; "Modern Short Stories," by Margaret Ashmun; "The Theory and Practice of Argumentation and Debate," by V. A. Ketcham; "Handbook of Exposition," by R. A. Jelliffe; "Introduction to the Critical Philosophy of Kant," by G. T. Whitney and P. H. Fogel; "Problems of Child Welfare," by George B. Mangold; "The Instinct of Workmanship," by Thorstein Veblen.

Macaulay's contributions to the *Edinburgh Review* began with the essay on Milton in 1825 and ended with the second essay on Chatham in 1844. In all, there were twenty-seven of them. They are now put forth in a new edition by the Oxford University Press in two volumes, the first volume containing the "literary" essays, of which there are thirteen, and the second being given over to the four-

teen "historical" essays. The basis of this distinction may be indicated by noting that among the former are included the essays on Milton, Machiavelli, Bacon, and Temple, and among the latter those on Hallam's "Constitutional History," Burleigh, and Warren Hastings. In each volume the essays are arranged in the order in which they were written, and a table of contents gives the year and month when each appeared. Although the volumes run to 700 and 800 pages respectively, they are invitingly light. Each of them is provided with an extensive index.

Any lover of the Johnson circle will be eager to acquire a new volume of letters from the mistress of Streatham, and to learn for himself whether they throw any light on that rather enigmatic lady. But it cannot be said that we get any really new view of her character in "The Intimate Letters of Hester Piozzi and Penelope Pennington, 1788-1821," which have been edited by Mr. Oswald G. Knapp and published by John Lane. Nor are they intrinsically interesting. Early in their friendship Mrs. Piozzi writes to her correspondent, then still Miss Weston: "Your letters, my lovely friend, are like the places they describe, cultivated, rich, and various: the prominent feature elegance, but always some sublimity in hope and prospect." Such was equally the sentiment of Miss Weston in regard to Mrs. Piozzi's epistolary graces, and no inconsiderable part of these pages is marked by this utterly false and pretentious obliquity of taste. A few of the ladies of that age—notably Fanny Burney in her earlier years—escaped this infatuation of emptiness, but on the whole their correspondence and lucubrations offer about as dreary reading as anything in the whole range of English literature. Mrs. Piozzi could be racy and idiomatic at times in her public writing; she saved her elegance mainly for her letters.

The letters in the volume now printed begin in 1788, not long after Mrs. Piozzi's second marriage, and continue almost to the day of her death. The recipient, Penelope Sophia Weston, was a friend of Mrs. Siddons and Anna Seward. In 1792 she married a William Pennington. There is a break in the correspondence of some fifteen years, when the writers quarrelled—Mrs. Piozzi, despite her generosity, was continually a victim of quarrels—over some unknown cause. We are out of Dr. Johnson's circle for the most part, but many readers will come to the book wishing to discover some reason for justifying the dictator in his rage over Mrs. Thrale's marriage, or perhaps, if he is Irish and a partisan of Goldsmith, seeking the reverse. He will find here direct support for neither side of the question. We really know Mrs. Piozzi no better after reading this book than we did before; but it cannot be said that we like her better. With all her good traits, she does not attract, and she leaves us distrustful. If ever the extraordinary diary now in the possession of Mr. A. M. Broadley is printed in full we may be able to speak of her character with more assurance.

Serge Persky's "Contemporary Russian Novelists" (Boston: Luce & Co.), translated from the French by Frederick Eisemann, may be commended with few reservations as a thoroughly workmanlike and useful guide to the more intensive study of Russian fiction during the last thirty years. Within the space of three hundred small pages the writer has produced almost an encyclopædia of his subject. It is, in fact, against certain excess of detail that one feels impelled to protest. In his desire to summarize virtually every short story produced by the prolific Russian band during more than a quarter of a century, it is inevitable that the author's narrative should at times become a bald statement of plot and incident, with little of the inner meaning of the original. Neither can one always subscribe to Mr. Persky's appraisement of his individual authors. He has his rather peculiar likes and dislikes. Nevertheless, to the reader interested in the facts of the latest Russian literature, the facts are there in abundance. The men to whom Mr. Persky devotes separate chapters are Tchekoff, Korolenko, Verressayeff, Gorky, Andreieff, Merezhkovsky, and Kuprin. The minor figures are sufficiently provided for in a supplementary chapter. Is it the author or the translator who persists in speaking of Gorky's "Thomas Gordeyeff," instead of using the true and better known form, "Foma Gordeyeff"?

Mr. C. Reginald Enock's annual volume is this time devoted to "The Republics of Central and South America, Their Resources, Industries, Sociology, and Future" (Scribner); it has sixteen illustrations as well as nine maps. There are many loose statements, but this is not surprising under the circumstances. In order to write a standard manual, it would have been necessary for the author to spend far more time on it than was at his disposal, even though he is a rapid writer, rarely uses the blue pencil, and has been lecturing and writing books about the west coast of both North and South America for six years. There is a vast amount of detail in this 520-page volume, but much of it makes very dry reading. Nor is the proportion just. Mr. Enock writes at great length of the two countries with which he is personally familiar, Mexico and Peru, and slights Brazil and Argentina, which should have had as much space certainly as Peru. Bolivia has twenty-four pages, while Uruguay has but ten, and Costa Rica not quite three! The maps are not bad, but the large map at the end of the book, which pretends to give the actual railways and those in course of construction, has been quite carelessly drawn. No mention is made of the new railways in the centre of Bolivia; it would appear that Colombia has only one short railway instead of half a dozen, and the connection between Montevideo and Rio de Janeiro is not marked, even as being "in construction," although it has been in use for more than a year. There is still a crying need for a good book on this subject, which shall combine a high standard of accuracy and a good sense of proportion with a readable style.

Costa Rica stands out so prominently among the countries on the Caribbean for being prosperous, well-governed, and stable, that it is a pleasure to welcome Dr. Ricardo Fernández Guardia's "History of the Discovery and Conquest of Costa Rica," which has been translated by Harry Weston Van Dyke (Crowell). Although of necessity largely a compilation, its sources are not available to the ordinary reader, and the public libraries will welcome this volume as filling a long-felt want. Sr. Fernández Guardia has done enough browsing in the archives of the Indies at Seville to be able to offer some unusually interesting details in this little-known story. An understanding of pre-Columbian civilization in Costa Rica is made easier by many excellent plates taken from photographs of gold ornaments, pottery, and stoneware, now in the National Museum of Costa Rica. Archæologically, Costa Rica leans toward Chiriquí and the south, rather than towards the Mayas and the north. The plates, particularly those of the stone altars and the Nicoya ware, will be a revelation to any who have not made a special point of studying the antiquities of this remarkable little republic. There is also a useful map.

The Philippines have witnessed in the last fifteen years the apotheosis of José Rizal. This is just. His life is a great episode in Filipino history, and a bright spot in the history of the struggle for human liberty. Rizal, as he exemplifies the possibilities of his race, stands out, not as a violent revolutionist—such types are common enough—but as a rich human figure, representing intellectual culture, moral uprightness, sane enthusiasm, and unflinching courage. This rich character is completely presented in the vivid pages of Austin Craig's "Lineage, Life and Labors of José Rizal, the Philippine Patriot" (World Book Co.). The narrative is in every sense commendable for its dignity and sobriety. There was a danger of exaggerating his literary value. Rizal is a competent writer. Is he a great novelist? If we view him on the background of world literature, there can be but one answer, and that in the negative. Professor Craig also has a charming study of Rizal. Noteworthy are the illustrations of Rizal's work as painter and sculptor. The author is not wholly free from the attempt to Americanize his hero. If there is identity between some American policies and Rizal's ideals, that proves simply that colonial governments sometimes have good sense. But the reason for stressing "Jagor's prophecy" with a chapter heading, a three-page translation of the "prophecy," and the conclusion, entirely undocumented, that Rizal "believed that America would some time come to the Philippines and wished to prepare his countrymen for the changed condition that would then have to be met," is not apparent. Rizal cited, to be sure, the prophecy in a study of Philippine conditions; he bought another book on the Presidents of the United States; he "studied" the United States from the car windows on crossing the American continent, and he learned, according to Mr.

Craig (p. 142), that the Rocky Mountains are picturesque, that the Indians in front of our cigar shops are "no two alike," that Niagara Falls are not superior in delicacy to the cascades of La Laguna, that the Hudson is not so very different from the Pasig. Out of this material it may be possible to construct a legend of Rizal's Americanism. But until Professor Craig gives us more data we are inclined to suspect that Rizal, in common with some other men of equal erudition, knew that the United States existed, that it had a republican form of government, that it had a growing Oriental trade. Not the least fascinating portion of this book is the republication of Rizal's "The Monkey and the Tortoise," with the original pen sketches. It is the Filipino version of the American "tar-baby" of Uncle Remus.

"The Credit System" (Macmillan), by W. G. Langworthy Taylor, is more inclusive than its title would indicate, for the subject has led the author into a critical survey of a large part of the field of theoretical economics. A discursive treatment of interest, profit, and rent supplements the theory of commercial and bank credit. The explanation of general crises, not a novel one, is based upon over-capitalization of the future. Anticipated profits are not realized and security values shrink. Then follows a diminution in bank loans, which in turn decreases purchasing power and pulls down prices. A chapter entitled Justice for Debtors disapproves of legislative proposals to prevent fluctuations in the general level of prices. It is maintained that changes in the price level, if not violent, are desirable. Moderate fluctuation is a stimulus to enterprise. Much importance is attached throughout to psychology in its relation to business. For example, it is insisted that the volume of bank loans and deposits is largely a function of business confidence. In his contention that the volume of deposits may over a period of years regulate the reserves instead of the reverse, the author parts company with accepted authority. Containing discussions and arguments that at times reach the realm of the imaginative and written in a stilted style that often lacks lucidity, the book will be read only by those interested in the theoretical phases of the problem here developed.

If, as has been said, the acquisition of a new language is the acquisition of a new sense, a key to all languages ought to be a boon of priceless value. Such a key is offered substantially by Mr. Harold Bayley in "The Lost Language of Symbolism: An Inquiry into the Origin of Certain Letters, Words, Names, Fairy-tales, Folklore, and Mythologies" (Lippincott). Mr. Bayley's method is simple: discarding philological investigation, he penetrates into the heart of his material by intuition. Thus, having discerned (Vol. I, p. 13 ff) that the syllable *ak* means "great," he finds it as a formative element in a host of words, among which are Hackpen (at Avebury), Carnac (Brittany), Karnak (Egypt), Anak (Deut. ix 2), Anakes (Castor and Pollux), Akbar (Mohammedan India), Balak (Moab), Shishak (Egypt), Hakon (the present King of Norway), archon, magnus, Anahuac (Mexico), anaconda, Pachachamac (Peru), Acrea (Juno), Merodach (Assyrian), Herakles, Achilles, oak, Zodiac. This sort of procedure, continued through two stout volumes, enables the author to traverse almost the whole field of symbolism and mythology, along with other material, producing results hitherto unknown to scholars. He has looked over many books, gathering from them names and stories that he easily weaves into his scheme, and any reader, working in a similar manner, may produce a similar encyclopædia, with an attractive and different system of interpretation. It would be pleasant to be able to say a word in commendation of so well-meaning and industrious a writer. But he adds nothing to our knowledge of the subjects he treats; and, what is more important, he encourages (in those who may be influenced by him) reliance on superficial and fanciful resemblances instead of careful geographical, historical, and philological research.

At a recent session of the Institut de France (Académie des Inscriptions et Belles-Lettres) Prof. Paul Violet, a member of the Institut, read before his colleagues a communication from Mr. Louis Cons, of Bryn Mawr College, concerning one of the most mysterious problems of literary history: The authorship of the fifth book of Rabelais's "Pantagruel." Critics and historians have always suspected that this work, published ten years after the death of Rabelais in 1554, was but partly from the master's pen, but during four centuries no one has known who wrote the continuation. Mr. Cons has demonstrated conclusively that the continuator is Jean Quentin or Quintin (1500-1561), one of the intimate friends of Rabelais and at the same time one of the most interesting—though one of the least known—figures of the sixteenth century. Jean Quentin, it appears from studies that Mr. Cons has made of his life and of his writings, was a man who, although a high official of the Church and outwardly a loyal Roman Catholic, had been secretly converted to the Reformation. In the continuation of the fifth book of Rabelais he took delight in expressing anonymously the most bold and revolutionary ideas concerning the Pope and the priesthood.

At the beginning of 1757, when Count d'Argenson, War Minister of Louis XV, was relegated by the King's orders to his country seat, the Château des Ormes, he took with him all his private papers. Hence it happens that most of the letters addressed to the count have been preserved by his descendants and are still intact in the archives of the family. His son, the Marquis de Voyer, was too near the events in which the father had participated to publish any of these letters, and his grandson, the Marquis d'Argenson, Deputy for the Department of the Lower Rhine, never seemed to care to make the correspondence public. But the Marquis René d'Argenson, his great grandson, did edit the "Mémoires du Marquis d'Argenson," this Marquis d'Argenson being the brother of the War Minister mentioned above. This was the Jannet edition, printed in 1858, which is less complete than the Rathery edition, which is often consulted and which, at the close of the memoirs proper, gives, at the end of Volumes IV and V, some letters addressed to Count d'Argenson, among them being a few rather interesting ones from Voltaire, St. Simon, and the Queen. M. de Nolhac, in his "Louis XV et Marie Leczinska," is one of the rare writers who appear to have discovered these, the only public signs of the archives of Les Ormes. The late Duke de Broglie is another author who was able to use, and this but sparingly, a few bundles of these letters, placed at his disposal by his cousin german, the Marquis René d'Argenson. This is particularly seen in the Duke's "Voltaire avant et après la Guerre de Sept Ans." The father of the present Count d'Argenson was interested in these documents and classified them, but published none, even refusing to permit them to be examined by others than the immediate members of his family.

Among these letters preserved at Les Armes there are seventeen from Prince Charles Edward, the Pretender, written at or in the neighborhood of Paris during the years 1747 and 1748, after the unsuccessful uprising of 1745-6. Most of these, though addressed to the Minister, were really intended for the King, and, in some instances, were indeed addressed to him and sent simply in care of the Minister. A sentence of one of these covering letters reads: "I beg you to hand the enclosed to his Majesty, and I may add that not a single person knows that I have written it or how I have sent it." Some of these communications are four pages in length, and are on large-size letter paper, in the clear bold hand of the Pretender, the ink being still almost as black as the day it was used. There are also two letters from the son of the deposed James II, father of Prince Charles Edward, written from Rome and addressed to the count. The first, two pages in length, dated April 15, 1743, three years before the disaster at Culloden, begs France to come to the support of his cause, and the second, shorter, dated August 11, 1745, the month following the Prince's landing in Scotland, implores his Majesty to aid the efforts of his son. In another batch of papers concerning the partisans of the Prince, is a list of Irishmen who can be counted upon, among whom appears the name of MacMahon, the progenitor of the future Marshal of France, and second President of the Third Republic. Prince Carini, the great grandson of the Marquis René d'Argenson, is now engaged in preparing these papers for the press. The Stuart letters will be given *in extenso*.

Dr. Samuel Mitchell Jefferson, professor of philosophy of Transylvania University, Lexington, Ky., since 1900, and one of the best-known educators in the South, died suddenly on Friday, at Lexington. Professor Jefferson was born in Kent County, Del., July 28, 1849, son of John Warren and Elizabeth Lynch Jefferson. He graduated from Indiana University with the class of 1874, and received the degree of A.M. from Bethany College, W. Va., in 1891, and that of LL.D. in 1896. He was a graduate stu-

dent of philosophy at Columbia in 1903. He was ordained to the ministry of Disciples of Christ in 1869. From 1893-96 he was professor of New Testament Greek and Biblical literature at Bethany College, and from 1896-1900 was dean of the Berkeley Bible Seminary, Cal.

Dr. Alcée Fortier, since 1880 professor of Romance languages at Tulane University, La., died at New Orleans on Saturday. Dr. Fortier was born in 1856 and educated at the University of Virginia and in Paris, where he studied phonetics under Professor Passy. He received the degree of Litt.D. at Washington and Lee in 1894 and at Laval University in 1898. He was a Chevalier of the Legion of Honor, and wrote both in French and in English. His works include: "Le Château de Chambord," "Gabriel d'Ennerich," "Bits of Louisiana Folklore," "Sept Grands Auteurs du XIXme siècle," "Histoire de la Littérature française," "Louisiana Studies," "Louisiana Folk Tales," "Voyage en Europe en 1895," "Précis de l'Histoire de France," "History of Louisiana," "History of Mexico."

Science

"Worry and Nervousness, or the Science of Self-Mastery," by William S. Sadler, M.D., is announced by McClurg.

"The Bodley Head Natural History," Vol. II, is promised this week by John Lane Company.

Macmillan's spring announcement of new books includes: "The Unconscious: The Fundamentals of Human Personality," by Morton Prince; "The Great Society: A Psychological Analysis," by Graham Wallas; "The Childhood of the Word," by Edward Clodd; "The Two New Sciences of Galileo," translated by Henry Crew and Alphonse de Salvio; "The Cambridge British Flora," by C. E. Moss; "The Standard Cyclopedia of Horticulture," new edition, edited by L. H. Bailey and collaborators; "Fruit Insects," by M. V. Slingerland and C. R. Crosby; "Farm Structures," by K. J. T. Ekblaw; "Farm Forestry," by E. G. Cheyney; "Textbook on Forage Crops," by Prof. C. V. Piper; "Small Grains," by M. A. Carleton; "Irrigation," by John A. Widtsoe; "Weeds," by Ada E. Georgia; "Field Crops," by George Livingston.—Medical: "Operations of Surgery," by W. H. A. Jacobson, new edition, revised by R. P. Rowlands and Philip Turner; "Diseases of the Arteries and Angina Pectoris," by Thomas Clifford Allbut; "Materia Medica for Nurses," by A. S. Blumgarten; "On Diseases of the Rectum and Anus," new edition, by Harrison Cripps; "Post-Mortem Technique and Practical Pathology," by James Miller; "Tuberculosis of Bones and Joints in Children," by John Fraser; "A Short Manual of Diseases of the Nervous System," by Edwin Bramwell; "Manual of Medical Jurisprudence, Toxicology, and Public Health," by W. G. Aitchison Robertson; "Black's Medical Dictionary," edited by John D. Comrie.

The fourth supplement of the Kew Index of Phanerogamous Plants embraces the period from the end of 1905 to the close of 1910. It comprises more than two hundred and fifty large quarto pages, each containing three columns in small type. This will give some idea both of the amount of activity in the systematic botany of flowering plants and the care with which the harvest has been gathered at Kew. Every botanist will be glad to see that the question of date of publication of species has received close attention, and that the perplexing matter of synonymy has been sedulously examined and the results recorded. Director Prain should receive hearty thanks for these modifications, which render the present supplement more valuable than its predecessors. The casual reader who takes up this Latin treatise for examination will ask himself why certain genera in the natural family of Rosaceæ, have been split up into a vast number of species, while others have been left undissected.

The death was recently announced in his eighty-fourth year of Dr. Albert Charles Günther, the head of the Zoological Department of the British Museum. Dr. Günther was born in Würtemberg, and studied at various universities in Germany, becoming connected with the British Museum in 1856. He founded and was the first editor of "The Record of Zoölogical Literature," and his publications, in addition to ten volumes of the Museum catalogues, include "Reptiles of British India," "Gigantic Land Tortoises," and several monographs on fishes.

William Whitman Bailey, the botanist and professor emeritus of the botanical department at Brown University since 1906, died on Friday. Professor Bailey was born at West Point, N. Y., in 1843, the son of Prof. Jacob Whitman and Maria Slaughter Bailey. He entered Brown University in 1860, and graduated in 1864. He received the degree of Ph.B. in 1873 and that of A.M. in 1893. In 1866 he was an assistant in chemistry at the Massachusetts Institute of Technology, and from 1867-68 he was the botanist of the United States Geological Survey of the fortieth parallel. During the latter year he became Deputy Secretary of the State of Rhode Island, and from 1869-71 he served as assistant librarian of the Providence Athenæum. In 1877 he became an instructor at Brown, and from 1881-1906 he served as professor of botany at the same university. Professor Bailey was a member of numerous learned societies, and was the author of a number of botanical works and of a volume of poems.

Dr. Robert Kennedy Duncan, director of the Mellon Institute of Industrial Research of the University of Pittsburgh, died in Pittsburgh on February 18, after an illness of several weeks, aged forty-five. He was born at Brantford, Ontario, Canada, November 1, 1868, and graduated from the University of Toronto in 1892. For some years after 1900 he studied abroad, he was professor of chemistry at Washington and Jefferson, and professor of industrial chemistry, 1906. In 1910 he was made director of industrial research, University of Kansas, and director of industrial research and professor of industrial chemistry at the University of Pittsburgh. Dr. Duncan was the author of "The New Knowledge," "The Chemistry of Commerce," "Some Chemical Problems of To-day," and was editor of the New Science series.

Drama

Karen Borneman; Lynggaard & Co. Two plays by Hjalmar Bergström. Translated from the Danish with an Introduction by Edwin Björkman. New York: Mitchell Kennerley.

These plays form a volume in the Modern Drama series of translations, edited by Mr. Björkman. This particular book presents to English readers for the first time some of the work of one of a considerable group of contemporary Danish dramatists whose productions are attracting favorable notice at home.

To those already familiar with modern Danish literature the volume offers significant evidence of the persistence of traditional literary tendencies. Since the time of Holberg Danish authors have, in general, been interested to interpret ideas current in contemporary European thought in terms of national life. Bergström's work is closely related to recent German and English drama and is distinctive only in those places where one can recognize Danish reactions upon familiar ideas. In the general reader, therefore, these plays will hardly arouse much interest. They will be to him but one word more upon hackneyed themes.

"Karen Borneman" (1907), a discussion of what Mr. Björkman calls "that ever-vexatious question of sexual morality," is clearly reminiscent of Sudermann's "Magda" ("Heimat"). It becomes, however, particularly as interpreted by Mr. Björkman in his introduction, representative of certain "modern" pleas for sexual freedom for woman. The implications of the piece seemed so vicious, indeed, to the Danish censor that its production was for a time forbidden at home.

Karen Borneman, a young woman known to the public as the translator of Zola and Maupassant, is the daughter of a professor of theology in Copenhagen. Her literary duties take her to Paris, where she acquires and eagerly applies advanced ideas of temporary mating. She then returns to Copenhagen and showers noble scorn upon all who object to her conduct. A "liberal" doctor receives her lofty contempt by refusing to marry her after he has discovered what her past has been. When the father learns, with a horror that is supposed to be fussy and old-fashioned, that she has been the mistress of a brutal young artist, he goes to the sculptor to insist that he marry his daugh-

ter. He is made to understand, as is Col. Schwartz in "Magda," that his daughter has been the mistress of more than one. Unlike the German officer, however, he does not then become the centre of a moving tragedy in which natural impulses of many sorts clash impressively. He merely goes home and calls his daughter a strumpet. This name she is old-fashioned enough to resent, so that she answers her father with passionate words of justification. She prophesies the coming of a day when women will demand their liberty as a right, meaning their freedom to enjoy fully in their own way "the most beautiful among the passions bestowed upon man."

Then feeling a movement of filial sorrow for her father, who is a pathetic figure, Mr. Björkman explains, "like all who strive to dam the onward sweep of human progress," she remarks sadly: "I suppose it is the law of life that nothing new can come into the world without pain." Whereupon she walks quietly out and the play ends—or, rather, stops, for both the author and his interpreter are a bit scornful about dramatic conclusions in the old sense. A modern author must show disinterested curiosity. To betray moral convictions is for him to be guilty of artistic impudence. His judgment must in no way encroach upon the judicial freedom of his observation, which, it is hinted, is a much higher artistic faculty. This play ends, then, merely with "the opening of new vistas." The vista in this case is meant to be a realization that Karen's demands for the indulgence of sexual caprice are a part "of the onward sweep of human progress."

Though "Lynggaard & Co." (1905) is a product of the same artistic notions, it is a more interesting play. Like Hauptmann's "Weavers" and Galsworthy's "Strife," it is concerned with industrial conflicts. The scene is laid in the home of the capitalist, about whom persons representing different attitudes towards labor are grouped—the idle dilettante, the scheming efficient manager, the improvident philanthropist, and the impractical Socialist. The author shows skilfully the various points of view without indicating his preference for any one. The play also merely closes, not, however, until the socialistic son of the capitalist has had time to speak of a procession of singing strikers as "the future going by."

Mr. Björkman is not always happy in rendering the idiom of familiar conversation into English. In these plays he tends to reduce all his dialogue to too low a colloquial level, and he still persists in using repeatedly one or two utterly un-English Teutonisms.

Macmillan's spring announcements include: "The Post Office," and "Chitra," by Rabindranath Tagore; "The Tragedy of Pompey," by John Masefield; "Romance," by Edward Sheldon.

We may expect this week Prof. Charles Mills Gayley's "Beaumont the Dramatist."

"Peer Gynt," translated in the original metre with an introduction by R. Ellis Roberts (Mitchell Kennerley), is only the second attempt to render Ibsen's great poem into English. The excellent version by William and Charles Archer, which means "Peer Gynt" to English readers, preserves the metres of the original without rhymes. Mr. Roberts has attempted a much more difficult task. He has tried, in addition to retaining Ibsen's metres, to adhere to the rhyme schemes of the original, even to representing "treble and double rhymes by treble and double rhymes in the translation." The great literary tact and skill demanded of one making this attempt only those fully acquainted with the original can appreciate. Despite the complications in which the translator has involved himself, he has done much of his work well. He has often shown himself ingenious and resourceful. The reader undoubtedly obtains a much better sense of the lyrical diversity and virtuosity of the Norwegian poem from this version than from the merely metrical translation of the Archers; and the metrical form of the original is often the very incarnation of the spirit of the work. In particular, the audacity of Peer's imaginative escapes from the realities that hurt him, such as he shows at the time of Ase's death, is better suggested than ever before. The rigor of the metrical restraints inevitably results in many infelicities. At times these intrude so closely as to vitiate the spirit of a passage; more often they are small blemishes. Certain lines of sheer doggerel it is hard to excuse, such as

> Forth from here I must try and get.

Although this translation will never supersede that of the Archers, scarcely indeed rival it in popular favor, it will be to the serious student of Ibsen an almost indispensable source of information.

"The Wolf of Gubbio" (Houghton Mifflin), by Josephine Preston Peabody, reads very much as though it might have been adapted from some ancient mystery play. The author calls it a comedy in three acts; and perhaps that is its nearest conventional designation—it is certainly not tragedy. But there is little that resembles comedy proper about its guileless plot; little in the nature of acts in its successive tableaux. One wonders that the author did not frankly call it a miracle play, a term that describes it admirably. Perhaps its likeness to this sort of drama is due, in part, to its legendary and popular origin; for it is drawn, as its title indicates, from the well-known story of St. Francis of Assisi and the wolf. But at all events it seems as though it belonged to some cycle like the Towneley plays, along with the pageant of Mak, the sheep-stealer, and the shepherds. To be sure, it differs from the latter in tone and atmosphere; it lacks the rude farcical mirth of the older play; it is more sophisticated and subtle; it is naïve rather than childlike. The symbolism of the wolf which longs to be a man—

> I . . . that was master of all the Pack
> To all, and sulk here—and look back!
> I, that could rend, and claw, and grip—
> Sucking my paws, for fellowship!
> Puzzling here in my ambuscade,
> What men are, when they're not afraid!
> Worrying—wondering, how 'twould feel
> To sit with men, and to share their meal;
> Talking words, with my bite and sup
> Out of a man-made, earthern cup. . . .

—this wolf which speaks with a human voice, which steals a child, and suffers from conscience until he restores it, is a notch beyond the artistic abilities of the rudimentary drama, as are the rapid transitions from the human to the brute and back again in the poor beast's breast during his conflict. But at the same time the setting—the Christmas spectacle, with the simple peasant woman whose child has been stolen playing the Madonna by the empty manger with the ox and the ass, and the gaping townsfolk offering their poor gifts—has a kind of primitive charm about it, which is enhanced, if anything, by the artlessness of the versification. On the whole, this is the day of the primitive; and if we are to return upon our tracks, it is better to seek our motives in the elemental cravings of the creature for the human, as Mrs. Marks does, than for the bestial, as so many poets are doing at present.

Henry Arthur Jones has completed a new play, of which the character is not yet divulged.

Marie Tempest is to assume the character of a spinster in Norreys Connell's new play, "Thank Your Ladyship." She will be supported by Graham Brown, Ben Webster, O. B. Clarence, and others. The production will be in the London Playhouse.

Richard Pryce's adaptation of Arnold Bennett's novel, "Helen of the High Hand," will be produced in the London Vaudeville by Norman McKinnel and Frederick Whelen.

Harold Brighouse is the author of a new comedy, "Garside's Career," with which Miss Horniman has opened her new season at the Gaiety, Manchester. "Garside's Career" deals largely with politics, in humorous fashion. The principal character is a Labor M.P., a political demagogue, played by Milton Rosmer. The piece has been warmly praised.

There are some refreshingly frank remarks about Mr. William Poel's "Hamlet" in the London papers. A writer in *Truth* says:

> I had thought it was impossible to find "Hamlet" tiresome, and I have a great appreciation of the untiring energy and devotion of Mr. Poel, but I am sorry that he should have given us "Hamlet" as he gave it at the Little Theatre. Perhaps he has been annoyed by people who declare that Shakespeare is rather a poet than a dramatist, but that is no reason for trying to nullify the poetry by getting it spoken in a trick fashion at a great pace with one word, not always the right one, heavily accented at the expense of others and the intelligibility and beauty of the wording. It is no excuse for presenting the Danish Prince as an ill-conditioned, ill-mannered boy dressing and undressing before the audience and behaving like a wild animal during the play scene—Hamlet, who is never a prince, or a philosopher, or a dreamer, but always a petulant weakling, with nothing to recommend him but

an astounding ability to reel off the lines at tremendous speed.

Music

Beethoven. By Vincent D'Indy. Boston: Boston Music Co.

A Critical Study of Beethoven's Nine Symphonies. By Hector Berlioz. New York: Charles Scribner's Sons.

Symphonies and Their Meaning. Third Series. By Philip H. Goepp. Philadelphia: J. B. Lippincott Co.

Sixty years ago a Russian Government official, W. von Lenz, aroused a great deal of discussion in the musical world by a work in two volumes entitled "Beethoven et ses trois styles." Vincent D'Indy, who is the second Frenchman to write a valuable book on that composer (the other being Romain Rolland), might have chosen the same title for his book, for it is concerned mainly with the discussion of Beethoven's three styles. It is, however, much shorter (only 127 pages) and less marred by blind enthusiasm, thus meriting its subtitle, "A Critical Biography." M. D'Indy believes that the career not only of Beethoven, but of every creative artist whose life attains normal duration, "divides into three periods, differing one from the other in the character of the compositions: imitation, transition, reflection." In the case of Beethoven there is also a period of ten years' preliminary study. Beginning at the age of twelve, he wrote forty-nine pieces before, at the age of twenty-three, he was sufficiently satisfied to issue a composition as his opus one. Our French author contrasts this with the antics of many young artists of our time who are "lost in admiration of their first picture, their first novel, or their first symphony, and cannot rest until these attempts are exhibited or printed or engraved." Eighty works were composed in the years 1793 to 1801, the "period of imitation"—among them the first symphony, which Haydn might have written.

In 1881 Beethoven "shook off all indolence of imitation," and began to write a series of masterworks interspersed with potboilers. This period, M. D'Indy declares, has even now been insufficiently studied. The change from his first style is due, he thinks, to the influence of the strong emotions aroused by his three loves—his love of women, of nature, of his country. These three loves "were what they had to be in so mighty a genius—of a vehemence mounting into passion, delirium." To these were added the heart-surges caused by the first symptoms of his deafness. The compositions written under the influence of these feelings are those which always have and always will make the deepest impression on the public. They are autobiographic; "commencing with 1801, one might reconstruct Beethoven's life almost step by step out of his works."

The last twelve years of his life are the period of his third style. Deaf, unmarried, harrowed by family and pecuniary troubles, he had come to lead "a purely introspective life, an almost monastic life, contemplative, intense, fruitful." Having fully mastered the art of composition, he turned to the traditional forms of the fugue, the suite, the choral with variations. As to the comparative value of the productions of this third period opinions still vary as much as they did nearly a century ago. Many professionals find in it their deepest satisfaction; but to music lovers in general they will always remain sealed books. M. D'Indy classes the ninth symphony (which belongs to this period but is not of it in contents) with the uninspired mass, as "two colossi." In other places he shows more critical discernment. "He was never a great writer of lieder," he admits; and in regard to the opera "Fidelio" he points out that it is "very far, very far, indeed, from having a value in the dramatic class equal to that, in the purely instrumental style, of the sonatas, the symphonies, and the quartets."

On this last point Hector Berlioz would not have agreed with Vincent D'Indy. The little volume of translations of his chapters on Beethoven's symphonies includes a glowing tribute to "Fidelio." There are also a few pages on his trios and other sonatas, besides an essay on music. The analyses of the symphonies are brief, readable, and helpful; one must agree with the translator, Edwin Evans, that they depict their leading features more vividly than any other treatise on the same subject. What makes this the more remarkable is that Beethoven's fame in France was in its infancy when these chapters were written. On one occasion the allegretto of the seventh symphony was inserted in the second to pass off the remainder! Of particular interest is the analysis of the "Pastoral" symphony, with which Berlioz, the protagonist of programme music, naturally sympathized with all his heart. His remarks on the storm culminate in these words:

> Then the trombones burst forth, the thunder of the kettledrums becomes redoubled in violence, it is no longer merely rain and wind, but an awful cataclysm, the universal deluge—the end of the world. This literally produces giddiness; and many people, when they hear this storm, can scarcely tell whether their emotion is one of pleasure or of pain.

Philip H. Goepp, the distinguished Philadelphia critic, one of several prominent musical authors who studied under Professor Paine at Harvard, has also made a keen and helpful analysis of Beethoven's nine symphonies. It takes up 160 pages of the second series of his "Symphonies and their Meaning." The third series includes the symphonic poems of Liszt, Saint-Saëns, Wolf, Loeffler, and Richard Strauss; but most of its pages are devoted to the symphonies of Berlioz, Liszt, Franck, Tchaikovsky, the neo-Russians, Sibelius, Bruckner, Mahler, Sgambati, Martucci, Elgar, Hadley, Strube, and Chadwick. It is worthy of note that the first of Mr. Goepp's volumes is already in its eighth edition; which attests the present interest in symphonic music as well as this author's success in providing information regarding them in a palatable form. As annotator of the programme book of the Philadelphia Orchestra he has had abundant opportunity to get his notes at first hand. Mr. Goepp regards Wagner with undisguised aversion, which is a curiosity in these days; but as Wagner wrote no symphony worth considering, he has his say about him only by the way. One wickedly suspects that his high praise of Liszt as the master-spirit among the composers of his time is based less on love of Liszt than on hatred of Wagner. It is needless to say that he is a Brahmsite, heart and soul. Yet he has many pleasant things to say about composers whom Brahms regarded, or would have regarded had he lived longer, with feelings of dismay. Mr. Goepp believes in the future of the symphony, while acknowledging that it now has one of its fallow periods. His reasoning on page 40, where he tries to persuade the reader that the symphonic poem is less coherent than the symphony (which in truth is a mere mosaic) is quaintly illogical.

Macmillans announce the publication of "How to Sing," by Lilli Lehmann.

The next book to appear in the Walter-Krause German series (Scribner) will be a book of German songs. This will contain sixty-one of the best-known and most popular German songs with simple four-part arrangement.

Maeterlinck's most popular play, "Monna Vanna," was turned by him into a libretto and, by his own desire, set to music by Henri Février. The opera was produced in Paris on January 13, 1909, and met with sufficient success to tempt three German managers (in Berlin, Schwerin, and Münster) to stage it. In this country it was first produced by the Boston Opera Company and subsequently by the Chicago Company, first at home and then in Philadelphia and New York, where it was heard for the first (and probably last) time last week, at the Metropolitan. The play was made familiar throughout the country by the performances of Bertha Kalisch, who impersonated the part of Monna Vanna, the commander's wife who, to save the Pisans from starvation, goes to the tent of the general of the army besieging them, clad,

as desired, only in a cloak, and returns unscathed. Subsequently she elopes with the general, who had respected her because she could no longer love the husband who doubted her story of what had happened. Thus condensed the story seems equally fantastic and foolish, but the play has many lines of genuine poetic worth. The same cannot be said of the music, which for the most part is so commonplace that it is not worth a moment's discussion. The composer has shown some skill in adapting the spirit of the music to the dramatic development, but he has nothing to say that is worth while. Scenically the staging of the opera was splendid, Mr. Urban's stage pictures, painted for Boston, being as poetic in their way as Maeterlinck's best lines.

The average term of life of musicians is above sixty years, according to Herr Challier, of Giessen, Germany. He has collected facts about the ages of no fewer than 4,113 musicians whose deaths have been recorded since 1870. Of these, however, he was able to discover the exact age of only 3,737. For these the average age at death was 61.11 years. The list includes artists of as widely varying ages as the prodigy Henry Kartern, who died when he was only nine years old, and the patriarch Manuel Garcia, who lived to be almost one hundred and two. Kartern was a violinist; Garcia, the brother of Malibran, was a singer. Some of the other prodigies died scarcely older than Kartern, such as the young Scottish girl Lizzie Kennedy, who died with her sister in the theatre fire at Nice many years ago. Elise Farnese, a well-known prima donna in her day, reached the record of one hundred and five years, while Herr Hilf, a popular German conductor, also surpassed the age of Garcia, dying at one hundred and three. The causes of death have not been so thoroughly established as these ages, but Herr Challier gives only seven cases as due to theatre fires and other catastrophes. Far more died from natural causes while singing, eleven on the concert platform and the same number on the operatic stage. Suicide accounted for 67 deaths and murder for 5, while 19 died virtually of starvation, and 30 died insane.

According to Charles Wakefield Cadman, "rhythm rather than melody is the basis of Indian music." In a recent Western lecture Mr. Cadman illustrated the Indian's cleverness in producing several rhythms simultaneously, as shown by the use of drums, rattles, and many curious devices.

Art

THE MORGAN LOAN EXHIBITION.

After months of preliminary labor the collections of the late J. P. Morgan have been put on exhibition in the new north wing of the Metropolitan Museum. The collection being perplexingly various and large, ranging from the seventh century B. C. to the early nineteenth, the greatest pains have been taken to make the arrangement attractive and clear. The new, top-lighted galleries on three sides of an inner corridor have been individually hung with rather pale velours. This unobtrusive background is sufficiently rich and brings into harmony the tapestries, paintings, bronzes, enamels, and potteries which adorn nearly every hall. A separate small room reproduces the famous Graesse interior, with Fragonard's paintings in their original setting. The ordonnance is strictly chronological, but in every hall there is free admission of all objects of the period. The effect is of a glorified Hoentschel collection.

The pictures, which had already been separately shown, are distributed by periods as incidental decorations. One misses certain great rarities which Mr. Morgan is known to have possessed. His Duccio Crucifixion would have been an invaluable note in the Romanesque rooms. Ghirlandaio's lovely Giovanna degli Albizzi would have glorified the room of Renaissance bronzes. The three ranges of the central corridor contain suites of tapestry, porcelains, figurines of the eighteenth century, watches, and complete garnitures of porcelain from the rarest European and Chinese kilns. The orderly arrangement of all this material makes a visit as instructive as delightful. The staff of the Museum has acquitted itself with high credit in a most difficult task.

Any survey of these vast collections must confine itself to very general considerations. At the outset, the effect is wholly impersonal. The quality of everything is amazingly high, but there is nothing adventurous in the selection. We have to do with those objects which, by common consent of international dealers and their clients, are brevetted as of highest rarity. Æsthetic, historic, and individual standards have been largely in abeyance. We have to do, not with a collection, but with an impressive assemblage of fine objects, of which large collections are merely ingredients. It is by a triumph of tactful arrangement that the exhibition escapes what, to a sensitive amateur, would be a somewhat tedious effect of standardization—on a very high level, to be sure, but all the same a standardization alien to the finest processes of artistic appreciation.

I.

The dealers and patrons who have effected this useful and imposing, if not wholly satisfying, work of standardization make a distinction which may be very useful to the visitor. They speak of objects of art and of curiosity. The distinction is fundamental, if a little blurred at the edges. The Morgan collections contain objects of curiosity in a ratio of about five to one to objects of art. The case may be put more strikingly in simple terms of chronology. Draw a line about the year 1550. Topographically, it would fall at the partition between galleries 13 and 14. The three earlier galleries contain mostly objects of art, objects of curiosity being merely sporadic; the later galleries contain mostly objects of curiosity, objects of art becoming exceptional. In another aspect our prime division corresponds to the Classic, Byzantine, Romanesque, Gothic, and Renaissance periods on one hand, and to the Baroque, Rococo, and Empire periods on the other.

Why was the characteristic product of the earlier periods objects of art, of the later objects of curiosity? To answer such a question would require the writing of an amount of history that would bore a casual reader, while superfluous to an instructed one. In a word, the objects of art correspond to and express the deeper emotions of entire peoples; the objects of curiosity correspond to and express the tastes, caprices, and varieties of small fashionable classes. In a Greek bronze is the accent of convinced and joyous humanism; in a Gothic enamel or ivory carving is the humility and fervor of Christian faith, the vision of a visible word built on invisible but firm foundations. In the Renaissance a prouder and more self-conscious humanism has come back to earth. The emotion of reverence for antiquity is profound and widespread. Then a change. Art appeals only to a class. The amateur and savant appear, and not far behind the dealer and auctioneer. The artist is no longer the spokesman of the deeper instruction of a people, but the chartered amuser of *petits maîtres*. His response to the demand is to be sprightly, delicate, ingenious. The enameller no longer makes the pyxis for the body of our Lord or the reliquary for a saint in terms of bold symbolism, but he fuses his enamel exquisitely in pastoral designs on a *carnet de danse*, a snuff-box, a watch. Oddly enough, the inert enamel itself has lost all seriousness in the process. In Gothic and earlier times it had strength and splendor and carrying power; in Rococo times it has the bloom and soft sparkle of an aquarelle, and may best be enjoyed through a monocle. It may be profitable to trace this process somewhat in detail through the enamels, which are incomparably the rarest and completest collection of the several that make up this memorable exhibition.

II.

That the art of fusing colored enamels on metal first came into Europe from barbaric Scythia is rather a reasonable conjecture than an historic certainty. The discovery that mineral colors could be run on metal with fusible silicates was likely to occur wherever the art of glass-making was carried far. Touches of enamel are not uncommon

in Greek jewelry, but the first general and effective use of it seems to have been made under Scythian teaching by the Gothic tribes in their bosses and brooches. The Morgan collection begins with the Byzantine medallions—from the famous Svenogorodskoi collection. These are impressive busts of saints. The method is *cloisonné*, of a fineness rivalling that of the Far East. The figures are painted in enamel on a gold background. Much bolder are the mediæval enamels, made with a counter-sunk bed for the enamels. The background here is worked away, leaving thin lines as guiding contours. The shallow depressions are filled with brilliant enamel, but much gilded metal is left in sight. The figures are usually reserved in the embossed or engraved metal. All the finest enamels are made by this method of working out the metal plate, *champlevé*, and at all good periods the enamel assumes a humble, incidental rôle.

From Georges Hoentschel Mr. Morgan bought scores of pieces of this splendid Romanesque and Gothic *champlevé* enamel. As compared with the Byzantine work, which more nearly approximates painting, it is subsidiary and decorative. There are the most splendid medaliions with figures or grotesque beasts or heads, also scrolls dug out of the metal and filled with glorious reds and blues and greens. Playing upon the gamut of blue was a favorite device. Now and then in a crucifix an emaciated Christ of chalky whiteness is set amid carbuncle and sapphire radiances at the extremities of the cross. Reliquary shrines, originally containing precious bones and rags fetched from Palestine, or fought for between convent and convent, or chaffered for in Rome, are put together from all sorts of costly material and with an impeccable decorative sense. Some twenty complete reliquaries are in the exhibition, and three times as many fragments of dismembered shrines. Often the metal-worker set within or on the gilded copper bossy cabochon jewels, classic engraved gems, cut crystals, bits of carved ivory, slabs of porphyry, the enamel serving as the lower harmonizing diapason of the richly composite color scheme. I can only particularize the great tabernacle, with its doors and back adorned by Passion scenes in gallery 12, and in the same room, case N, where may be seen a great variety of forms and materials, all magnificent examples of sensitive craftsmanship and of wide design. Limoges and the lower Rhine district were the centres for Romanesque and Gothic enamels, but the art was widely understood and practiced. Italy had vigorous schools, Russia always, and even Spain. The objects were rarely merely for display, but for high devotional use. The craft remained ancillary to sculpture in metal; the art was humbly dedicated to the service of the Church, and made no pretensions on its own account. It is almost as if objects of such material glow and splendor were made for the eye of God. Study the wealth of color and chasing bestowed on the grotesques, apparently from the Bestiary, which are set in a leather-covered box in room 12.

With the fifteenth century comes a change. The art becomes detached and self-conscious. The enamel-worker emulates the painter, fusing his translucent pigments over a smooth plate of metal, without raised metal lines. The emancipation from sculpture is complete, with corresponding loss and gain. Nardon Penicaud's great triptych of the Passion, signed late in the fifteenth century, best illustrates this completely pictorial phase of the art. There are two exhibition cases of work by him or in his manner, and one case of Italian enamels, technically quite similar, though very different in design. Penicaud drew his designs from the masculine and realistic models of the new Burgundian painters. His part was to endue these familiar religious patterns with the utmost material splendor. He fully succeeded. Certain deep refulgencies of cobalt, ruby, and emerald are peculiar to his palette. The enamel is smoother and more translucent than in earlier Gothic enamels, and lined and powdered with gold. Technically it is the consummate expression of an art about to decline. Indeed, to achieve the pictorial completeness of a fine Penicaud there has been serious sacrifice. Only in the material is the art *sui generis*. The old decorative variety has been lost. A fifteenth-century enamel painting, despite its intrinsic gorgeousness, has a rustic look. It seems some kind of a glittering debasement of a painting by Van der Goes, Rogier de la Pasture, or Hans Memling. Still, it remains emphatically an object both of utility and of art.

To the position of objects of curiosity the painted enamels of the sixteenth century sunk very rapidly. Limousin, Courtois, Zip—these are sounding names in the modern auction room. Yet the work has little to recommend it except a futile excellence of manufacture. Before the advance of the Italian and Roman ideals the color of enamel fades. Its hues become tiresomely discreet, while the designs become vapid transcripts from the mythological phase of the Italian Renaissance. The whole thing is the make-believe of a superficially cultured class. Toilet-boxes and drinking-cups are now more in order than reliquaries. The art was still to revive on a lower plane by frankly accepting its sunken condition. It shrunk to miniature proportions fitted to display the meticulous character of the workmanship. In the playful and exquisite snuff-boxes of Battersea and Paris the enamel as object of curiosity reached its acme. The art that had sufficed to adorn a shrine or monumental altar-back now glorified the lid of a snuff-box or the cover of a watch. The transition from the object of art to the object of curiosity was exemplary and complete.

III.

In the carved ivories the same process may be traced even more broadly, if with more gaps in the story. Next to the enamels this is the most important mediæval collection. The few scraps of classical date are trivial enough, whether as design or workmanship, but archæologically very interesting. They include a remarkable couch with Cupid supports, in hall 11, which has been somewhat arbitrarily reconstructed as a throne. There may be some fifty Byzantine pieces, complete casket and fragments, devotional and consular diptychs, dating from the sixth to the thirteenth century. Nothing here is quite of the highest quality, but the display is comprehensive and instructive, the design usually stately, though without vigor. The six marvellous silver salvers, with the story of David in beaten and carved silver, Byzantine, sixth century A. D., may be regarded as the prelude to the Christian ivories. In the Romanesque work of the eleventh to the thirteenth century, which is abundantly represented, as in the few earlier pieces of Carolingian type, there are greater power and less reserve. In Gothic times, from the thirteenth through the fifteenth century, we have an ascending scale of skill and vivacity ending in a rather small but still charming dexterity. At the beginning of this period are splendid ivory tusk horns, with scroll and medallion ornaments, such olifants as dying Roland cracked with the last blast at Roncevaux. The very finest ivories are those produced after the year 1300 in France. A number of exquisite examples of this workmanship are in case C, in hall 12. The combination of pathos with monumental impressiveness in a little fragment from the foot of a crucifixion is extraordinary. So is the monumental suavity of one or two standing virgins, their forms swayed in a long curve under the dear burden of the Divine Child. The same case contains a piece or two of those crisp skeletonized tablets which mark the approach to the fifteenth century and the decline of the art. Nothing is more inspiriting than the deeply cut spandrel, from a throne, in which we see an armored knight with lance at rest plunging up hill against invisible terrified Moors. The work is Spanish, about 1300, and we are asked to see in this stalwart *conquistador* Jaime I, of Aragon, ob. 1276. The piece is in hall 11.

Barrington Public Library

A quick survey of the numerous fourteenth and fifteenth-century ivories, mostly triptychs and diptychs of the Paris school, brings the reluctant conviction that the art was rapidly settling into a perfunctory cleverness and vivacity. Hardly as much may be said for two big altar-backs in carved bone, produced about the year 1400, from the Venetian shop of the Embriachi. If still fairly decorative, it is a rather poor kind of manufacture, in the full sense, neither object of art nor of curiosity. The art ends with a certain blatancy in the insipid Venuses and blowsy Bacchantes which adorned the German flagons of the sixteenth and seventeenth centuries. The contemporary boxwood sculpture, which is fairly represented, usually has superior sincerity and idiom. Beyond that there was nothing much real except umbrella handles, though for three centuries past the most flagrant objects of curiosity have been freely imitated in ivory for the benefit of the incautious and lavish amateur. That such secondary pieces are not to be found in the Morgan collection need not be remarked. Everything is genuine, and of a certain importance. As an historical series, the ivories are most instructive, but even in the finest Gothic period first-class pieces are rare. A glance at the small stone and wood sculpture tastefully distributed through hall 12 will, as compared with all but a handful of the most beautiful ivories, demonstrate a generally superior quality in the larger work. Ivory-cutting only rarely escaped the limitations of a derivative and secondary art.

IV.

With the small bronzes, largely from the Pfungst collection, which are charmingly displayed in hall 13, we are on the debatable ground between the object of art and of curiosity. Nothing in the whole mediæval series is more austerely fine than the Resurrection which Vecchietta of Siena signed in 1472. Despite the date, it is mediæval. Three splendid pieces, a Paris, a Hercules, and a Marsyas, ascribed to Antonio Pollaiuolo, show a powerful archaism struggling for a fuller beauty. That is a precious moment in any art. The same show case, A, contains bronzes by or near Bertoldo and Verrocchio, with more florid pieces as late as Giovanni da Bologna. A hurried visitor might well concentrate on this case and on the Vecchietta. There are four cases of tensely modelled Paduan bronzes—figures, animals, grotesques, statuettes, bells, and inkstands. In addition there are two cases of similar Venetian bronzes, a few late Florentine bronzes, and a case of northern examples, including fine pieces by Peter and Hans Vischer. Though displayed to utmost advantage, these little bronzes invariably lose when assembled in numbers. Unlike their Greek and Roman prototypes, they do not live well together. The accent is too piquant and individual, too little traditional. The later sixteenth-century pieces tend to a deft copyism, and a slippery sort of elegance. Perhaps the vogue of these pieces, with their prices, is exaggerated. In the next century a Bernini seems more fine, and later a Clodion in every way more real and powerful. I am convinced that a rigorous scrutiny of the Renaissance bronzes would relegate a good two-thirds of them to the category of objects of curiosity. With them we have reached the artistic great divide and may cast a glance backward and forward.

On the very dividing line is the collection of Italian majolica—fine standard examples of the wares of Urbino, Pesaro, Gubbio, Deruta, Faenza, and Caffaggiolo, from the famous Oppenheim collection. Notable here are two cases of lustred Gubbio, including several signed examples of the famous Maestro Giorgio. Of the primitive potteries which, decoratively simple, have a larger and finer accent, there is no example. But these are of recent discovery. It is as if the collector had declined all ceramic issues until authoritatively underwritten. Of the excessively rare Henri II ware, Oiron, there are some ten examples.

Behind our imaginary watershed lie, among other rare objects, a full dozen naïve Burgundian tapestries, naïve in design, splendid in color; before, twice as many weavings of the seventeenth and eighteenth centuries, sophisticated in design, less splendid in color. Everything that is associated with the *école galante* is represented amply and at its best. The *clou* is, of course, the painted decorations, with incidental woodwork, which Fragonard made for the villa at Graesse. In these boscages the flirtations of shepherdesses and their swains graze the edge of passion. The whole effect is gay and ardent. An opaline panel of Cupids tumbling in the sky shows that, had he chosen and opportunity served, Fragonard might have met the great Tiepolo on his own ground. The whole decoration is a charming souvenir of an age that had sensualized its spirit, while in a manner spiritualizing its sensuality. Technically, the scale seems wrong. Indeed, they may have been intended originally for a larger room in Mme. du Barry's country house. The panels are a little too big and insistent; they belong in a larger room, with restful wall spaces. One is forced into indiscreet and almost embarrassing proximity to these eager wooers. One almost fears eventualities that are not for the critical eye.

There is only a word left for what is, from a museum point of view, the most complete and important of all the collections—that of portrait miniatures. There is a case for Holbein and his school, with Henry VIII, Edward VI, and Sir Thomas More. Through Isaac Oliver's eyes we may see the perfumed but sturdy courtiers and ladies in waiting for good Queen Bess. Nicholas Hilliard will show us the diminishing but still splendid days of James and the first Charles. Then there is a magnificent case of Cooper's, with such juxtapositions as Cromwell and Charles II—sober masculine work. One is tempted to regard him as the only British portrait painter who can be set beside Hogarth with impunity. Almost equally interesting is the case devoted to the Clouets and their successors. The installation is admirable—curtained glass cases, so that there is no spottiness, and one may concentrate upon the group that particularly interests him. As the collection reaches the time of Cosway and Nattier and Plimer and Isabey, it only increases in completeness and variety. I abridge the enumeration because now we have only in a limited sense to do with objects of art. These rosy powdered charmers, eternally smiling, often ogling you from their jewelled frames, were in their hour the objects of a tender, perhaps ardent, curiosity, and so are their miniatures today. In either case the deeper issues of the heart are not in question.

From the miniatures one may pass out through a miniature porcelain population of shepherdesses and their lads in the corridor. All the famous kilns of France, Germany, Austria, and England are represented most fully. The brittle and slightly perverse charm of the work is highly indicative. It is the last word of elegance in a world become wholly dilettante. Such things were made to break, though one shudders at such a destiny, and an imaginative person may see the taurine form of Marquis Mirabeau, a repentant *petit maître* himself, ominously approaching the china shop.

I think no one can close the survey of these collections without deep gratitude to the memory of Mr. Morgan. Personally, I find something very pathetic in the fact that he did not live to see his own treasures decorously brought to light. Many of these lovely objects he literally never saw. They lay *perdus* in storage, or, at best, were clumsily displayed in foreign museums. The pleasure and instruction which is now, through his generosity, offered to the humblest citizen, was largely denied to himself. This is new ground for sympathy, and as well for admiration of that prophetic energy and insight which foresaw in broad outline what the skilled staff of the Metropolitan Museum now exhibits in perspicuous detail. No one would have rejoiced more heartily than Mr. Morgan himself in this demonstration of the value that

taste and intelligence add to mere things, however intrinsically rare and beautiful. F. J. M., Jr.

Macmillan's list of spring announcements includes: "The Principles of Greek Art," by Percy Gardner, and "Bernini and Other Studies in the History of Art," by Richard Norton.

After extensive repairs and alterations, the Fogg Art Museum of Harvard University is again opened to the public. Of the considerable internal changes the most important is the raising of the roof of the picture gallery. This has greatly improved both the architectural effect and the lighting. To celebrate the reopening two notable loan exhibitions—of Persian, Indian, and Saracen miniatures, and of Japanese color prints—have been arranged.

The recent death of Baron Giovanni Barracco makes the Commune of Rome the owner of the famous Barracco Museum in the Corso Vittorio Emanuele. Baron Barracco was possessed of a considerable fortune, and he devoted much of his time and money to the formation of this collection of Greek and Roman sculpture, which he willed to the Commune of Rome some time ago.

This season's excavations in Egypt on the site of Meroë, carried on by Professor Garstang, of Liverpool University, are yielding interesting results. Recent discoveries include a sacred well and adjacent observatory, in which there is evidence of instruments for observing transits and for determining latitude and other astronomical data. Two monumental inscriptions, the longest Meroitic texts extant, have just been brought to light, recording victories and containing references to the city of Rome. Explorations are proceeding also outside the city walls, where hundreds of laborers are now clearing buildings and ruins. The work is receiving every assistance from the Sudan Government.

Professor Dall' Osso, of Ancona, has made an important archæological discovery, in the shape of a Stone Age burial place in the Valle Vibrata, in the province of Abruzzi. The bodies are not buried, but are all laid in small cabins containing from two to eight each, and are ranged on either side of the huts on low platforms sloping towards the centre. With a single exception, the bodies all rest on one side, with the knees drawn up. In one of the cabins, almost in the centre of the group, there was found, instead of a corpse, a large circular hearth, around which it is assumed—from the quantities of bones of animals and fragments of broken earthenware pots about it—the funeral banquets were held. The objects found with the bodies show a remarkable degree of civilization for so early a period.

While Government employees were carrying on excavation work at Pergla, in the island of Gozo, an interesting discovery of a tomb containing human remains belonging to the neolithic age was made. The neighborhood was explored some time ago by Dr. Ashby, of the English Archæological School of Rome. The tomb is contemporary with the world-famed Hypogæum of Hal Saflieni, which was discovered at Valetta a few years ago.

Finance

STOCK EXCHANGE AND GENERAL BUSINESS.

Having seen the stock market go up with a sudden leap, and the money market go down with a similar abrupt decisiveness, Wall Street watched confidently for a similarly complete and instantaneous reversal of its position by business at large. When that event failed to come about—the trend of business affairs remaining quiet—the conclusion was suggested that the movement in the stock and money markets must have been a mere flash in the pan. This is a familiar incident in the markets; and the odd part of it is that precisely this sequel of events—including the community's adoption of a resolution, so to speak, denouncing the stock market for its misleading forecast—occurs with sufficient frequency to fix a general precedent, yet that it always astonishes Wall Street when it occurs again. Even such notable instances as that which preceded the business revival of 1905 are forgotten—an occasion when the Stock Exchange progressively "discounted" better times for four successive months, without evoking, during that period, the slightest convincing response from general trade.

Precedent of our industrial history would certainly give no ground for uneasiness, merely because of the fact that a month has elapsed since the important change for the better in our financial markets, and that no equally important change for the better has occurred in business. The main consideration, now as on all previous occasions of the sort, is the question how far the underlying influences, to which the financial markets made their response in January, may be relied on, in due course, to affect the general movement of prosperity. The answer to this question ought to be reasonably simple. Money markets fell throughout the world last month, and stock markets rose, for the obvious reason that the embargo on free supplies of capital had suddenly been lifted. Why it had been lifted may be debatable; but the fact was incontestable, and so was the further fact that, to the extent that the world's loan market had again begun to work satisfactorily, the particular difficulties which confronted both finance and industry in 1913 were removed.

As is always the case, the markets for speculation and investment were the first to give concrete evidence of their relief. But if the movement of trade and industry last year was cramped and handicapped by this same situation on the money market, it should be reasonably evident that the new situation must, sooner or later, have its effect in those quarters also. Last year, when the tying-up of capital supplies was first in sight, our stock markets and money markets made very prompt response. Business affairs continued to pursue their prosperous course until a considerably later period; but they had their turn at reflecting the unfavorable influences, after an interval which had led the hopefully disposed to declare that business would not be affected at all. Now the reverse process seems to be under way, and general trade is quite as deliberate in adapting its course to the shifted economic wind as it was when the opposite influences prevailed, a year ago.
